We followed them, rather tired and discouraged. Suddenly my guide crouched down behind a rock and beckoned me to him. I ran up; about 200yds. off in front of us were three caribou feeding in the bushes and coming our way. Two were females and one was apparently a young stag. They all carried antlers. When about 100yds. off they turned at right angles. I selected the young stag and fired a quartering shot in his side. He dropped flat without the slightest struggle. The wind was blowing a gale, so the others did not notice the report or the smoke; they stood there smelling of the stag and acted in the most stupid manner. I could have shot them all. Finally I ran up to within 50yds. of them. Then they got my wind and rushed off like race horses, snorting and shaking their heads in terror. To my disgust my young stag turned out to be a female with a fine head, but she was in fine condition, and I knew would make fine venison for our larder. Before my guide finished skinning and cutting up this one, two other caribou fed up to within 50yds. or less, offering me the most tempting shots, which I declined, but made a rough sketch of them in my sketch book instead.

The view from the high hill was superb. To the south lay the purple hills at the head of Hall's Bay; toward the north the queer top sails stood up boldly among the famed "White Hills." Sheffield Pond lay at our feet surrounded by the dark green forest, looking very much like one of our Adirondack gems at home. It was a grand day and a superb view. After my successful shot I felt pleased with myself and all the world and particularly with Newfoundland. After a frugal lunch and a drink of cold tea we lit our pipes and returned to camp. On our way back we saw three more caribou, but did not attempt to stalk them, as we had all the venison we could possibly carry and a great plenty hanging up in camp. Altogether I had twelve good chances that day that I did not take advantage of. On our return to camp I selected half a dozen nice fat chops, which I placed in our wire gridiron and stood it before the hot coals; then I made a big pot of strong coffee, while one of my companions mixed a dish of Indian meal bannocks, which he fried in hot pork fat. We made a royal supper after our day's hard tramp, and after a pleasant smoke before the big fire crept into our blankets for a sound sleep, well earned by eight hours of steady walking. WAKEMAN HOLBERTON.

Indian Territory Game.

LOCO, I. T., Sept. 1.—Birds have fared well this season but for scarcity of seeds and grain. Some quail have the third brood. Prairie fowl have the second brood, the first being fully grown. Highland plover are numerous. Saw bluewing teal on Aug. 23. Large game here is but a memory. There will be no end of netting and shooting for market here this fall and winter. Can nothing be done to put a stop to this practice? Could not the authorities prevent shooters from shipping quail and chickens out of the Territory? L. D. W.

WOODCOCK SHOOTING.

OF all the kinds of shooting of field and forest, the sport of woodcock shooting holds the warmest place in the hearts of its devotees. The woodcock shooter is an enthusiast of enthusiasts. He may take a keen pleasure in bringing other game birds to bag, but when woodcock shooting is under consideration comparison ceases. And indeed this sport possesses many fascinating features peculiar to itself. First of all, it can at best be indulged in but in very small quantities. There is but little of it when compared to the abundance of other kinds of shooting, for the woodcock is comparatively a rare bird, and its season is a short one, therefore the keen edge of enjoyment of woodcock shooting is never dulled by surfeit. The habitat of the bird is distinctly different from the habitat of all other game birds, and of the vast tract of land which makes the earth's surface there are but tiny spots here and there which meet the wants of its nature, and many vast tracts of fertile country have no woodcock ground at all.

It too is a bird of mystery, of whose coming and going no one knows. It is nocturnal in its habits, and its haunts being such secluded and unused spots, ones rarely invaded by man, it is rarely seen. The residents of sections wherein is the home of the woodcock may never see one from year's end to year's end, and indeed may go through life with no more knowledge of them than that derived from hearsay, or, seeing one, may still remain in ignorance of its identity. While the quail, the partridge, the snipe and other game birds are not unfamiliar to country residents and are readily identified by them, that of the woodcock and its doings are shrouded in mystery. The large woodpecker in some sections is called woodcock by the country folk, while in other sections any plover with a long bill is classified as being the same bird. So little is the bird known that sometimes when killed it is called snipe and sometimes the snipe is called woodcock by those who have not given the bird special study or attention. Its life being so entirely without the sight of man and in general so little being known of its haunts and habits, it is not all strange that the little accurate knowledge is obscured by the air of much mystery, and that those who seek the bird find a fascination in it greater than that of any other form of game bird shooting. The bird itself is of peculiar form and of rare richness in its colorings, and its flesh is esteemed a morsel of rare excellence, fit for the palate of the most fastidious epicure. Thus it affords great sport in its capture and is pleasing to the eye and palate.

Its habitat is generally in densely shaded nooks in out-of-the-way places where man rarely enters, and where the soil is soft and moist, for in such places is its food obtained. The alder ruins, and slopes in the birches, and nooks in the woods where springs or rivulets or excess of moisture makes the ground soft, are its favorite haunts, and sometimes in certain sections it finds spots in the cornfields which are desirable feeding grounds, though haunts and feeding grounds are never plentiful. In Mississippi it is occasionally found in open sedge fields. Many places which to the eye have every appearance of home for it still have no birds in them.

The scarcity of the bird, its beauty and the delicate flavor of its flesh, all serve to enhance its value, and its mystic life adds a charm to its pursuit which is distinct from all others.

The difficulties of woodcock shooting have been greatly exaggerated in every particular, particularly as concerns the extraordinary skill required by the shooter, and the still more extraordinary labor and consequent fatigue imposed on the dogs, the latter being an indispensable factor in the sport, if any success worth considering is sought. While intrinsically the sport possesses all the requirements of the highest degree of wing shooting, the writers on it have deemed it fitting that it be dressed in a glamour of romance, presumably that a little knowlege might be presented in an elaboration of high colors which touched on the sky, the sunshine as it glinted through the alders, the beautiful color of the foliage, the balmy zephyrs laden with nature's perfumes, *ad infinitum*, all of which are present in all other kinds of shooting, or indeed present if there is no shooting at all. The shooting of woodcock is difficult, it is true, but not so extraordinary in its difficulty as to be distinctly special, and far from being so difficult as most shooters make it from injudicious selection of guns, loads, etc.

Woodcock shooting is close shooting, the closest of any kind of shooting recognized as legitimate sport with the shotgun. While the woodcock is called a game bird, it is gentle and mild in its habits, with none of the pugnacity or extraordinary vitality possessed by members of the grouse family. The smallest of shot is sufficiently heavy to kill it, and the cylinder-bore gun is amply close enough for the ranges which one must accept in shooting it. The choke-bore of any kind is out of place in such extremely short ranges, and unfit to use on a bird so easily killed, though, strange to say, the use of it is not uncommon, owing no doubt to the fact that many men owning but one gun must use it for all kinds of shooting, and in other instances to the further fact of thoughtlessness concerning the proper requirements of the sport. Short barrels too are desirable, the difference in the handling of a 30in. barrel and a 24in. barrel in cover being far away in favor of the latter.

Woodcock shooting is largely a matter of snap shooting; therefore a wider pattern at a much shorter distance is a requisite if one is cultivating success instead of nursing a fad in respect to the use of choke-bore guns for all kinds of shooting, whether the guns be fitting or otherwise. In the shooting of quail, or chickens, or ruffed grouse—to a lesser degree with the latter—a certain degree of deliberation and quick aim can be practiced, but in woodcock shooting the opportunities for deliberation are the rare exception; hence the need of adopting an open gun to meet the requirements of quicker work and short ranges. Light loads and smaller shot can be used successfully, some noted shooters using dust shot exclusively. With a short, cylinder-bore gun—a true cylinder-bore, not the modified choke-bores which are often called cylinder—such a pattern can be secured at 15 or 20yds. as will insure fair success to the average shot and the best of success to the good one. It might be said that such a gun and load are too murderous, and indeed they would be in the hands of a man who could shoot with any degree of precision if he could exercise deliberation, but as in the greater number of instances the shooter has but an instant in which to act, the results are far from being so fatal as one might fancy them to be. Often there is but a momentary glimpse of a dusky shadow flitting through or across a small vista in the dense growth, and the shooter must fire then or not at all, unless he is pleased at a purposeless tumult, that being the sum total when he shoots and trusts to luck for the execution of his purposes.

As in all other shooting, experience enables the sportsman to recognize the promising nooks for woodcock, and the signs which denote its presence, they being the holes made by it in boring in the ground for its food and other signs well known to the shooter, and which can only be recognized by experience.

As to the labor and fatigue imposed on the dog while seeking for woodcock, they are largely an exaggeration. Wilson, in his work on the birds of North America, specifically mentions the fatiguing efforts which the dog encounters in woodcock shooting, and mentions that relays of dogs are necessary. As a matter of fact the work of the dog in woodcock shooting is the easiest of all kinds of shooting. He must range close to the shooter, or at most not beyond a gun shot if he serve the best purpose in that kind of shooting, and it is not at all essential or desirable that he work at high speed. It is essential, however, that he be intelligent and know thoroughly the best manner of working to the gun and assisting the shooter to get his shots in the manner to insure success. He should work diligently, but not hurriedly, and it is hardly necessary to add that the work should be done as silently as possible, though this also is true of all other kinds of shooting.

The dog should be a good retriever, otherwise a large percentage of the birds will be lost, for many times it is as difficult to find the bird after it is killed as it is before. Dogs which run riot in this shooting can soon tire themselves out, particularly in summer shooting, when dogs are out of condition and the weather warm, the consequent fatigue from such over-exertion and unfit condition cannot be justly attributed to the difficulty of the sport. It is rather hard work for the shooter, particularly he of the North, where the quest must be made afoot and where the footing is difficult and insecure, though after all it is but little more difficult than any other shooting in which the shooter walks.

As the dog often comes to a point in thick cover out of sight of the shooter, even though the point may be but a few steps away from him, a bell attached to the dog's collar has been found of great assistance in determining his whereabouts, and its silence indicates when he stops on point, matters very essential in conducting the sport. Not every dog is a good woodcock dog, even though he may be excellent on quail, snipe, chickens, etc. Some dogs appear to dislike the work intensely, others refuse to recognize the bird at all. A few take to it very kindly and work to the gun from observation to a useful degree far above what could be established by the most careful training. The spaniel is but little used in the United States for woodcock shooting or any other shooting, for that matter, though there is no doubt but what they could be made eminently useful in field sport.

In Louisiana and other sections of the South, where the woodcock seek a clime more genial than that of a Northern winter, the conditions of shooting change almost entirely. In sections at certain times, generally in the last of December and the fore part of January, they may be found in great numbers, and a bag of twenty, thirty or forty in a day is not then considered remarkable. They frequent the switch cane bottoms, or woods in the timbered prairie in which the heavy fall rains have softened the ground and where abundance of food can be found. Their stay in the South is very short, they starting North immediately on the lessening of the winter cold, probably after a stay of about two or three or four weeks, their coming and going then being quite as silent and secret as in the North. They are there killed in great numbers both day and night by market shooters, and shipped to the home and distant markets. They have their choice feeding grounds even in that land of abundance, and skill, diligent effort and knowledge of habitat is quite as essential to success in the Southern winter shooting as it is in the less bountiful shooting of the North in summer and fall.

B. WATERS.

A Roe Deer Hunt in Germany.

"JOE," whose letter to Mr. Elmer is printed in FOREST AND STREAM of Aug. 8, must have been in very bad company. If he had been among sportsmen and killed two roe deer with his 16-bore hammer gun, *i. e.* with shot, he would simply have been asked to leave the grounds and to bear in mind that the shooting of roe deer with shot is considered a disgrace. Roe deer, like red deer, are shot with the rifle, and it is nothing unusual to see a good shot make "*eine Doublette auf Rehe*," not, as Joe quotes it, "a *doubletta* on *reh*," with the last-named weapon, provided they are bucks, for does again are sacred to every true sportsman in and out of season. Roe deer are by no means scarce in this country. Even around Berlin Joe could see as many as from 100 to 200 in broad daylight on good hunting grounds covering from 3,000 to 4,000 acres. Yet Joe terms it a rare opportunity to shoot one in one's life.

ARMIN TENNER.

Quail in North Carolina.

ATLANTA, Ga., Aug. 28.—I heard through Jack Flint, an engineer, that there was a wonderful crop of quail getting ripe in North Carolina. This news I conveyed to my hunting companion, Fred Ford. We decided to take our dogs and go up there on a prospecting trip, and bought tickets via the Sea Board Air Line to Waxhaw, Taylor county, N. C. From there we drove four miles out to the home of Mr. Horne (a friend of Jack's), who lives on Twelve-Mile Creek, where we arrived in time for supper.

The next morning, accompanied by Mr. Horne, we rode horseback through the fields until 9 A. M. During that time (about three hours) we found fourteen coveys, some of which must have contained thirty birds. The coveys were so large that I thought there must be several banded together, but Mr. Horne said he thought not.

Some of the birds seemed to be full grown, but others could hardly fly, and Mr. Horne said they were a second brood.

At 3:30 P. M. we were in the saddle again and going in an opposite direction. We found nine coveys before sundown, two of which were very large ones.

The next morning Mr. Horne drove us to Waxhaw. When we started we let the dogs un, but subsequently had to take them into the wagon, as they were continually on the point.

I hope later to take a trip to Waxhaw with Fred. Then of course we shall take our guns, which were left home on this occasion, as we never shoot out of season or pot a covey.

C. E. RANDALL.

The Rifle Again.

I WISH to express my sense of personal obligation to the various gentlemen who of late have written so interestingly about rifles and calibers, especially to Col. Clay, H. B. S. and Stewart. As to the first of these, it must be a matter of no little wonderment to other ordinary mortals who like myself have the usual complement of arms, legs and hands, just when and how he acquired the mastery over the grooved barrel which his shooting displays. Of course, if a man is going to shoot like that, an old cavalry carbine, a .44-40 "baby," or 'most any other piece of a gun will do him. I should have to practice at the rate of about forty shots a day for the next ten years to be as independent of mechanical helps as he is.

Why doesn't somebody rise up and defend the nitro cartridges for the ordinary calibers? I invested in one box for my .45-70, but their shooting was decidedly miscellaneous. Those I loaded myself with nitro rifle powder were even more so. It seems that nitro will do very well when you are shooting at a whole army—good fellows at that, whom you had really rather miss than hit—but that when it comes to putting a bullet into the most obnoxious part of a grizzly's spinal column it is better to depend on the old familiar black diamond dust. By the way, speaking of animals dropping "as if struck by lightning," did anybody ever see them do it except when hit in the head or spinal column?

The article on caribou shooting was choice. Here we have exact facts, not theory. The writer's objection to the Gould bullet for animals the size of the caribou seems well taken. But I believe that if it can be so tempered as to mushroom and not split off, it is a good missile for deer and animals of a similar size. I am inclined myself to try the 350 solid bullet made of nearly pure lead, so as to mushroom. My experience is that if a rifle is kept clean lead bullets can be shot from it without any serious loss of accuracy. It would seem that the 405 bullet with about a 20-grain hole in the point ought to be good. That would give a weight of 385grs., with a heel long enough and heavy enough to penetrate well and deliver a heavy shock.

AZTEC.

SAN LUIS POTOSI, MEX.

Bull-bat Shooting.

"A BULL-BAT—what's a bull-bat?"

"Why, don't you know what a bull-bat is?"

He did not explain, and not knowing any other name for it, he was like the old wise-in-his-conceit darky who wouldn't gratify the "phorocity" of his ignorant sable friend who wanted to be informed as to what "dat transom of Venus wus." Hence I was left with my "phorocity" until September, at which time I saw the thing he meant, which in all probability is the whippoorwill.

The bird is seldom seen here, except for two or three weeks in September; and as the days of this month draw near there begins a sharp lookout for the bull-bats, for fine sport is expected. Good, bad and indifferent shooters, boys as well as men, are on the watch, and on the first appearance of the birds they repair in haste to the outskirts of town, for their flight lasts only for an hour or two and it behooves the shooters to make the most of their time. Soon the air is filled with the bats, silent as the owl in their flight, irregular in their course, darting upward, downward, to right and left, now overhead, now skimming swallow-like near the ground in the eager pursuit of food, heedless of man and fearless of his death-dealing arm. *Ala* Tennyson, to the right of you, to the left of you, behind, before you, all around you, they furnish excitement to the shooter not altogether of a tame character. The firing is incessant. For an hour it is a continuous fusillade, not unlike volleys of musketry in battle. I think I do not exaggerate in saying that 1,000 shots are fired sometimes during an hour within an area not over a quarter of a square mile. This is when the birds fly as I have described. More often they fly rather high, not one in ten being low enough for good range; and many inexperienced shooters, whose judgment of distance is faulty, waste any amount of ammunition.

The flight of the birds begins about 4 o'clock in the afternoon, but is not always on consecutive days. The sport lasts for a week or two, after which the bat is seldom seen. The noise of firearms doesn't seem to startle him, but when picked up wounded he sometimes utters a chattering sound indicative of fear. I suppose he gets his name, bull-bat, from the chubbiness of his head. He is plump and fat, and makes a very palatable pie or stew. I can't see that there is the least diminution in numbers of these birds, but rather an increase yearly.

N. D. ELTING.

CENTRAL CITY, W. Va.

[The bull-bat is the night hawk (*Chordeiles Virginianus*). It is an insect eater and not properly a game bird.]

Chickens and Deer.

A FRIEND just in from North Dakota wheat fields, where he has been in the interest of agricultural implements, says there is a good crop of prairie chickens up there.

Mr. Magee and party, of Winchester, Ind., just back from an outing in northern Wisconsin, report deer quite plentiful. They were camped sixteen miles from Fifield, on the spot our tents stood in October, '94. They found excellent bass fishing in the lakes and muskys in the Flambeau River.

G. W. CUNNINGHAM.

Texas Plover Shippers.

VICTORIA, Tex., Sept. 1.—*Editor Forest and Stream:* With reference to the party who is shipping plover from this point, I would say that I have been able to make an investigation of some shipments, and that so far I have found nothing to substantiate the report that he was shipping immature quail. Personally, I was glad to find no evidence of violation of the game law, as it seems to me far better—and I believe your paper will join with me in this feeling—that there should be no violation of it than that there should be such violation, even if discovered

W. M. PETICOLAS

A Florida Game Country.

Editor Forest and Stream:

About twenty-five miles south of Kissimmee, Osceola county, Fla., three large lakes lie closely together with an immense marsh surrounding them on three sides.

Into the lakes flow several creeks, and the lakes and creeks are full of black bass weighing from 1lb. up to 16lbs. The fishing is simply grand. I will guarantee to show you more bass there in the same length of time than you ever saw before.

The marshes afford a feeding place for countless number of ducks and snipe. Just after the first cold wind in October the snipe begin to come in and they come by thousands, also the ducks; the ducks are of a variety known as the Florida duck and mallards.

Out in the woods are all the quail you can shoot, and on the west side of these lakes is one of the finest deer and turkey countries in the State. R. R. T.

Holeb Lake.

THE "ideal camp" described in our issue of Aug. 15 is situated on an island in Holeb Lake, Maine, not Hobb Lake, as was then printed.

Sea and River Fishing.

IN THE FAR NORTH LAND.—II.

[*For first paper see issue of Aug. 22.*]

THE great lakes and rivers of British America north of latitude 60° abound in fish which in size and quality far surpass those of more southern districts. In that vast and barren land they form a large part of the food supply, the Indians drying them for use in summer, or "hanging" them in the frosty autumn days for winter consumption.

The salmon of the Pacific is not found except near the mouths of several Arctic rivers, but there are other members of the salmon family as valuable for food as the better known species of the western coast. One of these is the *Salmo mackenzie*, or the "inconnu" of the early *voyageurs*. This I saw first at the Rapids of the Drowned on Great Slave River. At a glance it resembled the "silver salmon" of Alaska, but the head was larger and the shape less graceful. The inconnu, like a true salmon, has its home in the sea, ascending the rivers to spawn. It is found in the large rivers of Alaska—the Kowak, Youkon and Kuskowick—and in Backs Fish River and the Anderson of the Barren Grounds. There is a species also closely allied, if not identically the same as the inconnu, in the Obé, Lena, Kolyma and other rivers of Siberia.

The inconnu appears about the middle of June at Fort Smith, 1,400 miles from the Arctic Ocean, and would no doubt continue its journey up the Great Slave River as far south as Lake Athabasca were it not for the fierce Rapids of the Drowned, which at this point bar the river. During its long journey no obstruction breaks the flow of the mighty Mackenzie, and the fish arrive in fine condition compared with the mutilated and dying salmon one sees in the headwaters of the Columbia and Fraser in British Columbia. The specimens which I saw averaged about 12lbs. apiece, the flesh in the more southern districts being a bluish white, and very palatable, though inferior to whitefish. At the Delta of the Mackenzie, where the fish were fresh run from the sea, the flesh was firmer, of much finer flavor, and pinkish white in color.

While at the Rapids of the Drowned I talked with William Flett, an intelligent Louchoux Indian, who, as a boy, had accompanied the late Robert Kennicott on his expedition to Alaska, in 1865. William Flett told me that the largest inconnu ever seen by him was caught at the Mackenzie Delta, and weighed 50lbs. Dr. Tarleton H. Bean, of Washington, D. C., gives this weight as the maximum one, but Mr. Camsell, chief factor of the Mackenzie District, told me of an enormous specimen of 90lbs. weight. This was taken by an Indian at the mouth of Hay River, on the southern shore of Great Slave Lake. It was so large that when carried on the back of an Indian its head projected over his shoulder, while the tail dragged on the ground. The Louchoux name for the inconnu is "thly-oog-cho," meaning a long, narrow fish, perhaps referring to its elongated snout. The proper pronunciation for this name is a combination of a gurgle and a chuckle.

I tried in vain to catch the inconnu with hook at spinning bait while camping near the Rapids of the Drowned. The Eskimos at the Mackenzie Delta take the fish by both means, and it is probable that the inconnu, like the Pacific salmon, will refuse food while far inland on its way to the spawning grounds. I have fished successfully for salmon with trolls and artificial flies in the bays and mouths of rivers in Alaska, though I failed to capture one in the upper reaches of the Columbia River.

Although the inconnu is a valuable food fish in the far north, it plays a less important part than the whitefish. This, in numbers and quality, is far and away the best fish in British America. There are several species, the most widely distributed being the common whitefish of the Great Lakes. The usual weight is about 3lbs., though it often attains a much larger size. It spawns in September and October, and at such times the Indians fill their nets as fast as they can be lowered. The Hudson Bay Co.'s posts consume an enormous number of fish, a "district" or head post requiring about 18,000 during the year for their officers, servants and sledge dogs.

The great lake trout or "namaycush" abounds also in the north, reaching a weight of more than 60lbs. It varies as much in the color of its skin and flesh as does the trout of our Great Lakes. Small specimens are often taken in the whitefish nets, which have a 5 or 5½in. mesh, but the largest are captured with cod hooks and bait. Perhaps the finest fish in the country are those of Great Bear Lake. The depth of this inland sea, its extent of 14,000 square miles and the clearness of its waters, supplied by the cold, rushing streams which come from the Barren Lands, all combine to render the fish exceptionally fine. Great Bear Lake was too far out of our course for me to visit it, but I saw the Bear River, its outlet. Not far from the Hudson Bay Company's post, Fort Norman, the Bear sweeps into the Mackenzie in a fine curve at the point where Bear Rock rears its precipitous cliffs 1,400ft. above the level of the river. For some distance beyond the junction the two bodies of water remain quite distinct: on one side the great flood of the Mackenzie, pale brown in color, opaque with the sediment brought from the south; on the other the steel-blue current of the Bear, clear as crystal, rolling rapidly and smoothly, unbroken by ripple of fish or insect.

Having a few hours to spare one evening, I determined to try the river with rod and line, though with little hope of success. Duncan, one of the men at the post, and I took a small skiff and rowed some distance up the Bear. It was after 10 o'clock, but there was broad daylight; and as we passed under the banks we could hear the bees humming busily over the patches of early primroses, Arctic asters and Indian pinks.

For an hour we tested the fishing carefully with bait, spoon and artificial fly, but not a rise did we have. Leaning over the water's edge, I dipped my hand into the water. It was icy cold and a few seconds made my fingers smart and tingle. We knew the river was full of fish, but they evidently were to be taken only by nets, and at last we gave up in despair and turned our faces homeward. We paused as we passed the company's nets to see what they had captured. The nets had a mesh of 2 or 2½in. and were weighted down at the lower edge by stones and floated at the upper one by wooden buoys. Duncan pulled up length after length, revealing scores of beautiful fish caught by the gills. They were round, fat, about 2lbs. in weight and as bright as burnished silver. In the north they are known as the "herring," but are in fact a true whitefish (*Coregonus lucidus*). Sir John Richardson, of the Franklin Arctic Expedition, found them in this locality and gave them the name. They resemble the cisco of Lake Superior (*Coregonus artedi*), but are superior in quality, and there are differences which a scientist would detect in the formation of the head.

The grayling (*Thymallus signifer*), or "blue fish," as it is called in the Mackenzie District, was met with halfway down the river. We had put ashore to get some wood, and were detained some time. I hastily caught some "bull-dogs" (a kind of deer fly) and with fly and bait rod went a little distance from the boat. A missionary, who was on board, went with me, using my bait rod while I tried some artificial flies. We could see the fish breaking the surface of the water in midstream and I hoped for some good sport. But I seemed fated to have no fishing. We had hardly reached the spot when a sudden gale arose, making it impossible for me, by no means a skillful caster, to throw the flies far enough in the face of the wind. Just as I was about to take the bait rod that missionary caught with it our only grayling. I was delighted to see it, even if I was not to be its fortunate captor. It certainly was a beauty: a male fish, 10in. in girth, 18in. long and weighing 2½lbs. The general color was a purplish silver, the tail a soft red gray, the large dorsal fin a dark bottle-green, with changing light blue and light green spots on it, and lovely iridescent hues. The lower fin greenish gray, with pink and purple stripes; eyes dark brown or black, with golden rims. The stomach was full of small stones, vegetable matter like half-digested grass and small sticks, a beetle, a grasshopper and many May flies.

The storm increasing, we were obliged to give up our fishing and return to the boat. I saw the grayling once more at Big Island, where the Mackenzie leaves Great Slave Lake, but we did not pause long enough to try the fishing.

The grayling is found in the Barren Lands east and north of Great Slave Lake, and in the cold rapid streams flowing into the Mackenzie. I did not hear of it south of the lake, though it probably exists in the mountain streams that feed the headwaters of the Peace and Athabasca rivers. The Louchoux Indians at the Delta call it the "Tsee-Jah" or "Shee-Jah." "Shee" means a knife in Louchoux, and the name probably is an allusion to the great dorsal fin which resembles a knife-blade.

This fish must afford fine sport with light tackle. The one we caught was delightfully gamy and fought as well as a Nipigon trout. The grayling are very active, jumping clear from the water after insects or seemingly in play. They love clear water, and are not found near Fort Rae on a branch of Great Slave Lake, where the waters are shallow and often muddy; nor are they taken at that point in the Mackenzie where the Liard River pours a turbid flood into the main stream.

This species was first discovered by Sir John Richardson in the Barren Lands. It differs from the southern grayling (variety *ontariensis*) in having larger scales and the great dorsal fin being much higher, with more rows of spots. During my whole journey I had few opportunities of fishing; either we were traveling without pausing night or day or the waters were unfavorable for fish. I regretted this especially at the Delta and Peels River post, the most interesting places on our voyage.

At the latter place I purchased some Eskimo hooks, or baits made of walrus ivory or blue soapstone, found on the shores of the Arctic Ocean. These were used in trolling, with lines of whalebone, and were most skillfully fashioned. The largest were about 5in. long, and had toward one end a nail inserted sharpened and bent like a hook. On the ivory were little figures of whales and seals etched with some black substance, while some were ornamented only with black lines and dots. The herring hooks were not more than ⅜in. in diameter, several being fastened with short 5in. snells to the main line of whalebone. The Eskimo through an interpreter assured me that inconnu of even 12lbs. weight could be captured with these small hooks by "going very easy." The large baits were used for inconnu and the great lake trout. The Eskimos take fish also by nets or by fishing with bait through the ice. Whitefish and other species of freshwater fish are found in Mackenzie Bay, far out beyond the Delta. Such a vast body of fresh water is discharged through the many channels of the Delta that the influence of the ocean is hardly felt for many miles.

I secured one hook and line which closely resembled those of the Alaska Indians. The line was of reindeer skin, and the hook was made of bone securely lashed at a sharp angle to a small stick of wood with thongs of reindeer skin.

As we were passing through one of the river channels on our return, we heard a shout from the shore, and a long-pointed Louchoux canoe darted out from the shore, its occupant signaling for us to stop. We knew that the Indian had fish for barter, and as our supply of dried reindeer meat was falling short, the captain checked the boat's speed and the canoe was drawn up alongside. It was half filled with inconnu and whitefish, and never have I seen more beautiful fish. The inconnu were fat and round as little mackerel, and averaged at least 18lbs. apiece. I selected a smaller one of 12½lbs. and a whitefish of 5½lbs.; as I had not alcohol enough to preserve the whole fish, the captain and I fell to work and soon had two skins which could be packed in smaller bulk. The latter proved to be *Coregonus richardsonii* or *Coregonus kennicottii* of Milner. It was a female, and at that time, July 15, was full of eggs about the size one sees in shad in April. These whitefish were nearly the same size, averaging perhaps 6lbs. apiece, and were very round and fat, with large brownish scales. And I can testify that never have I tasted more delicious fish; no, not even a Nipigon trout fresh from the rapids, eaten after a hard day of portaging and paddling.

I saw splendid inconnu of 25 and 30lbs. weight at Fort Good Hope, near the Arctic Circle, and at Peel's River post. I heard, too, of fine mountain trout taken in the spurs of the mountain and west of the post. These may be the malma trout, or it is possible that the rainbow trout is found here as well as in the more southerly ranges of the Rockies near the Canadian Pacific Railway.

The far north offers a wide field for the naturalist. Mr. Macfarlane and other officers of the Hudson Bay Company have done valuable work in ornithology, but the fish, smaller animals, insects and plants remain to be carefully studied. A few imperfect collections have been made by Polar expeditions in certain districts, but immense tracts of country are still practically unknown, never having been seen by white men.

ELIZABETH TAYLOR.

CHICAGO AND THE WEST.

Minnesota Matters.

SPRING PARK, Lake Minnetoka, Minn., Aug. 28.—There is an old saying among men of the cloth—the green cloth—that nothing will beat luck. The FOREST AND STREAM luck is proverbial, and of a sort, I am persuaded, to put one in a position to give that unfortunate gentleman, Napoleon I., cards and spades. The main difference between Napoleon and me, as near as I can discover by diligent reading of the current monthly magazines, is that, although we both have been broke at times and have both had good runs of luck, his luck ran out on him entirely after a while, whereas mine never has. Napoleon, for instance, was never at Lake Minnetonka, and in fact seems never to have known anything at all about the possibilities of the beautiful State Minnesota. Napoleon may have worn a sword with diamonds on it, as against a plain six-shooter with a wooden handle, but he can't eat three meals a day where he is now and I can. Napoleon may have a larger and colder coffin than I will ever have, but he has got none the best of me, for I can sleep in a tent, and sit by a camp-fire and watch the moon come up over Minnetonka, and do a lot of things that he can't and never could. In short, the difference between me and Napoleon is mainly one of point of view. Napoleon has been taken up and boomed by the magazines; and I have not, that is all. Really, when it comes to this destiny business, I am a lot luckier than Napoleon.

The FOREST AND STREAM luck this week has brought me to a part of this big and wonderful United States hitherto unknown to me, though known about, vaguely, by all who live within 800 miles of it on any side—that is to say, the wonderful lower lake country of Minnesota, the State of lakes. While by no means new, this State is by no means known. I have long thought that Minnesota was soon to succeed Wisconsin as the main field of the sporting travel of Chicago, and certainly it seems as though Minnesota had enough of resource to stay and content for many decades the angler, the shooter, the tourist, and, above all, the summer traveler.

Lake Minnetonka I had always pictured to myself as a nice sort of pond, with a big hotel on each side of it, and a few boats with perch fishermen anchored out between the hotels. I thought they had a band come out once in a while and play a few popular airs, and that the girls put on their good gowns once in a while and had callers on the front porch; and sometimes they all went riding on a hay wagon, the guests of one hotel visiting those of the other. I thought Lake Minnetonka must be anyway more than a mile across.

Investigation proves that I was a little shy on facts about Minnetonka. Instead of being a pond or a lake it is a sea, made up of many lakes. It has a shore line of over 120 miles, and one so broken and varied that one can never see more than a small part of it from any one view. It has two big railroads to feed it, and some day that vigorous Westerner, Jim Hill, will just about build a railroad clear around it. It has three big hotels, miles apart, where hay wagons do not constitute the chief means of locomotion, and there are dozens of towns and villages built along its shores, and of its 100 miles of available shore front over fifty miles are built up with cottages and summer homes. It is a vast summer city whose population comes from the cream of the West and South and East. All the world here is free from care. All the world sails, swims, rows, fishes, and is happy. What a relief, to leave behind the great city where all are unhappy, and land after a night of sleep in a city where every one is happy. There the hurrying people all wear the frown of care. Here every neighbor has a smile. Unlucky Napoleon, to have been concerned so closely with affairs of business!

Mr. Carrington Phelps is a long-time member of the FOREST AND STREAM family, who was aware of the fact that both Napoleon and myself were shy on Minnetonka, so he invited us both out for a look at the country. Napoleon sent regrets, poor fellow, but here I am.

Mr. Phelps has 580 acres of the best land around Minnetonka, with timber and bluffs and that sort of thing, and at one of the loveliest parts of this body of land he has pitched his summer camp for several years. Here there is a fine dining hall fully 25ft. long, made, like a claim shack, of boards and tar paper, and a big house tent and a big sleeping tent, and some log stables, and a boat landing, and everything on earth you need for happiness in summer. Mr. and Mrs. Phelps and their son Carrington live here with their guests for four to six months each year. I think I shall live here six months or so myself, for I feel as though I were going to like the place. The home camp is on a bold bluff above a great expanse of the lake, and the view is lovely by day or by the moonlit night. An Aztec camp-fire, perpetual, unextinguished, burns in the middle of the community, bright and high at night, low and comfortable by day, so that always one has insensibly about that most soothing and comforting of odors, the smell of sweet smoke. It is astonishing

how one comes to be used to this faint smell, so that he misses it when away. So far we have been too comfortable to go fishing, but the walls of the dining hall bear an array of heads of fishes—17lb. pickerel, 5lb. bass, and the like—which show what Minnetonka has up her sleeve. And near by, in a place which my friends wot of—seventy-five miles is near by nowadays—there are some prairie chickens, and next week comes opening day. Alas! Napoleon, in every way except that of marble coffins you are not in it.

Minnetonka has sporting news about it in abundance, as has any place always where out of doors folk foregather. For instance, I learn of a certain type of yacht here of which I have not seen mention ever in FOREST AND STREAM, but which threatens to make revolution in Western sailing matters at least. This is the half-catamaran known as the Tartar. The man who built this boat knew about the Malay catamaran, and its faults as well as its virtues; so he made the bow of his boat like that of any boat (above water), and the stern of it he made like a catamaran, as who should say, he could have made a whole catamaran if he had tried. The result is a boat which theoretically and scientifically cannot possibly sail a lick on earth, but which practically and actually does sail about twice as fast as all the other boats. It is most singular, and at times most annoying, to see the perverse stupidity of facts.

Another item of interest to outdoor folk I find in Mr. Phelps's house tent in the form of a chimney. Most tent stoves wind up in a blaze of glory by burning the tent down on the first rainy day, when you need the tent most. Mr. Phelps has made a stovepipe which is also a tent pole. This stovepipe is an upright wooden tent pole for about 5ft., then it goes into a socket and becomes a galvanized iron stovepipe, with a hole in the side for the pipe from the stove. At the top of the tent this stovepipe tent pole swells out into a hollow cylinder, perforated for ventilation. Above the tent this cylinder is continued up in the form of a chimney, insuring a draft for the stove and carrying off all smoke. The tent, guarded by a leather collar, slips right down over the chimney as though it were a spike in the top of the pole, and stops away from it on each side. The idea is only a civilized adaptation of the Sibley tent and Indian tepee idea, one of the best ever hit upon by tent dwellers in search of warmth and freedom from smoke. Mr. Phelps guards against sparks by treating his tents occasionally with an alum solution. If a spark falls on this sort of a tent it burns in a small round hole which does not spread. A dry cotton tent not thus prepared will burn cheerfully down to the tent pins.

E. HOUGH.

MEN I HAVE FISHED WITH.

XI.—Gen. Martin Miller.

WITH clothing torn and bloody, his face bruised and cut, one eye blackened and swollen shut, Mat Miller came down the main street in Greenbush one day. Beside him walked a giant negro like Eugene Aram, "with gyves upon his wrists," and in a condition like Mat's as to face and clothing. This sight so impressed me that it always came up whenever I heard of or saw Mr. Miller. We little boys had never seen such a sight, and when we learned that the colored desperado had been a terror to the country for miles around, and was a burglar, and that Constable Miller, having learned that he was sleeping in the old spook-house barn, had attacked him alone and captured him after a long and fierce fight, he was our hero. We learned in later years that this genial fine-looking athlete was the champion wrestler of Rensselaer county, and at "collar and elbow" or "square hold" could lay the local wrestlers on their backs. But this capture of the powerful burglar overtopped his other feats.

Some time after this event Herr Driesbach, the great animal trainer, wintered his menagerie in the village, in the stables of Bill Gaines, the local racing man, on Broadway, just below Columbia street, back of Fly's brick store, which still stands there. In those days the circus and the menagerie were two distinct things. The circus had no animals, while the menagerie had a ring in which dogs and monkeys rode on ponies and appealed to that portion of the public which objected to men and women in tights. In early days, when my father's barges brought emigrants up the river to Albany, Jake Driesbach was an emigrant runner for a line of canal boats which took them to Buffalo. He then went to Germany, and returned as "Herr Driesbach, the world-renowned lion tamer." Boys were not wanted in the stables, but as father's business froze up when the river did, and Driesbach came to our house in the long evenings to play chess with father, I had the run of the show, to the envy of the other boys, who could not get in unless I chose to take them. To be on intimate terms with so great a man—for a lion tamer is the biggest kind of man to a small boy—was indeed a pleasure unknown to men who were never boys. By that I mean those old fellows who were born "young men" and never had any fun because they had no inclination for it.

The privilege of seeing these animals at all times was something, but to witness the rehearsals that were necessary to keep both men and animals in readiness for the opening performance in the spring was a thing that a real live full-blooded boy would naturally class as but little below paradise, if he didn't consider it a dozen miles above. As the village constable, Mat Miller walked in the menagerie when he pleased. In fact any reputable citizen could, the line was drawn at boys who might get hurt or into mischief. There was no steam-heating apparatus in those days, and the two elephants, the giraffe (the first one ever in America), the monkeys and other inhabitants of warm countries were in the end where the great stoves were. One day a chained elephant became scared at something; Driesbach said the animal saw a mouse and feared it would go up its trunk. The cage containing the royal Bengal tiger was overturned and pandemonium, or the Cooper Union after an Anarchist meeting was a Quaker assembly compared to it. The elephants trumpeted, lions roared, hyenas howled, monkeys screamed and what the cockatoo said is lost. "Mat" was there and so was Driesbach and the writer. The constable jumped, grabbed the cage by the top and forced it back to its place at the expense of a coat and a torn shoulder from the tiger's claws. Driesbach was astounded at the quickness and strength of this unassuming man and offered him a lucrative position to travel with him, which was declined. Me? O, yes! After it was all over "Dandy" Nesbitt the jockey, Tom Scribner and I were found safe under the wagon where the trick bear had his residence.

Up to about 1845 there was lots of fun every year at "general training." This was an assembling of the uniformed and the ununiformed militia for several days or a week's drill in camp, as required by law. The ununiformed militia consisted of every man between certain ages, not specially exempted, who could, I think, escape by paying a certain sum. It was a grand spree for some and the guard-house was always well filled with drunks. When in garrison in later years this gang was known as Company Q.

Martin Miller was a general of militia, but of what rank I never knew, in fact, rank was unknown to us boys beyond the fact that there were officers and privates. It was my fortune to see two "general trainin's," one on the farm of John Morris, above the village, and the other at Clinton Heights. Then I think the law was changed and they were abolished, perhaps before 1845, for I was then old enough to remember more than two such rackets. It was a great event. Drums, flags, the squads of farmers' boys who couldn't keep step to the drum, the neat uniforms of some of the companies, the usual crowd of bumpkins, yokels, three-card-monte men, thimble-riggers, sweat boards, chuck-luck and other gamblers, peanuts, gingerbread and, above all, General Martin Miller resplendent in *chapeau bras*, epaulet, sword and sash, mounted on a white horse, trying to bring order out of chaos. If all these things did not make soldiers for the State out of the rawest kind of material it certainly made a very large day for the small boy.

If any one trait was more prominent than another in the mental make-up of General Miller it was his love of boys and his desire to see them have fun. Having no children of his own at that time, he was fond of those of his neighbors. Things were getting along in shape and the gamblers were reaping a harvest when the General invited a crowd of boys to follow him if they wanted to see some fun. Every sweat board and chuck-luck table had piles of coin of all sizes and values piled up to show their ability to pay bets, and as the General came alongside of one he would wheel his horse suddenly, clap the spurs to him and that gambler's coin was scattered far and wide, a harvest for those who could reap. Somehow the gamblers did not appear to like this, judging from their remarks.

Years after this the General became a grocer and in that very democratic community subsided into plain, every-day Mat Miller, so called by every man, woman and child in the village.

We were in his store one day talking of going down to the Popskinny for a couple of days' fishing and to camp in Rivenburg's barn in the hay.

"What do you boys do down there at night?" he asked. "Perhaps you raid Teller's potato patch and roast his potatoes with his fence rails. I think I'll go along to keep you straight."

"Come along," said Billy Shaw, "we'll let you gather drift-wood and then you'll know whether we use fence rails or not.'

"Yes," chipped in John Atwood, "and you can hook the potatoes too, if you want 'em. We never trouble the farmers and they don't trouble us. We take our grub along and just cook a few fish."

Billy Atwood, a boy who seldom said anything, remarked: "Mat might go and milk some of Rivenburg's cows if he wants to eat his fish in milk," a reference to a man who was said to have tried this dish on recommendation of one Harleigh Mather, whose humor lay in such things. This man was known as "Suckers and Milk" until life became a burden to him and he moved away. This same irreverent joker in after years replied to a clergyman who wished to know how to cook frogs: "Oh, we stew them just as we do bats." I do not approve of this sort of thing except when I do it myself.

Rivenburg's barn was only used to store hay in until it could be pressed into bales and sent off, therefore it was empty most of the year, but there was always enough loose hay left to sleep in. It was one of the finest barns you ever saw, for ventilation. The doors were off the hinges and were propped up by poles. We did not disturb them, but walked in from whichever side was convenient. The double doors were, if I remember, a trifle larger than the other holes.

John Atwood had brought the worms for bait in some old mustard boxes, and we assured Mat that they were not brought in the coffee-pot because that had been kept hidden in the barn as part of our permanent outfit, along with the frying-pan and tin cups. Hot coffee, fried sausages and other things saw us comfortably fed by sundown. Great clouds came up and the wind shook the barn and we hurried to the tightest corner as the storm suddenly broke over us. The thunder made the barn shake and it could not have rained harder. Flash after flash came so fast and the thunder followed so quickly that one could hardly note the interval. Heaven's artillery opened right over us and every fellow was doing his own thinking and keeping it to himself. Billy Shaw was the exception. He ventured to remark: "Maybe you fellows like this, but I wish I was home!" That broke the spell and he was nearly smothered in the hay which they piled on him. During this smothering of Shaw I saw, or believe I saw, a flash of lightning shoot up from the ground. It was so close to the barn that it seemed as if a man had shot a gun in the air. Two boards were off that side and there was no man there. If such a thing ever occurs, I saw an instance of it, if it does not I was deceived. No hole in the ground was visible in the morning, but half a century has not dimmed the picture.

Such a rain never lasts long and soon the stars were shining, and we rebuilt the little fire, and with dry material from the barn for seats were enjoying life, when the sound of oars was heard, and soon the lapping of the water under the bottom of a little scow told that a boat was near.

"Halt! Who comes there?" was the challenge of the General.

Bill Atwood, John's younger brother, who had already shown symptoms of nautical bacteria which eventually dragged him to a sailor's life, hailed the coming craft with: "Aboard the scow! Pull on yer starb'd oar or you'll foul our coffee-pot!"

A few more strokes and the boat was beached and out stepped the old trapper, Port Tyler. "Where's that coffee-pot?" said he, "I'm wet an' cold and some hot coffee is just what I want. No, thanks, nothing to eat, I've got lots. Why, Mat Miller! What you doin' here campin out with these boys? I see ye all go by when I was hid in the lilypads around the bend yonder watchin' for wood ducks, an' I knowed the hull lot on'y Mat, an' I'd a knowed him ef I'd a suspected he'd come a-campin' with you boys. What 're ye up to, Mat? Burglars or thieves been on the island, or are ye on'y lookin' up the boys that's just come of age and just goin' to vote for the first time this fall?"

"Sit down here," said the General, "get outside of this warm coffee. I'm not looking for you, but there's a widow up there at John Morris's rope-walk that is, and she'll get you too if you don't look out."

This was a clean knock-out, for if ever there was a man who was shy of a woman it was that confirmed old bachelor, Port Tyler.

The stars twinkled. Venus just about to disrobe and retire for the night winked at Polaris, the night clerk, and hid herself behind Bethlehem woods. A night heron said "quawk" in a derisive tone, and even the little barn owl seemed unduly hilarious as it alighted on the gable of the barn with a field-mouse. Then there was a vast wave of silence that rose like the battle waves of Ossian and overflowed the lands on either side of the historic Popskinny. No doubt old Port might have thought with Hamlet:

> "It is not, nor it cannot come to good;
> But break, my heart; for I must hold my tongue."

This is merely surmise. Miller's shot struck home, and the bashful trapper took it in silence. Not a leaf stirred. Billy Shaw finally ventured to ask, "What kind o' game are you after, Port?"

Oh, just lookin' for yellow-legs and shore birds. I've got three young *quawks in the boat, and nobody about here eats 'em but me; so I can't sell 'em, an' if you'll eat 'em I'll cook 'em."

By unanimous consent it was voted "a go," or words to that effect. Billy Shaw had no fear of thunder now that it was not in his immediate front, said that we were down for fun and might as well have it. "If you are not hungry now," said he, "you will be by the time old Port gets these song birds dressed and cooked."

John Atwood and I took Port's boat and put out his set lines for eels, in order to have fish for breakfast. These lines were of ¼in. cord, reaching from bank to bank. At every 2ft. was a 1ft. snood tied with a "bow-timber hitch," dropping only 1ft. below. This enabled the fisher to snatch a snood loose and drop it in the boat, eel or no eel; but the beauty of Tyler's rig was the eyed hooks with a knot above and one below, which prevented an eel from unlaying the snood and breaking it strand by strand, merely turning the hook as if on a swivel. There is no patent on it.

The quawks were roasted when we returned after putting out the eel lines in several places, and the fact that we had eaten one supper did not prevent us from eating of the strange birds, and they were not a bit fishy, as one would suppose, but were tender and good. Port had set up a wind break and heat reflector by the fire and hung the birds on strings, so that they kept twisting round. When we came to crawl into the hay for the night Billy Shaw seemed a bit nervous and inquired if there might be rats about, and that started stories of enormous rats that lived along the creek and in the barns, all for his benefit. The little owl would whinny not unlike a horse, and Billy was evidently uneasy until Miller ran a stick in a wiggling way into the hay and said something about snakes. Then Billy vowed that he would go home. The General owned up and persuaded him to lie down, and the next we knew the night had gone.

We had eels enough for breakfast on the first line, and then Port took up the others and left us. We fished until near noon, when the fish took a rest and we gathered at the barn, each with several strings of perch, bullheads and rock bass. John Atwood had a strange fish, one that none of the party had ever seen before. We learned that it was a black bass, a Western fish that had come into the Hudson by way of the Erie Canal, so Harleigh said, and he was the village authority on fish and fishing. Just why the bass have not become more plenty in the upper river is a problem. Down about Newburgh, where the water is often somewhat brackish, they seem to be more plentiful. A little more fishing in the afternoon, and we went home after sundown. The General declared it was a pleasant trip, but I never knew him to fish before or after this once.

Back of Ruyter & Van Valkenburg's tannery there was a great heap of spent tanbark to tumble in, and Jimmy Brown and I practiced somersaults there; the other boys merely jumped. This interested the General, and he would help us in a whirl with his strong arm, which landed us on our feet. This was a special help in the back flop. Poor Jimmy Brown! We used to play the banjo for each other's jigs on the sanded floor until he was burned up on the steamer Reindeer in the summer of 1850. General Miller also taught us to wrestle in the "collar and elbow" and "square hold" styles, and always impressed his correction of a fault upon us by taking hold himself and making the faulty one put his foot or his weight in the wrong position and then quickly laid him on his back. There were many fair wrestlers then among the boys of Greenbush.

One winter, when the ice was exceptionally good, he proposed a skating party to Hudson, some twenty-eight miles down the river. We had an ice boat that some of the boys built, and this was to go along to pick up stragglers and to return on. Cub Wilson sailed the boat. A Greenbush boy of those days had little reverence and less respect in his composition, and nicknames were common. Wilson was then about twenty-five years old, fat and unwieldy, and had been called Cub from boyhood and didn't mind it. He may have had a given name, and no doubt his mother called him by it. The party consisted of John Atwood, John and Hiram Stranahan, Jerry Van Beuren, James Miles, Isaac Polhemus, John Phillips, General Miller and myself, the youngest in the party. We started in the morning about 8. A light south wind was in our faces, and coats and overcoats were soon piled on the ice boat. In places the ice was too rough to skate, and once we took off the skates and walked about half a mile. Phillips and the Stranahans were the best skaters, and took the lead and kept it, reaching Hudson some

* This is the way we called this night heron, *Nycticorax*. The common name is sometimes spelled "squawk," while some naturalists call it "the qua bird." If you take my spelling and add "quock" to it, and then divide the sum total by two, you will get very near to the bird's own pronunciation of its name, and who should know better than he?

time ahead of us. Atwood, Van Beuren and I brought up the rear. We did the stretch in four and a half hours —some claimed less time—pretty well tired and with numb feet. We all wore high boots. The skates had great turned-over prows ending in brass acorns, were guttered in the bottoms, and strapped so tightly over the foot that the blood could not circulate. We did not think skating possible under any other conditions. When the strap would not take up another hole we drove wooden wedges between the strap and the boot to make it tighter. A few years ago I tried on the old style of skate and could get around a little, but could do nothing with those of the present model.

At Hudson Gen. Miller took us to a hotel and we had a good dinner. We had a strong wind from the west on the homestretch and the ice boat did not have to tack once, and we were not long on the way. Skipper Wilson remarked, "You boys beat me when I had to tack against a head wind, but you couldn't do it now." On telling the story the General said: "The boys are all good skaters, but you should see 'em eat! They cleaned up everything in that hotel, and if they ever go to Hudson again that landlord will close his house when he sees 'em coming."

"Hans Breitmann gife a barty—
Where ish dat barty now?
Where ish de lofely golden cloud
Dat float on de moundain's prow?
Where ish de himmel strahlende stern—
De shtar of de shpirit's light?
All goned afay mit de lager beer—
Afay in de ewigkeit!"

Without intending any levity, this philosophical verse of Leland's comes up when that day is recalled, for all except the writer have passed into the *ewigkeit* of the Plattdeutsche, or *evigkeit* of the German. Five died peacefully. John Atwood was killed by a boiler explosion, Van Beuren was drowned in California, and Phillips was killed by interlocking his "turn-over" skate with that of another boy, and his skull was broken on the ice. Surely I may ask: Where is that party now? And *ewigkeit* or eternity, as you choose, is the only answer.

I learn from one of boyhood's companions who has not yet crossed the Styx that Gen. Martin Miller was born on May 12, 1816; was Doorkeeper of the State Senate in 1845-46; was member of Assembly in 1858, and died in the summer of 1882. The General married a sister of my friend, Garrett M. Van Olinda, who is now in business at 18 Harrison street, New York, and one son survives him.

For a few days during the time of the Mexican war the sleepy little village of Greenbush was disturbed over a very small word and argument ran high. Abram Van Olinda, brother to the General's wife, had raised a company of volunteers for the war and the citizens of Greenbush purchased a sword to be presented to the Captain, but it must have an inscription of some kind to tell who presented it and also who it was presented to. A few had agreed that the blade should be inscribed: "Presented by the citizens of Greenbush to Captain Abram Van Olinda, and never to be sheathed but with honor." This was the sentiment of Volkert P. Douw, Squire Hogeboom and John L. Van Valkenburg. Isaac Fryer moved to strike out the word "but" and insert "except," and Thomas Miles and others backed him. The inscription hung fire and the women of the village took it up and hot arguments were held as to which of the two words was the best to use in the inscription. A meeting of all who had subscribed for the sword was called at Fryer's tavern, and after much argument from each side "Mat" Miller was asked to give his view of how the inscription should read. He rose and said: "'Never to be sheathed but with honor' is good, we all know what it means. We also know what it means if we say, 'Never to be sheathed except with honor,' and it's only a choice of words and 'but' is Dutch." That settled it. The Douws, Van Valkenburgs and Hogebooms were defeated by this thrust. Captain Van Olinda was killed while leading his men at the charge on the heights of Chapultepec, on Sept. 13, 1847. The result of General Miller's epigram is still preserved on the sword, which was sent home and is still in the possession of his family.

Mat Miller—I love to think of him as "Mat"—was a warm friend to boys. Perhaps he liked some boys better than others, but he was always my friend, and he was the manly sort of man that I could look up to with confidence. He was a man when I was a boy. When I was fourteen he was thirty-one, but he was always one of us on such frolics as have been related and never seemed to know of that gulf which separates the fun-loving boy from the money-grubbing man which some men develop into.

General "Mat" Miller! You covered yourself all over with glory when you attacked a desperate burglar, who outclassed you in weight, alone and single-handed in the old "spook-house" barn and brought him to justice. May you be crowned with glory now as the reward of an honest life, is the prayer of your boyish friend.

FRED MATHER.

O, dear! I've "been and gone and done it" again. When I come to read the sketch of Capt. Ira Wood in cold type there is the blunder of placing Mrs. Malaprop, with her "derangement of epitaphs," in the "School for Scandal" instead of "The Rivals." That pens will slip is evident and it is possible for an old fellow's memory to get mixed. No doubt the mail of FOREST AND STREAM will be full of corrections of this slip. All right! Boys, you have got me, and I've not a word of excuse. I only hasten to get this to the office before every one of you has jumped on me. F. M.

SEPT. 4.

MAGNOLIA, Md., Aug. 22.—*Editor Forest and Stream:* From boyhood through life I have been an ardent lover of field sports or rather the enjoyment of nature's beautiful and inseparable surroundings, and still love them equally as well in memory as when a youth, bounding eagerly over the green hills and through the lovely valleys along the margin of the historic river whose waters sing their everlasting dirge along the shores of Mount Vernon. Since age has interposed its prohibition of the practical enjoyment of those exquisite pleasures, I find great consolation in perusing the sporting papers—and I truly say I never was more delighted in reading any article than I was with one in your paper of Aug. 22.

It afforded me infinite pleasure to know that there is a gentleman who has known through life and appreciates the lofty and sterling qualities of a gentleman I take the liberty of calling my friend.

I thank the author for affording me the infinite pleasure of reading his generous and just tribute to my friend, Col. Charles H. Raymond. J. N.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., Sept. 4.—Despite the fact that the first cool evenings of late August gave us cheering promise of good surf fishing, it has not yet materialized. While there is yet sufficient time, still the outlook is not of the brightest. Striped bass should now be plentiful, as well as kingfish and weakfish; but such is not the case. Fishing, however, continues fair in the rivers and bays, and inland fishing is now the order of the day. Snapper fishing has been looked forward to with great expectations and as a certainty, but not in years have they been so scarce.

The growth of snapper fishing has something of the marvelous in its nature. A few years since it was little appreciated, whereas now but few are too great to pay it homage. With the lightest of tackle, and when the snapper (which is the young of the bluefish) has reached the size of the herring, the sport is grand, and ranks as the best of our salt-water fishing. The average trout rod is too pliant to resist the pressure of the tides in which snapper fishing is always to be had under its best conditions, besides the split-bamboo is soon affected by salt water. I use a very light lancewood stock fitted with a Bethabara tip of lightest caliber 6ft. in length over all. For line I use Barbour's linen thread No. 30, thoroughly oiled, then dried and afterward waxed. This makes a line of extreme lightness, and will resist the action of salt water, which is so ruinous to silk lines. For a float I procure two bottle corks 2½in. long and pass a piece of bamboo through them, having first connected the ends together. I then shave and sandpaper them down, pointed at either end, until the greatest diameter about equals a lead pencil; this will sustain the small bait and split T shot sinker. I use a 3.0 ringed Carlisle hook, to which I fasten a 6in. section of hair wire ending in a small brass swivel, into which the line is fastened. I have found the foregoing rig most admirable, and it gives to the angler every atom of sport obtainable.

There is no doubt but the spearing, or what is usually termed white bait, is the most killing bait to be had, although they will bite readily at almost any fish bait or clam. A strong attraction for the snapper is found in the menhaden when ground or chopped fine and a portion inclosed in a muslin bag or other porous material and hung from the side of the boat. Agitating or gently squeezing the bag at intervals sets free the oil, which creates a slick on the surface of the water, which will be followed by the snapper to its source, no matter how great the distance; and once around the boat, with tackle as above described, fastidious indeed must be the angler who cannot extract true enjoyment therefrom.

LEONARD HULIT.

P. S.—I use a very small Kosmic multiplying reel, which will hold about 80yds. of above line.

BARNEGAT INLET, N. J., Sept. 1.—*Editor Forest and Stream:* Bright days, sunny skies and northerly winds are contributing to the sport of pleasure-seekers at Barnegat Bay.

The fishing during the past week has been especially fine in the vicinity of the inlet. Numbers of yachts have caught large quantities of bluefish in the inlet, and many captains report good catches of large weakfish and croakers just outside the bar.

I saw one of the first flocks of ducks last Thursday. There were about fifty of them and they were headed southward. SEA DOG.

ANGLING NOTES.

Shad in August.

A NEWSPAPER that comes to me daily prints a lot of information about what to eat and how to cook it. I did not know about this feature, as I never happened to strike the culinary department of the paper until one of my family asked me if shad were in season in August; and then I read under "Menu for Friday, Aug. 7: * * * Dinner—Clam broth, planked shad," etc. I answered the question by saying that the legal shad season extended only from March 15 to June 15, but the query made me think of something.

The expression, "Poor as a June shad," is meant to convey the idea that a June shad is a pretty poor article, but if you consult a shad fisherman on the subject he will tell you that the best shad are taken, or rather used to be taken, in July. I was out with the shad netters on the Hudson one night this year and naturally the conversation was about shad. Some of the oldest men on the river were present and all agreed that a July shad was sweeter and fatter than any caught earlier in the season; that shad improved the longer they were in the water, and it used to be the regular thing, before the law interfered, to set the shad nets on the night of July 3 to get shad for a Fourth of July feast. Further, that shad were taken with hard roe as late as August; this was not unusual; and that shad had been netted in the Hudson as late as November.

So in talking to a shad fisherman the expression, "Poor as a June shad," will not express what it has been supposed to express during all the years that it has been used. If necessary, this may be amended to read "Poor as a June shad that has spawned," and it will go.

One evening when rowing up the river to the shad-hauling grounds I noticed the young herring turning out of the water exactly as the whitefish do the same trick. This action is particularly noticeable in the round whitefish, or Adirondack "frost fish." Swimming near the surface, if they are disturbed they turn to seek deeper water, and if the surface of the water is still they slap the water with their tails as they turn, and it makes a sound which I have compared to hail on a tin roof, particularly if the school of fish is a large one.

Bullheads.

If I made a note of everything told to me supposed to be unusual about fish, I would have to carry a good big memorandum book to record the strange things. Fortunately perhaps most of the strange things are not as unusual as they are believed to be by those who relate them. Here is one that will bear investigation: An engineer on the N. Y. Central R. R. was spending his vacation at Lake George, and told a friend of mine that about Aug. 20 each year the bullheads come to the surface of the water in the Mohawk River at Schenectady in schools, and that at such time they can be scooped out in a dip net. He did not pretend to account for the action of the fish, but declared that it was a fact, and my friend came to me to explain why it was so. I could only say, if it was so, that the fish were probably feeding on something at the surface that made its appearance about Aug. 20 each year.

This reminds me that I saw the largest brood of bullheads this year that I ever saw. It was at the Cedar Island House dock in the Fourth Lake of the Fulton Chain. Standing on the dock with Col. A. W. Cole, waiting for our guide, I looked into the water and there was a black cloud moving here and there, and I called Col. Cole's attention to the brood of bullheads, and at first he was inclined to think I was not sincere as to what they were. Two parent fish were in attendance, hovering over and around the babies, and in spite of their care a baby skirmisher would get so far away as to be gathered in by waiting fish. The brood was so large that I thought it must be two broods combined. The ranks of the little bullheads were thinned as we watched them, and as they were apparently a week or so old there must have been many more originally, and this was more reason to make me think there were two broods in one, but I never heard of such a thing, and could not determine if what I thought were true.

Stain for Gut.

A writer in the *Fishing Gazette*, London, tells how to stain gut brown, and the editor commends it as a useful discovery. Here is the formula: "It may not be known to your readers that a brown stain may be obtained by this very simple process: Add a few granules of permanganate of potash to a tumblerful of water, and in this immerse the gut, which should have been previously soaked. A few seconds suffice for a fairly deep stain, and I always keep a basin of cold water in which to rinse the gut from time to time. A very few seconds are sufficient to produce an ordinary brown stain. The solution does not injure the gut, and removes the 'glitter.'" I just received some leaders stained very dark, and the maker thinks they are the better for it. I will find out in a few days.

A. N. CHENEY

THE FONTINALIS CLUB, OF MICHIGAN.

IN an earlier article in FOREST AND STREAM mention has been made of the beauty of many of the streams of the lower peninsula of Michigan, and something has been attempted by way of description of their natural excellence as fishing streams for trout. Any such description would be unfair and inaccurate which did not take into account the gradual but unmistakable and inevitable depletion which has taken place in those waters since the country has opened up. It is the history of all the wild regions. As soon as the railroads come there are paths along the trout streams. I spoke in this earlier mention of the disappearance of the grayling in Michigan, and mentioned the character of the trout fishing in some of the streams which once were famous.

It was at that time a matter of surprise to me to hear of a preserved trout stream away up north in the wild country of the pine-clad south peninsula, for it seemed as though each and every stream of that land should still be swarming with trout. I wondered when I heard of gentlemen coming all the way from the town of Grayling, on the Au Sable River, and from Detroit and other cities to fish in this preserved stream, and I could not understand the reason for existence of a trouting club in that country. It seemed to me like carrying coal to Newcastle. This was a different thing from the Castalia Club, of Ohio, which is right at the doors of the settlements and convenient of access for many business men. It seemed to me likely that this Fontinalis Club, which I heard of over on a branch of the Sturgeon, near Vanderbilt, must surely be the idea of a few men not contented with the earth and the fullness thereof. I learned later that it was the idea of a few men who have seen the inevitable advancing, and who have realized what we must all realize before long, that the American system of game and fish laws is inadequate to prevent the extermination of the game and fish of the country. I learned, even in my short experience in that region, that but for the continual stocking of the wildest streams by the State authorities the paths along the streams would long since have disappeared, for there would long ago have ceased to be any trout left worth fishing for. More than that, it became plain to me that even the best of State stocking cannot keep up a supply of trout in a stream, no matter how good a stream it may be naturally, if that stream is left open to the tender mercies of the general fishing public. The latter is bound to solve for itself the great problem of how to both eat your cake and have it, a problem which the wise men tell us never did have but one conclusion to it.

By this no disparagement whatever is intended for the noble efforts of the Michigan Commission to supply cake to the public, for theirs is a work which has restored many streams to the public which once were fished out, and made fishing streams out of some that would otherwise never have had any trout fishing in them. Of this latter fact I had a very good illustration near at hand to the camp on Mullet Lake, not far from Cheboygan, where I was stopping when first I heard of the Fontinalis Club. There was a little, tangled, brushy stream that ran through a cedar swamp for a few miles, and which carried the euphonious name of Nigger Creek. It was said to have trout in it, and I tried it one day. Near its mouth in Mullet Lake I found the farm of the settler, a gigantic negro by the name of Bush, who had been cause for the name of the creek. Bush proved a character in his way, and was able to tell me the history of the stream. He said there never was a trout in it till they were planted there by the Fish Commission some twelve years ago, though he had often since then seen them, lately of a size up to 3 and 4lbs. Bush told me that he came out into that wild pine country as a homesteader immediately at the close of the war, which found him living in West Virginia. He had lived before that in Virginia, and I was surprised to find, out here in a wild Michigan pine wilderness, a man who knew of members of my own family, back in Virginia, more than thirty-five years ago. Bush told me that he had heard of this land open for homesteading, and had concluded he could never start younger, so he had headed for Michigan. He had not known of the thousands of better farming countries he could then have gone

to, but thought that the cold and the terrible labor of clearing up a pine farm was a cheap price for the thought of owning a farm. So he labored on, and sent back for his friends, and they sent for theirs, until there was a colored settlement of some forty families working away up in the Michigan woods. They lumbered in the winter and cleared land when they could, and now their labor has made a little hole in the woods, though here and there a scarred hillside, slowly being eaten up again by the forest, shows all there is left of some man's efforts at making a home for himself. These things Bush showed me and told me about as he took me down to his little creek. He told me where I would see the trout, and I found his statement correct. I had visible proof of the efficacy of State stocking. I saw a dozen trout in my fishing that afternoon which would have weighed over 2lbs. each, and a few which I thought heavier than that. Of trout 10in. long there was abundance.

But there was another lesson in the day on Bush's Creek. The trout were there, and it was generally known that they were there, but the fact that they remained there depended entirely on the fact of their inaccessibility. I fished three miles of that stream, and never saw a worse stretch of water in my life. The cedar windfalls made a protection which but few anglers would care to break through at all, and fewer yet would care to try it a second time. It was not sport in any sense of the word. It was impossible to cast a fly or to use a fly in any way. At times one could not get a hook down to the water at all, so deep was the tangle of interlocked and bristling fallen trees that covered it like a floor. My fly-rod was in constant danger, and my clothing was soon torn. It was impossible to wade and impossible to walk the bank. It was a case of climb and scramble for three miles. There were trout there, to be sure, but only once in a while could one get at them decently, and never at all by means of the fly. No wonder the stream was not fished out, and no wonder there was no path along its bank! Now I had abundance of such fishing as this in my life before, and when I feel that I must have trout to eat I will endure it, albeit I cannot call it sport. But when I came out at the cross road, three miles above the point where I had gone in, and when I stood, black with the grime from burned logs and ragged from the war with cedar stubs, I vowed at the time that never again would I go after trout in such a place. And I registered my belief to myself, there alone in the forest, that I did not believe there was a stream out of doors in Wisconsin or Michigan where a man could wade like a gentleman and catch a basket of trout on the fly. My experience, a somewhat varied one, had once again taught me that where there were trout there was no wading, and where there was wading there were no longer any trout.

Then I walked six miles home and kicked myself every step. And when I got to camp there was an invitation from Mr. Geo. L. Alexander to come for a day on the stream of the Fontinalis Club. I took counsel of my own experience that day, and thought there might be reasons for this club. But still I was skeptical and said to myself, "If there is ever, anywhere, anyhow, upon the face of this green earth, in this whole State or anywhere else, a stream where I can really get in and wade and really take a basket of trout on the fly, I shall, the moment I see the truth thereof, establish a pæan of thanksgiving which shall be heard throughout the land."

This is the pæan. There is such a place. There are gentlemen so fortunate as to own it. It is better than I thought, and better than any one can know who has not seen it for himself. Best of all, it is not going to be ruined. It is going to be kept just as it is. There will be no willow poles in the deep corners where the market fishers threw them. There will be no tin cans of defunct worms along the banks. The trout will not all be fingerlings. And yet this will be in a locality altogether possible and pleasant. So much for the idea of a trout preserve in a region where fifty of the handsomest trout streams on earth bubble along emptily, telling you of what they were ten years ago, and of what they might be to-day were it not for the belief of the public that it can both eat and keep its cake.

In the excellence of the sport afforded, in the wild character of its surroundings, and in the thoroughly sportsmanlike though comfortable conditions under which the sport may be pursued, I imagine that the like of the Fontinalis Trout Club does not exist anywhere in the country. It is a stream of the wilderness, untouched since the hand of the lumberman left it at least, and showing no trace of any past or possible attempt at civilization. The stream is not "improved" or changed in any way. The natural cover has been left almost as it was originally. There is no artificial extension of the stream at all, and not the least effort to change its natural conditions. Here, let us thankfully remember, are at least five miles of the wilderness where the willow rod and the tin can and the side path shall not tell of glories gone by. The glories are here, just as they were when the cruiser first came. They are to remain here. No man is allowed to use anything but the artificial fly as a lure, and unwritten law places a limit on his take even then. This is the example of one preserved stream as against that of the fifty open ones. Against such an example the local public of course rebels, wishing always to break in and devour the cake, witting not that the wise self-restraint of the members of such clubs is only a fair and rational purchase price against the lack of restraint practiced by the general public. Ever since Biblical times the wise virgins who had oil to burn have had rather the best of the argument over the foolish ones who had none. That is the status of the game preserve question in America in a nutshell, one must fear. Not all men are wise, but some are, and some will fall back on the common law which governed individual action long before statute law was dreamed of. It will be the law of trespass against the fish and game laws in this country, before another generation has passed by, one must fear, though there will still be heard the cry, "Give us of your oil, for we have none."

My companion guests, Mr. O. A. Woodruff and Mr. W. H. Yardley, and myself drove in to the Fontinalis Club house from the railroad station of Vanderbilt, a little pine woods town which lies well up toward the top of the lower peninsula, something like forty or fifty miles south of Mackinaw City, I should guess. The road was sandy, but lay part of the time through a very pleasant bit of pine and maple forest, so that the five miles passed very quickly. At the end of our way there came into view a piece of clearing in the big woods, and here we saw the club house, a log house, to be sure, but such a log house as one sees nowadays, designed by an architect and worked out handsomely in one of the best building materials. This log house would serve well for a fashionable suburban dwelling, with its gables, its broad veranda and its generally handsome and substantial look. About this main building were grouped others, a cottage for the ladies, buildings for the keeper and family, a spacious barn, etc., in all quite a little settlement of a strangely finished and sophisticated look for that wild and unkempt country.

But it was the interior of the club house that most impressed one. Of course there was the usual dining hall, and upstairs, at one side of the great court which extended from floor to roof, there were sleeping chambers. But the main room of the lodge, a vast one, sided and ceiled and raftered with native pine, was a very dream of a place, a room such as one always thinks of when building air castles, a roofing in of the outdoor air, with sweetness, light, warmth, comfort, rest in every suggestion. The fireplace was a noble one, and the very flames in the corners of it winked at one with subtle hints of heroic stories told within its hearing. There were pictures of the right sort upon the wall—pictures, sometimes so difficult, but here so well chosen. There were big swinging hammocks dangerous to a fisherman's conscience, and indeed everything one could suggest to make the place an ideal gathering place for sportsmen. It was that combination of elegance and naturalness which is the expression to-day of the best of modern sportsmanship. My friends and myself, left alone for a moment, could not avoid comment upon the charm of the place, nor congratulations later to the members belonging to this lucky organization. Of all the halls, gun rooms and assembly places I have seen among the sportsmen's club houses in the country, I do not know of one where one would more willingly throw himself down and say: "This is the place, the very place!" The walls bore evidence of the occupancy, with their decorations of rods, baskets and the like, and the tracings of record trout taken on the Fontinalis stream or captured by traveling members on other waters. There were pictures of the great trout of the Nipigon and of salmon of the Restigouche (the latter taken on a very successful trip by Mr. Russel), and there were outlines of big trout killed on the home stream by members, notably one of 30oz. and one of 32oz., if memory serves, fish taken by Mr. Alexander and Dr. Longyear, showing what the sport can be there at the home of the club. It was all very fit and very sportsmanlike and very pleasant.

At the hour when we arrived we were not expected, owing to delay of our train, and none of the members were at the club house, all being out upon the stream improving the opportunity of a most excellent cloudy morning for fly-fishing. There were present at the club at the time the two Misses Russel, of Detroit; Mr. George L. Alexander, of Grayling, Mich.; Mr. Wm. K. Anderson, of Detroit, and his friend, Mr. Dwight; Mr. C. Valentine, of Chicago, and Mr. Kemp, of Gaylord, Mich., who was invited in with our party. At lunch time these all came in—for the fishing there never need take one far enough away to miss luncheon if he cares to come in—and then we met everybody. It was pleasant to learn that the Misses Russel are very ardent and successful trout fishers. When they appeared it was in regular trouting garb, with the waders which the fishing there makes necessary, and they were enjoying in a rational and pleasant fashion not only the happiness of being out of doors in the freedom of the pine country, but also the sport of fishing for trout and catching them, too, with the fly. There are not very many places in the country where this is a possibility. The ladies showed us their catch of the morning with just pride, and told us of larger fish which had escaped. Evidently the atmosphere of Fontinalis was of the proper sort. It is impossible to abide there without imbibing the first and highest principles of angling.

Mr. Alexander welcomed us upon his return from the stream, and soon everybody was crowding about him and peeping into his basket, for he is the acknowledged expert of the club, and usually gets trout if any one does. He smilingly emptied his basket, and to my surprise and delight I saw that he had actually thirty trout, nearly a basket full, some running up to ¾lb. in weight. They were bright and beautiful fish, every one of them killed honorably, upon the fly, as all trout should be, and certainly the sight of them was enough to make an angler's heart jump. These were real trout, actual trout, taken upon the fly, and upon a stream where a man could wade and cast a fly! Then I wondered if dreams ever had come true before.

Mr. Alexander is a born fly-fisherman and a tireless lover of the brook trout. He has a rare skill with the rod, as we had occasion to witness later, and he ties his own flies and makes his own pattern at times, as we also learned. (The best fly on the stream we found to be the one called the "Alexander," a white-winged fly with red body, devised and much used by himself.) But it is not as a fly-fisher that Mr. Alexander most excels, if he would allow us to say so, but as an entertaining and obliging host. A more unselfish man never lived, and his is always the task of taking care of everybody, and seeing that everybody has a better place to fish and a better time all around than he has himself. I don't know what title should be given the man who carries this responsibility, but the office is an unusual one, and one which should be maintained in every body of sportsmen in the land. The only objection or difficulty I can see to this is that there is but one George L. Alexander, and he is already located. I have read a good deal about the true sportsman, and have heard several speeches about him and have been on his trail, but if I ever actually saw him anywhere, it was right here at Fontinalis. This may be said partly at the charge of my exuberance at finally finding that long sought place where one could wade and catch trout on the fly; but there are a great many others who say the same thing, so I presume Mr. Alexander will have to blush and stand it.

When we got to the stream for our afternoon's fishing, I found it an ideal trouting water. The little river, which has the pleasant name of Fontinalis, is a branch of the Sturgeon River, and is preserved for four or five miles in all by the Fontinalis Club. It averages about 50ft. in width, I should think, and is rarely too deep to wade with high wading trousers, though some of the holes run as deep as 5ft. or so in places. The bottom is sandy or gravelly rather than rocky, and the stream breaks up into riffs, shallows and islands at places. There are three dams upon the club property, and above and below these the big trout love to lurk. Some of the shore is lined with windfall at the middle dam, and a boat is used there, from which to my surprise two of the party, Mr. Alexander and Mr. Woodruff, caught a nice basket of fish. Along most of the fishing water it is possible to walk along the shore, and part of the stream runs through meadow, where it is possible to walk along and cast fly and catch trout without wading. For the most part the best fishing is had by wading, and as in parts of the stream the bottom is a trifle soft, the most killing way of fishing is by casting up stream, as in wading down stream the roily water disturbs the fish if one is not very careful.

But the trout! Never, even in the wildest mountain streams, have I ever seen so many trout. If I say the stream swarms with them I shall not exaggerate. By mistake in Mr. Alexander's directions I took the stream a little further up than was intended, and came upon it at a bridge once used by an old logging road. Under this bridge there is a deep hole, and above it the water runs deep for quite a little stretch. When I came up and looked over into the water here my hair fairly curled. A dozen trout, several of which would have gone 1½lbs. each, darted into cover from the white sandy spot over which they had been lying. And in the reach of the river above the bridge the trout were at that instant leaping and feeding by the dozen. It was a pretty sight and a thrilling one. Not for a long, long time had I been so near to some actual trout fishing. I confess I hurried in very unseemly fashion.

I dropped into the stream nearly hip deep along the cut bank above the bridge, and in two minutes was fast to my first trout on the Fontinalis. It happened that a little feeding flurry was going on, and I got half a dozen in a short time, some very handsome ones, but a few less than the established length of 7in. honest measurement required in the club rules, which latter were returned. Each of us had his hand measured before leaving the club house, and each of us had a certain crease marked on his wrist, which was just 7in. from the tips of his fingers, so there was no trouble about the proper measurements. It was not long before I saw the wisdom of the restrictions established by the club, which constitute a practical protection to the fish of the stream. In a short time my flurry of rising trout had subsided, and I cast for some time in vain. It needed a long and light line to take fish, for even on a stream so little fished as this the trout soon learn a thing or two. What one could do with bait upon such a stream is a different thing, but with the artificial fly alone and a standard of 7in. actual length it takes a good stream and good fishing nowadays to get a basket of trout. Of course we hear of a great many streams where this is possible, but we do not often actually see them. If the rules of the 7in. standard and the artificial fly could be enforced as statutory law we should see good fishing in open streams to-day that were long ago depleted by the usual methods. I saw hundreds and hundreds of trout, but some of them were feeding and some were not, and some were a little too small, and some did not like the sort of fly I had, and some preferred the abundant live insects to my fly, and some I frightened by bad casting at a critical time, and some saw me and ran away, so that I found at the time I left the stream I had less than a dozen trout in my basket. But they were trout, honorable trout, killed on a fly in a stream which permitted a long cast and a chance to play a fish. The next day I killed thirty trout before it was time to leave for the train, the most of these upon a crude Alexander fly, which I made by cutting down the wings of a May fly and wrapping the body with red silk. This is the best trout fishing I have ever had east of the Rocky Mountains. Of course I hear a great deal of parties going out and catching a thousand trout and all that sort of thing, but that is not trout fishing. It is no sport to grub trout out with a worm or a piece of fin or a grasshopper, nothing to compare with such angling as that at Fontinalis. To my notion there is no sport with the gun which surpasses quail shooting over good dogs, and no sport with the rod like that of fishing for trout upon a good stream and with the fly. Rare indeed is the opportunity for the latter.

These being the methods of the Fontinalis Club, and such being the natural excellence of their stream, it is an easy guess that they will always have good fishing. The stream is regularly stocked, and as the membership is only twenty-two, not many of whom are ever present at one time, the supply is equal to every demand made upon it. The trout are more abundant now than they ever were in that stream. It will for years yield pleasure to men who know how to enjoy it, and it is a living lesson against the foolish and wasteful ways of the men who fish on streams belonging to the people, and come back boasting of having killed a thousand trout.

There is a great deal of a kind of moss in many reaches of the Fontinalis stream, perhaps of the same sort that makes the Caledonia stream, of New York, and the Castalia stream, of Ohio, so famous, and certainly holding abundance of food for the trout. We found the fish lying under the edges of the moss banks, or in the cuts made by the current, and the best place of all was some deep spot where the white sand of the bottom was exposed. Here there was always the certainty of a strike if one were skillful and careful enough, for each pool of that kind would have a dozen or two of trout lying along the bottom. I sometimes parted the bushes and looked down into such pools, and often saw as many as twenty-five or thirty trout, some very large ones, lying in view in the transparent water. Yet in spite of the numbers of trout in this water it should by no means be supposed that the stream is a "tame" one, or one where it is easy to take a lot of trout. Indeed, it is much harder to take trout there than upon a wild stream which has an equal number of fish; for the latter is sure to be the less fished one. There are good days and bad days at Fontinalis, and even while we were there some of the anglers came in with only a very few trout. Luck is a large factor in trout fishing at Fontinalis as elsewhere. The fish taken there are clean and brilliantly colored, showing health and abundance of natural food.

The largest trout of the stream are of course found in the deepest water, and this is either above or below the dams. The club house is built upon a high bluff directly at the side of the stream, and near here is the lowest of the three dams upon the property, so that there is a lovely and convenient pool for evening fishing right at the door

of the club house. The second of the great pools lies less than a quarter of a mile above and is an admirable water for some big fellows, and it runs some 15ft. in depth. Here Mr. Anderson, standing upon the timbers of the dam on the evening of our visit, hooked and played for nearly a quarter of an hour a trout which he thought must have weighed 4lbs. He was alone and could not get down to the water, which was some 20ft. below him, and though he had his fish nearly dead on top of the water it finally broke away. At the lower dam, upon the same evening, Mr. Alexander hooked a good one or two which broke loose, but landed two that weighed over 1lb. each. The largest fish have been taken at the pools at night upon a light fly, preferably the white miller. It is a common thing to hear heavy fish feeding in this big water at night, but of course it is not the easiest thing in the world to go right out and hook one.

Enough has been said to show in outline the angling possibilities of this fortunate corner of the world, and I consider it lucky to have been able to tell FOREST AND STREAM readers something about this model angling organization. It shows the possibilities of these lovely Michigan streams, than which no better trout waters ever rippled out of doors. It is no wonder that the Detroit gentlemen are willing to go so far to get to Fontinalis. As we rode away, reluctantly, to be sure, and looked back upon the waving flag which bore the pleasant word "Fontinalis" high above the peak of the hospitable roof, one could not avoid reflecting upon the considerableness and the permanency of the hold which the sports of the rod and gun have obtained among the best citizenship of the land, a hold to be enlarged and strengthened more and more as the years go by, and in no way better than by such bodies of thoughtful and energetic men as those who thus went far into the heart of the Michigan pine forests to save a bit of nature for themselves and friends.

Fontinalis Club is young, not yet four years old, and seems to have known no troubles of any kind in its history. It is surely destined to a long and happy history.

The Tame Gull of Big Moose.

BOSTON, Sept. 1.—*Editor Forest and Stream:* I am pleased to send you a letter for publication received to-day from Rev. W. H. Allbright, D.D., of Boston, who has spent August at club Camp Big Moose, Adirondacks:

"Aug. 31 I was very glad to get the copy of FOREST AND STREAM you forwarded to me to Big Moose. Our party of four and guide have been on several expeditions of four and five days' length from camp.

"Fishing in Big Moose and thereabouts is not good in August. Some good catches of salmon trout were made early in the month. A 10-pounder and several smaller fish were taken by parties staying at camp. We took some speckled trout weighing from ½lb. to 1¾lbs. The trout are here yet, but they are not disposed to be caught. We have seen plenty of game. Partridges are numerous. We have had fine views of otter and mink. Two red foxes came in our way, and deer to the number of about thirty. I have shot one and a half. The first I got the second day of the open season. The second fell three days ago. Two of us shot from the boat instantaneously. The deer dropped with a bullet through its neck, breaking the bone. Which one of the two sharpshooters killed it cannot be determined. As the law allows but two to each person, we shall have to go together and shoot together at our next deer. Our camp has had three.

"I must close with a reference to Bill Dart's gull. Bill is the popular proprietor of the hotel on Second Lake. This particular gull he caught when young and has tamed for the benefit of his guests. Bill, it is said, plays tricks with this creature. It has an unlimited capacity for big suckers. It will eat two large ones at a meal, swallowing them down alive. Bill feeds it on the sly, then brings the gull out to perform for the company. He talks to the gull, while the suckers keep up a lively scrimmage inside. Bill says, 'Now, my hearty, show us a trick or two.' Bill watches to see which side the suckers are kicking, then says, 'Fall over on your right side.' Over goes the gull, and the company applaud at the intelligence and drollery of Bill's bird. Then he tells it to 'shake its sides in laughter,' and when the suckers kick inside the gull the suckers outside squeal over the unique performance of Bill Dart's pet gull.

"The woods are full of people this year, and health and pleasure abound. Thank God for the woods and waters."

J. P. W.

"Popscheny."

STOTTVILLE, N. Y., Sept. 4.—*Editor Forest and Stream:* In Fred Mather's "Men I Have Fished With," No. 10, Mr. Mather speaks of the "Popskinny," and says that he expects to be called down on the spelling of this name. On an old English map which I have, entitled "A Topographical Map of Hudson's River," etc., and which map was published according to Act of Parliament Oct. 1, 1776, this name is spelled "Popscheny," and applied to a group of islands at the Overslaugh. The Normanskill Creek, also mentioned by Mr. Mather in the above article, is spelled on this map "Normand Kill." I bought this map in a second-hand bookstore some time ago, and in tracing its origin found that it had been taken from a copy of the "North American Atlas," published in London in 1777. A perfect copy of this atlas I found in the Lenox Library, and the map referred to is well worth looking over. The names Mr. Mather uses are evidently of Low Dutch origin.

A. C. STOTT.

Large New Jersey Rock Bass.

SALEM, N. J., Aug. 31.—Elisha Davis and Harry Bramble went fishing in "Fishing Creek" (a small tributary of the Delaware River) last Saturday, and among their catch numbered four rock bass that weighed 25lbs., divided as follows: 4½, 5, 7 and 8½lbs. each. Your correspondent saw the two largest, and they were beauties. They were caught with rod and reel, with soft shelled crab for bait. Quite a number of large rock have been caught in our streams here this season, but this caps the climax.

A JERSEY SANDBURR.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 14 to 17.—Montreal Kennel Association's bench show, Montreal. G. Lanigan, Sec'y.

Sept. 15-18.—Orange County bench show, Newburgh, N. Y. Robt. Johnston, Sec'y.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show, Mineola L. I. J. Mortimer, Manager, Hempstead, L. I.

Sept. 23 to 26.—Stockton Fair Association's bench show, Stockton, Cal. D. J. Sinclair, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbury, Conn. G. M. Rundle, Sec'y.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detroit, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11 —Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y, Roxbury, Mass.

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 2.—Union Field Trial Club's inaugural trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Nov. 10 —Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials, Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 22.—Cheyenne Valley Coursing Club's meeting, Sheldon, S. D, Dr. J. P. Aylen, Pres.

Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W. Haragan, Sec'y.

Oct. 6.—Mitchell Coursing Club's meeting, Mitchell, S. D, H. G. Nichols, Sec'y.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington, Kan. C. A. Robinson, Sec'y.

Oct. 13.—American Coursing Club's annual meeting, Huron, S. D F. B. Coyne, Sec'y.

1897.

Jan. —.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

MANITOBA FIELD TRIALS CLUB'S TRIALS.

THE first day of the trials, Tuesday, Sept. 1, was favorable for work, a stiff wind from the southeast, a cloudy day and a cool temperature offering fair conditions for competition. A rainstorm set in in the afternoon. The attendance was light as compared to that of former years, and the number of starters in the different events also had decreased.

Mr. P. H. Bryson, of St. Louis, Mo., judged throughout, and his awards were commendably correct. Birds were in sufficient numbers to test the dogs' merits. Only three handlers from the States were present, Messrs. Rose, Nesbitt and Fay. After an absence of some years from field trial competition, Mr. Charles Barker again joined the knights of the whip and whistle, and showed that he had lost none of his old-time skill and address in handling, and was still able to cope with the best. The latter handled his dogs with noticeable fairness.

There were present Mr. John Wootton, honorary secretary-treasurer; Messrs. W. F. Ellis and E. McKenney, Manitou, Man.; Major J. M. Taylor, New York; E. C. Johnson, Chicago; F. G. Simpson and G. B. Borradaile, Winnipeg.

On the evening of Sept. 1 the club held a meeting. The resignation of Mr. C. C. Chipman as patron was accepted with regret. Following is the list of officers elected: Patron, Lieut.-Gov. Patterson; President, F. G. Simpson, Winnipeg; First Vice-President, T. T. Ashford, Birmingham, Ala.; Second Vice-President, G. B. Borradaile, Winnipeg; Secretary-Treasurer, John Wootton; Managing Committee—W. C. Lee, W. F. Ellis, Geo. Soames. The trials of 1897 to be held at Morris, Man., beginning on the first Monday in September.

The Derby.

This stake had eight starters. There was an absence of good breaking in the performance of some of the competitors, conspicuously among which were those of Mr. McKenney and one owned by Mr. Wootton.

The Derby Stake was for setters and pointers whelped on or after Jan. 1, 1895. First, $100; second, $75; third, $50; fourth, $25. Forfeit, $5; $10 additional to start.

They were drawn to run as follows:

E. McKenney's b. b. setter bitch Maid of the Morn (Val Lit—Cam Sing), owner, handler, with Hobart Ames's b., w. and t. setter bitch Glenn (Blue Ridge Mark—Lou R.), D. E. Rose, handler.

H. H. Maybury's l. and w. pointer bitch Alabama Girl (Von Arrow—Lady Mull), D. E. Rose, handler, with E. McKenney's b. and w. setter dog Barrister (Val Lit—Cam Sing), owner, handler.

S. P. Jones's b., w. and t. dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler, with John Wootton's setter dog Ben Bondhu (Dick Bondhu II.—Maud á Rose), owner, handler.

Hobart Ames's b., w. and t. bitch Christina (Blue Ridge Mark—Lou R.), with Del Monte Kennels' l. and w. pointer dog Tony Works (Tick Boy—Lulu K.), C. Barker, handler.

GLENN AND MAID OF THE MORN were started at 7:57 a short distance from town. Maid opened the work on chickens by flushing and chasing two of them, after which she flushed and chased a remaining bird. Glenn showed an inclination to join in the fun, but was obedient to command. Sent on, both soon stopped to a point, Maid going on to a flush and a chase, Glenn also behaving badly. Rose was unfortunate in flushing some birds which Glenn was working upon close by him. Next she pointed, then starting on a bird flushed down wind of her, after which she made two good points. Maid again flushed and chased. Up at 8:33. Maid was the better ranger, and worked her ground with better judgment. She was badly handled, which aggravated her unsteadiness. She had good natural abilities which were not properly trained. Glenn was working under disadvantages when against such an unsteady competitor, as are all dogs under such circumstances, and her work was better than could be expected amid so much that was distracting.

ALABAMA GIRL AND BARRISTER began at 8:35, and were ordered up at 9:05. Barrister opened the work with a stylish point, which was followed up with a flush and chase, and after order was again restored he repeated the error, following it with a third one of like kind, Alabama Girl yielding for a few moments to the temptation of the bad example. Sent on, Alabama Girl made a good point, and sent on again she flushed excusably. Their speed and range were good, and they beat out their ground with fair judgment.

HURSTBOURNE ZIP AND BEN BONDHU were cast off at 9:18. Both pointed; Ben had chickens; Zip, a lark. Sent on, Zip pointed on the footscent where the chickens had flushed. The birds were followed, and Zip was steadying to point as a bird flushed. Ben made a flush and a chase. Zip made two points; nothing found. Ben next found some of the scattered birds and flushed them and chased, his pleasure being augmented by the flushing of another bevy in his chase, whereupon he got beyond control entirely for awhile. Zip made two good points in the meantime. Though both worked well as to range and speed, Zip was the better and had also the better judgment, his superiority being particularly noticeable toward the end of the heat. Ben showed a disposition to potter awhile sometimes, and he was very erratic in his work; and his bad chasing probably ended all his chances in the competition. Up at 10:25.

CHRISTINA AND TONY WORKS began at 10:37. There was some uncertainty as to which had the first point, though there was no special merit in it. Christina made two points, one of which was at the moment the bird flushed. Next, Tony pointed; nothing found. Both dogs roaded and pointed; a single bird flushed wild ahead. Christina made a flush. Her range was limited, but she was diligent and speedy. Tony had fair speed and was obedient.

Second Round.

GLENN AND ALABAMA GIRL began the afternoon work at 3:10. Girl was just steadying to a point as the bird flushed and she made the bad error of chasing, though not a bad chase. Glenn next made a point on several birds. Up at 3:32. Girl was the better worker, and she was also the better in speed and range.

HURSTBOURNE ZIP AND TONY WORKS were started but a short time when both pointed, Zip the first to secure the point. The dogs behaved well to flush. Sent on, Zip made a good point; Tony, called up to back, pressed in and flushed the covey. The birds were followed. Zip pointed, Tony backed; two birds were flushed to the point. When they were ordered up at 4:26, Zip was easily the better performer. Rain began to fall in the latter part of the heat.

CHRISTINA had a bye and she began at 4:29. No birds could be found to her first point, though birds were thought to have been there recently; sent on, a bird flushed ahead of her and she lost several other favorable opportunities to point birds which were lying close by. Afterward she redeemed her performance by some good points, but as rain set in steadily the trials were ended for the day.

Wednesday.

A cloudy morning with a breeze of bracing coolness, which soon gave place to a clear sky and a stiff wind, which increased to a wind so strong as to add to the difficult of the work by midday and also seemed to make some of the chickens wilder.

Third Round.

HURSTBOURNE ZIP AND CHRISTINA began at 8:15, and they made an excellent heat, displaying superior range, speed and judgment for puppies, and they had the best of the competition in the stake. Zip found a bevy on which Christina secured a point independently as she came up. Zip showed his superiority, Christina second.

The dogs were placed as follows: First, Hurstbourne Zip; second, Christina; third, divided between Alabama Girl and Tony Works.

It escaped Mr. Bryson's attention that there was a fourth prize, but on learning of it he let first and second prizes stand as awarded, but left the other for later action. Later Glenn was awarded fourth.

The All-Age Stake.

There were twelve starters drawn to run in the following order:

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone IV.— ———), N. B. Nesbitt, handler, with E. McKenney's b. and w. setter dog Val Lit (Orlando—Lady Lit), owner, handler.

John Wootton's b. and w. setter bitch Bonnie Lit (Orlando—Lady Lit), owner, handler, with N. T. DePauw's l. and w. pointer bitch Sister Sue (Jingo—Rooney Croxteth), N. B. Nesbitt, handler.

Del Monte Kennels' b., w. and t. setter dog Sam T. (Luke Roy—Bettie B.), Charles Barker, handler, with W. F. Ellis's b. and w. setter dog Columbus (Duke of Manitoba—Hickory Link), owner, handler.

G. B. Borradaile's b., w. and t. setter bitch Dodo III. (Orlando—Atalanta), absent, with D. E. Rose's (agt.) setter Greenway (Columbus—Maud á Rose), agt., handler.

D. E. Rose's (agt.) b. and w. setter dog Domino, agt., handler, with Paul H. Gotzian's o. and w. setter dog Lawrence (——— — ———).

T. T. Ashford's l. and w. pointer dog Von Gull (Kent Elgin—Fannie Croxteth), D. E. Rose, handler, with A. L. Shonfield's b. and w. dog Noble Leo (Count Leo—Minnie T.), N. B. Nesbitt, handler.

The All-Age Stake was for setters and pointers which had not won first place at any recognized field trials in any previous year. First $125, second $75, third $50 Five dollars forfeit, $10 additional for starters.

The Amateur Stake did not fill.

First Round.

GLEAM'S RUTH AND VAL LIT were cast off at 8:46. Val Lit flushed a chicken on stubble and chased it earnestly.

Ruth made a good point on a bevy. Val made a second chase, after which he got out of control entirely and so remained for a long while, evading all efforts to catch him. Ruth made a flush and a point and was ordered up at 9:16. She worked prettily and was obedient.

SISTER SUE AND BONNIE LIT were worked toward some marked birds, Lit making a flush which she should have avoided, as the chances were largely in her favor for a good point. After a long search Lit dropped in time to save herself from a flush on a chicken which flushed. Sue flushed an outlying bird which flushed the rest of the bevy. Lit made a flush down wind. Up at 10:25.

SAM T. AND COLUMBUS were started at 10:26, running over an hour. Columbus made a point on birds, and several other points were made to which nothing was found. They had a difficult part of the day to work in. Columbus had the better pace and range. Sam did not stay out at his work and was not spirited in it.

DODO III. AND GREENWAY were to compete next, but the former being absent, Greenway was run alone. He was started at 3:26 and ran till 3:53. His speed was fair and well maintained, though he showed a disposition to potter on footscent. He pointed a bevy nicely on stubble and was steady to shot. He next did some inaccurate work on a bevy and made some uncertain points on footscent, his work on birds being good in part and bad in the rest. He had medium range and beat out his ground by quartering it.

DOMINO AND LAWRENCE were cast off at 3:55. Domino pointed a single and Lawrence backed stanchly, and on the scattered birds this was repeated. Both next pointed scattered birds; and sent on Lawrence pointed a single on stubble and Domino backed. Domino pointed a single; then both did some slobbery work on the young birds scattered about, the dogs being pressed too hard by their over-eager handlers. Each dog flushed a single. In the latter part of the heat Domino broke away from control and ranged far away, giving no heed to his handler. Lawrence's range was narrow and his speed slow. His bird work was fairly good. Up at 4:25.

VON GULL AND NOBLE LEO began at 4:30. Both ranged wide and fast, though it was easily apparent that Von Gull was using his nose constantly and beating out his ground skillfully, neither of which Leo was doing, though going prettily and with speed. Von made a point on a bevy, and two points on singles, one of which was shared by Leo. Both pointed some remaining birds, there being no special merit in that, as the birds were marked and the work easy. Von made two good points on singles, and both going down wind flushed, then pointed remaining birds, after which Von pointed a bevy. Up at 5:05. Von Gull's speed, style, range, good nose and sound judgment, and his excellent manner of doing his point work, indicated a first-class chicken dog, one in the first flight of the great chicken dogs of America, if his work is sustained as well in his later trial. Leo's way of going was pretty and his range wide, but he had little to show for his many pointing opportunities. This heat ended the day's work. Up at 5:05.

Thursday.

The morning opened most delightfully, a sharp frost of the night before still filling the air with a bracing coolness. Birds were found in fair numbers when the dogs were worked near the stubbles.

GLEAM'S RUTH—BONNIE LIT.—They were started at 8:05. Lit made two flushes. Next pointed and roaded a long distance, Lit roading about the same distance in the opposite direction; nothing found. Ruth pointed at the same time a bird flushed; then held point, and Nesbitt flushed a bird to her point. Next Ruth pointed a bird up wind of it, and Lit made a false point on stubble. Next she flushed a bird, then pointed two birds and Lit backed. Up at 8:39. Ruth had the advantage in every respect.

SISTER SUE AND COLUMBUS were cast off at 8:42. Sue had a decided advantage in speed and range, and judgment in working out her ground; and also her work was better on birds, though she did one piece of very ragged work among scattered birds, flushing right and left under good conditions for pointing. Columbus flushed a single. Sue roaded on a single, which was flushed by her handler. Next she pointed a single nicely, and Columbus crossing in ahead of her flushed it. Sent on, he flushed another shortly, then pointed and a single was flushed to the point. Sue roaded on a bird which flushed wild. Columbus pointed a bird very close on it. Then Sue made several bad flushes in succession. Sue had the better of the heat, but had ruined her chances by flushing. Up at 9:14.

SAM T. AND GREENWAY were cast off at 9:19. A long search was made in the open prairie without finding; then a turn was made back to the wheat stubbles, where birds were in fair numbers. Sam pointed, roaded about 50yds. and pointed several birds. Up at 10:05. Sam came in to his handler at first, but was ranging wide at the finish. Greenway was also ranging wide, much better than in his heat of the previous day.

VON GULL was run alone 20m., beginning at 10:07. He pointed a bird nicely and his ranging was well sustained.

SAM T. AND GLEAM'S RUTH were called up to run and started at 10:55, the winner to run the final with Von Gull. Sam flushed a bevy, then false pointed. Both made a point on a bevy, Ruth the first to make the point. Sam pointed two remaining birds. Ruth pointed a single and Sam backed, and Sam did some awkward work on the remaining birds. Sam made a flush and Ruth a point. Both ranged well at good speed, Sam the better, though his bird work was very faulty. Up at 11:12.

VON GULL AND GLEAM'S RUTH were called up to run the final at 11:21. They ran 9m. Von pointed, Ruth backed; Von lost scent and roaded away from the bird up wind, casting then beautifully about with a high nose to locate it. It was flushed afterward by wagons. Next he roaded a bird to a flush. Next down wind he flushed a single excusably. He made an excellently well sustained showing and was far away the best dog in the stake.

The judges then awarded first to Von Gull, second to Gleam's Ruth, third to Sam T.

Von Gull exhibited a degree of merit but little if any short of first class. He carried a high nose and displayed a delicate nose and rare judgment. He scoured for the body scent and was very accurate in his point work. The work of the others was inferior in comparison.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

A SHORT SQUIRREL HUNT.

NEW YORK, Sept. 5.—*Editor Forest and Stream:* The opening of the squirrel season always makes me nervous, and I cannot do justice to my business till I have gone out and killed a few. The squirrel season opened in New Jersey Sept. 1, and part of New Jersey lies in plain sight of the office buildings of lower New York. That part is not very inviting, to be sure, to a squirrel hunter or anybody else; but another part, a little higher up the Hudson, is very different. It was the knowledge of the existence of this other part that made the docks and ferries of Jersey City and Communipaw suggestive as I looked over toward them, and this in the natural course of events was responsible for my condition of mind.

So along about 4 o'clock on Sept. 1 I could stand it no longer, and, breaking away from the restraints of business, I made my way uptown, and at 4.45 reached West 130th street ferry. I had my bicycle with me, and in its case, strapped to the wheel, was a .22caliber Marlin repeater.

It is a simple matter to carry a gun on a bicycle, especially if carried in a case. To attach my rifle to the wheel is only a matter of snapping a single hook, which I have fastened to the end of the shoulder strap of the canvas gun case. This hook is that furnished by the Winchester Company with rifle slings. It works on a swivel and is made of spring steel, so that once snapped it will not become undone. In attaching it to the gun case I took out the two rivets fastening the shoulder strap to the ring at the rear end of the case and riveted on the hook in its place. Then, when I wanted to put the gun on the bicycle, I could carry the shoulder strap around the lamp bracket, which is attached to the handle bar post, and back around the rear part of the saddle post, and then snap the hook into the ring at the butt of the gun case. In that way the gun is carried high enough not to interfere with pedaling. It can be drawn from the case very easily, or case and gun can be taken from the bicycle in a second.

I rode about six miles north from the ferry before I came to a spot that suited me. Then I turned aside from the main road into an old wood road that ran west, crossed a swamp, and mounted a ridge that was wooded with a handsome growth of large forest trees, in which oak and chestnut predominated.

As I advanced things became more and more suggestive of squirrels. In one of the main forks of a great branching oak I could see a nest, while near by were several old gnarled hollow trees that would furnish the grays a chance of escape when hard pressed. Circling around to the left was the swamp, and just where the land fell away were several shaggy hemlocks, offering another safe refuge for squirrels.

I paused, resting on my bicycle, and scanned the neighboring tree tops for some view of the nimble denizens of the place. For some minutes there was no evidence of life in that corner of the woods, except for the mosquitoes, which were of the usual Jersey breed and thoroughly aggressive. Then off to my right I heard a crash as a squirrel sprang to a light bough that gave way with his weight, and, turning my eyes in that direction, I made out a streak of gray running down one of the main branches of an oak 70yds. away. The squirrel was coming toward the point where I stood; so I drew the rifle from its case, worked a long rifle cartridge through the action into the barrel, and raised the folding Lyman sight. But the squirrel had no intention of coming nearer. He had found an abundant supply of acorns in the tree where he now was, and seemed fully satisfied to remain in it till dark.

Meanwhile the mosquitoes increased in numbers, and the competition for the tenderer parts of my anatomy was unusually brisk. Accordingly I resolved on carrying the war into Egypt, and, leaning my bicycle up against a convenient tree, I advanced toward the tree where I had last seen the squirrel, keeping my eyes peeled for any motion on his part. The leaves on the ground were dry, and he had heard the first step in advance I made and hidden. I walked around the tree, which was not one the squirrel would have selected for hiding if he had had time, and presently became convinced that a protuberance on a limb pretty near the top of the tree was not the kind that naturally grow on oak trees; so I selected a position where I could rake this particular branch, and where no intervening obstacle would deflect the bullet, and fired. Two or three pieces of bark came sailing down, and a second later the squirrel followed, falling with a thud at the base of the tree. He had been hanging head downward, for the bullet had gone in one eye and ranged the whole length of his body, coming out on the under side near his tail.

I looked at my watch and found that it was just 6 o'clock, and I took some credit to myself for having killed a squirrel an hour and a quarter after leaving New York's busy streets.

Holding the gray in one hand and also the handle bars of my bicycle, and with the rifle in the other, I set out again in quest of more game. Crossing a swampy place, I came to another ridge wooded very similarly to the first. Here I left my bicycle and advanced a short distance more quietly than was possible when pushing the wheel.

Down toward the brilliant glow of the setting sun, which had now gone below the horizon, I saw another gray. He was moving through the trees a long way off, but gradually he drew closer. Ten minutes later he was almost within range; but it was fast growing dark, and when at 40yds. I tried for a sight on the squirrel as he moved through the tree tops he was so in shade that I could not catch him.

After crossing in front of me at about that distance I lost sight of him, and a minute's wait convinced me that he had turned in for the night.

Going over to the place where I had last seen him, I discovered a nest, and feeling sure that he was in it, I sent up several shots through its outer edges as a gentle hint that I would like to see him. I stopped for a moment owing to a missfire, and just at that instant the squirrel popped out. I had no time to insert a shell without the bullet, and accordingly I pushed down the lever, withdrawing the shell that had missed fire, and then pulled it back again, putting a new cartridge in the barrel with two bullets ahead, which I let drive in the general direction of the squirrel. The squirrel ran a good race through several trees and I fired at him a number of times, but it was too dark to see him among the leafy boughs, and being convinced of the uselessness of it I gave up and let the squirrel finish his journey unmolested.

It was then so dark that I had difficulty in finding my wheel, and only a faint glow indicated the position of the sun. I knew that there was a good road in that direction, whereas the road I had come was newly covered with crushed stone and was bad riding; so I struck out westward. Far away I could hear an engine on the Northern Railroad of New Jersey puffing and rumbling along with a heavy train, and this would have given me my direction if the afterglow had been wanting.

At first the walking was easy. In under the big trees the undergrowth offered no obstacle to my progress. Presently, however, I came out into an old clearing grown up to brush and wild grasses and blackberry bushes, and the traveling became harder. I succeeded, however, in pushing my wheel through this, but in crossing the clearing I lost the old road, which no doubt ended there, and after that new difficulties arose.

In trying to get around a fallen tree I climbed up on a large rock, and, jumping down the other side, found myself in a jungle of scrub oaks higher than my head. Through these I had to carry the bicycle, as it was impossible any other way to force it through the tangled growth. I made my way around the top branches of the fallen tree, and to my great relief found another old road, where travel was comparatively easy. Quarter of a mile further on I reached the main road, which I had never imagined to be so far away, and then all was plain sailing.

Thinking it all over, I am surprised at the ease with which a bicycle can be taken through undergrowth, for I had really gone about as quickly as I should have gone if I had had no wheel.

J. B. B.

Buck vs. Bicycle.

GRANT FROMAN left Albany, Ore., Tuesday morning on his bicycle for Belknap Springs on a fishing expedition. He traveled seventy-three miles that day, stopped at a farm house all night and started early next morning. He was directed wrong and went to Foley Springs, then started again after dinner, and on the way came across a buck lying in the road. He was slipping by on one side when the buck made for him, striking his bicycle and sending it 6 or 8ft., bending the rim and breaking two or three spokes, landing Grant on top of the buck where he sat a long time holding the buck down. When released the buck made off and Grant repaired his wheel and rode on, arriving at Belknap Springs at 5 o'clock in the evening, taking supper with Joe Meyers; at least that is the story the Albany *Democrat* tells.—*Morning Oregonian.*

OCTOBER.

Cor. Atlantic City, mosquito class, Atlantic City.

NOT a few of the would-be experts have amused themselves before the races with that illusory pursuit of "drawing lines" in the effort to prove that the Chicago champion must win. The absurd extreme to which this performance was carried in the present case may be imagined when it is understood that the favorable forecasts of Vencedor's victory were based on the racing of Vreda, an old and long outclassed British 20-rater, of 46ft. l.w.l., and of Priscilla, the 85ft. schooner built in 1885 as a sloop to defend the America's Cup. On this ridiculous foundation it was confidently asserted that Canada had no chance whatever with Vencedor.

WE notice with regret an attempt on the part of various American papers to depreciate the victory of Canada by misleading headings, such phrases as "Actually Beaten, but Won on Time Allowance," "Outsailed, but a Winner," "Won on a Fluke," etc. It is also made to appear that the match was an unfair one from the start, that the cunning and rapacious Canadian had taken an unfair advantage of the innocent and unsuspecting American. As far as the terms of the race are concerned, they are most unsatisfactory and unusual, but this is due to the fact that the construction of the challenger was begun before any overtures for a match were made. Comments on this matter were quite in order four months ago, but they are entirely out of place at this late day as an excuse for defeat. It has been evident for a long time that the match would be an unequal one, that while Canada stood a good chance in moderate weather, she would be greatly overpowered in the event of hard weather.

Without attributing to some of these biased writers any too much knowledge of yacht racing, it is safe to say that even they know that there is nothing discreditable in a smaller yacht receiving time from a larger one, and that the attempt to mislead the average newspaper reader into the belief that the Canadian yacht won by unfair means and fictitious advantages is not due to mere ignorance, but to deliberate dishonesty. Fortunately there are many American papers which have indorsed the opinions of all yachtsmen who are familiar with the two yachts and their crews; that the Canadians were decidedly superior in skill and discipline, and that their competitors can learn from them much that is worth knowing.

WE omitted to state last week that the handsome photos of Canada and Vencedor were by C. E. Bolles, the yacht photographer of Brooklyn, who made a trip to Cleveland specially to catch these yachts, and who incidentally secured photos of a number of other Western yachts; both of the photos are copyrighted by Mr. Bolles.

THE SEAWANHAKA INTERNATIONAL CUP.

CONTRARY to some positive statements recently published, the Seawanhaka C. Y. C. has not selected the 20ft. class in which to challenge next year, nor in fact has it yet taken any action in the matter. While it is most desirable that everything should be arranged before the racing season is over, it has not been possible to get a meeting of the club during August, and such a meeting is necessary to confirm the challenge and to decide on the class. The feeling thus far on the part of yachtsmen within and without the club has been in favor of the 20ft. class, and it is probable that it will finally be selected. Messrs. Cromwell and Sherman, of the race committee, will go this week to Montreal to talk over the matter informally with the Royal St. Lawrence Y. C. and to inspect the club sailing ground on Lake St. Louis, as the possible depth of water is in this case a very important factor.

The question of the selection of the class is an important one; there is much to be said on different points, but all that we have read and heard thus far has failed to satisfy us in either premises or deductions.

The first point in discussing the question of size—one, by the way, that is usually ignored or misstated—is that the yachts built for these races must be of extreme machine type. There is no use of talking about family boats or a sailing-boat for one's "best girl," or even of a wholesome and serviceable small yacht; but we must recognize the racing machine, and that only. If it be decided to impose special restrictions, that is a different matter; in this way it would be possible to produce any type of boat down to the safe and comfortable cruising tub. Thus far, however, the class, as in all other classes for international racing, has been left to the club rule alone, unhampered by special restrictions; the extreme in dimensions, design and construction has had full sway. Under the rule as it stands, all that can be looked for is a racing machine sailed by the most expert sailormen, and almost useless save for these special races. These machines may be built in one of three classes: 15ft., 20ft. and 25ft. racing length.

The 15ft. class is now well known; yachtsmen are perfectly familiar with its merits and defects—especially the latter, of which it has some serious ones. The winning boats of the cup and trial races this year show what may be looked for in the event of the retention of the class for 1897—the evidence of Glencairn, that a peculiar modification of the scow form must replace the old conventional V form, is corroborated by El Heirie; and as between these two, closely equal in many respects, the victory of Glencairn in the cup races demonstrates that in this class and under existing conditions extreme power pays. The class if retained for next year will be composed of boats of 13ft. l.w.l., 300sq. ft. of sail, of a form requiring extreme skill in handling, both to obtain speed and to avoid a capsize; and further, involving a risk of capsize that would be fatal to the winning of a race. In construction the boat will be strong enough to hold together through a racing season and perhaps for subsequent use. Thus far there has been no evidence of weakness in the light construction followed so far as strains are concerned; the great source of weakness lies in the very thin skin and light deck, liable to be holed by a slight mishap.

Those who oppose the 15-footers urge that they are too small for comfort and a useless type, both of which charges are perfectly true. On the other hand, the class is now established and a great deal has been learned which will aid in its further perfection and the elucidation of some most interesting problems, while this information will be of no use if applied to a larger class. The work of this year and last has left the hull problem still unsettled, but it has taught us how to build these little boats and how to rig them with a maximum of strength and a minimum of weight; this leaves the field clear next season for some experiments in dimensions, type and model that must be valuable and instructive. There are now a number of yachts in the class, the best of which, after a season's trial, will still have a fighting chance in the early races of next season, and which will materially strengthen the interest in the racing and increase the value of the results. Important as it is, the knowledge derived from Glencairn and El Heirie is still very incomplete; another year of the class will add to it immensely; but if the class be set aside for a new one, in which this knowledge appears only to a limited extent, all of the experiments must begin anew.

One strong argument for the 15ft. class is the cost, from $450, the cost of Glencairn, to $650.

The main argument we have thus far heard in favor of the 20-footer is to us an exceedingly weak one; it is said, in substance: "Look at Glencairn or El Heirie, the crack 15-footers, cramped and uncomfortable racing machines with big sail plans, capsizeable and useless save for racing, and then look at the 20 footers Eos and Bogie, fast, comfortable, non-capsizeable, with room for four or even five persons, good for both racing and cruising, in short an excellent type of boat." All this is very alluring on the surface, but has absolutely nothing to do with the case. The 20-footers are new and thoroughly modern boats, it is true, only recently launched, and all that their admirers claim for them; but so far as international racing for the Seawanhaka cup goes, they would never have a show after the first new boat had been built. They are both of a type that, in these classes, Glencairn has made obsolete; not only have they too much length and too little sail, but they have not the compressed waterline that is the radical and distinguishing feature of the two crack 15-footers, and without which they cannot win in the 20ft. class.

It is only a waste of time to consider these existing boats in comparison with the existing 15-footers; the true comparison demands that we should assume a 20-footer such as would be built to-day for international racing in summer. That such a boat could not be a fin-keel we are not prepared to say positively, but on the evidence thus far we see little to indicate that the fin would sail with the centerboard. The ratio of crew to displacement is not quite as extreme as in the 15-footers, but it is great enough to warrant the belief that live ballast would pay better than dead. We have very little doubt that the new 20 footers would be closely modeled after Glencairn, quite as useless save for racing, carrying one more hand, it is true, but costing at least double to build and more than double to transport and to race properly, being more difficult to handle in docking, etc., and greatly increasing the incidental expenses of racing. One designer who has been figuring closely on the probable boat for the class tells us that he would go very nearly to 15ft. l.w.l. and 600ft. of sail; in the course of his speculations he took a model at hand of a three-year-old racing sloop of 30ft. over all, 22ft. l.w.l. and 8ft. beam, and started to whittle it down to the waterline of a racing 20-footer, but was compelled to throw it aside, as the deck plan was already too small. Whether it is to be 500, 550 or 600sq. ft. of sail in the proposed class, it is absolutely certain that the existing 20-footers or 19ft. l.w.l. can have no place in it, and that the new boats will have all the disadvantages of the 15-footers, except room in cockpit, and still be as far from the ideal wholesome racing and sailing boat.

So far as actual data go, the 20ft. class involves an entirely new course of experiment. The knowledge of scantling, spars, rigging, etc., derived from the 15-footers will be of comparatively little use; the hull experiment, the most useful one of all, will again be hampered by defects of experiments in scantling and rig; the class, instead of being ready in the middle of May, as the 15ft. will be, will follow the course of all absolutely new classes, the boats being but half completed for the trial races. As to the number of new boats, the added expense will deter many, and yet the class is not large enough to attract that class of wealthy yachtsmen who have created the 21ft. and 30ft. classes. In condemning the 15ft. class, it must not be forgotten that it has brought out more amateur talent in designing and sailing than any class yet known, and it may be expected to do the same next year.

In discussing the 25ft. class we encounter some considerations that do not appear so prominently in the other two, though they are quite important. In the first place, the mention of the 25ft. class in the notice of challenge was a serious mistake, the committee evidently overlooking the provisions of Article IX. of the declaration of trust, under which the holding club, and not the challenger, has the right to name the class for the following season. On this point the Royal St. Lawrence Y. C. has taken a very generous stand, waiving its rights in the matter, which are incontestible, and announcing its readiness to accept a challenge in any class. As far as the 25ft. class is concerned, it is beyond discussion in the present case, for the reason that the waters about Montreal will not admit of a fin keel 25-footer; it would not be possible for the defending club to create a class of such yachts, even centerboard craft, for its trial races, and it would be most unsportsmanlike to force the club to build a few boats solely to defend the cup, and to transfer the races far from its home waters in order to obtain depth to sail them, thus losing all opportunity for the development of a strong class and the working up of a defender. The fin-keel problem in this class in a doubtful one; it is quite likely that the fin would sail on even terms with the centerboard, though we should favor the latter type with a crew of five men.

Much the same considerations apply in the 20ft. class; the fin must be at least recognized; and this the limited depth of water about Montreal makes impracticable; deep water courses may be laid out for a series of special races, but they would not be convenient to the club station; and the construction of a fin-keel fleet, or even the trial of the type, would be impossible, owing to the shoals in the lake, numerous and of great area, the very shoal water at the anchorage, and the absence of facilities for hauling up such deep craft.

On this point a suggestion has already been made by the Royal St. Lawrence Y. C., to the effect that if the S. C Y. C. should decide on the 20ft. class, an arbitrary limit be placed on the sail area and a limit of 6ft. on the extreme draft. This would tend to produce a much better type of boat; but it is a question whether arbitrary limits are desirable in international racing.

The feeling at the present time in the Royal St. Lawrence Y. C. is in favor of the 15ft. class for next year; and we believe that this is the best possible course. Too much has been done in this class to be thrown away, as must be the case to a great extent if the racing is transferred to another, while if it be retained in the class some very interesting experiments will be made. The interest now centers in the class; with the announcement of its selection for next year the work of improving the old boats and designing new ones will go on without interruption, whereas if the attempt be made to create a new class there will be nothing to begin on, there will be no existing boats to lend life to the early racing, and the result will be a fleet of half-completed boats for the trial races. As to the general usefulness of one class over the other, there is, as we have shown, but little to choose; and that, in the matter of cost, is entirely on the side of the 15-footer and against the 20-footer. The man who builds in either class for a safe, handy and comfortable sailing craft will be badly fooled.

CANADA—VENCEDOR.

THE victorious Canada reached Toronto on Aug. 31, the entire city turning out to do honor to her and her crew. The greatest enthusiasm was displayed throughout the city, the day being observed as a holiday. Vencedor returned to Chicago on Sept. 4. The race has awakened a wonderful amount of interest on the lakes and throughout the West, and it is likely to be of permanent benefit to yachting interests on fresh water. It is certain that Canada will not be allowed to rest easy in undisturbed possession of her honors, and the effort to take them from her must, if it is to be successful, be carried out on lines that will tend to unify the various local interests, and to raise materially the standard of yacht racing on the American shores of the lakes. In the matter of systematic building and racing, and of improving the racing rules, the Western yachtsmen are still behind those of Lake Ontario and the coast; there has always prevailed a variety of conflicting rules that have tended to keep the different clubs apart rather than to unite them, and even yet the rules and customs of yachting and yacht racing are far behind those of the salt-water clubs.

The mistake that was made in the planning of Vencedor and the issuing of the first challenge is now generally appreciated, and we hope that the lesson of it will not be lost on lake yachtsmen, as the whole future of their yachting for some time to come depends on their action during the coming winter.

We have no sympathy whatever with the various attempts to mitigate the disappointment of Vencedor's defeat by blaming her owners, her designer or her builders. Messrs. Berriman have shown themselves to be spirited sportsmen and good losers, they made a fair offer in the first place, they accepted terms disadvantageous to themselves in order to get a match, and they have accepted the result in the best possible spirit, making no complaints and immediately issuing a new challenge.

As to the builders, they have shown both spirit and enterprise in their original offer to build the yacht, in the securing of the best possible skill in designing and building, and in the creation of a plant for the work. They have met with many difficulties incident to the inauguration of a new enterprise, and the chances of the yacht have been hurt by delays, but they have done everything in their power to make her a winner.

How well the designer has done his work it is impossible to say under the peculiar conditions of the case; the yacht has never had the sail plan which her dimensions demand, and lacking this no one can judge of the merits of the design. It is both unfair and useless now to condemn and decry those connected with Vencedor merely because she has been defeated. The one great mistake which they made was in attempting to introduce the extreme racing machine of comparatively large size on the Great Lakes.

A very superficial knowledge of lake yachting is enough to show the many serious drawbacks under which it has always existed, and that it can be put on a permanent and successful basis only by the adoption of a wise and liberal policy by all the clubs connected with it. The first essential is unity of action, such as has existed for a dozen years among the clubs, American and Canadian, of Lake Ontario, but not among the lakes as a whole, not even to any extent among the American clubs of Lake Michigan or Lake Erie. After many failures, the latest attempts at union on these two lakes now promise to be successful, and there should be no serious obstacle to-day in the summoning of a convention of representatives of every yacht club from Chicago to Montreal and the adoption of one uniform rule and of certain racing classes. What that rule should be is by no means as difficult a question as might be supposed in view of the general dissatisfaction and uncertainty existing in the large American clubs and also abroad. The conditions of lake yachting are different from those of the great Atlantic clubs, American and British; they are fewer, simpler and more easily understood and propounded.

The lake racing is a system distinct and apart from ocean racing, and while in the latter yachtsmen have been always reluctant to impose any restrictions, however necessary and salutary, which may hinder extreme speed, no such consideration exists in the former. The lake yachtsmen can and must leave to others the development of the highest possible speed, regardless of all other considerations; their only way to success lies in the establishment of permanent racing classes of thoroughly wholesome types. Whatever may be urged for the bulb-fin of matchbox construction on the coast and the ocean, there is no place for such a machine on the lakes, and no good argument can be urged against its summary exclusion.

The experience of twenty years on the lakes furnishes data which may be relied on as a safe guide in the formulation of essential limits. The yachts of the larger sizes have been entirely of poor quality, judged by modern standards; comparatively few new yachts have been built, but old ones, mainly brought from salt water, have been repeatedly rebuilt and patched over, with most unsatisfactory results. There is not now and never can be for years a racing class of large size throughout the lakes.

The first requirement of lake yachting is a type of yacht which, while fast enough and smart enough for racing, is still usable for cruising and general yachting; there are no yachtsmen on the lakes who will, if they can, maintain a sailing machine exclusively for racing. To be thus usable the extreme limit of draft must not exceed 9ft.; plenty more can be used over hundreds of miles of water, and rough water at that, but if a yacht is to be used all about the lakes and in such ports as she must frequent for shelter, repairs, docking and supplies, it will be found that a foot less than 9ft. is better than an inch more. This has been settled by practical experience beyond the possibility of contradiction. Whatever objections may be urged against an arbitrary limit of draft in other waters, on the Great Lakes a limit of 9ft. is in every way desirable.

This limit is in no way inadequate for the size of yacht best adapted to the general requirements of lake yachtsmen; of course larger yachts will be used in the future as they have been in the past, and will be raced in such job lot classes as can be made up at times, but for the largest permanent racing class, to which new yachts will be built from time to time, and in which such contests as the present one will be held, the size cannot greatly exceed that of Yama, Zelma and Canada, 42ft. racing length. A yacht of this class of modern but not extravagant construction will cost quite as much as the average lake yachtsman is inclined to spend on a racing craft, both in first cost and yearly running; in fact very many yachtsmen who are disposed to spend such a sum will prefer to buy an outclassed yacht of much greater size and do no racing. With that quasi-international stimulus that has existed in the present contest,

strengthened by local rivalry between the different lakes and the various ports on each, it should be possible to build up a class of about 42ft. racing length throughout the lakes from Chicago to Oswego, with more or less regular racing.

Pending anything better, and such does not now appear to be forthcoming, the Seawanhaka rule, as it stands to-day, in use by many lake clubs, might well be universally adopted, with such uniform racing rules as those of the Long Island Sound Yacht Racing Union. In the way of limitations for the largest class they might be 42ft. racing length, 9ft. extreme draft, and in addition an arbitrary limitation to the minimum coefficient of the midship section, such as would encourage a section like Zelma's with 6ft. of head room, instead of that of Canada. Added to these, some limitation on construction is most necessary, as the lake yachtsman who builds a yacht expects to use her, even in racing, for an indefinitely long time, and is not prepared to sell her after her first season. A limitation to the ratio of ballast to displacement, at some figure which would allow a reasonable scantling in bottom and deck, would be practicable and advantageous.

Such yachts as this class should produce would be fast, as is instanced by Zelma, and at the same time would give excellent accommodation, a good main saloon and after stateroom, toilet room, ice box, etc., and they would be safe and seaworthy even on the rough water and steep seas of the lakes. They would be well within the powers of a Corinthian crew, another important requisite in this service.

The new challenge of Com. Berriman names a limit of 43ft. l.w.l., or the same length as Vencedor, though it presumably means a new yacht in which the sail plan shall be better proportioned to the length. Such a yacht, even though not a bulb-fin, would be worse than useless on the lakes, there is no possibility of building up a permanent class, and it would mean the construction of a single syndicate yacht to meet her on the part of the Royal Canadian Y. C. This yacht would be of too great draft for the regular racing on Lake Ontario, she would have no class, and, worst of all, she would be big enough and fast enough to spoil the racing in the existing 42ft. class, of about 37ft. l.w.l. It would be merely a case of Defender over again; the new racing machine, while absolutely useless for other than the special race she was built for, would destroy all interest in smaller and better yachts. If the yachtsmen of Chicago desire such a yacht as best suited to their requirements, and are prepared to build up and maintain it as a regular racing class, they have of course a perfect right to do so; but we doubt whether this is possible in Chicago, and we know that such a class cannot be maintained permanently on all of the lakes. There is an opportunity just now to promote the building of fast modern yachts if the cost can be kept within a reasonable figure; but if the cost is large and the yachts are of an extreme racing type, then the lake yachtsmen will do as they have in the past: put their money into outbuilt but comfortable cruisers and leave racing to the syndicates.

AN EXPERT'S OPINION.

THE following commentary on the Toledo races is by Mr. O. E. Cromwell, of the Seawanhaka C. Y. C. race committee, who was one of the judges of the Canada-Vencedor match:

"The match between Canada and Vencedor was one where the making of the match was the making of the race; the making and drawing up of the agreement, you know. Vencedor was obliged to sail under actual waterline length, at not less than 43ft., and her sailing length, from which her sail area is computed, could not exceed 45ft. She was thus obliged to take in ballast to bring the waterline to 43ft., and cut down the sail area to classify in 45ft. sailing length. The result was that she carried an unnecessary amount of ballast, and had her wings clipped. Canada was restricted to ½ft., and the effect of this arrangement made it impossible for Vencedor to win in light weather, and difficult for Canada to win in heavy weather. The race thus resolved itself into a question of prevailing force of wind, instead of the speed of boats. It is almost impossible to arrange a fair match between two boats of such unequal size as Canada and Vencedor.

"Another consideration which has great weight is the fact that the Canada was one of the latest constructions of Fife, a crack British builder. She is beautifully constructed, exceedingly light in hull, almost like a racing shell, fitted with hollow spars, and her rigging and gear were of the lightest possible character consistent with requisite strength. On the other hand, the Vencedor's sails, while of fair quality, were by no means what they should have been for so important a contest. Her blocks were unnecessarily heavy, and the entire fabric throughout was clumsy and cumbersome in comparison with the thoroughly up-to-date hull, rigging, gear and sails of the Canada. The Corinthian crew of the Canada was one of the best I have ever seen in an experience of forty years' yachting, while that of the Vencedor was a very fair crew, but was no match for their competitors It is my opinion that such important events as international races should be sailed by well-trained professional crews.

"The second race was the Vencedor's without question until she made the fatal error by mistaking a mark boat, and thus overstood the mark, losing about one and a half or two minutes. This was caused by a number of small fishing boats of precisely similar character to the mark boat anchoring in that vicinity during the absence of the yachts and committee steamer down the course. It was difficult to distinguish which was the mark boat. It should have been supplied with some distinctive mark, such as a sphere or some large flag of peculiar pattern.

"I think that Chicago's well-known enterprise, push and vigor cannot consent to play second fiddle to Canada in the matters of yachting, and I hope to see an intelligent effort made by her citizens to bring the cup back to this side of the lake next year. To do this a yacht of the proper size, say like the Canada, if that class should be agreed upon, should be designed and constructed by or under the immediate supervision of some first-class designer, like the Herreshoffs, Gardner & Cox, Cary Smith, or some other designer of well-known reputation. One of the most important things after the vessel leaves the designer and builders' hands is to have some amateur yacht sailor of skill and experience take it in hand, tune her up, and get the utmost speed out of her. Such men as Mr. Fish, of the Atlantic Y. C., and T. G. Zerega, of the Seawanhaka Y. C., are men possessing the necessary qualifications, and I do not doubt would accept with pleasure a proposition to take in charge vessels of this type for this purpose, as they are enthusiastic yachtsmen and men of means, having leisure time at their disposal.

"It is very fortunate that this international cup of the Great Lakes and the Seawanhaka international cup have gone to Canada, as the Canadian yachtsmen have proved themselves to be thorough sportsmen, and of far different caliber to some of the English yachtsmen who have visited our shores, such as Ashbury, Dunraven and Brand, who are constantly making protests and seeking opportunity for dissension."

THE AMERICAN WAY AND THE BRITISH WAY.

THE complaint has been repeatedly made, and perhaps not without reason, by the British press generally, that the "Yankee" does not know how to accept a victory gracefully, but "slops over" in a way that is both ill-bred, boastful and undignified. The true Briton is different; self-contained, unemotional and modest, he at least knows how to accept a victory—when it comes—in a correct and utterly proper manner. Here is a specimen from the *Mail and Empire*, of Toronto:

Canada by 26 seconds!

The American Eagle will not screech to-day.

An Eagle with its tail feathers pulled is not in the humor for screeching.

A bird without pride is a bird without voice.

The Canadian beaver has quietly accomplished its purpose.

Canada by 26 seconds!

The maple leaf rustles gladly in the brisk autumn breeze.

The hearts of the people are swelled with the national pride.

The Lion with the talons of the Eagle still marked in his back looks on approvingly.

Canada wins!

It is a victory of which all Canadians justly may feel proud. It is a victory of which all Canadians will feel proud. On the waters of Erie, in the midst of a great flotilla of American yachts prepared to blast forth the triumph of one of their numbers; in the midst of a great concourse of American citizens eager for the signal to rejoice in the vanquishment of their rival neighbor—there, alone, uncheered, unsung, unboasted, a Canadian craft, with a Canadian crew, carried the Union Jack twice over the course in advance of the Stars and Stripes.

Hurrah for Canada!

Now may some Canadian poet jingle his lines to the peerless craft that bears the name of the Dominion she represents. What more inspiring theme could he desire? Less variable than the winds that carried the Queen of the Lakes to the goal of her final triumph would be the sentiment that would install him in the hearts of a glad people.

Such an invocation as this certainly could never fail; the unknown laureate has responded, as witness the next issue of the same paper.

THE CANADA.

Uncheered, unsung, unboasted,
In that vast crowd alone,
With the Union Jack above it,
Our Canada held its own.
With our dear flag floating o'er it—
A Canadian craft and crew—
It defied the American Eagle,
And struggled proudly through.

On the waters blue of Erie,
Surrounded on every side
By yachts that claimed the Eagle,
And boasted in their pride.
They felt they were secure,
That they had naught to fear,
With triumphal blast they waited,
The victory to cheer.

But they knew not skipper Jarvis,
Nor our Canadian crew;
Knew not our gallant Canada,
Till it sailed so proudly through.
And the Maple Leaf is rustling
Glad in the autumn wind,
And the Lion looks on approving,
For the Eagle was left behind.

And Canada should glory,
And Canadians rejoice,
And the pride they're justly feeling
Be echoed with one voice.
All honor to our Canada,
So gallant and so true:
All honor to her skipper,
All honor to her crew.

N. M. Q.

Alas! for such pathos and such doggerel, even worthy of Austin himself, but facts are stubborn things, as the following letter shows:

Editor Mail and Empire:

SIR—On our return from Toledo this morning it was with regret that we read your remarks prefacing your account of the Vencedor-Canada race yesterday, as it was altogether out of accord with the spontaneous good-will shown toward the Canada by the many thousand American yachtsmen and spectators during the whole series; and while we cannot but think that your preliminary comments were written in any other feeling than that of exultation on the result, at the same time we fear an impression otherwise may be conveyed to our American friends. Among your remarks you state: "There, alone, uncheered, unsung, unboasted, the Canadian craft, with a Canadian crew, carried the Union Jack twice over the course in advance of the Stars and Stripes."

As a matter of fact, no winner could have received a more enthusiastic and generous reception, the Canada being cheered to the echo, not only at the winning line, but at every buoy in each race, and her twelve-mile run to her anchorage, after the final race, was a triumphal procession, the yacht and her crew being royally saluted by guns, whistles and lusty cheers from every boat she approached. All Canadians were splendidly entertained, and their wants looked after to the fullest extent.

When our American yachting friends visit us in Toronto, as we hope they may next season, Canadians will have reason to congratulate themselves if they are able to give them as hearty a welcome and as cordial a reception as they gave the Canada and Canadian fleet at Toledo. Yours, etc.,

F. J. CAMPBELL,
H. E. RIDLEY,
W. H. BROUSE.

TORONTO, Aug. 27.

Mr. Jarvis and his crew, with many other Canadians, have borne testimony to the fact that they were treated most fairly and hospitably at Toledo, and that no such state of affairs existed as is pictured by the *Mail and Empire*. The same was the case at Oyster Bay in July and at Grindstone last month; the Canadian winner of the Seawanhaka cup and the A. C. A. trophy were cheered and saluted by all.

Minnetonka and White Bear.

From the Chicago Record.

TARTAR has proved herself the champion for another year in the interlake races between the sloops on White Bear Lake, the St. Paul resort, and those on Minnetonka, the pride of Minneapolitans. The races were to have been commenced on Tuesday, but a 26-knot breeze played such havoc that it was next to impossible to sail, and a couple of accidents prevented the attempt.

The first race was sailed in a stiff breeze and under fair conditions. On Wednesday the sailing was over a three-legged 10-knot course on Lake Minnetonka, and the race was won on its merits by Tartar, who headed her rival, Alfrida, by 7m. and 24s. The official time of Tartar was 1 37.19.

What made the contest so intensely interesting, aside from the fact that every plan had been made to wrest the championship away from Minneapolis this year, was the fact that Tartar was a boat designed by a local Scandinavian builder on the shores of the "lake beautiful" from his own plans. Alfrida, on the contrary, was a creation of the world-renowned Bristol builders, the Herreshoffs. In their efforts to down their hitherto victorious rivals, a syndicate had been formed on White Bear, which secretly placed an order with the Bristol builders.

When Alfrida, the boat which was the result of that order, reached the lake she was found to be by all odds the best boat they had ever sailed; but over on the lake of "a hundred isles" was another boat built by the unknown Peterson. He had thought long and hard. He was a practical boat builder. He was familiar with the variable winds of Minnetonka, and he put his ideas into form, adding what has hitherto been unknown in boat building—a divided stern.

This division was effected by simply cutting out a rectangular piece from the stern of the boat, the entire cut, however, being above waterline. Objections were made to the boat of the new design, but the committee of the yacht club which took the measurements found Tartar to be all right and "of a design the building of which ought to be encouraged."

On Thursday there was little wind and a drifting match, in which Alfrida succeeded in drifting harder than Tartar. The course was not sailed until long after the time limit had expired, and it remained for the race of yesterday to tell the story of how the battle was lost and won.

A regular Tartar breeze of stiff twenty knots was blowing and freshening every minute The Minnetonka boat did not get down to business until she began to beat to windward on the third leg of the first circuit. Then she fairly hissed through the water, increasing her lead till at the close of her three stretches, which comprised the course, she led her rival by 7m 8s., corrected time.

The result gave the series to Tartar, which makes the two clubs break even on the two years' races. Next year will now decide which club shall have both the pennant and the cup. Tartar's work gave her the record for the ten-knot course on Lake Minnetonka.

A somewhat exciting contest was waged at the same time between Varuna, a Minnetonka catboat, and Nushka III., belonging to the White Bear catboat fleet. In both races the former won, although yesterday the breaking of the mast of Nushka prevented her from competing, a race which still held a fighting chance for her.

The yacht races were the scene of much social pleasure, the lake hotels and the yacht club both giving hops for the visitors. Mr. Peterson, the builder of Tartar, was the subject of many congratulations.

Hull Y. C. Club Regatta.

HULL—BOSTON HARBOR.

Saturday, Aug. 22.

THE Hull Y. C. sailed a club race on Aug. 22 in a variable S.W. wind, fresh at the start, then falling very light and increasing toward the finish. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Cero, W. E. C. Eustis	38.04	2 31 37	1 59 57
Handsel, J. R. Hooper	31.07	2 40 42	2 02 02
Mabelle F. Swift, G. Bruce	44.10	Disabled.	
FOURTH CLASS.			
Rooster, Adams Bros.	21.00	2 32 45	1 52 04
Gleaner, F. O. Wellington	24.03	2 30 51	1 54 38
Eulalie, R. G. Hunt	25.05	2 31 34	1 56 47
Privateer, A. E. Schaaf		2 33 49	. .. ..
FIFTH CLASS.			
Cleopatra, H. M. Faxon	21.09	1 41 08	1 15 57
Opechee, W. P. Barker	22.06	1 46 44	1 22 13
SIXTH CLASS.			
Aikane, F. M. Kelly		1 41 35	. .. ..
KNOCKABOUTS.			
Torpedo, J. J. Souther		1 35 56	. .. ..
Bo Peep, Clark & North		1 37 58	. .. ..
La Chica, C V Souther		1 42 26	. .. ..
Jacktar, T. E. Jacobs		1 42 40	. .. ..
Nike, C. A. Cooley		Withdrew.	

The judges were Messrs. E. C. North, F. H. Jeffries, E. K. French, W. E. Sherrifs, C. P. Flint, N. F. Greely and W. L. Walker.

Cero is a new boat, built on the Cape for W. E. C. Eustis to take the place of his Dyer boat Salmon, burned last year. She is about 34ft. l.w.l. and 13ft. beam, with very light draft and weighted centerboard.

Rochester Y. C. Closing Regatta.

CHARLOTTE, N. Y.—LAKE ONTARIO.

Thursday, Aug. 27.

THE last regatta of the Rochester Y. C. was sailed on Aug. 27 in a moderate west wind and light sea. Many of the yachts were absent on cruises and but eleven started. The times were:

	Start.	Finish.	Elapsed.
FIRST CLASS.			
Facile	2 25 00	5 26 28	3 01 00
Kilpie	2 25 00	5 31 46	3 06 42
Iris	2 25 00	6 05 20	4 20 20
Weno	2 25 00	Did not finish.	
SECOND CLASS.			
Nydia	2 30 00	3 59 37	1 29 37
Zanita	2 30 00	4 00 48	1 10 48
Althea	2 30 00	4 15 20	1 25 20
Nyxie	2 30 00	Did not finish.	
Jean	2 30 00	Did not finish.	
THIRD CLASS.			
Zenobia	2 30 00	4 16 37	2 26 37
Chic	2 30 00	Did not finish.	

Miramichi Y. C.

THE Miramichi Y. C. sailed its third race of the season on Aug. 27 at Newcastle, N. B., the course being twice around a 4-mile triangle. It was for the Thos. D. Adams cup and club prizes. The result was as follows:

	Elapsed.	Corrected.
Oriana, J. L. Stewart	1 18 40	1 16 00
Learing, Thos. Currie	1 16 30	1 16 30
Maude, J. C. Miller	1 20 15	1 17 35
Avis, Albert Henderson	1 20 25	Not meas.
Kittoch, Dr. Pedlin	Did not finish.	

The race was sailed in a strong breeze. Oriana wins the cup for the second year. She won the first race this season, was dismasted in the second, and now wins the third.

Delevan Lake Races.

DELEVAN, WIS.

Saturday, Aug. 29.

THE last race of the season on Delevan Lake was sailed in a blow that dismasted Mariella and Estelle and kept Ideal from starting, as she carried away her halyards on the way to the start. Circe was goosewinged in jibing, but finally won. The times were:

Circe	1 30 25
Euliana	1 36 00
Therissa	1 39 13

A second prize goes to Euliana.

The judges were G. M. Davis, L. G. Foster and E. S. Gilbert.

Jubilee Y. C.

BEVERLY, MASS.

Saturday, Aug. 22.

THE fourth and final championship race of the Jubilee Y. C. was sailed in a fresh S.W. breeze, the times being:

	Elapsed.	Corrected.
Elvira, M. Bartlett, Jr	1 42 10	1 27 50
Elf, Dixon, *et al*	1 59 50	1 34 20
Brownie, Hawley	2 19 10	1 45 40

Elvira wins the championship.

Put-in-Bay Regattas.

PUT-IN-BAY, LAKE ERIE.

Aug. 18, 19, 20.

THE races of the Interlake Y. R. A. at Put-in-Bay, Lake Erie, began on Aug. 18 with a lively race in a strong N.W. wind, the times being:

FIRST CLASS.

	Elapsed.	Corrected.
Priscilla	3 42 36	3 42 36
Mistral	4 16 41	4 07 02
25FT. CLASS.		
Eva	4 04 50	4 00 05
Shamrock	4 23 47	4 23 47
Alborak	4 35 55	4 32 05

NAPHTHA LAUNCHES—21 MILES.		
Restless, Toledo	3 19 25	3 10 37
Carlina, Sandusky	3 20 43	3 20 43

The race of Aug. 20 was an open one to all classes, with time allowance, the prize being the Hotel Victory cup. The wind was light and variable, with much fluking and drifting The times were:

	Start.	Finish.	Elapsed.	Corrected.
Zelma	8 45 00	2 42 13	5 57 13	5 37 51
Vreda	8 44 04	2 59 33	6 15 29	6 02 28
Sultana	8 14 17	3 15 11	6 33 54	6 13 20
Vanenna	8 45 00	3 22 02	6 37 02	6 27 32
Miriam	8 45 00	4 44 47	6 59 47	6 37 20
Priscilla	8 42 35	4 59 30	7 16 55	7 16 55

On Aug. 21 a special consolation race was sailed in a moderate wind, the times being:

	Elapsed.	Corrected.
Neva	1 58 48	1 58 48
Yankee	2 22 00	2 05 44
Lucy	2 22 13	2 06 23
Meteor	2 32 11	2 20 40
Elfin	2 35 12	2 09 13
Pearl	2 44 45	2 23 09
Mischief	2 26 50	2 10 41

In connection with these races, the *Chicago Times-Herald* comments very sensibly on the important question of a good rule and one rule only for the lakes:

"The meet has been the most successful yachting event ever held on Lake Erie. Not only did the fleet of yachts assembled far outnumber any of previous years, but the representative gathering of yachtsmen from the three Great Lakes gave an opportunity never before presented of discussing interlake yachting interests.

"The most important feature in illustration of this was the discussion of the plan to adopt uniform rules of measurement. Last winter the *Times-Herald* urged that the three big yachting associations of lakes Erie, Ontario and Michigan get together and agree upon some basis of measurement and racing rules. The discussion of the rules which should govern the international race emphasized the importance of this suggestion, and resulted in the appointing of a committee from each association to confer and report a plan for unanimity on the question.

"The matter was brought up at a meeting of yacht captains held at Put-in-Bay, and E. W. Radder, of the Cleveland Y. C., who represented the Interlake Association committee, announced that the Lake Erie yachtsmen favored the adoption of the system of measurement in vogue on Lake Ontario, where the actual instead of the approximate sail area is taxed. The only yachtsman present who was openly opposed to this new departure was Capt. Ingraham, of the Erie Y. C., who made a heated argument against the modern racing machines coming in and robbing the old style boats by reason of their overhang. He was in favor of adopting the overhang tax which Lake Michigan is striving to abolish. The discussion at this meeting demonstrated the fact that the Canadian yachtsmen have taught their brethren on this side of the water a good many things since these circuit races began. Not only have the lake sailors learned much from them about how to handle their boats in a race, but they have received other lessons which will work to their benefit.

"The Canadians are anxious that the three lakes should keep up the spirit of friendly rivalry which the international race and the meets at Cleveland and Put-in-Bay have inaugurated. They are willing to meet the others half way. It is a conceded point that on Lake Ontario they are far in advance of the other lakes in everything pertaining to the sport, and, in order to encourage an interlake organization, they are willing to retrograde, if necessary, and wait for the others to catch up. The result of this discussion just at this time will be the organization of an association combining the three lakes and establishing an annual meet, taking each lake in its turn."

Wood's Holl Y. C.

WOOD'S HOLL, MASS.

Aug. 22-29.

THE Wood's Holl Y. C. sailed its second regatta on Aug. 22 in a fresh S.W. breeze, the times being:

SPRITSAIL CLASS.

	Length.	Elapsed.	Corrected.
Dude, H. E. Hibbard	13.05	1 31 33	1 31 19
Trilby, J. K. P. Purdham	13.06	1 35 20	1 35 11
Florence, A. M. Ferris	13.05	1 35 34	1 35 20
Try, Chas. Harding	13.08	1 35 30	1 35 30
No Name, Mr. Wilbur	13.00	1 37 28	1 36 58
U K, Mr. Dyer	13.00	1 41 58	1 41 22

Polly H., Capt. Fish	13.01	1 43 56	1 43 25
No Name, Mr. Foster	13.01	1 47 40	1 47 09
Hobo, Com. Harding	13.01	Disabled.	
Init, Bob Harding	Withdrew.		
KNOCKABOUT CLASS.			
Vivid, J. M. Forbes		0 49 57	. .. ..
Bob, Edgar Harding		0 53 23	. .. ..
P D Q, Emmons		0 54 28	. .. ..
Captain Cox, A. M. Ferris		0 54 57	. .. ..

The third regatta, on Aug. 29, was very unsatisfactory, there being almost a calm. The only class to finish was the second catboat class, with Try first and Cinch second.

Green Lake Y. C.

GREEN LAKE, WIS.

Saturday, Aug. 29.

THE third and last race of the series for the Interlake cup offered by the Green Lake Y. C. and open to yachts from all the inland lakes of Wisconsin, Minnesota and Illinois was sailed on Aug. 29 on Green Lake. The course was 12 miles, the wind blowing half a gale from S.W. Tzin won, making her record four firsts and two seconds. The times were:

	Elapsed.	Corrected.
Tzin, Will E. Hazeltine	2 18 33	2 13 23
Hypatia, Gwynne Garnett	2 13 23	2 15 23
Pleasant Point, J. W. Ross	2 21 55	2 17 36

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

THE Seawanhaka Corinthian Y. C. has provided liberally for the schooners of late, with a race on Aug. 29 for the very handsome cup presented by Com. Rouse, and one on Aug. 31 for the Center trophy—originally a New York Y. C. prize—for a race around the Cape May Lightship, won twenty years ago by Vindex; and recently presented by Mr. Center's mother to the Seawanhaka C. Y. C. The response on the part of yacht owners both in the schooner and two smaller classes, in which good prizes were offered, has not been specially gratifying, as very few yachts started, in spite of the personal applications of members of the committee to various owners. The race for the Commodore's cup, costing $500, for schooners, and a $250 cup presented by Vice-Com. J. K Todd for the 30-footers, was sailed on Aug. 29, the wind at the start and through the first round being fresh from N.E. The Greenwich-Long Neck triangle was sailed twice over, the schooners starting at 12:05, Amorita leading smartly over the line at 12:05:04, Colonia at 12:08:17, and Emerald at 12:09:03. The 30-footers were started at 12:10 from the gun, Hera being first, followed by Departure, Raccoon and Argonaut. On the reach across Amorita kept well to windward of the mark, the others in her wake, so that all overstood; Colonia passed Amorita, tha turn being timed:

Colonia	12 40 31	Hera	12 50 18
Amorita	12 41 41	Departure	12 50 57
Emerald	12 42 10	Raccoon	12 51 10

On the beat to the Long Neck Point mark Emerald passed Amorita, the schooners being timed:

Colonia	1 42 15	Amorita	1 59 05
Emerald	1 56 40		

The wind held long enough to make a reach to the line for Colonia and then came out S.W. The end of the round was timed:

Colonia	2 23 10	Amorita	3 03 08
Emerald	2 54 40		

Amorita withdrew at the line.

The 30-footers were timed at their finish:

Hera	3 39 50	Departure	3 56 30
Raccoon	3 49 11	Argonaut	Withdrew

The second leg was sailed in slow time, the wind being very light. Colonia won easily. The full times were:

SCHOONER CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	12 08 17	6 37 56	6 29 39	6 29 39
Emerald	12 09 03	6 48 53	6 39 50	6 38 05
Amorita	12 05 04	Did not finish.		
30FT. SLOOP CLASS.				
Hera	12 10 00	3 39 50	3 29 50	. .. ..
Departure	12 10 00	3 56 30	3 46 30	. .. ..
Raccoon	12 10 00	3 49 11	3 39 11	. .. ..
Argonaut	12 10 00	Did not finish.		

Hera had left the racing of her class at Newport and made the trip to Oyster Bay specially for this race, being well entitled to the handsome cup.

On Monday, in addition to the schooner prize, a special prize was offered in the new and as yet nebulous 20ft. class, which it is proposed to substitute for the 15ft. class next season. Thus far there are no yachts in the class except the bulb-fin Bogie, designed by W. P. Stephens, and Eos and two other bulb-fins just completed from designs by Chas. Olmstead; only Eos being ready for racing.

The club launch was sent out in the morning to set the two marks for the same triangle as on Saturday, and, as on that occasion, started for the Greenwich mark first. The committee finding that the wind was W.N.W decided to sail the course the reverse of the usual way, to the Long Neck mark first. The start was made at 12:05, Ramona crossing at 12:05:40, Colonia at 12:10 and Amorita at 12:10:40, the two 20 footers being timed from the 12:10 gun. Before Colonia reached Long Neck Point the committee discovered that the launch had not had time to set the mark after setting that off Greenwich. After some trouble the yachts were notified of the situation, and that a new start would be made from Long Neck Point. On the reach across Colonia passed Ramona, and Bogie made a good lead on Eos.

The second start was made at 1:40, the times at the line being:

Ramona	1 47 18	Amorita	1 49 06
Colonia	1 48 46		

A shift of the wind now made a reach to the Greenwich mark, there being a stiff breeze. They ran across to the Center Island mark, Colonia in the lead and Eos ahead of Bogie; the schooners were timed here:

Colonia	2 56 22	Amorita	3 02 32
Ramona	2 59 57		

The wind now came out N.E., with a shower of rain, followed by a calm, and the yachts drifted across to Long Neck Point, where the 20-footers finished, Eos in the lead; the schooners being sent directly back to Center Island, as the wind was very light. Ramona withdrew here. The full times were:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	1 48 46	6 47 36	4 58 50	4 58 50
Ramona	1 47 18	Withdrew.		
Amorita	1 49 06	Did not finish.		
20FT. CLASS.				
Eos	1 50 00	5 26 17	3 36 17	. .. ..
Bogie	1 50 00	5 32 30	3 42 30	. .. ..

Huntington Bay Y. C. Annual Regatta.

HUNTINGTON—LONG ISLAND SOUND.

Saturday, Aug. 29.

THE Huntington Bay Y. C. sailed its annual regatta on Aug. 29, the course being a triangle between Taylor's Dock, in the bay, Lloyd's Neck Buoy and Eaton's Neck Buoy; 12½ nautical miles. The start was made in a moderate N.E. breeze, but after a time it fell and the wind came in light from the south. The times were:

CABIN SLOOPS, CUTTERS AND YAWLS.

Lake Geneva Y. C.

LAKE GENEVA, WIS.

Saturday, Aug. 22.

THE great event of the Lake Geneva Y. C., the annual race for the Sheridan cup, was sailed on Aug. 22, together with the race for the Folly cup. The wind was moderate from S.W. and a good race was sailed, Lorna winning the Sheridan cup and Possum the Folly cup. Mephisto was disqualified for fouling a mark, making Possum the winner.

Horseshoe Harbor Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Aug. 22.

THE Horseshoe Harbor Y. C., of Larchmont, sailed its annual regatta on Aug. 22 over the club's courses about Execution. The day was cloudy and unpleasant for the many spectators, but with a moderate S.E. breeze and a sea for the yachts. The times were:

	Length.	Finish.	Elapsed.
CABIN SLOOPS—36FT. CLASS.			
Cymbia, T. A. McIntyre	35.57	Did not finish.

The winners were Acushla, Quantuck, Raccoon, Houri, Paprika, Eos, Dosoris II., Scat, Orienta, Ione, Caprice, Agawan and Fairy. Fairy keeps the Bevan challenge cup, having won it three times in succession.

Fox Lake Y. C.

FOX LAKE, ILL.

Saturday, Aug. 22.

THE Fox Lake Y. C., of Fox Lake, Ill., sailed its sixth regatta, the last of a very successful season, on Aug. 22, the starters being:

Sloops.—Hornet, G. A. Johnson; Sleepy Tom, Nic Morris; Gold Bug, F. Mohrman; Baby Jane, O. H. Morrison; Francis M., O. D. Bray; Nellie G., H. Gardiner; Anna, O. Wangberg; Windward, J. Lindsay; Joker, S. Chase.

Catboats.—Willie Wumps, F. Lornax; Vixen, E B. Webber; Happy Days, G. A. Martin; Grimalkin, R N. Tooker, Jr.; Lorna Doone, W. H. Lyford.

Baby Jane is a new yacht of the same model as Sleepy Tom and Gold Bug. The wind was strong from N.W., and it rained toward the end of the race. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SLOOPS.				
Hornet	2 26 07	3 57 17	1 30 10	1 31 10
Sleepy Tom	2 24 50	3 46 05	1 21 15	1 13 40
Gold Bug	2 25 10	3 49 30	1 24 20	1 14 47
Baby Jane	2 25 15	3 50 42	1 25 27	1 20 12
Francis M	2 25 12	3 57 24	1 32 12	1 29 47
Nellie G	2 25 25	3 59 01	1 33 36	1 33 36
Anna	2 25 00	3 52 00	1 27 00	1 21 49
Windward	2 25 49	Withdrew.		
CATBOATS.				
Willie Wumps	2 37 30	Withdrew.		
Vixen	2 36 55	3 58 56	1 22 01	1 21 42
Happy Days	2 39 30	3 51 50	1 22 20	1 22 18
Grimalkin	2 29 44	3 51 46	1 22 02	1 22 02
Lorna Doone	2 29 44	3 52 55	1 23 11	1 22 37

The judges were C. A. Barnum and Clark Bennett.

Gold Bug was protested by Baby Jane for fouling the mark at the start and was disqualified. Sleepy Tom wins the Commodore's cup, having won five out of the six races of the season. Happy Days wins the Hansell cup, having two legs for it, with Grimalkin, Vixen, Lorna Doone and Willie Wumps one leg each.

Piscataqua Y. C.

YORK BEACH, ME.

Saturday, Aug. 22.

THE second open race of the Piscataqua Y. C. was sailed on Aug. 22, the times being:

	Finish.	Elapsed.
FIRST CLASS.		
Emma C., Cooper	2 54 17	2 49 17
Ida J., Beckman	2 56 58	2 51 58
Premier, Chase	3 03 33	2 58 33
Notus, ——	Withdrew.	
Organet, ——	Withdrew.	
SECOND CLASS.		
Toyo, S. Humphrey, Jr.	2 43 05	2 38 05
Frolic, Decatur	2 54 30	2 44 30
THIRD CLASS.		
Emma C., French	3 19 40	3 09 40
Aurora, Regan	3 22 22	3 12 22
Cirrus, Turner	Withdrew.	
Almeda, ——	Withdrew.	

Oconomowoc Y. C.

LAKE OCONOMOWOC, WIS.

Saturday, Aug. 22.

THE Oconomowoc Y. C. sailed a race on Aug. 22 for the Commodore's cup and cash prizes, the times being:

	Elapsed.	Corrected.
Bird, F. W. Noyes	1 07 32	1 06 36
Hope, Geo. D. Vandike	1 10 29	1 06 54
Skedaddle, Gordon Buchanan	1 11 31	No al'w'ce
Argo, D. E. Murphy	1 32 45	1 32 11

The final race at Lake Oconomowoc was sailed in a strong S.W. wind that disabled both Argo and Skedaddle. The times were:

	Elapsed.	Corrected.
Bird, F. W. Noyes, Jr.	0 50 05	0 49 09
Hope, G. D. Van Dyke	0 54 40	0 50 55

The final result of the series is that Hope has won four times and Bird three times.

Zoe—El Capitan.

A PRIVATE match was sailed on Aug. 21 at East Moriches, Great South Bay, between the catboats Zoe (Henry Growtage) and El Capitan (Wm. Newberry); the stakes being $100 per side. The course was a 3⅛-mile triangle, sailed three times. Zoe led until the last round, when she was passed by El Capitan, but the latter neglected to cross the finish line and started to sail another round, thus losing the race. The times were:

	Start.	Finish.	Elapsed.	Corrected.
El Capitan	3 17 42	4 31 20	1 13 37	1 13 37
Zoe	3 14 32	4 17 13	1 02 41	1 01 10

Racing at Newport.

IT must at least be said for the special 30ft. class that it has furnished sport in plenty for those directly interested in it, and to this extent has been a direct benefit to yachting in a dull season. The racing at Newport goes on without interruption, in spite of the fact that two or three boats are taking all the prizes.

On Aug. 19 the race for the cups offered by Mrs. E. D. Morgan was postponed in the absence of the wind, but late in the afternoon a light breeze sprung up and a sweepstakes race was started over a 10-mile course from Brenton's Cove around the Castle Hill and Bishop buoys, the times being. Start, 4:00:

	Finish.	Elapsed.
Wawa, James Stillman	6 06 00	2 06 00
Vaquero, H. B. Duryea	6 06 04	2 06 04
Dorothy, H. P. Whitney	6 07 05	2 07 05
Musme, J. Macdonough	6 08 50	2 08 50
Asahi, Bayard Thayer	6 09 20	2 09 20
Hera, R. N. Ellis	6 11 50	2 11 50
Puck, E. D. Morgan	6 14 25	2 14 25
Rosemary, G. Paget	Did not finish.	

On Aug. 20 a race was sailed for a cup offered by H. P. Whitney, owner of Dorothy, for Corinthian helmsmen only, the Dyer's Island course being sailed in a fresh S.W. wind, to leeward and return. The lee mark was timed:

Puck	3 23 55	Dorothy	3 24 35
Vaquero	3 23 55	Wawa	3 24 50
Musme	3 24 09	Hera	3 25 20
Rosemary	3 24 30		

On the wind Vaquero III. soon came to the front, Mr. Duryea steering, with Mrs. Duryea as one of the crew. Puck went ashore and was unable to finish. The times were Start 2:00:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	4 50 08	2 20 08
Wawa, J. A. Stillman	4 52 30	2 22 30
Dorothy II., W. B. Duncan, Jr.	4 53 02	2 23 02
Musme, J. M. Macdonough	4 54 12	2 24 12
Rosemary, Gerald Paget	4 56 11	2 26 11
Hera, R. N. Ellis	4 58 38	2 38 38
Puck, E. D. Morgan	Did not finish.	

On Aug. 21 the Brig Ledge course was sailed in a fresh S.W. wind and moderate sea, the yachts following the Newport shore on the return made over the others and Vaquero III. again won, the times being. Start 2:55:

	Finish.	Elapsed.
Vaquero, H. B. Duryea	5 38 58	2 43 58
Musme, J. Macdonough	5 39 30	2 44 30
Asahi, B. Thayer	5 41 52	2 46 52
Puck, E. D. Morgan	5 43 08	2 48 08
Esperanza, A. Van Winkle	5 44 07	2 49 07
Wawa, J. A. Stillman	5 44 59	2 49 59
Hera, R. N. Ellis	5 46 28	2 51 28
Rosemary, G. Paget	5 47 30	2 52 30
Dorothy, H. P. Whitney	Did not finish.	

On Aug. 22 the fleet started in a special class in the regatta of the Rhode Island Y. C. at Potter's Cove, the times being: Start 1:40:

	Finish.	Elapsed.
Asahi, B. Thayer	4 36 53	2 56 53
Esperanza, A. Van Winkle	4 38 17	2 58 17
Vaquero, H. B. Duryea	4 38 58	2 58 58
Wawa, J. A. Stillman	4 39 09	2 59 09
Musme, J. Macdonough	4 39 34	2 59 34
Hera, R. N. Ellis	4 40 12	3 00 12
Dorothy, G. Paget	4 41 00	3 01 00
Puck, E. D. Morgan	4 41 36	3 01 38

The race of Aug. 25 was for three cups of $100, $50 and $25, given by residents of Newport, the Brig Ledge course being sailed in a light and variable wind. Vaquero III. raced with a new suit of Ratsey canvas and won, the times being:

	Finish.	Elapsed.
Vaquero, H. B. Duryea	5 32 31	2 47 31
Asahi, B. Thayer	5 33 20	2 48 20
Dorothy, H. P. Whitney	5 34 30	2 49 30
Wawa, J. Stillman	5 37 14	2 52 14
Puck, E. D. Morgan	5 42 37	2 57 37
Hera, R. N. Ellis	5 45 01	3 00 01
Esperanza, A. S. Van Winkle	Did not finish.	
Musme, J. Macdonough	Did not finish.	

On Aug. 26 the Brig Ledge course was again selected for the race for the Duryea cup, already won by Vaquero III., but offered again by Mr. Duryea, the wind being moderate S.E. Esperanza did very well during the early part of the race, but Vaquero III. again won. The times were:

	Finish.	Elapsed.
Vaquero III.	5 27 18	2 52 18
Asahi	5 28 01	2 53 01
Esperanza	5 28 12	2 53 12
Wawa	5 30 50	2 55 50
Puck	5 32 30	2 57 30
Musme	Did not finish.	

The postponed race for the Morgan cup was sailed on Aug. 27 over the Dyer's Island course in a fresh S.W. wind. Vaquero made a poor start, but won on the windward work, the times being: Start, 2:40:

	Finish.	Elapsed.
Vaquero, H. B. Duryea	5 13 15	2 33 15
Asahi, Bayard Thayer	5 14 02	2 34 02
Puck, E D. Morgan	5 15 35	2 35 35
Esperanza, A. Van Winkle	5 15 40	2 35 40
Musme, J. Macdonough	5 16 24	2 36 04
Wawa, J. A. Stillman	5 19 39	2 39 39
Dorothy, H. P. Whitney	5 20 42	2 20 42

The race of Aug. 29, over the Dyer's Island course, in a moderate S. wind, was for the Thayer cup, Mr. Thayer withdrawing Asahi; but Capt. Nat Watson went aboard Wawa and won with her. Puck again went ashore, and hung up until she was out of the race. The times were:

	Finish.	Elapsed.
Wawa, J. A Stillman	5 27 47	2 47 42
Dorothy, H. P. Whitney	5 28 40	2 48 40
Musme, J. Macdonough	5 29 40	2 49 40
Vaquero, H. B. Duryea	5 31 50	2 51 50
Esperanza, A. Van Winkle	5 32 27	2 52 27
Puck, E. D. Morgan	Did not finish.	

On Aug. 24 a very interesting race was sailed by the 15-footers Osprey (a Herreshoff fin-keel, owned by W. K. Vanderbilt, Jr.) and Ideal (owned by H. O. Havemeyer, Jr.). The course was from Brenton's Cove around the Jamestown and Bishop buoys, six miles, in a variable wind, making a reach over the course. Osprey made a poor start, but was very close to Ideal at the first mark; the other then left her and won easily, the times being:

	Start.	Finish.	Elapsed.
Ideal	3 18 00	4 30 36	1 12 36
Osprey	3 18 00	4 35 38	1 17 38

The prize was a gold cup offered by Mrs. O. H. P. Belmont.

On Sept. 1 a sweepstakes race was sailed over the Brig Ledge course in a strong N.W. wind, the times being: Start 2:25:

	Finish.	Elapsed.
Asahi, Bayard Thayer	5 06 50	2 41 50
Vaquero, H. B. Duryea	5 08 50	2 43 50
Wawa, J. A. Stillman	5 14 50	2 49 50

On Sept. 2 another sweepstakes race was sailed over the Dyer's Island course, the wind being strong from S.W. The run down wind was very even, Vaquero being first at the turn; on the wind Wawa and Puck did very good work. The times were: Start 2:32:

	Finish.	Elapsed.
Wawa, J. A. Stillman	4 43 10	2 11 10
Puck, E. D. Morgan	4 43 30	2 11 30
Asahi, Bayard Thayer	4 44 07	2 12 07
Vaquero, H. B. Duryea	4 46 03	2 14 03
Esperanza, A. Van Winkle	4 46 40	2 14 40

Savin Hill Y. C.

SAVIN HILL, MASS.—BOSTON HARBOR.

Saturday, Aug 29.

THE third race of the Savin Hill Y. C. for the Damon cup was sailed on Aug. 29 in a fresh S.E. breeze, single reefs being in order. The times were:

	Corrected.
Flora, W Burgess	1 12 54
Arab, W. T. Scott	1 15 59
Siko, J. E. Morbeth	1 16 26
Romance, L Sears	1 19 21
Madcap, C. E. Main	1 22 13
Erverell, W. H. Lowe	1 30 15
Imp, L. A. Horton	1 31 38
Penguin, J. E. Robinson	1 38 09
Moya, G. L. Fitz	1 39 42
Mora, A. R. Howland	1 41 42
Heming, J. E. Scott	1 43 19
Wild Duck, W. T. Leach	2 02 13
Minx, G. D. Silsbee	Withdrew.

Arab, Imp and Flora have each won a leg for the trophy, two wins being necessary to hold it permanently.

Beverly Y. C. Third Sweepstakes.

WEST FALMOUTH.

Saturday, Aug. 29.

THE resail of the postponed third open sweepstakes, 236th race, was had at West Falmouth, Aug. 29. Judges—S. G. King and W. Lloyd Jeffries.

Course for special class, triangular, 17⅝ miles. For first and second classes, to windward and back, 12 miles. For third and fourth classes, to leeward and back, 9⅛ miles. Fifth class, to leeward and back, 4 miles.

There was a light N.E. air in the morning, but it died out, and at 12:30, the advertised time, there were breaths from six or eight directions within half a mile of judges' boat. Race was postponed for twenty minutes, when a light but steady S.E. breeze struck.

First leg down the wind showed Cero and Ashumet as near as possible quits, but once on the wind Cero took the lead and kept it reaching home. It was not an Ashumet day; on the other hand, Cero got becalmed near Wepecket buoy.

In second class it was a close call between May King and Mist, the latter winning on allowance, while in third class Nobska beat Melro by 6 seconds only.

Coquette led in fourth cats, with Elsa, who wants more wind, second. In fourth sloops, three men could hold Grilse up and she won by nearly 7 minutes. Sally and the little Herreshoff c. b. knockabout sailed a great race for second place, Sally winning by one second.

999 as usual beat in the fifth class.

Exit protests her own and Snipe II.'s measurement, leaving second prize in doubt in this class.

	Length.	Elapsed.	Corrected.
SPECIAL CLASS.			
Cero, B. Y. C., W. E. C. Eustis	39.00	3 50 24	3 49 21

Winners: Special, Cero. Class 1, sloops, Little Peter. Class 2, cats, Mist. Class 3, cats, Nobska first, Melro second. Class 4, cats, Coquette first, Elsa second. Class 4, sloops, Grilse first, Sally second, Edith third. Class 5, sloops, 999 first, Mongoose second.

FIRST OPEN RACE—MARBLEHEAD.

Saturday, Aug. 29.

The postponed 238th race, first open race, was sailed at Marblehead Aug. 29 off Corinthian Y. C. house by the courtesy of that club.

There was a good E.S.E. to S.E. breeze and the feature of the race was the work of Cock Robin and Ida J.

Latter is a first-class boat, but having no competitor assume length and won on allowance.

Cock Robin is a great credit even to Herreshoff. As a knockabout she has played with the class, and now with a jib and mainsail rig, but a small one, she sails round the racing machines.

Judges—F. E. Cabot, W. W. Keith.

Courses triangular: 10⅓ for special, 10 for second and knockabouts, 6⅓ for third and fourth classes.

	Length.	Elapsed.	Corrected.

Royal St. Lawrence Y. C.

DORVAL—LAKE ST. LOUIS.

Saturday, Aug. 22.

THE Royal St. Lawrence Y. C. ended its season on Aug. 22 with a race for the Hamilton trophy, won last year by Xania, the race being open to yachts in the A, 30ft. and 25ft. classes. The starters were: Xania, G. H. Duggan, owner and skipper; Chaperon, E. S. Clouston, owner; J. C. C. Almon, skipper; Rita, C. O. Clarke, owner and skipper; Valda, A. F. Riddell, owner and skipper; Coquette, Arthur Hamilton, owner and skipper; Waterwitch, James Paton, owner and skipper. The race was sailed in a light east wind, the times being:

Preparatory gun, 3:35; start, 3:40; course, A.:

	Start.	Finish.	Elapsed.
Xania	3 40 00	5 40 45	2 00 45
Chaperon	3 40 00	5 49 10	2 09 10
Rita	3 40 00	6 02 08	2 22 08
Valda	3 40 00	6 17 12	2 37 12
Coquette	3 40 00	6 26 45	2 40 45
Waterwitch	3 40 00	Did not finish.	

Xania wins the cup permanently. She was designed by Mr. Duggan and built by St. Onge under his direct supervision.

Pine Lake Y. C.

PINE LAKE, WIS.

Saturday, Aug. 22.

THE Pine Lake Y. C. sailed a race on Aug. 22, the Dyer boat Friar winning easily. The times were:

	Elapsed.	Corrected.
Friar, Com. Robt. Nunnemacher	1 07 18	1 00 00
Frances, J. C. Iverson	1 07 27	1 04 10
Leona, Udo Doristan	1 10 40	1 05 03
Kismet, A. A. L. Smith	1 12 47	1 05 44
Nyack, Henry Niedecken	1 12 55	1 08 29
Edna, H. & M. Manegold	1 11 35	1 11 15
Henrietta, Geo. Brumder	1 17 28	1 16 05
Martha, John C. Koch	1 18 55	1 17 10

Corinthian Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, Aug. 22.

THE 105th regatta and third championship of the Corinthian Y. C. of Marblehead was sailed on Aug. 22 in a fresh S.W. wind, Reaper, Exit and several others carrying single reefs. The times were:

CLASS A.

	Elapsed.	Allowed.	Corrected.

Petus, F. Cote	....	. .. ..	1 07 42

Fantasy was disqualified on protest from Circe for not turning all the marks.

On Tuesday there was a strong southerly breeze and sea; the yachts started but, some turned the wrong buoys, the first and second classes making no race. The others were timed:

THIRD CLASS.

	Length.	Elapsed.	Corrected.
Arab, W. F. Scott	18.01	1 45 30	1 16 30
Tautog	20.05	1 54 22	1 27 54
Spirit, J. P. Walsh	19.10	1 55 13	1 28 10
Louisa, S. W. Clement	18.11	2 01 04	1 33 01

FOURTH CLASS.

Coot, A. Brown	16.04	1 51 47	1 20 34
Alpine	Withdrew.		

Eastern Y. C. Open Races.

MARBLEHEAD—MASSACHUSETTS BAY.

Aug. 18-19.

THE Eastern Y. C. sailed two open races for the knockabouts and 30-footers on Aug. 18-19. There was a moderate sea and a fresh breeze on the first day and a good race was sailed, but in the 30ft. class there was trouble over a missing mark, the race being finally given to Handsel with Anoatok second. Cock Robin easily won in the knockabout class. The times were:

SEVENTH CLASS—SLOOPS.

	Time.
Handsel, J. R. Hooper	1 26 00
Anoatok, G. Owen, Jr	1 28 45
Katona, Oliver Ames, 3d	Withdrew.
Cero, W. E. C. Eustis	Disabled.
Zeruah, G. C. Curtis	Withdrew.
Mabel F. Swift, George Brewer	Withdrew.

KNOCKABOUTS.

Cock Robin, C. S. Eaton	2 00 20
Tautog, W. O Gay	2 02 05
Bo Peep, Clark & North	2 03 27
Water Lily, H. M. Sears	2 03 46
Jack Tar, T. E. Jacobs	2 05 48
Torpedo, A. J. Souther	2 05 52
Sally, D. C. Percival, Jr	2 07 01
Vishna, C. F. Ayer	2 09 55
La Chica, C. V. Souther	2 10 24
Dorothy, F. Brewster	2 12 25
Bonita	2 12 56
Alruna, Lambert Bros	2 21 48
Comet, A. Lawrence	2 22 12
Mayona, C. O. Stearns	Disabled.
Carl, C. H. W. Foster	Withdrew.

With a N.W. wind the next day the water was smooth and a very good race was sailed, the times being:

SEVENTH CLASS—SLOOPS.

	Elapsed.	Corrected.
Cero, W. E. C. Eustis	3 20 15	3 13 33
Handsel, J. R. Hooper	3 30 48	3 14 00

Scooter, James Dean	1 32 13
Bee, Alanson Bigelow, Jr	1 32 25
Jap, Bouve & Pegram	1 33 22
Hoodoo, Gammons & Wheelwright	1 35 01

Lake Geneva and Oconomowoc.

CHICAGO, Sept. 1.—As a result of the friendly rivalry in yachting which has long existed between the Lake Geneva Y. C., of Lake Geneva, and the Oconomowoc, of Lac La Belle, Wis., a series of three match races were arranged between Mr. Julian M Rumsey's Lorna, of the former club, and a three-time winner of the Sheridan prize, and Corsair, owned by Mr. Wm. Hale Thompson, of the Oconomowoc Y. C. These races were sailed on Lake Geneva, under the auspices of the Lake Geneva Y. C., which also provided a handsome trophy.

Both boats are sandbaggers of the most approved fashion. Lorna, which was built by Willis, in 1886, has a long list of victories to her credit, both on Long Island Sound and Lake Geneva. Corsair is a more recent production, and was designed and built by the well-known builder, Mr. John Cornwall, at Port Washington, N. Y.

But two races were necessary, Lorna winning both, and these were sailed Friday and Saturday, Aug. 28 and 29.

Friday there was a fair breeze from the S.W. Following is a summary of the race:

	Start.	Upper Buoy.	Finish.	Elapsed.	Corrected.
Lorna	11 02 00	12 46 48	1 59 49	2 48 43	2 48 49
Corsair	11 02 00	Capsized.			

Before reaching the upper mark Corsair, with sandbags and crew well out to windward, was struck by a sudden slant of wind, which, aided by the weight of men and bags, threw her down to windward till she filled and capsized.

The summary of the second race is as follows:

	Start.	Upper Buoy.	Finish.	Elapsed.	Corrected.
Lorna	11 01 00	12 31 02	1 31 09	2 30 09	2 24 45
Corsair	11 01 00	12 39 04	1 43 48	2 42 48	2 42 48

The course is 14 miles.

The judges were: Com. Ferd. Peck, of the Oconomowoc Y. C.; Rear-Com. H. W. Marsh, Lake Geneva Y. C., and Mr. N. K. Fairbank.

New Jersey Athletic Club—Ellsworth Cup.

BAYONNE—NEWARK BAY.

Saturday, Aug 29.

THE yachting department of the New Jersey Athletic Club sailed the third race of the series for the Ellsworth cup on Aug. 29 over a 10-mile course on Newark Bay below the bridge. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Iroquois	2 53 20	4 46 24	1 53 04	1 24 24
Doctor	2 53 39	4 58 02	2 04 23	1 28 53
Chip	2 55 00	5 05 26	2 10 26	1 30 46
Drift	2 51 00	4 55 49	2 04 49	1 30 59
Henrietta	2 50 40	4 56 47	2 06 07	1 31 46
Yankee Boy	2 51 15	4 55 47	2 04 32	1 34 12
Volage	2 51 22	4 55 15	2 03 53	Not meas.
Flirt	2 50 15	4 56 18	2 08 03	Not meas.
P D Q	2 51 22	Disabled, did not finish.		

Canoeing.

The A. C. A. Races.

THE following table gives the complete result of the races at the A. C. A. meet, a most favorable showing as compared with the last two years. The results of these previous years have been discouraging, and of a nature to prevent the building and racing of new canoes; but there is evident this year a marked turn of the tide that promises a renewed interest in the racing. It is tolerably certain that Mr. Butler will have a new canoe next year, and not be caught napping, as this season; up to the last moment, there was no indication of a new canoe, and the Vesper fleet—Bug, Bee and Wasp—had proved itself quite good enough for existing boats. Mab was raced within a month of the time when she was ordered, nothing was known of Mr. Archbald's intention of building, and no effort was made by other canoe sailors to meet him

A. C. A. RACES, 1896.

Events Nos. 20, 21 and 26 have no starters.

with a new boat. It is probable that next season will see several new racing canoes in the sailing division, while the victory of a Western paddler, and in a peculiar position, must awaken the rivalry of the East and Canada. While the entries were but few in number in many of the events, nearly thirty races took place, and the interest in them was not confined to a few experts, but was very general throughout the camp.

In our description of Mab last week we neglected to mention that all of her deck fittings are of rawhide; instead of blocks she has plain brass thimbles secured by a loop of rawhide to a base of the same material, which is screwed to the deck. How this works when saturated with water we do not know, but as long as it is protected by varnish and dry it is hard, strong and light.

Rifle Range and Gallery.

New Jersey State Rifle Association.

THE annual meeting of the New Jersey State Rifle Association was held last week on the range at Sea Girt, where these annual meetings have always been held, and where the Association has an elegant club house and ranges second to none. There was a large attendance of shooters, and as a natural result the interstate events were of exceptional interest.

The New Jersey organization has become the possessor of several trophies owing to the decease of the National Rifle Association, the latter organization when it went out of existence handing over to the New Jersey Association trophies which were shot for at the annual meeting of the national body.

All the arrangements for shooting off the long list of events scheduled for this meeting were as perfect as could be desired. The officers of the Association are: President, Hon. John W. Groggs; Vice-Presidents, Gen. Wm. C. Heppenheimer, Gen. P Farmer Wanser and Wm. Hayes; Treasurer and Executive Officer, Gen. Bird W. Spencer; Secretary and Statistical Officer, Capt. DeLancy G. Walker; Assistant Secretary and Manager, Lieut. Albert S. Jones.

The sharpshooters were treated well by the weather, that on the last day being about the worst of the whole meeting.

FIRST DAY—SEPT. 1.

The marksmen got to work early this morning, and from the start, which was about 8 A. M., there was no break in the firing until darkness put an end to shooting for the day. The strong northwest wind which was blowing in the early morning hours threatened to make trouble for the riflemen, but this proved not to be the case.

There were five events set down on the programme for to-day, but only two were brought to a conclusion, the company team match and the carbine team match. The first was won by the first team of Company A, Engineer Corps, D C., with the large total of 432. The first battalion, Georgia Infantry, was second with 430. The conditions of this race were 5 men to a team, 10 shots per man, at 200 and 500yds. range. Below are the scores in this event:

Co. A, Engineer Corps., D. C., 1st team.

	200yds.	500yds.
Sergt Scott	40	42—82
Corp Wetherald	37	46—83
Pvt Appleby	37	48—85
Pvt Cook	44	49—93
Lieut Graham	43	46—89
		432

Co. A, Engineer Corps, D. C., 2d Team.

	200yds.	500yds.

		201

SECOND DAY, SEPT. 2.

Among the more important events decided to-day was the Interstate team match. This event was won by the Georgians with a total of 1,048; the Massachusetts men were second with 1,030, the District of Columbia team having to be content with third place and a score of 1,022. The scores were:

	200yds.	500yds.
Georgia	517	531—1048
Massachusetts	513	517—1030
District of Columbia	516	506—1022
Pennsylvania	499	493— 992
New Jersey	479	488— 967

THIRD DAY, SEPT. 3.

To-day was not a good one for large scores, a 20-miles-an-hour wind sweeping over the ranges. The force of the wind would not have been so fatal to high scoring had it been steady; it came, however, in gusts that knocked out all previous calculations as to correct windage.

The Hilton trophy contest was the chief event on the programme, and the closing scenes in this contest will not be easily forgotten. The teams representing the District of Columbia and the State of Georgia were in the lead, and the final rounds at the 600yds. range were watched with the most intense interest. The match closed with the two teams tied for first place with scores of 1,910 each. The District of Columbia team were declared the winners, as its score of 333 at the 600yds. range was 9 points better than that made by the Georgia men at the same distance. Below are the conditions under which the Hilton trophy is shot for, and the scores made at the various distances by the teams that took part in the contest:

Hilton Trophy Match.—Open to teams of twelve from the army of the United States, the United States Navy, the National Guard or uniformed militia of the several States and Territories, including the District of Columbia; also the regular army, the militia, the volunteers, and the navy of any country. The prize is a trophy presented by the Hon. Henry Hilton of New York, valued at $3,000; also a medal to each member of the winning team.

	200yds.	500yds.	600yds.	Total.
Pennsylvania	291	363	320	974
District of Columbia	317	360	333	1,010
Massachusetts	304	360	325	989
Georgia	316	370	324	1,010
New Jersey	291	349	306	946

The Regimental Interstate team match was won by the Georgia men, the First Battalion, Georgia Infantry, making the score of 1,594; the Engineer Corps, District of Columbia, was second with 1,564, and the First Pennsylvania third with 1,422. The scores in this match were:

Regimental Interstate Team Match—First prize, interstate trophy, $100; second, $50.

	200 Yards.	500 Yards.	Skirmish.	Total.
Third New Jersey	214	188	860	1,262
Engineer Corps, District of Columbia	249	243	1,072	1,564
Sixth New Jersey	204	188	762	1,154
First Battalion, Georgia Infantry	255	262	1,077	1,594
Governor's Horse Guards, Atlanta	195	177	717	1,089
Second New Jersey	226	225	857	1,308
Second Regiment, Dist. of Columbia	216	223	853	1,292
First Pennsylvania	239	237	946	1,422
First Regiment, District of Columbia	216	184	874	1,274
Twelfth Pennsylvania	233	224	772	1,229
Third Pennsylvania	202	199	910	1,311

The New Jersey National Guard shot for two special prizes, open only to teams of the National Guard of the above State. The first of these contests was the Columbia trophy, the trophy and a medal to each man on the winning team being the prizes offered. The Second Regiment won the trophy with the score of 1,348, as below.

Columbia trophy for New Jersey National Guard only. Prize, Columbia trophy and a medal to each member of the winning team:

	200yds.	300yds.	500yds.	Skirmish.	T'l.
Third Regiment	151	141	141	860	1,293
Seventh Regiment	157	135	148	832	1,272
Sixth Regiment	153	152	155	760	1,222
Second Regiment	171	160	160	857	1,348

The second of these special contests was for the New Jersey National Guard trophy. The Second Regiment were again the winners, scoring 1,315; the Third Regiment was 30 points behind them with a score of 1,285.

New Jersey National Guard match. Prize, the New Jersey National Guard trophy and $50; second prize $25, and a medal to each member of the winning team:

	200yds.	500yds.	Skirmish.	T'l.
Seventh Regiment	214	194	832	1,240
Third Regiment	215	210	860	1,285
Sixth Regiment	205	208	762	1,175
Second Regiment	230	228	857	1,315

FOURTH DAY, SEPT. 4.

This was a New York day on the range at Sea Girt. Sergt. Dolan, of the Twelfth Regiment, N. G. N. Y., captured the prize in the President's match, and with it won the title of military champion of the United States. He won his honor by the scanty margin of 3 points, Sergt. Huddleson, of Massachusetts, and Pvt. Austin, of Georgia, tieing for second place with scores of 89 each against Sergt. Dolan's score of 92. The first stage of the contest is 10 shots each at 200 and 300yds.; the five best scores in this stage being entitled to shoot in the second stage at 500 and 600yds., 10 shots at each distance. The five men entitled to shoot in the second stage were the three above named and Lieut. F. C Wilson, of Georgia, and Lieut. Young, of Company A, Engineer Corps, D. C. Lieut. Wilson made the high score of 92 at the first stage and shot up well in the 500yds. series, but fell down on the 600yds. range. Last year's winner was Sergt. Boyle, also of the Twelfth Regiment, N. G. N. Y. The scores in this match made by the five high men in the first stage were:

First Stage.	200yds.	300yds.	Total.	Second Stage.	500yds.	600yds.	Total.
Dolan	41	45	86	Dolan	47	45	92
Huddleson	42	45	87	Huddleson	47	42	89
Young	42	45	87	Young	38	39	77
Wilson	46	46	92	Wilson	47	39	86
Austin	42	45	87	Austin	47	42	89

In the contest to-day for the Hayes medal, Capt. George T. Cann, of Georgia, took a firm grip on the medal with a clean score of 70, making 14 bullseyes in succession, as well as two more bulls as sighting shots. This contest was 7 shots at 500yds. and 7 at 600yds. Capt. Cann's score is a record for this range.

FIFTH DAY, SEPT. 5.

This was the worst day of the week for good scores. A strong wind, amounting at times almost to a gale, blew in from the sea and made accurate work at the longer ranges something that was almost impossible.

The honors of the day rested with Capt. George Cann, of Georgia, who won the Wimbledon cup with a total score of 109. The conditions of this contest were 30 shots at 1,000yds., any rifle within the rules, cleaning allowed, any position without artificial rest. Capt. Cann shot one of the Winchester military rifles; Ferd Van Dyke, who represented the Winchester Repeating Arms Co. at Sea Girt, being much tickled thereat. Military rifles received a handicap of 18 points, special military rifles a handicap of 6 points. The following were the scores:

Wimbledon Cup Match—Open to all citizens and residents of the United States. Distance, 1,000yds.; 30 shots. Weapon, any rifle within the rules; cleaning allowed. Position, any without artificial rest. Entrance fee, $2. Eighteen-point handicap for military rifles; 6-point handicap for special military rifles.

	Score.	Handicap.	Total.
Geo H Harries, Washington	72	0	72
Lieut S S Steabins, 12th Regt, New York	61	18	79
Chas P Frey, New York	60	0	60
Colin R Wise, Passaic	0	0	0
Sergt John Cowie, 12th Regt, New York	92	6	98
Capt J C Postell, 1st Cavalry, Georgia	53	18	71
Capt G T Cann, Georgia Volunteers	103	6	109
Col Cecil Clay, Washington	52	18	70
Sergt W W Cookson, Washington	68	6	74
Lieut F C Wilson, Georgia	99	0	99

The New York *Recorder* speaks of the revolver matches at Sea Girt as championship affairs. Of course all this is foolish, and neither the contestants nor management make any such claim. There has only been one championship for revolver shooting in the United States—the Winans Trophy contest, held under the management of FOREST AND STREAM—and there is only one champion, Capt. Wm. E. Petty.

The following is a brief resume of the week's work:

Members' match: Open only to members of the New Jersey State Association; 200yds, standing, 7 shots, any military rifle. Winner, General Inspector of Rifle Practice B. W. Spencer.

Kuser badge: Open to all; any military rifle, 500yds., 7 shots, 3 scores to count. 1st prize, Private Austin, Georgia, with score of 104; 2d prize, Sergt. Huddleson, Massachusetts, score of 100; 3d prize, J. H. Keough, score of 99.

All-comers' military match: Open to all; 7 shots at 200 and 300yds., any military rifle adopted or issued by any State. 1st prize, Lieut. F. C. Wilson, Georgia; 2d prize, Lieut. Wetherall, Washington, D. C.; 3d prize, Sergt W. W. Cook, Washington, D. C.

The Schuetzen match: All-comers' continuous match; distance, 220yds.; position, standing; number of shots, 7 on the standard American target, with 11in. bullseye (the bullseye including the 7 ring); any weight rifle with any trigger pull, palm or other rest allowed. When firing, the muzzle of the rifle must be kept outside the loop-hole of the shelter. Allowances for military rifles, 4 points on each string; cleaning allowed between shots; the aggregate to count for all prizes; entries unlimited. First prize, $50, won by L. P. Hansen, of Jersey City, score 181; second prize, $25, Charles Zettler, of New York, score 176.

Hayes medal: open to all; 7 shots at 500 and 600yds., both scores to be made on same day; any military rifle. First, Capt. George T. Cann, Georgia; second, Lieut. S. Wetherall, Washington, D. C.; third, Corp. G. E Cook, Washington, D. C.

Perrine memorial match: Open to officers and enlisted men of National Guard of New Jersey; 7 shots at 200 and at 300yds.; rifles, those in use by National Guard. Medal presented by Col. Lewis Perrine, Jr., won by J. H. Wells, Company G, Second Regiment N. G. N. J.

Gen. E. P. Meany match: Open to all; any military rifle, 10 shots at 500 and at 600yds. Winner of gold badge and first prize, C. J. Smith, with a score of 91; second prize, C. S. Richmond, Georgia, score of 90.

Department of Rifle Practice match: Open to all inspectors of rifle practice, either by commission or detail, and to all members of the New Jersey State Rifle Association; distances 500 and 600yds.; 25 shots at each distance; both ranges to be shot over the same day; rifle, any military. First prize, the Department of Rifle Practice 50-shot badge, to be held by the winner during the year, and $20. Won by Inspector of Rifle Practice Scheffelin. His score was 223.

New Jersey Rifle Association trophy match: 7 shots at 500 and at 600yds. First prize and trophy, Pvt. W. G. Austin, Georgia, with score of 64; second prize, Lieut. G. B. Young, Washington, D. C., with score of 62; third prize, George P. Cooley, with score of 57.

Trenton Interstate Fair match: 7 shots at 200 and at 300yds. First prize, Lieut. F. C. Wilson, Georgia, with score of 68; second prize, G. B. Young, Washington, D. C., score of 59; third prize, Corp. McLaughlin, Washington, D. C., score of 59.

The Sumner match: Open to all; 10 shots at 200 and at 500yds.; rifles, regular three-grooved Springfield or regular Remington, chambered for and using standard ammunition. First prize, Capt. Boardman, of Massachusetts, and Lieut. F. C. Wilson, of Georgia, tied for first place, Boardman winning on best score at long distance. Their scores were 181.

Military revolver match: Scores 6 shots each, each score to be fired within the time limit of one minute. Revolver, the Colt 38-caliber, army or navy; factory ammunition with full service charge; trigger pull 4lbs., Creedmoor target; total of three scores to count. First prize won by Theodore J. Beck, 38; second, Sergeant Corrie, New York.

Revolver match: Distance 30yds.; five shots on American standard target, reduced to 100yds.; position, standing; off-hand use of one arm only allowed; aggregate of three scores to count for all prizes. Prizes: Revolver presented by Theodore E. Beck, Esq., and $15. Won by Private C. S. Richmond, of Georgia; second prize, Capt. Eichberg, Georgia.

Revolver Shooting in England.

LONDON, England, Aug. 21.—The latest reports from revolver circles are as below:

At the North London Rifle Club, on Aug. 19, the revolver series was for alternate hands at 20yds., stationary target; right and left hand shot alternately:

Walter Winans	774677—38	Major Munday	576565—34
T Knapp	755767—37	Capt Evans	457754—32
Holmes	777755—38	Llewellen	547644—30
Capt T W Heath	757665—36	Lieut Curley	763763—32
Andrews	663777—36	G G Howse	732255—25
Denyer	775547—35	Franzmann	435573—27
Britton	753675—33	Tilbury	735534—27
Capt Baxter	367755—33	H Young	232047—17

The scores for the revolver championship of the club now stand:

Series:	1	2	3	4	Total.
Walter Winans	42 41 41 40 40 40	38	39	37 36	394
A W Carter	40 38 38 36 36 36	32	35	34 31	368
W Luff	37 37 36 35 35 34	28	33	31 31	337
Capt W Evans	38 36 35 34 33 32	32	30	33 31	328
T Andrews	32 32 31 30 27 21	36	28	35 24	285

The rest have not shot their full number of scores yet.

At the South London Rifle Club, on Aug. 18, owing to the wet weather there were few competitors. The following scores were made in revolver shooting:

Twenty yards, stationary target:

Capt T W Heath	777767—41	C Knapp	747466—34
Walter Winans	777676—40	C Malschinger	555225—24
E Howe	676575—36		

Fifty yards, stationary target:

Walter Winans	657766—37	C Knapp	737456—32
Capt T W Heath	766647—36	C Malschinger	550654—25
E Howe	675466—34		

The scores for the revolver championship of the club now stand:

	20yds.	50yds.	Total.
Walter Winans	40 40 40 40 40	37 37 37	311
E Howe	41 41 40 40 39	37 37 35	310
Capt T W Heath	42 41 40 39 39	37 36 36	310
C Knapp	40 39 39 38 38	36 35 34	299
Clementi-Smith	38 38 37 37 36	38 35 34	293
Malschinger	26 26 25 24 22	25 23 18	189

The rest have not shot out their full scores yet.

Calumet Heights Riflemen.

CHICAGO, Ill., Aug. 30.—In the A class, 10 shots per man, 200yds. range, standard U. S. target, any caliber rifle, Paterson won the medal, his score of 30 being better than similar scores made by Harlan and Spaulding. Scores:

Houston	5000020320—12	Hodson	3420022303—19
Norcum	2242402330—22	Harlan	3444233403—30
Holmbol	2332230344—26	Paterson	0344222454—30
Spaulding	4345303323—30		

Miss Harlan won the Class B medal. The conditions for Class B were: 100yds. range, Creedmoor target, .22-caliber rifles:

Mrs Dr. Silva	0020300023—10	Mrs Marks	3342431353—34
Miss Ervin	4344434353—37	Mrs Whitman	334233 342—30
Miss Harlan	4345344345—39	C W Spaulding	4322344433—32
Mrs Chamberlain	2443433333—32	L J Marks	4435344543—39

PATTY.

Snap Shots on a Tin Can.

PORTLAND, Indiana, Sept. 3.—Mr. C. A. Bogardus, who claims to be the champion quick shot of the world, gave an exhibition on the grounds of the local gun club here yesterday. He did some very clever work, both with the shotgun and rifle, at a distance of about 25ft.; he put 25 out of 26 balls from a .22 Marlin into a quart fruit can in eight seconds. He tossed a can in the air, and hit it four times before it reached the earth; also tossed a small marble and broke it with a rifle ball. G. W. C.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; $750 added money.

Sept. 26.—HACKENSACK, N. J.—Fourth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Bergen County Gun Club. Sweepstakes at 10 A. M.; League team race in the afternoon. C. O. Gardiner, Sec'y.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

1897.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

Merrill—Williamson.

MILWAUKEE, Wis., Sept. 2.—On Tuesday, Aug. 25, a very interesting race was shot at live birds by Mr. Richard Merrill and Dr. J. L. Williamson; 100 birds, A. S. A. rules. The result was a tie, each man scoring 93, with 3 dead out of bounds. The tie was shot off at 100 birds the following Saturday, Aug. 29, with the surprising result of another tie and precisely the same score: 93 each and 3 dead out of bounds. Both men were in fine form. The birds were extraordinarily hard. Mr. Merrill used a Greener, U. M. C, green trap shells and 50grs. E. C., 1¼oz. 7 chilled. Dr. Williamson shot a Cashmors gun, U. M. C. green trap shells, 3¼drs. E. C., 1¼oz. 7 chilled shote The double tie may be shot off again some time this fall, and the result is awaited with interest. H.

DRIVERS AND TWISTERS.

The Interstate Association's tournament at Marion, N. J., given this week under the auspices of the Endeavor Gun Club, of Jersey City, closes the season for the Interstate Association. The next important meeting held under the auspices of the Interstate Association will be the Grand American Handicap. As yet no place has been chosen for holding that great live-bird event. Manager Shaner will do some looking around with a view to choosing the scene of the Grand American Handicap of 1897 as soon as he has carried to a successful issue the above-mentioned shoot at Marion.

The West Lebanon, N. H., Gun Club will hold its second annual all-day shoot on Sept. 11. The club's grounds are located on Franklin farm, ten minutes' walk from the depot. The programme is one of popular prices, and a special invitation is issued by the club to members of neighboring organizations and to all trap-shooters in general. The purses will be divided under the Rose system.

The list of fixtures for 1896 is growing very small; it will not be long before the dull season will be upon us, that is, so far as target shooting is concerned. The Schmelzer Arms Company's tournament, Sept. 15-16, at Kansas City, Mo., and the Pennsylvania State Sportsmen's Association's tournament at Harrisburg, Pa., Sept. 29-Oct. 2, being two of the more important tournaments left on our list.

Jim Elliott has been spending some weeks at Block Island, where he has been performing some prodigious feats in the way of landing striped bass and bluefish. He has also succeeded in getting a good summer-girl color, and now looks fit to shoot anybody and everybody all the matches they want.

Louis Schortemeier is fast developing into a shooter of the crackerjack class. Since he has taken up the single-barreled Francotte he has been smashing the targets with a monotonous regularity—to his opponents—and is just now about the king pin in these parts.

Ed Taylor, known to the boys as the "Old Reliable," has come to town; and what is better still, he has come to stay. His headquarters will be, of course, the offices of Laflin & Rand Powder Co., 99 Cedar street.

The Arlington Shooting Association is one of the recent organizations in New Jersey. Its president is Marshall Herrington, the well-known representative of the W-A powder; its secretary-treasurer is Herbert Frapwell.

SEPT. 8. EDWARD BANKS.

The County League at Pottsville, Pa.

POTTSVILLE, Pa., Sept. 2.—The annual meeting of the County League of Fish and Game Protective Associations took place here yesterday. There was a good attendance of members and some good shooting was done on the grounds of the Pottsville Gun Club at Woltjen's farm, Tumbling Run. In a 55-target event there were forty-four entries; of that number three tied for first place on 21 each—Fen Cooper, of Mahanoy City; Schuyler Adams, of Newton; and Frank Palmer, of Pottsville. Fen Cooper retired from the contest, and left Adams and Palmer to shoot off the tie; Adams won by scoring 4 out of his first 5, Palmer dropping his first 2 targets and withdrawing as he was shot out. The scores were: Leininger 18, Tanner 16, Seltzer 14, Bechtel 7, Green 19, Miller 12, Weir 16, S. Adams 21, J. Bobbs 11, Dougherty 13, G. Schoffstall 18, Cockill 15, Driscoll 18, Barnhart 16, Malkey 12, Zimmett 18, Ed Clouser 15, Zerbey 7, Brown 12, H. Adams 18, Beck 17, Ossman 11, E. Schoffstall 18, John Irving 2, Cooper 21, Palmer 21, Stitzer 17, Zeekman 17, Hoverty 12, Starr 17, Cooch 10, J. Clouser 14, Thomas 12, Pritchard 16, Knittle 17, Foster 16, Schoppell 18, H. Hoover 17, Head 18, E. Hoover 18, Horning 12, Gorman 9, Walker 12, Roeder 12.

The live-bird event had 21 entries, each man shooting at 10 birds. The rules were "Schuylkill county rules," 21yds. rise, gun below the elbow until the bird is on the wing, use of one barrel only, a missfire to count as a lost bird. Of the 21 shooters there were only two that made clean scores; these were Fen Cooper and F. Palmer, who divided first money. Second money went to John Head, of Wadesville, and P. Naventy with scores of 9 each. E. Walker, P. McQuaid, Frank Stitzer, Weir and Green each killed 8 and split up third money. The scores were:

Frank Setzer	1001011001— 5	Gorman	1101110100— 6
H Deibert	0111001111— 7	Driscoll	1011011100— 6
E E Hoover	0011101011— 6	Pritchard	0111101011— 7
F Palmer	1111111111—10	F Cooch	0100001100— 3
E Walker	1111001111— 8	F Cooper	1111111111—10
J Head	1111101111— 9	Stitzer	0111101111— 8
L Klausman	00000 w — 0	Phieffer (Weir)	0011111111— 8
A Schappel	1010111110— 7	Green	1111111100— 8
P McQuaid	1011101111— 8	Parkins	0001110111— 6
T Tanner	0101110111— 7	Zechman	0100010110— 4
P Haverty	1111101111— 9		

The following account of the proceedings at the annual meeting is taken from the Pottsville *Miner's Journal* of this date:

"At the business session held in the morning the Llewellyn Fish and Game Protective Association was admitted into the League, and in honor of this admission the next meet was fixed for Llewellyn. Edward S. Sillman, President of the First National Bank at Mahanoy City, resigned his position as President of the League. Mr. Sillman's resignation was induced by failing health. His leaving was much deplored by the members. In his stead William A. Bensinger, of Mahanoy City, was elected. This is considered a well-deserved honor, since no man in the county has worked harder in advocating the interests of the Association and to protect our fish and game than Mr. Bensinger.

"The following delegates answered roll call:

"Tremont—John A. Bechtel, L. H. Miller, David Leininger, Samuel Brown.

"Newtown—John Irving, Thomas Dougherty, Schuyler Adams, Robert Weir, Harry Adams, Frank Clouser, John Ossman, Edward Clouser, Henry Zerbe.

"Cressona—H. Deibert.

"Mahanoy City—W. A. Bensinger, Christ. Lugan, Thomas F. Gorman, Fenimore Cooper, C. W. Stitzer, John F. Becker.

"Schuylkill Haven—H. D. Roeder.

"Llewellyn—Grant Barnhart, Elwood Schoffstall, Wm. Mackey, Grant Schoffstall, Joseph Starr, W. A. Cockill, Frank Semmitt.

"Pottsville—Frank Leonard, Jacob L. Bobbs, James P. Costello, W. J. Beck, Frederick Portz, Al Zechman, F. C. Palmer, Cyrus Sheetz."

On Long Island.

WOODSIDE GUN CLUB, OF BROOKLYN.

Sept. 2.—The Woodside Gun Club, of Brooklyn, held its club shoot this afternoon. Several sweepstakes at targets were indulged in, but the club shoot at 15 targets per man, handicap rise, was the main event on the programme. The score in this event was as follows:

A. J. Henderson (16) 13, T. W. Richardson (18) 12, J. W. Heany (16) 10, T. W. Murphy (16) 11, U. V. O'Connor (16) 9, J. W. Colgan (18) 12, E. V. Kent (16) 7, J. R. Bernstein (18) 5, F. F. Williamson (17) 8, H. P. Smith (16) 4, E. S. Morris (16) 8, C. L. Thurston (16) 5, T. W Heany (18) 9, S. P. Schleucter (16) 5, Dr. J. F. Behrens (16) 11, W. H. Hunt (16) 6, J. J. O'Brien (16) 5.

MUTUAL ROD AND GUN CLUB, OF BROOKLYN.

Sept. 2.—The Mutual Rod and Gun Club, of Brooklyn, a new organization, held its first shoot on the North Beach grounds to-day. The yearly prizes are awarded for scores made at the monthly shoots, the club event being at 7 live birds per man, all at 25yds., 10-gauge guns penalized 2yds. The scores made in that event to-day were as below:

J. B. Knowles and Frank Dexter 6, H. C. Staton, W. S. Massey, C. C. Treadwell and J. P. Smith 5, C. Schneider and P. Wambold 4, Aaron Whitney and G. A. Tracy 3, Thomas Hudson 2.

WAVERLY GUN CLUB, OF NEW YORK.

Sept. 3.—The members of the Waverly Gun Club, of New York, spent this afternoon cracking targets on the grounds at Bayside, L. I. The club shoot, which is 15 targets per man, handicap rise, resulted in a victory for James R. Selover, Jr., who broke 15 straight from the 16yds. mark. The scores in this event were as follows:

J. R. Selover (16) 15, C. L Thompson (16) 14, J. M. Gompert (18) 12, H. M. Meyemberg (16) 10, Dr. Emil Schroeder (16) 12, J. L. Waterman (16) 7, H. J. Gorman (16) 5, W. W. Graham (16) 7, P. F. Ulrich (16) 6, G. J. Guernsey (16) 5, T. J. Ryan (16) 4.

The L. J. Dorp Gun Club, of Philadelphia.

PHILADELPHIA, Pa., Aug. 29.—The third weekly shoot of the L. J. Dorp Gun Club too place to-day on the grounds at Morris, Delaware county, Pa. It was an ideal afternoon for target shooting, with the exception of a strong wind blowing, that made the flight of the targets erratic. As the rail season is now on us, we do not expect to shoot again at targets until October, as the boys will be busy with the little birds. Scores in the club shoot were as below:

L J Dorp	1111011101111110111'11'01—21
Frank Gill	1111011011111111111110111—21
V V Dorp	1111011011101111010101111—20
Walt Durfor	1111110110110011001101011—17
Robt Lloyd	0001000010001100100011000— 7

V. V. DORP, Sec'y.

In New Jersey.

FINLETTER WON THE MAX BLEIMAN CUP.

Aug. 29.—The main event at Hollywood this afternoon was the contest for the Max Bleiman cup, 20 live birds per man, handicap rise, Hollywood boundary. The cup was won by Leonard Finletter, of Philadelphia, who killed his 20 birds. A. L Ivins was again unfortunate in losing a single bird, finishing with 19 out of 20; Phil Daly, Jr., J. B. Ellison and Thomas tied for third place on 18 each. Edgar Murphy was the scratch man, being placed on the 31yds. mark; he was clear off his form and retired at the end of the 8th round, at which time he had lost 3 birds. Bland Ballard and Fred Hoey both retired at the end of the 12th round, each having lost 2 birds and there being only two moneys. The scores follow:

L Finletter (29)	22222222222222222220	—20
A L Ivins (29)	22220222222222222229	—19
Phil Daly, Jr (29)	20222222222222222022	—18
J B Ellison (28)	22022222220222222222	—18
Thomas (27)	22222002222222222222	—18

Edgar Murphy (31)	02022022	— 5

THE DALY-MONEY MATCH AT HOLLYWOOD.

Sept. 1.—Captain Money and Phil Daly shot a race to-day on the grounds of the Hollywood Gun Club, Daly winning the match by 5 birds, the scores standing at the close of the match: Daly 83, Money 78. The conditions of the match were: 100 live birds per man, $100 a side, 30yds. rise and the Hollywood boundary (21yds. in front, but only about 17½yds. from the end traps). The birds were a good lot and were materially aided in their efforts to get away by a strong wind that blew from the score to the traps.

Captain Money was not shooting in his old-time style; strangely enough he lost 5 birds that had an incoming tendency, ordinarily he is sure to score on such a bird. That his shooting was ragged is shown by the score, a single run of 10 straight being his only double-figure run in the match. Daly made one run of 15, two runs of 11 and two of 10. Lester Wallack was referee, while Louis Shortemeier pulled the traps. The individual scores were:

Capt A W Money	222•2•1112•0•112221220222	—19
	12220•1202212221222•220122	—20

	0212222222022•00222222220•	—18—83

ARLINGTON SHOOTING ASSOCIATION.

Sept. 2.—The members of the Arlington, N. J., Shooting Association held their regular monthly shoot this afternoon. The club event is at 25 targets per man. Mr. Tony Schuler would have made a better score in the club shoot had not his predilection for a pump induced him to shoot that kind of a gun, which did not suit him at all. He did some good work later on with a double gun, for Tony is all right and we look forward to his becoming one of the cracks of the Arlington Gun Club. Scores:

F Walters	10100111111111111111101111	—21
J Sickles	01010111111111101111110110	—19

A Schuler	00001000000101000111001111	— 9

M. HERRINGTON, Pres't.

IVINS IN GOOD FORM AT HOLLYWOOD.

Sept. 5.—A. L. Ivins shot in good form this afternoon on the Hollywood grounds, and after a long streak of bad luck landed first money and the cup in the contest for the Phil Daly, Jr., cup, with a straight score of 25. He did not win the cup easily, Finletter, the winner of the Max Bleiman cup, chasing him with 21 straight before dropping a bird. Edgar Murphy and Fred Hoey took third place with 23 each. The wind was against the birds, rather a strong southeast wind blowing all the afternoon. The scores were:

Phil Daly, Jr., silver cup, 25 birds, $25 entrance, handicap 25 to 31yds., 50 per cent. and cup to winner, 30 to second and 10 to third.

Ivins (29)	11121212222222221222222222	—25
Finletter (30)	11111121212222222222220222	—24

THE ENDEAVOR'S ANNUAL SHOOT.

Sept. 7.—The annual Labor Day shoot of the Endeavor Gun Club was held to-day. The weather was all that could be desired for target-shooting, and the attendance in consequence was good also. To-day's shoot was a double-barreled affair. It was, as stated above, the annual Labor Day shoot of the club, but it also was the "preparation day" for the Interstate Association's tournament, which will be held to-morrow and the next day, Sept. 8-9.

For the latter tournament Elmer E. Shaner, the Association's manager, has put in two sets of bluerock traps, and has also placed in position all the paraphernalia of the Association, giving to the gun club's grounds at Marion quite a gala appearance.

Shooting commenced early and was kept up until sundown, 5,000 targets being thrown, although only one set of traps was used at a time and no hustling was indulged in to any extent. Among those present were: J. Hildreth and J. A. R. Elliott, of the Winchester Repeating Arms Company; Justus and Carl von Lengerke, of the firm of Von Lengerke & Detmold, the United States agents for Schultze powder; Noel E. Money, secretary of the American E. C. Powder Company; U. M. C. Thomas, of the U. M. C. Company, Bridgeport, Conn.; Ed Taylor, of Laflin & Rand and W-A powder; Mrs. M. F. Lindsley (Wanda), ably filling the place of her husband, Milt Lindsley, etc.

Prominent among those shooting were: Louis Schortemeier, E. D. Fulford, "Uncle Billy" Sigler, who made his appearance at the traps for the first time for about a year; C. F. Lenone, of Passaic, and his fellow citizen, Bennie Abbott; James Smith, of Hackettstown; Dr. Jackson, of Springfield, N. J.; F. A. Thompson, of the Vernon Gun Club of Brooklyn; John L. Brewer, Jas. S. Duston, E. A. Geoffroy, etc.

The outlook for a good shoot the next two days is decidedly promising. The weather appears to be settled again, so that nothing need be apprehended on that score. The members of the home team are working well for the success of the shoot, the last one in the 1896 series of the Interstate Association. EDWARD BANKS.

The Cazenovia Gun Club.

BUFFALO, N. Y., Aug. 29.—The Cazenovia Gun Club held its weekly shoot this afternoon. Event No. 1 was the club prize shoot at 25 targets per man. Messrs. F. L. Swope and Stevens tied for the badge in class A, with scores of 20; W. Heinhold won the class B badge with 19, C. L. Swope taking the class C badge with 17 breaks. Several other sweeps were also shot during the afternoon, the scores appearing in the table given below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	25	10	10	10	10	10	10	10	Targets:	25	10	10	10	10	10	10	10

Trap-Shooting Systems.

BALTIMORE, Md., Sept. 5.—*Editor Forest and Stream:* I have just read a letter on "trap-shooting systems" which appeared in your last paper. Without altogether taking Novice's side of the question (and I think I know who Novice is), I must own to being very much of his way of thinking. While I am willing to admit that the system itself has been more to blame than the shooters for the "dropping for place" which was so common at tournaments until FOREST AND STREAM went to work at the droppers, I am however far from willing to admit that the old system, which he reviles, is without merit.

Class shooting was introduced, I take it, to keep those shooting who would have had no share of the purse if everything was "high guns." It performs its part well, and the original system of dividing purses would still be in general use if "our paper," FOREST AND STREAM, had not come out and given us the Rose system. I don't believe in jumping on a man when he is down, and the old system has certainly been downed by the newer and entirely equitable system you have so earnestly advocated. The old system was good enough when we knew none better, but now—*requiescat in pace.* CHILLED SHOT.

St. Paul Nineteenth Annual.

ST. PAUL, Minn., Sept. 1.—The St. Paul Gun Club may be seen to be an ancient and honorable organization by reference to the fact that it this week held its nineteenth annual tournament According to these figures the club must be at least nineteen years of age, dating, therefore, back to 1877. What a world of change in shooting matters it has seen! I presume the club must always have given good tournaments—at least it has the reputation of having done so—but no doubt its early tournaments must have been crude affairs compared to the systematic and methodical modern tournament of 1896. This year's shoot is as good as any it has ever held—probably the best one it ever held—for, though the figures of former years are not at hand, the entry of 50 shooters on the first day is a large one.

The twin cities of St. Paul and Minneapolis have a pleasant custom of taking a rest now and then and indulging in festivities of a purely holiday character. They made all sorts of schemes for having a big good time, from harvest festivals to ice carnivals. This week is a great one for the twin metropoles. Each city vies with the other, as usual, in magnificence and liberality. St. Paul has the G. A. R. encampment, and Minneapolis the Knights of Pythias, each city being a swarm of uniformed men, brass bands, parades, review stands, ice cream booths, and orators. There is a cloud of smoke all day and a pillar of red fire all night. There are a king and a queen of the carnival, chosen to preside over the nightly spectacles of joy and the long lines of illumined floats, and there are numbers of other kings and queens who preside elsewhere. Everybody is smiling and happy and brightly dressed, and both these towns are working their hardest and spending thousands of dollars daily in heroic effort to go through a vast daily programme of entertainment. Besides the two great encampments, the State Fair of Minnesota, itself a great thing, is in progress during this week. As neither of the two cities could corral the fair, they concluded to let it be held exactly halfway between the two cities, at Hamline, easily accessible by electric lines and railroads. Here there is a further daily struggle to work off a big programme of amusement. There are bicycle races and horse races and foot races and Indian la crosse games and parades and reviews and contests and displays of all sorts to stand as proof of the joy of the vast farming population of the grand State of Minnesota that the harvest is over and the fall shooting season at hand. All over the great fair grounds are all sorts of quaint, queer, ingenious and instructive things. You can buy several kinds of cider, and plenty of ice cream, and considerable pie and peanuts and extraordinarily bad coffee, and a lot of things. You can see self-binders and seeders and huskers and stackers and threshers and rakers and diggers and pickers and all sorts of things now needful in the touch-the-button farming of to-day. It is easy to be a farmer now, it is all done by machinery. I think I shall go into farming, because all the hard work a farmer has to do nowadays is to go to church or to talk politics.

Up on the hill at the State Fair grounds, beyond the wagon and steam engines, and the tents of the mammoth ox and the two-headed rooster and the fat lady, are the grounds of the St. Paul Gun Club, where the annual tournament is now in progress. Here there is a very comfortable club house and a railing to keep out the surging crowd of spectators. The grounds lie on top of an eminence offering a good light and a fair background, and everything is very carefully arranged for the comfort of the many shooters in attendance, the platforms, walks, sheds, benches, etc., being very well planned.

The tournament was at targets only, and was announced to be under A. S. A. rules, though it is to be observed that 10-gauge guns shot through at the same score with 12-gaugers. Bluerocks were used, shot at 3 cents, and at two sets of traps, or rather at one set of traps (known angles) and one magautrap. Paul North, of the Cleveland Target Co., superintended the magautrap personally, and one must say it worked handsomely, breaking almost no targets, and causing no trouble except an occasional balk by the puller, who sometimes grew erratic in his elbow. The old-fashioned and soon to be obsolete system of class shooting was adhered to, except that on the second day the equitable system was used in the first two events and the Rose system in the next two following. The choice of systems was left to the shooters following that. Winners of first money were handicapped 2yds. in the following event. This was hard on Charlie Budd, who had to stand back behind the others so much so he could not talk to McMurchy and Heikes at the firing line. Thus it may be seen that the nineteenth annual shoot of the St. Paul Gun Club was about as well arranged a shoot as the average modern tournament, with abundant indication of a leaning to still more modern methods. Next year, let us hope, it will cast aside fears and come out for the Rose system flat-footed.

The State championship event of the second day, for the diamond badge indicative of the individual State championship, made a change in the monotony of a stiff target programme—indeed too, stiff a programme, for 200 birds a day is too much shooting, especially where there are so many counter attractions as there are here at the State Fair. It ties a man fast to the traps all day and makes the "sport" not sport, but plain hard work. The State championship event was at 25 singles and 12 pairs, known angles (conditions not so hard and not so modern as such an event should carry), for an entrance of $6.50. A list of prizes followed down to the sixth place, among these a silver-trimmed cigar case for second place by Parker Bros. In the general average prizes there was a list covering the places from first to twenty-fourth, so that nearly everybody had a chance to get something to take home to the babies, from a plush lap robe to a negligee shirt. It would seem that the merchandise prize is still with us, but after awhile it too will go. Among the more important average prizes were the following: First, fine ejector hammerless gun, "B" grade, 12-gauge, presented by Remington Arms Co., value $75; second, cash by the club, $50; third, $40; fourth, $35; fifth, fine Elliot pattern repeating shotgun, 12 gauge, presented by Winchester Repeating Arms Co., value $47; sixth, cash by the club, $30; seventh, $20; eighth, $15; ninth, $10.

My ancient friend of the merchandise prize list, the silk umbrella, was in the list, and so was the hard hat, but I do not see any bottle of liniment. I was at a shoot once where the merchandise prizes included a bottle of liniment, and since then I have always thought that no such list was really complete without a bottle of liniment. It is singularly appropriate, moreover, for the man who has fallen down into twenty-fourth place. The ancient Romans had the pleasant motto "*Væ victis*," which being interpreted means, freely speaking, "Swat the under dog." Managements offering plunder lists to jolly along twenty-fourth men through 600 targets should always, in my opinion, offer a bottle of liniment or ointment, or something of that sort, for twenty-fourth place, so as to offer reproof to the brutal Romans. The Romans never asked a disinterested and harmless men's furnishing goods dealer for a silk umbrella or a Derby hat to jolly along a sore gladiator, but in many ways the Romans were behind the times, even the times of yesterday.

An innovation in methods was practiced by the officers of the shoot. No squad cards were used in scoring, and all the scores were kept as shot upon the blackboard only, the blackboard being covered by a piece of paper and ruled similarly, a fresh sheet being tacked on for each event. At the end of the event the sheet was taken down and handed to the cashier and assistants, who copied the totals of each man into the record book. This was an experiment, but it served to save time and confusion.

There was a strong attendance of stiff Western shooters, such as Mayor H. B. Jewell, of Wabasha; J. H. Block, of St. Peter; M. Trent, of Wadena; M. Jones, of Atwater; J. Dodge, of Duluth, etc., etc. P. O'Shaughnessy came all the way from Bismarck, N. D; E. J. Graham from Rosedale, Mich., and Willard Thomas from Indiana. Fred. Gilbert was not present from his Iowa home, being absent with Mr. E. S. Rice on a chicken hunt. The old guard was represented by McMurchy, of the Hunter Arms Co., Rolla Heikes and Charlie Budd. The Twin Cities sent a large and hard shooting contingent of gentlemen, who united in making things pleasant for visitors.

There were two lady shooters present, though one of them, Mrs. W. P. Shattuck, did not enter in any of the events. The other lady is a very desirable accession to the ranks of trap-shooters, a very bright, graceful and pleasant personage, and of course popular at once among the gallant shooters. This was Mrs. D. H. Day, of Duluth, who has been shooting for less than a year, but who goes into the 65 per cent. class readily enough. This was Mrs. Day's first tournament away from home, and she seemed to enjoy the fun very much. Mrs. Day was coached by her husband, Dr. Day, a very pleasant gentleman, though also a very unfortunate one. Dr. Day recently in course of the practice of his profession incurred blood poisoning and was obliged to suffer amputation of two fingers of his right hand. He fears this will deprive him of his profession of dentistry. Let him at least take heart that it will not debar him from shooting, for many men even more unfortunate have become very proficient with the gun. Besides, as he himself says, he takes as much pleasure in seeing Mrs. Day shoot as though he were doing it himself. Mrs. Day has a fine position at the trap and will be a good shot as soon as she has a proper gun that fits her.

Mr. B. F. Schurmeier, Dr. Lyons, Mr. Kennedy and all others connected with the management were efficient and courteous in their several parts, and aided respectively in establishing the smoothness of detail which made the St. Paul nineteenth annual up to date. It was a shooters' shoot and a success worthy of either or both the Twin Cities, which are the homes of jollification, good times and successes.

Following are the scores:

SECOND DAY.

The highest scores for the three days were made by the following shooters: McMurchy 1st, Heikes 2d, Budd 3d, Dodge 4th, Hub 5th, Robin Hood 6th, Burke 7th, Wilson 8th, Bennett 9th, Rose 10th, Bud 11th, Gold Bug 12th, Baldwin 13th. The scores made yesterday in the final events were as follows, the events being the 19th and 20th, inclusive. Four were at 25 singles, three at 20 singles, and four at 15 singles. The first event was at known angles and the second at unknown angles, successively.

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	*15*	*20*	*25*	*15*	*20*	*25*	*15*	*20*	*25*	*15*	*25*

NOTES AND INCIDENTS.

By evening of the second day, Tuesday, the cities of St. Paul and Minneapolis were crowded almost to their limits by the throngs of visitors from all over the country who came either to the G. A. R. or K. of P. encampments or to the State Fair. Each train brought many more people, until it was next to impossible to get about on the streets. Arrangements for handling these crowds were pitiably inadequate. The Interurban car line between the two cities was the only route the shooters could take from the grounds, and the cars on this line went by in lines, one after the other, loaded down so that the shooters had to wait often over an hour by the roadside before they could crowd into a car. There was great popular dissatisfaction over this very unfortunate state of affairs.

On the first day Heikes was unable to get his trunk at his hotel, and was forced to use a job lot of ammunition which proved no good. Budd also shot badly for a while. McMurchy was steady and went far ahead on the grand average. On the second day both Budd and Heikes began to pull up to McMurchy, but at evening he still led them by something like 12 or 14 birds, and was thought safe for first on grand average.

On the second day, it being left to a vote of the shooters, the Rose system was continued in use and gave satisfaction. Budd said that under the old system he made on Monday about $86 clear, and on Tuesday, under the Rose System, he made about $34 clear. The Rose system is bound to be the next thing in trap-shooting.

The weather was good, bright and calm Monday, but windy on Tuesday, when the shooting was hard.

The individual State championship was won by W. M. Taber, of Park Rapids, with the score of 38 out of 50, the lowest score ever shot to win this trophy. The high wind accounted for the low scores.

Mr. Day shot under the name of Duchess, one the boys were willing to call appropriate. In the State championship race Mr. Day scored 25 out of the 50.

The attendance at the shoot would have been much better had it not fallen directly at the date of the opening of the game season. This is a great country for field shooters, and all were eager to get out for a go at real feathers. It is good to be able to say that the Minnesota shooters will have more game this fall than they have had for the past ten years.

Paul North wore his bicycle suit, which displays him to be built like a hired man.

"Hank McMurchy, the Syracuse crackerjack," is what a local paper called him.

Roger Kennedy proved himself an able cashier, and pleased everybody at the window.

B. F. Schurmeier was general hustler and manager-in chief at the scores.

John F. Burkhardt appears in the new rôle of newspaper man, being publisher of the *Western Field and Stream*, a bright monthly which bears no less a name than that of Chas. Hallock as editor, as well as that of Mark Biff, a young lawyer of St. Paul. Mr. Burkhardt is welcome to the broad and flowery path of newspaper work.

Mayor H. B. Jewell, of Wabasha, is Wapahasa in the game and shooting columns of FOREST AND STREAM, and well known by that title. Mr. Jewell's style at the score is singular. He points his gun at the ground inside the trap line when calling "Pull!" Most men cover the field above the traps.

Pa Baldwin was there, as usual.

Block, of St. Peter, is one of the town's solid citizens. He weighs about 280lbs.

It takes the Twin Cities to get up a crowd. It was like World's Fair times. One rarely has a better chance to observe the serious and businesslike way in which the American citizen sets about having a good time than was afforded here this week.

After the shoot McMurchy goes to Duluth; then to Atwater, Minn., for a chicken shoot; then to Clear Lake, Ia., for a visit with Charlie Grimm until it is time to go to the Schmelzer shoot at Kansas City. Budd was called home and could not go chicken shooting. Heikes stayed over for a chicken hunt with Fred and Dick Merrill and the writer, west of St. Paul. Two days after the shoot would have found few of the trap-shooters at home, for all had joined the general exodus for the prairies and stubbles.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Calumet Heights Gun Club.

CHICAGO, Ill., Aug. 30.—The regular medal contest of the Calumet Heights Gun Club took place to-day. S. M. Booth was the winner in class A with 24 out of 25; Hodson, in class B, made the same score, losing his 23d target, and winning the medal in that class. Harlan, of class C, won the medal in that class by defeating his solitary opponent, Chamberlain, by the score of 18 to 17. The conditions of the shoot are 25 targets per man, known traps and unknown angles. Scores:

Class A.

G C Lamphere	0111111111111011111101010—20
S M Booth	1111111111111111111101111—24
A C Paterson	0111011111111101111111101—21

Class B.

Houston	1100110111000111100101110—15
Hodson	1111111111111111111111011—24
Harper	1010000001001010111110011—12
Metcalfe	0111010100011111100001011—14
Norcum	1111101111011111111101111—22
Whitman	1010111110111101101011000—16

Class C.

Harlan	1101101101110111111010101—18
Chamberlain	1101110101001110011111101—17

Two team races were shot during the afternoon. The first resulted as follows:

Patterson's team: Patterson 8, H. Carson 8, Hodson 6, Metcalfe 6, Houston 5, Chamberlain 4—37.

Lamphere's team: Lamphere 8, Norcom 5, Harlan 5, Harper 5, Booth 4, Whitman 4—31.

The second team race was at 10 targets per man, as the above, but the 10 targets were shot under the conditions known as "snipe shooting." At this style of shooting Lamphere's team put up the score of 43 out of 60, defeating Patterson's team handsomely. Scores:

Lamphere's team: Lamphere 10, Norcom 10, Booth 8, Harlan 7, Harper 6, Whitman 2—43.

Patterson's team: Hodson 6, Metcalfe 6, H. Carson 6, Patterson 5, Houston 5, Chamberlain 3—31.

Four events were also shot, the conditions of these events being as below; No. 1, 15 targets; Nos. 2 and 3, handicap events at 25 targets, Class A men shooting at 25 targets, Class B at 27 and Class C at 30; No. 4 was at 25 targets, unknown angles. Scores:

Events:	1	2	3	4	Events:	1	2	3	4

PATTY.

Grand Rapids versus Holland.

GRAND RAPIDS, Aug. 29.—The Valley City Gun Club of this place has held the five-men team championship of Michigan since winning it from Battle Creek in 1895. The club was recently challenged by the Holland Gun Club, and the contest came off to-day. The result, a tie, was very unsatisfactory to both clubs, and it was at once arranged to try issues again on Sept. 12. The score was much lower than has ever won the trophy, and was remarkable for being a tie on both singles and on doubles. No excuses can be made; weather and all conditions never were more favorable for a high score, but, for some unaccountable reason, every man was unable to reach his regular average. Even Messrs. Karstens and Van Eyck, usually handling their guns like professionals, shot well in the preliminary sweeps, but fell down in the main event. We do not know so much about the shooting qualities of the rest of the visitors, the two named having shot with us before, but all failed to maintain the reputation they were credited with. With the exception of Mr. Gould, who took the place of Mr. Gilmore on the home team, it was made up as usual, and no excuses can be made for the result.

There is no other club to whom we would rather lose the cup than the Holland gentlemen, and their next visit will be welcome.

Valley City Gun Club.

PUBLISHERS' DEPARTMENT.

Good News from South Dakota.

THE glorious results of this season's harvest of golden grain will pour a stream of sound money into the pockets of every Dakota farmer.

South Dakota has thousands of acres of choice farming and ranch land lying east of the Missouri River, and within one day's ride from Chicago or Milwaukee, which can now be bought reasonably cheap, but which before the end of another year may be advanced in price.

The stock raising industry in South Dakota is profitable, and Eastern capital is now being invested in cattle and sheep growing in that State.

Diversified farming, the growing of live stock and the products of the dairy are placing South Dakota foremost in the ranks of the successful Western States.

Those desiring full information on the subject, and particularly those who wish to seek a new home or purchase land, are requested to correspond with W. E. Powell, General Immigration Agent, 410 Old Colony Building, Chicago, Ill., or to the local agent of the Chicago, Milwaukee & St. Paul Railway.—*Adv.*

The Baker Gun Quarterly.

"THE Baker Gun Quarterly" for August is full of information relative to Baker guns. The first article is by A. R. King, of Syracuse, who brings out strongly the good features of the Baker hammerless. On another page notice is given of the company's intention to discontinue the manufacture of hammer guns. Owing to this fact, an excellent opportunity is offered to purchase guns of this class at reduced rates. The "Quarterly" will be sent free on application to the Baker Gun Co., Batavia, N. Y.—*Adv.*

Winchester Shot Shells.

THE Winchester Company has issued an August price list of paper shot shells that describes and illustrates the famous "Rival" and "Leader" shells, as well as the later products of the company, "Blue Rival," "Metal Lined" and "Repeater" shells. A table of comparative measures of nitro powders is also included.

The circular is artistically printed, and each shell is shown in its particular color.—*Adv.*

On Sept. 6 the double summer service of the Fall River Line will be discontinued. The steamers Plymouth and Pilgrim will be retired from service, while the Priscilla and Puritan will remain in commission, leaving New York, as usual, week days and Sundays at 5:30 P. M.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 19, 1896.

VOL. XLVII.—No. 12. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

AUDUBON BIRD PLATES.

THE most famous bird pictures in the world are those by America's great artist-ornithologist, John James Audubon. Devoted as he was to the study of birds, Audubon was first of all an artist—ardent, sensitive, poetic—and it was this artistic temperament, united to the painstaking fidelity of the naturalist, which made his paintings of birds far surpass any others ever painted. The great work in which the plates are contained is now so extremely rare that, although we have all heard much of these Audubon pictures, few of us have had the privilege of seeing them. It is with decided satisfaction then that the FOREST AND STREAM announces that a series of half-tone reproductions of selected Audubon bird plates will be given in forthcoming issues. The plates have been photographed especially for this purpose from a copy of the original double elephant folio edition of this work, 1827–1835, in the possession of a member of the Forest and Stream Publishing Company, and the results will be seen during the next few months by our readers.

The birds chosen for the illustrations include several species of ducks—including the beautiful plate of the canvasback—two species of grouse and several of the waders. The first of the series of reproductions will be the Black Duck in our next number, Sept. 26.

BIRDS AND THE FARM AND GARDEN.

IN response to a demand for Miss Florence A. Merriam's paper, "How Birds Affect the Farm and Garden," we have reprinted it in a pamphlet of thirty-two pages, and it is now for sale at this office. Price, 5 cents per copy, postpaid; with special prices to individuals or bird protection societies who may wish it in quantities for distribution.

SNAP SHOTS.

THE National Forestry Commission reached San Francisco last week after a two months' exploration of the Government forests in the Yellowstone Park, Idaho, Washington and Oregon. The observations have been much impeded by the widespread forest fires in the Northwest. Prof. William H. Brewer, of the Commission, said to a press reporter: "I have been constantly surprised during this trip to notice the wanton destruction of the great forests. I also noticed the inroads among the redwoods, those great forest giants, that ought to be preserved as a heritage for future generations."

In these days of political turmoil and ill-considered speech we hear much loose talk about the East and the West as two sections with diverse aims and opposed interests. If we could induce the authors of such talk to take down their guns, pack their grips and go shooting, the Eastern contingent on Western prairie chicken grounds and duck sloughs, and the Westerners in Eastern quail grounds and ruffed grouse covers, each enjoying all that a shooting excursion usually embraces in the way of personal intercourse, we should have accomplished about all that was required to convert them to the faith that they were to look upon one another as friends rather than enemies. The better the people of the country actually know one another, the less prone are the residents of one quarter to regard their fellows elsewhere with jealousy or mistrust. A good way to get acquainted is to go shooting together. Your sportsman tourist is a true cosmopolite. He has broadened his horizon. He is the true citizen of the country. Sectional strife can never be fostered in his soul. You may tell him that the East and the West are opposed in spirit and interest, but you shall not persuade him to accept the doctrine. He knows better.

The European sparrow supply in the towns of this country has been affected in an enormous degree by the development of electric motor and cable car systems. The local abundance of a species depends largely upon its food supply; we always take into account the crops of mast in prognosticating the amount of game to count on. So too the more game, the more varmints to prey upon it. In India when game harborages are established it has been found that if shooting is forbidden for a term of years in such preserves, the tigers and leopards and wild dogs and other beasts of prey multiply in such force that their ravages upon the game come in time to defeat the purpose of the harborage. The tremendous increase of the European sparrow in American towns was due largely to the abundant food supply afforded by the offal in the streets. Now that the trolley lines and cable system have so generally superseded the horse cars, and hundreds of thousands of horses have been banished from city streets, the sparrow's food supply has been restricted in a corresponding degree, and the bird itself has diminished in like ratio. Another anti-sparrow agency in New York is the reformed street cleaning department. There was a time when the sparrows had the street filth pretty much to themselves; but nowadays there is a man with a broom on every block waging war continuously on dirt and so on the sparrow simultaneously. It may be that while the local sparrow supply has decreased in the towns, the total stock remains as great as it was before; for the sparrows may have deserted the towns only to descend upon the country; so that the farmer may wail that under the new system he not only loses a market for his horses, but has to feed the sparrows too. Such a condition of things, it appears, might well have a place in the political platforms.

Great is Texas, and her native game resources are magnificent. In proportion to these gifts of nature is the responsibility of Texas citizens to conserve the supply and to maintain this wealth of furred and feathered creatures. As we all know, game protection has had practically no place whatever in the economy of Texas. Game interests have been left to look out for themselves, and the result has been in Texas what it always is everywhere else. But a change is promised; action has been taken which gives reasonable ground for confidence that the great commonwealth of the Southwest will take her place among the States which have come to appreciate and maintain their resources of field and forest.

A convention representing the sportsmen of different sections of Texas was held in Waco Sept. 5 and resulted in the formation of the Texas Game Protective Association. The name has a business ring. The convention was marked for its business character; delegates showed themselves to be alive to the desperate condition of game interests and to be earnest in adopting measures to remedy that condition. In the nature of things, a first meeting can be little more than preparatory; it affords an opportunity of meeting one another, taking measure of strength, and planning for united effort. All this was done at Waco, and well done. A permanent organization was instituted, a series of amendments was adopted as a basis for the new law, and a committee was named to report at a future meeting. It is hoped that the proposed measures may be won at the next Legislature. Texas should have a non-export game law and a law embodying the FOREST AND STREAM'S Platform Plank forbidding the sale of game at all times. This system is already extensively in force in other States; it is the best game protection we can have, and the best is not too good for Texas.

The man who devised the phrase "As sure as shooting" knew nothing about shooting, which is one of the least sure things in the world; and he certainly never could have had any experience with shooting club affairs. The uncertainties of shooting are illustrated in the fortunes of the Bowley's Quarter Ducking Club, of Chesapeake Bay. The club's property was formerly one of the most renowned duck shooting grounds of that famous region, but the wildfowling was seriously impaired in 1893, when a flood destroyed the wild celery beds. In 1894 the preserve was overwhelmed by the great tidal wave, and 800 of its pheasants met an untimely fate. Now we have to record a third serious disaster, the destruction of 3,000 of the club's pheasants by poison miscreants. As President Janney tells us in another column, this is by no means a private calamity confined to the members, for this pheasantry was designed to stock the State of Maryland with the game, and the wrong which has been done is a public injury to the citizens of Maryland. The Bowley's Quarter Club will have the sympathy of sportsmen everywhere.

A proposition to license sportsmen's guides is under discussion in Maine. Those who advocate the system argue that licenses will commit the guides to better observance of the game laws and will insure a higher degree of skill in the craft of guiding. We have not seen any definite explanation of the way in which the license system is to secure these ends. That the guide is an influential agent for or against the law is universally recognized. If the guides of Maine should band together and stand by one another in a compact to keep the game and fish law scrupulously, and to compel the sportsmen under their conduct to respect the law, everyone knows that the problem of game protection in Maine would be solved. There would be an end of sneaking into the woods in midsummer and killing game to rot on the bank. There would be an end of wholesale summer butchery by the Zieglers, if the Zieglers could no longer buy up the guides body and soul to do their lawless bidding. The close season would mean something; it would mean close season. The guides hold the key of the situation; if they say that the law shall mean in actual practice precisely what its terms imply, it will mean it, and in the depths of the woods.

Another reason given for the license system is found in the dangerous nature of the guide's occupation as a canoeman. Travel by canoe, it is pointed out, is full of peril; and when one intrusts himself to the care of his guide he should have some means of assuring himself that he is in safe hands. The license would give such assurance, possession of it being based on the proved qualifications of its holder.

Along with the licensing of guides would naturally go licensing of sportsmen, and this proposition comes up every now and then in Maine. Whatever may be the result of these discussions, they are interesting because of the evidence afforded by them that it is in Maine no longer a question as to whether game shall be protected, but as to how it may be protected most efficiently. When the discussion has reached that point the interests at stake are in the end certain to be well cared for.

We believe that a practicable and expeditious solution of the guide problem may be found in a voluntary combination of the guides themselves, following the example of the guides of the Adirondacks. The Maine guides might form an organization, pledging themselves to a standard of conduct quite as excellent as any that could be prescribed by law, agreeing one with another as members of the association strictly to observe the law and to compel its observance by sportsmen in their charge. Such an association would be a power in the State; it would do more for game protection in a year than all the wardens in ten.

At the coming election in New York an amendment to the Constitution will be voted upon empowering the Forest Commission to exchange plots of State land which are outside the borders of the State Park in the Adirondacks for other pieces of land which are included within the park lines, or to sell the outlying plots and purchase others within the park area. In support of this proposition it is urged that many of the isolated tracts of land outside of the park are not without value to the State, but cannot readily be protected by the forest guardians, whereas the consolidation of lands within the park limits would extend the State's holdings where they could be properly cared for. The State Comptroller has made an order that the cancellation of State tax sales in Hamilton county made by former Comptroller Wemple was void and that the sales are therefore in full force. This means that some 200,000 acres of Adirondack lands will be restored to the State, if the order shall be sustained by the courts.

The Sportsman Tourist.

THE MARKED MINK SKIN.

SIXTY years ago there lived in a quiet New England hamlet a hatter named Job Wilbur, an honest and industrious man who by economy and close attention to his business managed to gain a comfortable livelihood for himself and family.

He was a Quaker, and there being a goodly number of that persuasion in the neighborhood, he had the advantage of their patronage in the manufacture of the broad-brimmed hats which were an indispensable part of the apparel of the male members of that sect. There was no change in their fashion, and a new hat was only bought when the old one was worn out; but the orders were sure to come, though they came slowly, and as Friend Wilbur's conscience was quite easy on the score of filling the more frequent orders of the world's people as changes in the style of headgear demanded, the trade was good enough to warrant him in teaching his son Abel the mysteries of the craft.

Abel's school days were confined to the winter months, but he was studious and made such good use of his limited opportunities that he won the open praise of his teachers and the secret envy of some of his schoolmates. Among these were the four Thurstan boys, who were less apt or less diligent scholars than he. Their father was the great man of the village, keeper of the principal store and owner of several farms which had come into his possession by foreclosure of mortgages, and it was galling to the pride of the rich man's sons to be outdone in any respect by the son of the humble Quaker hatter. They snubbed and slighted Abel upon every occasion, and at last began to insinuate doubts of his honesty.

The hatter's shop afforded a ready market for furs, and most of the boys of the neighborhood as well as its professional hunters and trappers availed themselves of this means of adding to their pocket money, and trapped muskrats and mink along the little river that turned the village mills, and in the small lake of which it was the outlet.

Though they stood in less need of it, the young Thurstons were as forward as any to avail themselves of this source of profit and pastime, and though they had more means to buy traps and more leisure to tend them, yet Abel was their most successful rival in this pursuit. At length they hinted suspicions that he robbed their traps, but found little credence, for though Abel was too diffident to be a general favorite, there were few who could believe that one who had been so carefully trained by such honest parents could be so dishonest.

His case was under discussion by the village gossips at the store one evening, when Abel quietly entered. A sudden hush fell upon the company until he had done his errand and retired, a silence that he did not fail to notice.

"The devil's allers nighest when you're talkin' about him," remarked one as the door closed behind the boy.

"Wal," said old Peter Carter, an oracle among them, "you can't make me b'lieve 'at a boy 'at looks so honest an' come o' sech honest folks 'll tech tu take what don't b'long tu him," and Peter knocked the ashes from his T. D. pipe with an emphatic tap upon the stove hearth.

"The's a black sheep in most every flock," said the first, whose speech was mostly in proverbs.

"I don' care if the' is," answered Peter.

"You can't allers tell how fur a twud 'll jump by his looks," said the proverbial philosopher.

"Wal, you can cal'late putty nigh, if you've studied twuds," said the other.

"I tell you he's a sneak and a thief," Tom, the eldest of the Thurstan boys, declared emphatically, as he came from behind the counter with both hands full of raisins. "Everybody 'll know it 'fore long. Have some raisins, Mr. Carter? Have some, Cyrus? Have some, anybody?"

"No, thank ye," said Peter. "I guess if your father come in an' ketched us a-chankin' raisins, he'd think we'd be'n a-helpin' ourselves."

"Pooh! he wouldn't care," Tom scoffed; but he quietly pocketed his remaining handful when his father just then entered with Squire Tilden, the first selectman of the town, and it was noticed that Tom's beneficiaries munched their portion very unobtrusively.

"The' must be some fire where there's so much smoke," the philosopher resumed.

"I'll b'lieve he's up tu sech tricks when I see it," said Peter.

"Yes, seein's is b'lievin'," Cyrus remarked, and the conversation drifted into other channels.

After transacting some business with Mr. Thurstan, Squire Tilden went out, and was quickly followed by Tom, who overtook him at a little distance from the store.

"Mr. Tilden," he said in a low voice, "will you help me ketch a thief?"

"What's that? a thief!" The Squire stopped and looked at the boy's eager face, fully revealed in the bright November moonlight.

"Yes, sir," said Tom, "somebody steals mushrats an' mink out o' my traps. I know who it is well enough, but nob'dy 'll believe it. There's a mink in one o' my traps now, not twenty rod below the saw mill, an' I want you to go with me an' mark it so't you'll know the skin when you see it. It won't take more'n ten minutes; will you, Mr. Tilden?"

"Why, yes, Tom, I'd do e'enamost anything for your father's son. But there's more'n that, Tom. I've heard some talk about this matter, and I'm sure you're on the wrong track. Abel wouldn't ever rob a trap."

"That's what everybody says, but you wait and see," and Tom led the way down the river bank. "If he hain't got it a'ready, there's a nice prime mink in my trap here."

Sure enough, in front of a disordered "cubby house" built under the shelving bank lay a large mink, quite dead after a brave struggle for life and liberty, which was evidenced by the torn earth and displaced sticks of the miniature shanty in which the bait had been placed and the trap set at its door.

"Now you mark it so you'll know it, an' I won't look," said Tom, turning his back on his companion and whistling softly to himself as he looked upstream. The broken current crept unseen in the black shadows of the banks, and sparkled in the moonbeams that were shot upon it through the fringe of naked trees. He could see up to the mill and the noisy dam, spilling from the entire brink its nightly overflow in a broad sheet of misty silver; but his thoughts were not of the beauty of the scene before him.

Squire Tilden laid one ear of the mink upon a stick and nicked it with his knife, then replaced the animal in the position he had found it.

"All right," he said, "now let's be off," and Tom's whistle became loud enough to be heard above the rush of the rapids and the roar of the dam.

"You've marked it so you'll know it, Squire?" and assent was nodded. "Now if you'll go into old Wilbur's shop in two or three days, I'll warrant you'll find it there."

"Like enough," said the Squire, "but it don't follow that Abel brought it there. Job buys a good many skins of a good many folks." And they parted on the street, each going his way.

Two days later Job Wilbur and his son were at work in the shop, the father whipping a broad-brimmed hat with a rattan to raise the nap for finishing, which, in the case of this particular hat, was to be done with especial care, for it was for Friend Palmer, who sat at the head of the meeting on first and fifth days. Abel stood at the hurl or hatter's table "flicking" a fluffy bat of fur with a bow-string twanged with a wooden pin. Further back were the furnace kettle and bench where unformed hats were "planked" or rolled like sheets of pie crust, with a rolling pin, and the dyeing vat with its wheel, on which the blocked hats were placed to be submerged in the dye by its revolutions.

The dingy walls were a museum of natural history, hung with the coats of various fur-bearers, the rounded skins of beavers just as they came from the stretchers of Indian trappers in Canadian wilds, the attenuated pelts of otters, furry coats and plumy tails of foxes, bundles of mitten-like muskrat skins, a dusky display of mink skins and one great tawny hide of a panther hanging from ceiling to floor.

In the front window an array of hats was disposed around an ancient and dilapidated stuffed beaver. It was faded and moth-eaten, its broad, scaly tail shriveled and shrunken like a dried fish skin.

Presently Squire Tilden entered and accosted Job with a mingled air of determination and shamefacedness.

"Well, Job," said he, "have you got any prime mink skins on hand? I've a notion to have a nice muff made for Miss Tilden, a Christmas present."

"Christmas presents are a vanity," said Job Wilbur, "but I've got three or four nice mink. There's one in partic'lar that my son just caught, is a remarkable nice one. Abel, thee show Jonathan Tilden them mink skins, will thee?"

Abel left his work and brought over the skins, all turned fur side out but one, which was still on its stretcher.

"This is the largest and the tail is the handsomest," the Squire said, picking it up; "I'd like to see the fur side."

So Abel took it off and turned it and submitted it to the Squire's critical examination. The worthy magistrate heaved a sigh of pained surprise when by touch and sight he recognized the mark he had made in the ear of Tom Thurstan's mink.

"Where did you get this?"

"I caught it in one of my traps," Abel answered.

"Where, what place?"

"In a hollow log at the upper end of the mill pond," Abel replied, embarrassed at such close questioning.

"Abel Wilbur," said the Squire in his deepest magisterial tone. "I saw the mink in one of Tom Thurstan's traps last Tuesday night and I put that mark on the ear with my own hands. Oh, Abel, I'm sorry, I'm sorry enough."

Poor Abel staggered as if he had been struck a crushing blow. "I don't understand it. There's a mistake somewhere," he gasped. "It's awful."

"What is it? What does it all mean?" asked the father in great anxiety.

"It means that your son has taken what don't b'long to him, Job," said the Squire, solemnly. "I couldn't have b'lieved it if I hadn't seen this mink in Thomas Thurstan's trap with my own eyes and marked it myself. There's the mark on the left ear."

"I don't think my son would do such a thing," said Job. "How is it, Abel? Surely thee can explain it."

"I don't know, father, I don't know. It's all a mistake. The mink was in my trap. What shall I do?"

"If you'd own it all up, I should think better of you, Abel."

"I cannot own to what I never did," said Abel, firmly. "I don't know how it happened, and that is all I can say."

So in sorrow and indignation the Squire went forth, presently meeting Tom Thurstan, whose suspicions he was compelled to admit had been verified. Before the close of the day the story was known throughout the village, and at the evening meeting of the gossips at the store it was the all-absorbing topic of conversation.

"It's a long rhud 'at hain't got no turn," Cyrus Barker said. "A wolf in sheep's clothin' 'll show his fur some time or 'nother. What ye think about it now, Peter, hey?"

Peter could only shake his head and say, "I wouldn't ha' b'lieved it. An' I do' know 's I du b'lieve it now."

But there were few who were so lenient, and many were willing to accept the fact of Abel's guilt. Though he suffered no legal prosecution, he was under a social ban that was almost as humiliating and hard to bear as a penal sentence.

His own family believed in his innocence, but elsewhere he was met by coldness, distrust or open contempt. At length he went abroad only as necessity compelled, and when the winter school opened he did not attend it, but worked steadily in his father's shop.

Sometimes when a stock of hats accumulated Abel took them to a distance to peddle out, but even then he found his evil name followed him.

So the cloud continued to shadow his life till he had grown to manhood. Coming home from a long extended peddling trip, he was told that Tom Thurstan was lying ill of a fatal malady and had sent an urgent request for Abel to visit him.

Wondering much at the cause of it, and with little inclination to comply with it, he nevertheless did so.

He found Tom but a shadow of his former stalwart figure. His face bore a remorseful, haunted expression, in strange contrast to his wonted bold and defiant mien. He had but time to give Abel an eager welcome when Squire Tilden came in, evidently an expected visitor.

"I'm awful glad you've both come, for I've got something to tell you that I couldn't die in peace till I did tell you." Tom spoke rapidly, as if afraid his strength would not hold out. "I needn't tell you I used to hate you, Abel. I always made that plain enough. I told stories about your robbing my traps, but I couldn't prove 'em, and I made up my mind I would. You remember the night I got you to go and mark the mink, Mr. Tilden? Then my brother Perley took it out of the trap as soon as we left it, and he and I put it into one of Abel's traps. That's all there is to tell. You know the rest. It always troubled me a good deal to think I did such a mean thing, but never as it has since I was sick. Write it down just as I have told you, Mr. Tilden, and I'll sign it, and then you must show it to everybody—everybody."

The Squire did as he was desired, and Tom signed his name to the confession.

"Now can you forgive me, Abe? I've done all I can do to right the wrong I done you."

After a brief but careful self-examination Abel answered, "It has been a grievous burden to bear, Thomas; but I can truly say I do forgive thee and bear thee no ill feeling. I wish thee might get well."

Tom shook his head. "I can't say I want to now. I can die in peace. Good-bye, Abel."

"Farewell, Thomas; I thank thee for what thee has done."

The young men took each other's hand in a kindly and grateful clasp, and the visitors departed in solemn silence.

Squire Tilden lost no time in making public the confession, and then each member of the community strove to outdo every other in making amends to Abel for all the scorn and condemnation that had been heaped upon him.

"It's allers the way," said Cyrus Barker, "if you give a dog a bad name everybody's ready to fling a stone at him, an' we've all hed a shy at Abel."

"I tol' ye I never b'lieved he stole that 'ere mink," Peter Carter protested.

"Wal, seein 's b'lievin'," Cyrus said, "but feelin 's the naked truth, an' that's a fact. I s'pose you felt 'at he wa'n't guilty, an' the rest on us didn't, was the way on't."

Abel Wilbur became respected and prosperous in the community where he had been almost an outcast, and afterward removed to Philadelphia, where for years he lived an honored member and revered preacher in the Society of Friends.

This story was told me by a relative of his nearly as I have related it, with the exception of a change in the names of the chief actors. ROWLAND E. ROBINSON.

FERRISBURGH, Vermont.

ISLANDS OF THE PACIFIC.

I.—The Galapagos.

THE Galapagos Islands are so called from the land turtle or elephant tortoise found there. They are quite a large group, lying on the equator, and ranging from 89 to 92 W. L. I visited them several times in 1860, '61, '62. I propose to give a few extracts from the log kept at that time.

July 1, 1860.—Becalmed off Redondo Rock; two boats gone fishing. North Head looms well up off to the S.E. Wish I could get ashore.

Boats got back at 4 P. M. Have had good luck, mostly yellow-tails; they had a few that looked like the Grand Bank cod.

Hoisted in boats, took in light sails, stood off and on all night.

July 2.—This morning we found we were well in under North Head. Wind to west'rd and light. Made all sail and ran down past Cape Berkeley, into the narrows between Albermarle and Narborough. Came to at 5 P. M. in Tagos Cove, Albermarle Island.

This is a beautiful place from the ship. It may not look so well after we get ashore. It appears to be well wooded with patches of green sward and many black and brown rocks showing their heads above the foliage. I can see some clean white beach that I want to get my foot on. There is one point abreast of our anchorage where the rock comes clear to the water and ends in a high bluff which looks like the mouth of a cave.

July 3.—Here we are at anchor and all hands busy. We are to get wood and terrapin and have a run ashore. We are all glad of that, for we haven't put foot on solid ground for months. Part of the crew are breaking out casks in order to make stowage for wood. Part are getting ready to cut wood, while others are getting ready for terrapin hunting. Some of our crew have been here before and they are giving instructions as to the outfit.

The terrapin are found on the table-land, two and sometimes as far as five miles from the beach. As there are no roads and no carts, they are brought down on men's backs.

The terrapin will weigh from 40 to 100lbs., and to pack one two miles over a rough trail in very hot weather is no boy's play. The outfit for the work consists of two canvas straps and a few fathoms of spun yarn. The straps are about 2in. wide by 2ft. in length. They are doubled and well stitched with sail twine, with a large hole or grommet worked in each end.

The *modus operandi* is as follows: First find your terrapin and turn him over on his back; then get a round stone about the size of a cocoanut or larger; sit down flat with your feet against the terrapin's shell; get a good grip of one of his feet and pull. He is very strong, and it will take lots of muscle and hanging on to get his leg out straight; but it will come at last, and then with your toe tuck in the round stone to the socket behind his leg. Make fast one end of one of your straps to his foot with several turns of spun yarn. Serve the other three legs the same way, having your straps fast to right and left legs and crossing in front. Now you are all ready to shoulder your load. If you have any little fixing of clothing, etc., to do, do it before you pick up your load; you can't do it afterward.

Set up your terrapin against a rock, head up, and as high as your convenience will allow. Get down in front, back to your load, slip your arms through the straps, having them cross on your breast; then get on your feet, and there you are with your living knapsack, all ready for a tramp to the beach.

It's not hard work at first, but before you get to the

beach the terrapin of 40lbs. that you started with weighs a ton. You start off brave as a lion; the load is not heavy; the straps are wide, and the terrapin doesn't make any fuss about it. But the load grows heavy fast; the straps are not so easy as they were; the day is hot, the way dirty, the perspiration runs down into your eyes, and you get a pebble into your shoe, but you don't dare to stoop down to get it out, for you know if you ever do get down with that load you can never get up again. The terrapin's shell that you thought so smooth now seems to be as full of lumps as a bag of scrap iron, and every lump has found a particularly tender place on your back. The terrapin that has been riding along so quietly begins to get restless. He draws up one foot, then another, then all of them; and with every move he makes you think those straps are going to cut you through. You try to change the position a little, but every move makes matters all the worse. Finally, in desperation, you grit your teeth and plod along, vowing that if you do reach the beach alive you will never try it again. But you do, all the same. For terrapin are glorious eating; the bones cracked and made into soup are away and beyond green turtle, and the liver—well, if I could tell you how good that was I would, but I know of no words that will express it. Terrapin liver, fried in terrapin fat, has a crisp nutty flavor that is unequaled by any food that I have ever eaten.

July 4.—The nation's holiday, and as we fly the American flag we'd celebrate. After breakfast all hands go in the boats for a sail and run on the beach. We run down the coast a mile or so and land on a pretty little white beach. Some strip and go in for a swim; some look for shell, while the older and more sedate of the party are taking in the general outline of the country. We find something entirely different from what we have seen at home. Trees, shrubs and flowers (the last few) are very different from our home surroundings. The camphor tree is quite plenty, but very small. The cactus family is well represented, and all the specimens are of very large size, some as high as 20ft., with spikes 6in. long.

We start an iguana some 4ft. long, a disreputable-looking animal, built like an alligator, with a cross-cut saw growing out of his back. We make a rush for him, but he is too smart for us.

Now we find the nesting of thousands of birds, pelicans, gulls, cormorants, etc. These are not at all afraid of us and keep on their nests or at feeding their young. We did not make a very close inspection, for on getting near the nests we found that the odor from decaying fish and excrement was insufferable.

On returning to the boats we find a large seal. We surround and kill him with clubs and stones, and then wonder why we did it, as he is of no earthly use. We get back to the ship at sunset, tired and hungry, and so ends our Fourth at Albermarle.

July 5.—Up bright and early and hard at work. A small party starts for terrapin, the rest prepare to get wood.

These islands, though very rocky, are well wooded, but the trees are small, scarcely ever over 1ft. through. The islands are all of volcanic origin and are very uneven. All have one or more high peaks, which really are extinct craters, near the center of the land. There are ridges of lava radiating from each peak like the spokes of a wheel, and reaching nearly to the shore. Between the ridges are stretches of grass sward or green woods. Some of these spaces remind one of a New England meadow, with the green grass bounded by the ridges of lava like a stone wall.

This description will apply to about a mile from the beach. Above that there is very little grass or shrubbery, mostly a jumble of lava clinkers, ashes and rock, with here and there stunted shrubs or cactus.

Everywhere it is very dry, and I have been told that rain never falls here. I saw no fresh water on Albermarle, and very little anywhere. And on Chatham Island I found a small pond of very shallow and very warm water on top of the hill. I have been told that there is a small stream on the south side of Chatham, but have never seen it. Charles Island, south of Albermarle, was once a penal colony of Peru. When I was there in '61 there were two runaway sailors; they said there was no one else on the island. The fact that these men lived there and that there were cattle there would argue plenty of fresh water.

The islands consist of Albermarle, about seventy miles long by twenty-five wide; it lies north and south, with five high peaks, the highest 3,700ft. high. Narborough, about ten miles diameter; one large peak 3,720ft. high. Indefatigable, ten miles diameter, one large peak. James, ten miles long, five miles wide, range of small peaks. Charles, seven miles diameter, several small peaks. Chatham, nine miles long, four miles wide, several small peaks. Hood's, four miles long, two miles wide, one large peak, several small ones. Barrington, three miles long, a bluff to the water's edge. Duncan, Jervis, Bindloe, Tower, Abingdon, Wenam and Culpepper are all small. Besides the above there are many large rocks, the chief of which is Redondo, about twelve miles northwest from Albermarle, and a very striking object, rising from the water like a chimney to the height of 85ft.

We spent some very happy days in Albermarle and did some very hard work, but we were all young and full of vim, and hardy from our simple life at sea.

It seems, to look back at it all, like a grand play day.

Those days were not without mishaps either. Poor Gus slipped and ran a cactus spike into his leg. It entered just above the knee and ranged up for some 3in., and ½in. under the skin. It was my first surgical operation, cutting the spike out, but I made a good job of it. Poor Gus! I saw him go over the side several years later with two round shot lashed to his feet.

Francisco fell on a hatchet he was carrying and nearly cut his breast bone through.

John fell into a crevice in the rocks and had to hold on by his eyelids while a man went for a rope to pull him out.

But barring such trifling incidents as the above we had a good time. We got all the wood we could stow away; we got over a hundred terrapin, which made us many a good dinner. We had all the running and climbing we wanted and drove the scurvy out of our bones, for a while at least.

Still when on July 15 we took our anchor and stood to the west'rd it was with glad hearts. We were tired of shore and glad to feel the old familiar roll once more.

TARPON.

Natural History.

DR. GOODE AND HIS WORK.

From the Washington Evening Star.

DR. GOODE'S administration of the Smithsonian Institution was so thorough and scrupulously honest that it has always been said that that department was above suspicion of wrongdoing, and the idea of investigating it had never been suggested. He was a man whose upright life was known to every one who came under his influence, and he had the reputation of having a personal acquaintance with every employee of the institution without exception. He was scrupulously intent on carrying out the design of the founder of the institution as expressed in his will, and always reminded those associated with him that the Smithsonian Institution was for the dissemination of knowledge among men.

His purpose in carrying out this intention now and then brought him at variance with scientists who wanted to make use of exhibits for their own purposes of study to the exclusion of the public; but Dr. Goode never failed to insist that no use should be made of any portion of the exhibits under his charge which in the least interfered with the public having continual access to them.

He was careful about the use of public property for any private purpose, and it was said at the museum that no employee was permitted to use a sheet of paper belonging to the Government for the purpose of writing a private letter. Combined with his ability as a classifier and scientist Dr. Goode was endowed with a practical business ability, which greatly assisted him in successfully conducting the work of the institution.

One of his most pronounced traits of character was his accuracy and the immense care he took in order that every publication by the institution should be absolutely faultless. It was this intense desire to be faultless in his work that impelled him onward and caused him to work so incessantly as to greatly endanger his health. He was familiar with the work in every department under him, and frequently surprised his associates by his knowledge of their work and his suggestions for improving it.

Dr. Goode was a deeply religious man, and his life was as pure as that of a child. No one was known to have ever indulged in any talk in his presence that could not with the utmost propriety have taken place in the presence of ladies.

One of his most pronounced traits of character was his readiness to help fellow scientists, and it is said that at least 100 scientists throughout the world were under constant obligation to him. He helped many of these men to do their work and forwarded to them any information that came to his hand which he knew bore on particular lines of work pursued by them. He took a great interest in young men, and always had time to counsel the aspirant for scientific attainments. He was accessible at all times, and his temperament was so buoyant and friendly that no one was ever able to long be at odds with him when he might differ with them on some subject of administration of the institution.

BIRDS IN CENTRAL IOWA.

VINTON, Ia.—*Editor Forest and Stream:* Summer birds appeared in this vicinity as follows:

March 4—Mourning dove.
March 9—Meadow lark, song sparrows, a large flock of brown birds, and two bluebirds.
March 25—Killdeer.
March 29—Mourning dove, yellowhammer, northern butcherbird and pigeon hawk.
April 10—Kingbird.
April 15—Brown thrush.
April 25—Baltimore oriole.
May 2—Catbird.
May 3—Redheaded woodpecker.
May 5—Yellowbirds.
May 10—Cuckoo.

I doubt that the mourning dove of March 4 was a new arrival. It may have wintered here. I saw one the last day of December.

Blackbirds are usually among the very first arrivals, and remain the latest in the fall, there always being small flocks after the first snows. And, unlike the blackbirds of New England, I have never known them to pull up corn. I have watched them when I have been planting corn, and have not seen them pick up a kernel. A small flock can almost always be seen following a plow and picking up the insects that are uncovered. A short time ago I saw something in FOREST AND STREAM about a flock of blackbirds that stayed here through the winter. In this flock there were ten birds, but during the fore part of January there was a hard storm, after which the flock showed up with two birds missing. During warm spells of weather they would be gone for a day or two.

Feb. 17 was a thawing day, and I suppose that my blackbirds started on one of their pleasure trips, for I could not remember of seeing them that day; but, alas! the next day they were caught in a hard northwest wind, with the air full of snow and the weather at zero. They showed up that day with one bird missing, and there is no doubt but that the poor fellow became numb with cold and dropped out of the flock, while the others, being unable to give assistance, hurried on through the cold storm to their winter quarters. But do you think that they forgot their lost companion? Feb. 26 the weather rapidly grew warm, the thermometer showing 62° above. Geese and ducks were flying over, and the blackbirds went away. But on Feb. 29 they came back, fetching with them the missing one that they had left in the cold storm eleven days before. And I cannot understand why that was not about the same kind of instinct that men would have used under like conditions. I did not see these birds after March 6, and I believe they are at their old breeding places far away to the north. I will watch for them next fall.

Last summer I saw the only hummingbird that I remember having seen in Iowa, and I have lived here for thirteen years.

I have seen three bluebirds this season, but the song birds seem to be more numerous than usual. The meadow larks, like those in Nebraska, do not go through with their song, as does the New England lark.

There is also in New England a brown bird that has a sweet and extended song. We have the same bird here and it begins the song all right, and goes along lovely until it gets to the middle of the song, when it stops short. What is the matter with these birds? Is the air too rarified? The whippoorwills stay in the timber along the river; they seldom come on to the prairie. I have only heard four away from the river.

I learn that crows do not winter in northern Michigan or Wisconsin. They winter with us in flocks of thousands. I have never known them to roost in the heavy timber along the river, but always in the small groves out on the prairies. I do not understand why they do so, unless it is more damp and cold near the river. Every morning they go to the river to drink and feed on the carcasses usually found at such places, but in the latter part of the afternoon begin to string out to their roosting place.

Butcherbirds stay with us all winter, and that together with their handsome plumage is all the good that can be said of them.

They build their nests and generally keep away from the buildings, yet I have seen them chasing down song birds that were flying for their lives from tree to tree, with horror shown in their movements and panting with exhaustion, and every spring I think that I will kill every one near my place. Even in the night time I have heard their cry for blood coming from the hedges by the roadside.

Bluejays stay with us through the winter. There also is a bird that stays here summer and winter whose note is the same as that of the phœbe, excepting the note of the former is a clear pewee, while the note of the latter is tremulous.

The catbirds are great berry thieves, while the blackbirds, after they have flocked together in the fall, destroy some apples, and the bluejays are guilty of doing the same. The bluejays have a reputation for destroying the eggs of other birds, but they build in my yard every year, and there are always other birds that build and raise their young within a few feet of them.

I have just read in the last number of FOREST AND STREAM what Mr. A. K. Fisher says about the food of the barn owl. Now all research into the habits of birds is to be commended, and for one I am thankful for any knowledge imparted or advice given; but if one feels that he knows best how to serve his own interests he should be allowed to act without being subjected to the insolent comments of people who are as unfit and unable to give good advice as to rural matters as an Australian kangaroo is able to jump into heaven.

Farmers are told that they murder their friends by killing hawks and owls, for it has been learned that hawks and owls mostly live on meadow mice, song birds and domestic chickens. They do some good by catching meadow mice, but how much? I believe there is not a 160-acre farm in this country on which the meadow mice destroy enough grass to amount to more than one forkful of hay, which in the East would be worth 10 cents and here 2½ cents. Sometimes the mice get into the stacks of corn if the latter is left standing long, and in one field might eat half a quart of corn, which in New England would be worth 1 cent and in Iowa ⅓ cent. I would not lose one song bird or chicken for all the mice the hawks and owls have killed on my place during the last ten years. I do not kill meadow mice, for I think they are harmless; neither do I kill owls; but I have made few shots that have given me the satisfaction that I have taken in knocking down a hawk that was flying away with a peeping chicken in its talons. When I find a hawk on my place I will kill it if I can for the deviltry it is bent on doing, and when I find one elsewhere I will try to kill it for the deviltry it has done, and no one need lose any sleep by figuring out how much my loss will be.

The only good owls do me is to look wise in the daytime and cry in the nighttime, and that is not objectionable, for there are few sounds that come to my ear either in daylight or darkness that are not pleasant to hear. The song of birds and the buzz of insects; the rattle of the tree toad and the chorus of the crickets; the midnight hoot of the owl from the wooded shores of the secluded lake and the cry of the eagle in the sunlit sky; the croak of the bullhead, the bullfrog, and the bellow of the bull; the bark of the squirrel, the baying of the hound and the howl of the wolf in the lonely woods; the boom of the partridge, the gun, the settling ice, and the electric current in the troubled clouds; the whistle of the woodchuck, the wail of the loon and the laugh of the crane circling dimly in the distant sky; the splash of the alighting duck, the feeding fish and the beaver startled by the campfire's glare; the breaking of the ocean waves on the shore, and the soughing of the wind in the mountain forests: from meadow and hillside, from valley and mountain, from sunlit plain and woodland shade—few indeed are the sounds that I do not love to hear, and of such I can now recall but three: the hiss of the hidden snake, the rasping call of the red-headed woodpecker and the outlandish squall of the wooden-headed opera singer; and although there are notes of the former bird that are not unpleasant, I have never yet listened with pleasure or comfort while the latter was giving tongue.

I do not like hawks very well. I was once changing my camp from Bancroft, Idaho, to Bear Lake, a distance of sixty miles. Soon after leaving Bancroft I saw a hawk sitting on a snow guard by the railroad track. I handed the lines to my wife and taking my shotgun jumped out of the wagon. I went up to a snow guard that was between me and the one that the hawk was on, and looking under it I saw that the hawk was getting restless, so I laid down and quickly pushed the gun ahead; my position and the lay of the ground preventing me from putting the gun to my shoulder, I glanced quickly along the barrels and let her go. Eheu! but how she went, somehow both barrels at once. The old gun jumped clear from the ground and came right back at me, she whacked me on the shoulder, then glanced up and gave it to me again on the bridge of my nose; then she shook herself around in the air until she lost the firing pin from the left barrel and dropped back to the ground.

I went around and picked up the hawk, and then went back and got the gun, which had not yet got through smoking at the mouth. I laid the hawk down by the side of the wagon, and that hawk was as dead as any dead hawk that you ever saw. Then I tried to make my wife believe that I was not hurt. Then wondering how any two feathers on that hawk could be together, and not seeing any wound on it, I took hold of its leg with my left hand and raised it up so that I could more closely look at

it; but just then its other foot came back to life, and reaching up took me around the thumb, one claw going through the root of the nail. I dropped the gun out of my right hand and began to pull on its claws, but the hawk's other foot came to life, and it took all the attention of my right hand to take care of that foot; and there I was, holding one of its legs with my right hand and the hawk clinging to the thumb on my other hand, the blood running from my thumb and nose, and I jumping up and down like a sandhill crane Oh! how I did want to let go of that hawk; but I couldn't let go. I wished it back on the snow guard and to several other places both above and below the earth—but I couldn't let go.

I don't know how I did get away from it, for after the curtain dropped no one could tell me and I could not remember, but all the time Mr. J. N. Hayden, who was going to Bear Lake with me, sat in the wagon laughing like a sixteen-year-old girl. I used to call him Old Ike after that. My wife tied a rag around my thumb and fixed up my nose, and we drove to Soda Springs. That evening, after copying the "day book on to the ledger," I saw that I had lost the firing pin from the left barrel of the gun and a generous patch of hide from the right barrel of my nose and had accumulated a lame shoulder, an extremely sore and painful thumb, and as elegant a thunder cloud around my eye as ever graced the features of a Chicago alderman. I have picked up quite a few little things by experience, some of which I still cling to, others I let drop mighty sudden, while still others I have wanted to let drop awful bad and couldn't. All of which has taught me that when knocking around in a strange part of the country to keep an eye on my nose and be just a little shy as to what I poke my fingers into. But how can this be made to jibe with birds in central Iowa?

In looking over the above I see that it might be supposed that Mr. A. K. Fisher had said something that offended me, but such is not the case.

Since writing the above I have seen the picture of the European starling in FOREST AND STREAM of July 25. The blackbirds that stayed with me last winter were marked the same, the top of their heads were brown. Were they the European starling and did not know about going South in the winter? As the warm days of spring came I thought I would kill a pair of them and have them mounted; but they having sung for me all winter, and seeming to be so glad that spring had come, I did not have the heart to do so. Long may they live. MOUNT TOM.

[The blackbirds were perhaps rusty grackles. They were probably not starlings.]

BIRD NOTES FROM NEW BRUNSWICK.

SCOTCH LAKE, N. B.—*Editor Forest and Stream:* The bobolink arrives here (46° N., 67° W.) the latter part of May. I cannot give the exact date, as the individuals which came under notice for a number of years were migrating and some miles from the lowlands, where they live in summer. They do not stay far from the river, but on the islands and intervales are abundant.

They nest from June 10 until the last of July. By Aug. 1 the males have nearly all moulted and have the appearance of females. By this time they have congregated in goodly-sized flocks and it is difficult to distinguish the adult birds from the first hatched young.

By Aug. 15 they are on the southward journey. At this time they visit grain fields on the highlands and are then seen where at other times of the year a bobolink is unknown. As to the bobolinks getting scarcer here, have only heard one man mention it. He said that for a good number of years the bobolinks had bred in a field near his house, but that the last two years there had only been an occasional straggler there.

These last two summers have been very dry, and is it not possible that it may have been too dry for the birds, and they have been forced to the lowlands, where there is an abundance of water. This is the sort of country they seem to prefer.

Their worst enemies here are hawks. The marsh harrier feeds on them. They are not molested by man. Sportsmen seem to think that they are small game—in fact, do not consider them as game.

I will also add a few notes on the snowbunting (*Plectrophenax nivalis*). In Mr. Chapman's book, entitled "Birds of Eastern North America," there is the sentence: "The snowflake is strictly a ground bird, never perching on a tree, though it often does so on a house or fence."

Now in this locality it is not uncommon to see them fly up from where they have been feeding and alight on trees near by. I have also noticed them perched on trees not near to their feeding ground. They are expert fly-catchers. In the early spring when the snow begins to get soft there is a fly called here the sap fly that is in certain places very abundant, and it is on these insects that they feed. They run swiftly along, catching these insects on the snow or on the bare ground.

WILLIE H. MOORE.

Deer and Lilypads.

TOWNSHIP NO. 2, Me., Aug. 21.—I have noticed in former numbers of your paper articles to the effect that deer do not eat lilypads. Yesterday I paddled about six miles down stream and saw two fawns, five bucks and nine does. One of the does was snow white. They were on the bogs and along the edges of the stream feeding. The wind was toward me, and by keeping in line with bushes I was able to approach within a few feet (a canoe length in one instance). One of the fawns was feeding in the water and had a pad hanging from his mouth.

I watched a doe for some time. She was standing among the pads and would bury her head in the water up to the ears, bringing up each time a mouthful of stems. I have often seen deer feeding in this manner, but never until yesterday tried to find out what they were feeding on. W. L. S.

Birds as Farmers' Friends.

BROWNSVILLE, Tenn., Aug. 25.—*Editor Forest and Stream:* From this end of the vineyard we send over greeting as well as thanks for the many good things in our journal, chiefest being the series of articles by Florence A. Merriam. I have read aloud to my family and made them a text for a series of lectures to my younger friends, and deem them of inestimable value to the bird interest in all our country and the farmers as well. May she continue the good work and reap from it the reward so justly deserved. For some years I observed the food and feeding habits of the birds she mentions, only a few of which I am not familiar with, and found them all insect destroyers, all of benefit to mankind, and while reading her last was watching a family of Baltimore orioles as they fed on the caterpillars infesting my cedar trees. We have had fewer birds this year than I ever saw and more insects, a striking contrast to the year 1895. Have not seen a bluebird this year, and after extensive inquiry only heard reliably of one pair in the county. BENJ. C. MILES.

Nature at Home.

OKANOGAN County, Wash.—While after cattle a few days ago I saw four young calves running, and one was bleating. Two coyotes were trying to catch one of them; and had the little fellows not kept together they would probably have done so. As soon as the calf hollered the band of cattle which were near by took after the coyotes and ran them away. I watched the performance until it closed.

A short distance beyond was a small pond of not more than three acres, in which were two broods of teal. The young could not fly, yet they could swim faster than my dog Dick, who thought it great fun following them. While returning from Oroville Saturday I noticed Dick acting rather suspicious. I kept a close lookout when I got near the place, but the team shied off and began snorting. I pulled them to a stand and looked very carefully for quite a while, but the horses did not want to stand. Finally I saw quite a big rattler coiled up in the grass. I took a shot at it with my .22 and cut it nearly in two. This one was the highest on the mountain of any I have ever seen. LEW WILMOT.

Game Bag and Gun.

Our readers are invited to send us for these columns notes of the game supply, shooting resorts, and their experience in the field.

PRAIRIE CHICKENS.

CHICKEN SHOOTING.

THE glorious weather of September. The vast ocean of prairie, dotted with a few islands of yellow stubble and green corn. The movements of the dog, as with high head and waving tail he breasts the grass; throws his nose up in the wind, stops just a moment, then with slow and careful walk goes forward just a little way; stops, slowly turns his head to make sure the guns are coming; then, when the guns are come, he moves with stealthy steps and straight extended tail. Slowly; slower; slower still. He stops. The sportsman holds his breath, and feels his heart beat with excitement. A moment's waiting. Then with sudden beating of strong wings and cackling *tuk! uk! uk! uk!* the big bird bursts from the grass and is off. Steady now; throw the gun to the shoulder, exactly in the right position; cover the bird quickly. Now, just an instant to make sure. The explosion, the recoil, the little cloud of floating feathers, the thump of the dead bird striking the ground and bouncing clear above the grass. See it?

O. H. HAMPTON.

SOUTH DAKOTA PRAIRIE CHICKENS.

LINCOLN, Neb., Sept. 9.—I had a pleasant little surprise the other day: I ran across an old-time acquaintance I had begun to believe was no more, no less a personage than my old friend the prairie chicken. For a couple of years or more I have searched for him in vain throughout the length and breadth of the land that he once called home, but with the exception of a few discouraged representatives of his once numerous family I saw little to convince me that he had not joined the great majority.

Once in a while I would hear that he had been seen in certain localities and would journey considerable distances to renew our old acquaintance, but only in the end to meet with disappointment, so that this year when George wrote me that a man had told him a fairy tale about somebody else hearing of another man who knew where our pinnated friend was to be found, I just wrote back "you're another." But as George with his usual faith in mankind insisted that it must be so, and that he felt sure that we would find our feathered friend cavorting around in his old-time sporty way, seeking whom he might devour, I concluded to go along. This time the scene of his depredations was in central South Dakota, and with much misgiving on my part I packed my gun and corduroys for the trip of 300 miles or more.

George met me at Sioux City, and together we traveled for the best part of the next day, arriving at our destination hot, tired and exceedingly dry and dusty. It was the eve of the open season. We were told by every sportsman in town (and that means every one able to bear arms) that the birds were exceedingly plentiful, but that as some of the boys had been shooting for three weeks, we might find it a little hard picking. We also heard the welcome news that over 3,000 chickens had been killed before the season opened. This was not calculated to arouse much enthusiasm, but we are used to hearing this, and as long as we were there we determined to investigate a little anyhow. Accordingly the next morning we started out and found our first birds at precisely 6 P. M., and got the large number of six. That's all we had to show for our first day. The next morning, however, we started at 2 A. M. and did not put the dogs out until we were about twenty-five miles from town, and it was not long before we knew that we had gotten beyond the range of the "sooners."

The country we hunted over was a wide valley, every acre of which was under cultivation and settled by a class of foreigners, who neither hunted or owned a dog or gun. Best of all, they did not care a rap how much we hunted. This may sound very pleasant to lots of the brethren who, like ourselves, have been all too familiar with the pretty little signs that read, "No hunting allowed." It was a truly ideal state of affairs, and every field with one lone exception contained one or more coveys of birds.

The only drawback was the ever-present Russian thistle, South Dakota's never-failing crop and a torture to man and beast. The poor dogs suffered horribly, and notwithstanding the fact that we put thick boots on them came in at night with their willing legs badly lacerated. And as for George and me, our muscles ached for many a day from forcing our way through the luxuriant growth of those fiendish prickly pests. But we found chickens galore, and that is what we went there for.

I don't like to state just how many birds we got; somebody would probably jump up and call us game hogs, etc. But I will say this much, we got in our four days' hunt all we wanted to send, a nice mess, to each of our friends and acquaintances, and we could have killed four times as many if we had been so inclined.

This to be or not to be a game hog is a curious question anyhow. If some of us Western hunters tell about killing forty or fifty birds in a day, when perhaps we could have killed three times as many had we wanted to, some Eastern brother is sure to rap us over the knuckles and say all sorts of unpleasant things about us. Yet this same sportsman, when writing about his own outings, tells us about tramping all day and seeing six or seven birds, and winds up stating that he killed five or six of them, and may be all that he saw. Now, we never have any trouble in disposing of our game, and could give away more and also kill lots more if we wanted to; but we generally quit when there are plenty more to kill. So, as I said before, this game hog question is a funny thing anyhow.

Since Mr. Hough's experience with the bears, I don't believe it is good policy to state the location of this chicken country. Still, if some right good fellow comes along and would like to know all about it, you can give him my address and I will tell him just where it is and how to reach it. He doesn't want to wait too long or the chickens will all be in the cornfields, and corn is about 12 to 15ft. high in this year of plenty. W. R. HALL.

NEWS FROM THE CHICKEN FIELDS.

MINNEAPOLIS, Minn., Sept. 3.—The season on prairie chickens has but just opened for Minnesota, but already enough actual information is at hand to make it positive that there are more chickens in Minnesota this year than at any time for the past ten years. Various causes are assigned for this sudden and mysterious abundance of the prairie fowl, and climatic reasons have a high place in those given. The year of 1896 has been favorable for breeding, not too wet and not too dry. The lakes of the State, some of which have been quite dry, have had more water in them, and so have the sloughs. Chickens must have water, but not too much water, to hold them on a country. It is thought also that the game laws have been better observed of late, and that this has produced good results. It is also possible that the last few years' rush of travel to the Dakotas has left Minnesota with a chance to rest. From this time on the State enters into the second stage of the chicken situation. The old days of wild prairie and abundant birds are gone forever. The cornfields take the place of grass, and the habits of the birds change very much. The shooter must labor among fences and irate farmers, and hunt far and wide over large wheat fields and cornfields. His bag will not often approach those of the old days, and soon, if not now, he must learn to be content with a dozen birds to the gun where once he could have killed fifty.

In these later days of chicken shooting the birds become rapidly wilder and more alert than in the old days. A friend who once lived at Morris in this State says that he has known chickens when much hunted to change their habits entirely, feeding almost altogether at night upon the stubbles, and living during the day in sloughs grown up with heavy weeds, out of which it was next to impossible to start them, as they would run instead of flying. Any chicken hunter can say that this is precisely the safest way for a bird to escape.

In many villages about the railroads the game laws have been well enforced this year, and the birds have been watched closely by local shooters of the better class. It would seem that a better sentiment obtains than was the case a few years ago, although, of course, there will always be some men who will shoot ahead of season.

Information carefully collected from shooters who know what they are talking about is offered below, in the hope that it may be useful to sportsmen who want a day with the big grouse.

Hallock, Minn., has good country near, and it has never been shot to death, though it has had better years than this. It is in Kittson county, and near Kennedy, where the field trials are run this fall.

Pembina, N. D., is up in that same region, and is called good by many who have had a line on the birds there this season. That is a grand natural chicken country, and I would advise a try there in spite of the reports that the season has been too wet there this past spring. The local information is not always disinterested.

Ada, N. D., is said to have a good supply of chickens this fall, and is worth trying.

Hope, N. D., is another point well mentioned by several shooters acquainted there.

Larimore, N. D., has long been known as a fine place for chickens, and many friends of mine have had good sport there and say it will be good this season.

Benson, Minn., is perhaps one of the safest places in Minnesota to try this fall. It is spoken very highly of by a number of well-posted friends of mine.

Windom, Minn., is a safe place to visit, and is in a good country, from which the birds have never been shot out.

Tracy, Minn., is mentioned highly by several shooters, and is well to keep in mind.

Ortonville, Minn., has been much visited in the past by Eastern parties, but it is said to be unusually good this season.

Atwater, Minn., is well mentioned for this season.

Morris, Minn., is in the heart of a splendid chicken region, and there are birds there to-day in greater numbers than for years. This point should be kept in view.

Glencoe, Minn., and Hutchinson, near by on the same line of railroad (C., M. & St. Paul), are both in good chicken country. These points are not so very far from St. Paul.

Ottertail county, Minn., is a famous one for game, and is a land of lakes. Many who have once visited it will be glad to hear it is filling up again with the prairie chickens.

The country south of Millbank, S. D., has plenty of chickens this fall, and is worth keeping in mind.

Webster, S. D., is another good chicken point to remember.

Andover, S. D., is reported to offer better shooting than almost any other place in that region, and should be looked into.

Graceville, Minn., is a cinch for some chicken shooting this season.

Brown's Valley, Minn., is in good chicken range and is worth a visit.

Traverse City, Minn., is to be kept in mind for chickens, and especially for ducks in late September and October.

St. James, Minn., is the private tip of a man who knows about prairie chickens.

Esterville, Ia., is reported very good this season.

Fulda, Minn., is a good place to make a note of, and is tipped to me by a friend.

Mayville, N. D., is well mentioned and is worth looking into.

Knox, N. D., is another good northern point, and the birds are spoken of as abundant there.

Fairchild, Wis., and also Eleva and Mondovia, in Buffalo county, below Eau Claire, are this fall all good points to go to. A friend just back from there tells me he had fine shooting on prairie chickens, ruffed grouse and quail, all in the same day's hunt. Wm. Hurlburt, a market-hunter at Eleva, will take parties out.

The above information is thought to be reliable. It is all gathered from original sources and not from back-number railroad folders, of which beware always. In each case a shooter has given me the information.

The North Dakota license law must be borne in mind. It may keep many shooters out of that State.

Any non-resident sportsman visiting any of the above points should not expect to have the old days of great bags back again. He can have sport, but not slaughter. If he can kill ten, fifteen or twenty birds a day he may be satisfied that he did not go any further.

I have had two days' sport at chickens this season myself and shall speak of the trip later. I mention it now to advise shooters visiting Minnesota from now on to take nothing smaller than No. 7 shot, and to have some No. 6 shells handy. We have found the birds big and strong and wild enough in most cases to offer fine sport. But one covey of small birds has been seen. Some of the birds we have killed took a lot of hitting, and it was by no means always easy shooting. This is as it should be. No State should open its chicken season earlier than Sept. 1, and by that time most of the birds can take care of themselves well enough to offer sport. So far we have let only six birds out of fifty-two shot at get away (in three days), but this fact is due only to the extraordinarily fine shooting of my two companions, Messrs. F. F. and Richard Merrill, one or other of whom has kindly wiped my eye for me each time of my own numerous misses. They are both splendid field shots, though perhaps they do not enjoy it any more than I do, after years of absence from the chicken stubbles. I used to think no man ought to miss a prairie chicken, but find grounds for changing that belief. September birds in Minnesota are no lead pipe cinch for an ex-shooter. Each week from now on will see them wilder and stronger, and if any FOREST AND STREAM reader wants a hunt this fall I would advise him to start at once.

CHICAGO, Ill., Sept. 12.—Reports received up to date seem to indicate good foundation for the statement offered last week, to the effect that 1896 is an exceptionally good year for prairie chickens, more especially in the States of Minnesota and North Dakota. The latter State will probably winter a few more birds than for some time past. The common agreement among those back from North Dakota is that there are very much fewer shooters there this year than last or for many years past, the high non-resident license keeping them out.

On my way to Chicago from St. Paul this week I saw at the depot in St. Paul a crate of fine-looking bird dogs, and of course had a look at them to see how they sized up. I noticed the name of Walter Dupee on the crates, and later saw on the train evidence of the hunting party I had guessed at. Walter had been out for his annual chicken hunt to Dakota. He dropped off in the night at Oconomowoc, and I did not see him personally, but met Mr. O. Ross, of Chicago, who, with Mr. McDowell, of Oconomowoc, made up the party. They went to Valva, on the Soo line, in North Dakota, and took out non-resident licenses. They report shooting not of the most abundant sort, but enough for a pleasant time. Their biggest day was thirty-six birds to the three guns, and often they did not do so much, though they did not try uncomfortably hard to make a big showing, preferring to have a quiet time with shooting when they felt inclined to go out. They report ducks and geese very abundant near Valva, but these they did not hunt. They say that all accounts agree that the license will keep a great many out of North Dakota.

There is an impression abroad that this license law will not be enforced, or that is "unconstitutional," or that no penalty attaches to a violation of the law, and some papers of North Dakota and elsewhere have spread this impression as much as possible. Whatever the future of the law, it cannot be called unconstitutional until proven so by the courts, and the Connecticut case decided in the Supreme Court of the U. S. may have some bearing on this. It may be safer to give North Dakota a good wide berth for the season at least, and let some one else run the risk of proving the law valid or invalid. It is certain that the State game warden, Mr. George E. Bowers, of Fargo, is enforcing the law. He has caused to be printed the following in the *Daily Argus*, of Fargo:

It has been stated in the public press that there is no penalty for those who violate the game laws. Sec. 1643, Revised Codes, declares: "It shall be unlawful for any non-resident of this State to hunt, kill or wound any of the wild animals or birds mentioned in chapter 72 of the Penal Code, without having first obtained the permit for non-residents herein provided for. It shall be unlawful for any resident of this State," etc. Sec. 7029 provides: "When the performance of an act is prohibited by any statue and no penalty for the violation of such statute imposed in any statute, the doing of such act is a misdemeanor." Sec. 6812 provides: "Except in cases where a different punishment is prescribed by this code, or by some existing provision of law, every offense declared to be a misdemeanor is punishable by imprisonment in a county jail not exceeding one year, or by a fine not exceeding $500, or by both such fine and imprisonment." From this it would appear that there is ample provision made for enforcing the law.

Mr. Bowers writes me a personal letter, in which he says that game of all kinds—ducks, geese and prairie chickens—is more abundant than for years, and he asks me to come out this month and repeat my fall hunt of last year, taking also a trip for wildfowl into the western part of the State. This I would of course like to do, though one chicken hunt a season is about all one can expect, and like the man who only took one drink a day, "I've had mine." I hope Mr. Bowers will be able to do something definite by way of stopping the flagrant violations of the laws which have long prevailed in that State, once so rich, but lately so poor in game. Last year there was very little decent chicken shooting in North Dakota. Even away up in the Turtle Mountains, where some friends of mine went for a long camping trip, the birds were so scarce as to offer very little shooting. This year these same friends, who were at great trouble to secure a training ground for their young bird dogs, found the birds so scarce and undependable that one of them expressed his intention of abandoning altogether any further attempt at training any dogs or chickens. This after a large expenditure of money, which would willingly be doubled if he knew of any place where he could really find birds enough to train on. He says he will quit chickens and hunt quail hereafter.

The rush has been to North Dakota for so long that Minnesota has been benefited, and this year Minnesota is a locality of especial interest by reason of the bar on Dakota. It is true, the birds are more abundant than for years, but one will not find the shooting of the early days by any means. A shooter who is contented with a bag of a dozen birds or so a day can find enough places to choose from to satisfy his needs. I hear well of Twin Valley, Minn., and of Fertile and Ulen. Herman on the Great Northern is a point well spoken of at first hand by a shooter who was there lately. Another point of which I am disposed to think of very highly is a little station called Hitterdahl, the first stop above Winnipeg Junction on the Northern Pacific. This is well up into the grouse country, and by the time this matter is in print the big packs of grouse will be working slowly to the South. In October they will be all about Hitterdahl, on their way to their wintering place in the timber east of there. At this place also there is a series of deep lakes which do not dry up, or which did not dry up last year at least, and between these lakes there is an excellent duck pass. Not far away there was some goose shooting last fall, and should be again this fall. The accommodations there are scant, and the gentleman who takes a featherbed into camp with him might have trouble in getting it fixed to suit him; but a shooter can go in there and have some fun, as near as I can get at the facts this fall.

A. S. Frelinghuysen, of Chicago, and four friends are now absent in North Dakota on a special car trip after chickens. They are well equipped with arms and munitions, and should bag game enough to please them.

If I can be of further service than has already been the case by way of personal correspondence with those wishing to take a trip into the parts of the West above mentioned, I shall be glad, and shall take pleasure in answering all sorts of questions, except those inquiring the price of board. I cannot tell without first looking at a man how much he is going to eat, and obviously this is a factor which should be considered in determining the price of board. All those inquiring about the price they would probably be charged for board will confer a favor by inclosing a photograph and such other details as will assist in forming the proper estimate. E. HOUGH.

THE BOWLEY'S QUARTER DUCKING CLUB'S PHEASANTS.

PHILADELPHIA, Pa., Sept. 11.—*Editor Forest and Stream:* I have no doubt you have recently noticed in the Baltimore, Philadelphia and New York papers a mention of a most serious disaster which has befallen the Bowley's Quarter Ducking Club in the wholesale poisoning by some miscreant of over 3,000 English pheasants raised this season by the club on its large preserve on the Chesapeake Bay, in Baltimore county, Md.

As such an outrageous and unprovoked assault on the rights and property of a club has, I believe, never occurred before, I think you may be interested to know something of it.

The property of the club, containing about 900 acres, occupies the entire peninsula lying on the Chesapeake Bay between the eastern shore of Middle River and the southern shore of Seneca River, and immediately south of Carroll's Island. It is one of the finest ducking shores in the country, but as this game has somewhat diminished since the great flood of 1893, which rooted up the wild celery, the club has given special attention to the raising of English pheasants as an auxiliary sport. In August of 1894 the great tidal waves which swept our whole sea coast from Florida to Maine drowned for us about 800 pheasants, more than three-fourths grown. This season we inclosed two large pens, making nearly ten acres, with wire fencing about 10ft. high, and a large portion of it roofed in with the same material. In these two "pheasantries" we raised about 3,300 strong, vigorous young birds of the "ring-necked" variety, which grew and prospered in the most satisfactory manner, giving us promise of the finest shooting every enjoyed by any club in the country. About Aug. 2 our superintendent while on his rounds found a dead pheasant, and a little further on two more which were nearly so, but apparently paralyzed. Dr. George W. Massamore, the secretary and treasurer of the Maryland Game and Fish Protective Association, who happened to be visiting the club that day, immediately pronounced it a case of poisoning.

So violent was the mortality that in three days we lost in one pen 1,650 out of 1,800 birds. In a day or two after the birds in the other pheasantry began to die, and in a week we had only about 300 left of all our promising broods. The Maryland Game and Fish Protective Association through its energetic secretary-treasurer, Dr. Massamore, immediately took the matter in hand, and by the aid of very persevering and skillful detectives succeeded in effecting the arrest of three men, who were committed to Towson jail, Baltimore county, for trial for this dastardly outrage.

So interested were a number of the leading sportsmen of Baltimore that the service of the writs and the arrests were made by Sheriff Cole in person.

The penalty for the crime is from two to twenty years in the penitentiary.

It has always been the intention of the club to consider its property as a central point, from which the whole country round and even distant sections could be furnished with stock birds, and thus make available to appreciative sportsmen everywhere this splendid game.

Though this is a very bitter disappointment, besides a large pecuniary loss, we will enter upon our next year's raising with renewed energy, and we hope without further molestation. I inclose a clipping from the Baltimore *Sun* of the 9th inst. which is substantially correct. You can use such portion of this letter and clipping as you may see fit. All our members are regular readers of FOREST AND STREAM, and know how keenly alive it is to all that affects the true sportsman. We believe this case, from its magnitude and exceptional barbarity, will excite the interest and sympathy of sportsmen everywhere, as such a calamity is much more than a mere local matter, and will materially retard the game interests of a large section of the country for several years.

NATHANIEL E. JANNEY, Pres.

We supplement President Janney's letter with the account given in the Baltimore *Sun* of Sept. 9:

At Bowley's Quarter, the thousand-acre preserve of the Bowley's Quarter Ducking Club at Bengies, on the Philadelphia, Wilmington & Baltimore Railroad, there has been a dastardly and wanton destruction of English pheasants and other fowls by poison.

Yesterday James T. Butler and Robert Smith, both colored, were arrested, taken to Towson and charged, on the oath of D. C. Smoot, with entering the private property of the club and maliciously destroying English pheasants, ducks, chickens and turkeys in the interim between July 22 and Sept. 4.

Robert Taylor, a white man, was committed as a witness against the accused, while Butler and Smith were taken before Justice Chas. Pielert and sent to jail to await the action of the grand jury.

The pheasants destroyed numbered about 3,000, and the domestic fowls, including chickens, ducks, geese and turkeys, numbered 300. The monetary loss is placed at $5,000. Most of the birds had been raised on the place. They were killed with grain which had been saturated with arsenic. Dr. Geo. W. Massamore, assistant State game warden, and secretary of the Maryland Game and Fish Protective Association, who caused the working up of the case against the suspected men, says he cannot ascribe a motive for the destruction of the birds.

The arrests were made yesterday at Bowley's Quarter by Sheriff W. P. Cole, of Towson; Dr. George W. Massamore and T. J. Hardesty, of the detective firm of T. J. Hardesty & Co. The men were taken to Towson by Sheriff Cole and Detective William J. Rawleigh. The State Game Protective Association is responsible for the action taken and will assist in the prosecution. The Association had, it is stated, started to work upon the case before the Bowley's Club members generally knew of any losses.

Dr. Massamore's account of the killing of the birds is as follows:

"On July 22 I went to Bowley's Quarter on business connected with the game warden's office and to see the progress of the raising of pheasants by the club. The young birds are in a space of ten acres, which is surrounded by a wire fence 10ft. high. In passing through this place with the gamekeeper, Donald McVicar, I found several dead birds and one that was sick. I remarked to Mr. McVicar: 'This looks like poison.' Later I found other evidences of poisoning.

"On July 30 Mr. McVicar brought two dead pheasants to town and an autopsy was made, and an analysis by Prof. P. B. Wilson showed the birds had died from arsenical poisoning.

"On Aug. 6 I went there again and the birds were dying by hundreds, and I was told that the other fowls were going the same way. On Aug. 11 I went to Bengies with Detectives Smart and Rawleigh, who, with their colleague, Richard M. Brown, got to work.

"Butler had been dismissed from the club employ and was suspected. Later he was reëngaged, and he was an employee when arrested. Detective Smart personated a young man of wealth and leisure, who was said to be a relative of Mr. McVicar. The other two appeared as tramps. They slept in bushes, and stayed about the place and did much watching by night. Smart spent much time with Butler, took him on fishing trips, and all three of them got into his confidence.

"Butler on one occasion told Mr. Smart that he (Butler) had become a detective and had a commission from a Western detective firm. Smart replied that he would like to get into that business too.

"When the case was ripe the arrests were made. Poisoned wheat, which had been found, was analyzed, and carcasses of dead birds were also examined by the professor of chemistry at the University of Pennsylvania. Poisoned wheat was found in a box in the shanty of Butler. It was found under a bench in the shanty and under the floor."

The Bowley's Quarter Club has had extraordinary success in raising English pheasants, and at least 3,500 were reared this season. The club, though composed of Philadelphians, had agreed to let their place become a hatching farm for the State of Maryland, through the Game Protective Association, and had offered to furnish stock birds to persons who were recommended by the Association.

Mr. McVicar, the gamekeeper, has had a long experience in producing and caring for birds both in England and New Jersey. He went with the Bowley Club about four years ago. The club stocked the place with old or parent birds, which are worth about $4 each.

These old birds are kept in a separate pen, and when they begin to lay the eggs are taken from them each day and saved to be hatched by hens. If the eggs remained with the female bird she would stop laying after producing fifteen or sixteen, but if the eggs are taken from her she continues laying until she has produced forty or fifty eggs, enough for three broods.

After hatching, the young birds are placed in the large wire inclosure, where they are tended until they are large enough to fly out of it. Those that fail to use their wings to go over the wire fence are driven out about the middle of September, so that they will become wild for shooting about Oct. 1.

The wholesale killing of the pheasants at Bowley's Quarter leaves only about 400 on hand, and none will be shot or given away this fall, as all that are on hand must be used for stock purposes.

Mr. Nathaniel E. Janney, of Philadelphia, is president of the Bowley's Quarter Club. Among other members are Messrs. Robert M. Janney, Harry Bryant and a brother of Mr. Bryant, Horace Magee, Marriott C. Smyth and Dr. Biddle, all of Philadelphia.

The thousand acres of their preserves are in Baltimore county, on the neck of land bounded by Seneca River on one side, Middle River on the other, and the Chesapeake Bay in front.

RUFFED GROUSE SHOOTING.

A PARTY of sportsmen were one day discussing the various kinds of game birds when the question, "What is there so fascinating about ruffed grouse hunting?" was asked by one of the party. One said it was because of the surroundings; he liked to be in the woods at that time of the year, and enjoyed the tramp even if not a bird was bagged. Another said it did him so much good to get away with such a smart bird, when he did get one. Another said, "When you have shot one on the wing you have done something, and you have got something too." Another said he had hunted them a good many days, and thought it very poor sport.

"Ever kill any?" asked the man who is always asking questions. "Well, no, not many; they would always get up when I wasn't expecting it, or get up on the other side of a thicket, or dodge behind a big tree, or fly up after I'd passed by them, or fly out of a bush so close to my head that it took my breath. It always seemed to me that they were laughing at me when they flew away with that 'chuckle, chuckle.' Somebody tell us how it is done."

"I never hunted them any." "Neither did I," said several others.

"There's Ed Hathaway over there in the corner. He's shot hundreds of 'em. Ed, you're absorbing lots of information from this crowd, and are giving none in return; you have smoked three cigars since you've said a word. Now, then, out and give these youngsters some practical hints about it."

"So long as it's partridges you want to hear about I don't mind talking some," said Ed; "if it was chickens I'd not have a word to say, for the man that can't kill a chicken has no business with a gun; and the man who cares to hunt them, except for a day now and then, likes very tame sport. Duck shooting is all well enough, but you're always at it in bad weather and getting wet and muddy. Quail shooting is, of course, good enough for anybody; but a man wants variety to his sports as well as his food. Excepting the quail, the partridge is altogether the most important of the game birds in the North half of the United States to-day. There is no other bird that so taxes the hunter's shooting skill, and none that exceeds his table qualities; and last, but not least, he is here to stay. There will be good partridge shooting long after the ducks are practically exterminated, and the chickens only a memory.

"I can't give you youngsters any special pointers just now. Perhaps I better just give in my experience, as they say at class meeting. I was not brought up in a partridge country and was entirely familiar with quail and chicken shooting before I ever saw a live partridge. In shooting quail I used to shut one eye and take sight, just as I would if shooting a rifle at a target. If it was open ground the quail was most always killed. I seemed to have plenty of time to take deliberate aim, see that it was correct and then pull the trigger before the bird got 25yds. away; and even in the woods had time to look out for trees and still get the bird.

"When it came to partridge shooting entirely different conditions prevailed. The cover was very much heavier; the birds, instead of rising 4 to 6ft. away, got up anywhere from 5 to 50yds. from me and took advantage of anything that would hide them in flight. If in a clump of undergrowth they always rose from the further side and flew low until out of gunshot. If there was no underbrush they would dodge behind the first big tree and keep it between me and them. It is doubtful whether they fly any faster than quail, but there was so much brush by which to note their speed, and they go up so far away, that it seemed they were not in sight long enough for shot to reach them; then they were always getting up when I didn't expect it, and made so much noise that it scared me half to death. On account of the scare and their quick disappearance I did not shoot at more than half of the birds that got up. The first twenty-five shots did not stop a single bird, and one that was shot at while sitting in a tree flew straight up above the tree tops, then flew out of sight. I began to think I was hoodooed on partridge and would never kill one. The nearest I came to killing one was when tracking it in the snow, and expecting a flight it rose from the further side of a log 10ft. in front of me and went straight away. After the smoke cleared there was quite a cloud of feathers floating where I last saw the bird, but that was all I ever saw of it.

"About the last day of that season one bird was killed, the only one after many miles of tramping, and dozens of shots that missed. There was something wrong either with the gun, myself, or the system of shooting. The chief trouble seemed to be that the birds flew too fast, and the brush bothered me too much. I had heard of men who shot with both eyes open and looking at nothing but the bird (not seeing the gun barrels at all), and began to practice that method, shooting at both stationary and moving objects, and was surprised to find how soon I was able to shoot about as accurately as when looking along the sights, and found the shot could be made in about half the time, or less.

"I also resolved that my eyes should take no notice of intervening brush or trees; that they should see nothing but the bird. The habit of shooting at targets with both eyes open was easily acquired, but when it came to field work it was very difficult to keep from dropping into the old way, and the only way to break it up was to constantly remember that I was shooting not to get birds, but to learn to shoot without seeing the gun barrels. It took the whole season to fairly break up the old habit, and it was found very much alive at the beginning of the next season, but was promptly suppressed.

"During these two seasons and until near the close of the next my shooting was altogether on quail, most of it being in woods of varying density. I found that as many birds were killed in the open and many more in brush than formerly, and felt that I could kill partridges; so the last week of the third season I took a trip for them, but bad weather prevented all but one day's hunting. On this day I saw six, shot five times and bagged four. Two of them were killed at a double shot, both birds rising at once, one flying squarely to the right and the other going straight away. I also found one bevy of quail, which scattered in a very close thicket of young white oaks, and got seven of them at seven consecutive shots. The missed partridge was a low-flying, straightaway bird, in fairly open ground. One would think it an easy shot, and I don't see why it isn't; but all the same, find I miss a larger percentage of such flights than any other. Why? I don't know, and will be mighty glad if some one will tell why. This score is not to be considered an average one. It was made when in perfect training and perfect health, both of which are important factors. I have missed many a one since then, but a great many have also found it too late to get away. To be a successful ruffed grouse shot requires a great deal of patient and careful practice; but after the art is once acquired, it is the most fascinating of all upland shooting. When you hear a man say he doesn't care for partridge shooting, set it down that he can't shoot them."

O. H. HAMPTON.

CHICAGO AND THE WEST.

Quail in Minnesota.

Quail have made their appearance in Minnesota in larger numbers than have ever been known before. They are abundant in the Mississippi River Valley below Lake Pepin. They are also numerous this fall in Wisconsin, east on about the same parallel as Wabasha, Minn.

Ducks.

This is going to be a good duck season in Minnesota. Mention will be made later of data.

The Quail Crop.

It is a singular fact that there seems to be such a thing as good game year or bad game year. This seems to be one of the good game years, and the abundance of game seems not to be confined to one section of the country or to any one sort of game bird. For instance, the quail crop is reported good from many different parts of the country. Lower Illinois will offer good quail shooting this fall, and so will the lower portions of Indiana. Around Paoli and Orleans, on the Monon R. R., a friend tells me the birds are very abundant. The country there is rough and sparsely settled, the population not always absolutely friendly to outsiders. There are a few deer and an occasional turkey to be had there.

From western Tennessee I have assurances that the quail crop is something almost unparalleled. My informant also adds: "More squirrels than for many years past." The same gentleman states that along the Hatchee River the turkeys have done well this season, and that he knows of several broods nearly grown, to which he will pay his respects in October. In the South there is still a little game left. I only pray it will not be butchered off the way the game of North Dakota was, the way that of all the West was butchered.

Protection in Texas.

FOREST AND STREAM was the first paper to start the sudden wave of sporting travel which went to Texas last winter. In this FOREST AND STREAM conferred a very questionable benefit upon that State in some ways and in some instances. But FOREST AND STREAM was also the first to recognize the drift of this and to urge a better enactment and observance of game laws. It appears the men of that vast empire have at length begun to realize that even their great account in game can be overdrawn, and bids fair to be overdrawn before many years. Even in Texas the rapid growth in protective sentiment is apparent. To-day I have a letter in point from Mr. B. F. Williams, of Quanah, Tex., who writes:

"We organized a game club here last year, but we are now reorganizing for the protection of wild birds, fish and animals throughout the State. Under our present laws it is hard to catch and convict anyone violating the game and fish law. They are shipping plover from here every day and the hunters are killing quail and shipping with them. We have had a man hired and with them for a week and as yet have not sufficient evidence to convict them.

"We shall lease 25,000 acres to protect quail until we can get a law passed that will stop the wholesale slaughter of game."

The above is only one of several similar announcements coming of late from the Lone Star State. Pending a law of the right sort and means to enforce it, Texas men will find it a good practical way to get rid of quail netters and other folks of that sort to ask them kindly to leave the country before half-past 2 the next day. I have known of several instances where market netters and shooters could not find it in their hearts to refuse a request of that kind when politely worded.

The Snipe Crop.

It is too early yet to get an estimate of the snipe shooting for this fall, as the jacksnipe are not yet down. At Lake Minnetonka, on the night of the last day of August, I heard one jacksnipe. On Sept. 8 I saw two jacksnipe at a bit of water about ten miles from St. Paul.

Mr. F. R. Bissell, who has a little cottage at Water Valley, Ind., tells me that since the opening of the season he and wife have killed 204 birds of all kinds included, mostly yellowlegs. He killed one white egret (the greater egret), a few jacksnipe and wood ducks.

Within the next two weeks we shall hear of the jacksnipe in lower Wisconsin and upper Indiana in good numbers in all probability.

The Duck Crop.

Unless early indications prove to have been deceptive, we shall have in the West, say in Dakota and Minnesota, an exceptionally good year for ducks. The great drought of the past few years, which prevailed all over those two States and also over Iowa and Wisconsin, has left a great many of the old sloughs dried up, it is true, and all the lakes show a lower waterline than was the case in the past; but there is a great deal more water this year than last, and the shooting is expected to be a great deal better. The flight is thought to be a trifle earlier than common, so far as can be determined at this date, though, of course, that depends on later developments in the weather in the extreme North. Ducks and geese are already appearing in upper Dakota, which resident shooters say are migratory birds from the North. There has already been considerable sport at the local birds which bred low down in the States above mentioned, but some way this does not seem to entirely fill the bill with the veteran wildfowler, who longs for cold October and the whistling wings of the strong flying travelers.

Jimmie McKay, of English Lake Club, Kankakee River, Ind., made high bag on opening day at that club: 33 ducks and 17 jacksnipe. Of the ducks 22 were blue-winged teal.

Mr. L. B. Clark, of Chicago, has gone for a long trip in Minnesota after ducks. He will visit Big Rice, Muskrat and Tamarack lakes, all of which are well up to the northern end of the State of lakes, toward the timber belt. Tamarack Lake was a few years ago one of the most phenomenal mallard grounds on the face of the earth. It was then shot down almost to death by market hunters. For two years it has not been shot so much, and it may be very good this year.

As an instance of the sport of modern duck shooting, as it sometimes happens, I would cite the case of Mr. C. B. Dicks, of this city. Mr. Dicks was out for several days, including opening day, and he succeeded in killing one duck, which cost him, including all attendent expenses, just $100. Ben says he killed two other ducks, but they fell in the mud and he could not get them. "You ought to see me hustle for them ducks," said he. "When I saw 'em lyin' there on the mud I knew each one of 'em was worth over $33. And yet I couldn't get to 'em. Ain't that tough?"

The Dove Crop.

In the South, which is the only part of the country where dove shooting is practiced, the doves have afforded a great amount of sport. Mr. Etheridge, of Georgia, with whom I lately talked of this style of shooting, said that it was, when rightly practiced, capable of good sport, but he decried bitterly the custom of certain shooters who made a practice of baiting fields hired for the purpose (spreading out grain for feed for a number of weeks, thus attracting all the doves in the country to the field). After the birds have been well wonted to such a field the shooters make arrangements for a grand butchery, and the numbers of the birds are such that bags of 2,000 a day are sometimes made. This is not sport, but mere slaughter.

Much better is the method described as practiced by Tom Divine, with a pail of sangaree, a fan, and a boy to pick up the birds. Anent the mention of this, one of Mr. Divine's countrymen, Mr. Benj. C. Miles, of Brownsville, Tenn., says: "I have been shooting a few doves *à la* Tom Divine lately, but to his equipment I have added a cot and a book, and instead of having the nigger boy retrieve I let him keep the flies off with a big palm leaf."

The Deer Crop.

I notice current comment in the daily press to the effect that deer are now very abundant at both extremes of the country. As is of course well known, they are plentiful in Maine, and it is stated that they were last season shipped into the Portland, Ore., market in such numbers they could not all be sold, and the hunters were ordered to send no more in for sale.

What the deer supply will be in Wisconsin remains to be seen. It is very likely that the deer will be abundant as they were last fall. There were a good many hunters in Wisconsin last season, and there will be more than ever this year, but the legal hunting does not much affect the game supply. It affects the supply of hunters a good deal, for I am told that the records show that thirteen men were killed in the woods of Wisconsin and southern Michigan last fall, accidentally shot by hunters who took them to be deer. This does not include the cripples.

I am asked by Mr. C. W. Evers, of Bowling Green, O., where a small party of four—himself, a Sandusky doctor, a newspaper man and another friend—can get good deer shooting in Wisconsin. They have been going to different parts of Michigan, and have been to the Rockies, but do not want to go so far as the latter place this year. In answer I would say that when in Wisconsin two years ago I saw enough of the country around the St Germaine lakes, and the region between there and the railroad to the east, to make me feel sure the deer were very abundant there. The sign was plentiful and I saw some deer, though not hunting for them, it being then close season. I should think any party knowing how to hunt deer could go in there, say at Woodruff, and thence up to Plum Lake or Star Lake over the new spur of the Milwaukee road, and make a very good hunt there, moving back from the settlements after making proper arrangements at one of the above points for guide and accommodations.

Lake Vieux Desert has good deer shooting near it, and so has Big Sand Lake, and a dozen places. Also I can personally recommend Fay Buck, of G. W. Buck & Son, Manitowish, as a guide who is honest, well posted and reliable as they make them. Fay Buck and his partner on the trapping lines can take a party to deer and see that they are well outfitted for the trip.

The Moose Crop.

We are going to have a moose country all of our own out here in the West before long now. In 1898 the moose law will be up in Minnesota, and there will be a grand moose country ready for investigation above Park Rapids and all the Lake Itasca region. Mr. J. Dodge, of Duluth, informs me that he constantly hears of numbers of moose in the region to the west of Duluth. He speaks of Bug Creek as an especially good range. Many moose have been killed illegally in Minnesota, but the law has been of great benefit. We have a moose country within thirty hours of Chicago.

Off for the West.

A party outfitted at St. Paul this week for a trip to the Gallatin country, the Yellowstone Park and the Jackson's Hole country. They expect to be gone three months. The party includes Messrs. D. Velie and S. H Velie, of Kansas City; W. L. Velie, of Moline, Ill., and Lieut. Bruce Wallace, of Helena, Mont.

Mr. S. Crawford Wrenn, of New York, outfitted with party at St. Paul this week for a long trip through the Big Horns and other parts of the Rockies. The party includes Messrs. Frederic Geraghty, of Jersey City; T. L. Livingstone, of New York, and Bernard Belladene, of London, England. Mr. Balladene was disappointed at not finding any buffalo around St. Paul.

Montana Abiding Places.

Mr. Will Cave, of Missoula, Mont., kindly volunteers the following help for the gentleman who lately inquired about a place in Montana where there was not too much winter and not too few deer. Mr. Cave knows what he is talking about, and is a hunter of skill and knowledge of the region in which he lives. He says:

"In response to your invitation in FOREST AND STREAM

of the date of Aug. 29 to further answer the somewhat vague inquiry of Mr. R. E. Miller, of Elmira, N. Y., regarding a Montana town where he can go for a few months' life on a ranch near deer and other game, will say that probably he can find the conditions he desires near almost any town in the State on the line of either the Northern Pacific or Great Northern railways. (When I say near I mean anywhere from ten to 100 miles.) If Mr. Miller is a sportsman of the true stamp—that is to say, one who does not go out with the studied intention of directing his utmost endeavors toward the extermination of the entire game supply of the State—he would have no trouble in securing the necessary information concerning the most favorable hunting grounds from any local sportsman residing in any of our cities or towns. If he should come to Missoula I should certainly gladly be of such service to him as I might be able.

"As you have inferred, the climatic conditions at Missoula or in the vicinity are more favorable than in the eastern portion of the State."

Off for the Old Southwest.

Mr. F. H. Lungren, an artist who has made a more than national reputation by his paintings of the types of Southwestern Indians, left Chicago yesterday evening for a trip of two months in Arizona, where he will make studies for further work in his chosen field. A very charming field of interest it is too, that of the old Southwest.

Rifle Note.

John Burke, of Englewood, this week was a spectator at the attempt of a Chicago policeman to shoot a wild Texas steer. The policeman had a rifle. Mr. Burke will not lose his leg. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

THE GAME PRESERVE SYSTEM.

THIS is what the Springfield *Republican* has to say about game preserves in this country:

"The preservation of game is a comparatively new and strange thing in America. A generation ago, when bison by the myriad scoured the great plains, and a short journey from any part of the country would bring one to the haunt of bear or elk or moose, the notion would have seemed an excellent joke. Indeed, it was not far removed from the days when 'game' had to be cleared off for the preservation of the human race. But times have changed since then. Our forests are fast going, and the wild things are vanishing with them. At the same time there has been springing up a great leisure class, with the means for expensive amusements and taste, largely acquired from our English cousins, for finding amusement in killing animals. The natural sequel will be the establishment of great game preserves, surrounded with high walls and guarded by keepers armed with guns, and crowded with such things as it is thought pleasant to kill. The reports of an enterprise of this sort in Berkshire are interesting. The wealthy New Yorkers who have bought up a good share of Mt. Washington for a game park—if that is really their object—could hardly have chosen a better place. The town has dwindled till there are only some half a hundred voters within its boundaries, and the wild and desolate hills are all that could be asked for the habitat of any kind of game, from deer down. The men said to be connected with the undertaking have ample means for establishing a magnificent place, affording as good shooting as is to be found anywhere in the world, and if the suggested plan is carried out and succeeds it is likely to be followed by others until the abandoned farms and desert places of the hill regions are brought under the control of the rich and devoted to purposes of amusement, as has been the case within recent times in Scotland. The fancy of our millionaires is only beginning to turn in this direction, but there is every reason to suppose that the tendency will grow until Americans will be familiarized with the spectacle of great high-walled estates stretching for miles and covering hill and valley—estates devoted to costly amusement, and on which no trespasser dare set his foot. It will be a strange and not altogether welcome sight in a democratic country, and will help to alienate still further the rich and the poor. There will be certain difficulties in the way of managing such estates, for the fundamental principle of preserving is keeping other people from shooting, and this is difficult to manage in a country where game keeping has not from time immemorial ranked above agriculture. It is not such great while since English landlords were allowed to set spring guns and man traps to kill any trespasser. The laws against poaching are still vindictive to a degree that would not be tolerated in this country, and the local police are taken from their proper work and turned into extra game keepers for the rich landlords. Yet with all this rigor it is difficult to preserve. The difficulty would be much less in many parts of this country, of course, because the population is less dense, and there is neither a class of trained and organized poachers nor a half-starved peasantry ready to wring a hare's neck at the risk of penal servitude. But both of these may come in time. It will be a good while before game preserving cuts any great figure in American life, but it will be surprising if vast areas are not ultimately devoted to this purpose."

Vermont Game Birds.

SHELDON, Vt., Sept. 11.—The crop of small game will be a prolific one in this section of Vermont this season. Woodcock, duck and hare shooting opened on the 1st inst. Ruffed grouse shooting opens on the 15th of the present month. The nut and fruit crop is also an abundant one, which means much to the gray squirrel hunter. "Bob White's" merry whistle has become a familiar sound, and we expect to soon have the Mongolian pheasant as another permanent game bird.

Mr. N. P. Leach, of the committee on new game, will have within another month a consignment from Sweden of forty capercailzie and black game to distribute in this State. STANSTEAD.

His Age would have Protected him.

I'VE been pretty busy, have had, however, three days afield, with miles of hard tramping, and a net result of one gray squirrel. Had I known (before firing at him) how old he was, my reverence for old age would have let him go scot free. O. H. HAMPTON.

Chordeiles Virginianus.

FAUQUIER COUNTY, Va., Sept. 12.—I have just eaten two of them and feel better. Killed some eighteen yesterday evening; been in a highly litigated insurance case all day; failed to get my dinner, at which my wife had a pie made of the aforesaid eighteen C. V. (a Virginia lawyer would say this meant Code of Virginia), and when tonight, before supper, I take up my last copy of FOREST AND STREAM and read the communication of Mr. Elting, I can appreciate the accurate description therein contained, for I know whereof he speaks. At supper, tired and hungry, my wife placed before me a portion of that pie containing two "bull-bats," and I can assure you their bones were duly picked and enjoyed, notwithstanding, as you say, they are "the night hawk," "an insect eater" and "not properly a game bird." They may not be "properly a game bird," but when a fellow is "chained to business," can get off only for an hour or so in the evening, and then has only to walk some 500yds. from his home and try his hand at bull-bats, there is excitement and sport, and when they are flying low and seem to be as numerous as the gnats upon which they are feeding, it takes a good shot to be always able to bring down his bird. Yesterday evening there seemed to be no end to them; this evening not a bird. Mr. Elting does not exaggerate in saying that upon some evenings 1,000 shots are fired in an hour on the outskirts of a town, and when the character of the guns, from the hammerless to the old army musket, is considered, handled by the expert and by the boy eager but inexperienced, is it any wonder that not one in ten is killed?

Some months ago I wrote you that an act had been passed by our Legislature prohibiting the killing of partridges or quail in this State for two years from the 27th of December, 1895. I am glad to learn that now the birds, thought to have been almost totally exterminated, are increasing, and I have seen and there have been reported to me many large coveys, so that if the law can be enforced (but of this I am doubtful) we will in a few years again have fine shooting.

Some weeks ago I enjoyed a few days' fine bass fishing in the Shenandoah and while in the river got one or two good pictures with my pocket kodak. When court is over and I can get a breathing spell I want to send you an account of that trip, thinking it might interest some one "who was born that way." The other fellows need not read it. The right, of course, will be reserved to the FOREST AND STREAM to help fill the waste basket or the stove with that, as with this, if not fit for publication, without any hard thoughts from C. M. WHITE.

Plover on Texas Prairies.

WE had hunted all the afternoon for plover and had driven to and fro over the prairie, which stretched flatly away to the horizon on all sides, until our eyes were worn out and our brains seemed to reel with the monotony of the view, but we had not found any plover.

So we gave it up and started home.

As it so frequently does after we have given up all hope, the luck changed. Standing in the middle of the road, with his slim neck high in the air looking at us, stood a plover. And when he flew, as of course he did, he led us to others. And when we flew, as of course we did (out of that buggy), we got him.

And thereafter we found others.

As we were using my gun and my friend objected to its kicking, he wouldn't shoot, so we (speaking editorially) had to do our endeavors. And nobly we did them—that is for us.

We (still speaking editorially) had killed some seven birds in some eight shots, and were feeling very jubilant thereat, when our friend pointed out a small "bunch" of plover that were feeding just at the outside and to windward of a small cottonfield. We approached these birds with great dignity and the gun.

The birds flew; the shot flew; two birds were annihilated, one with the right, one with the left.

Our editorial dignity grew upon us, but we observed another bird flying toward us from the cottonfield. We lost our dignity for the moment and hastily endeavored to get in another shell; our comrade objurgated us for our slowness; we got in the shell and we annihilated also that bird.

For a second we breathed easier, and our dignity commenced to return.

But two more birds came and our dignity fled, while with trembling hands we inserted two more shells. These two also we slew, and as the last report died out a little "nigger" who was picking cotton in the field gave a wild whoop and came running to us, breathlessly ejaculating as he arrived, "Boss, how you kin shoot!"

We complacently accepted this tribute to our greatness, and after picking up the slain drove along the same line of fence, looking for more.

We found them; we approached; they retreated; we killed two as they rose, and by reason of our late experience we inserted another shell so rapidly that we killed another out of the same flock as they left.

We were almost stifled with our pride, but again they came. Two reports were heard, and two more plover were counted to us. Our pride annoyed us; we could not shout with joy and say "Boss, now you kin shoot," but we felt it and—must it be confessed—we thought it.

MARION WARNER.

British Columbia Game Birds.

VICTORIA, B. C., Sept. 1.—Blue grouse shooting started here on Aug. 15. Birds are plentiful, but it is very dry, we have had no rain to speak of for months; this makes it very hard work for man and dog, particularly the dog. Willow grouse and pheasants come in on Oct. 1. The English ring-necked pheasant is increasing fast; they are strong and hardy, and toward the end of the season the way they fly through the bush is wonderful, and a winged bird will run almost as fast as a dog.

VICTORIA RIFLEMAN.

North Dakota Game and Licenses.

FARGO, N. D., Sept. 5.—In this county thus far 437 licenses to hunt in North Dakota have been issued. We understand from reliable sources that the new game law is being well enforced. Wherever there is an efficient deputy game warden, in that locality very little illegal shooting has been done.

As a rule game is fairly plentiful throughout the State, but good dogs and good shots are necessary to secure it.

C. E. ROBBINS.

An Old-Timer.

MR. F. M. DENNY, of the Baltimore Gun Club, who takes a great interest in all matters pertaining to shooting, has acquired two interesting articles connected with the past. One is a curiosity, being a double-barreled flint and steel gun. It was brought to Baltimore about 1793 by a Mr. Despaux, who died in 1820. Mr. Despaux came to Baltimore from San Domingo, and was a shipbuilder here for years. The gun was made in Marseilles, France. From an inscription upon it Vasseden Vignies is supposed to have made it. In gold letters sunk between the barrels and near the two locks appears the name "Canon Jordu," presumably the original owner. All the work is of the finest character.

Mr. Denny found among his friends on the eastern shore a few days ago an old powder horn. All the work upon it was done with a knife. It is inscribed with the name of the owner, William E. Bartlett, who was the grandfather of Rev. William E. Bartlett, pastor of St. Ann's Catholic Church. The inscriptions, "Where Liberty Dwells There Is My Country" and "United States of America," and representations of a duck and a flag, are engraved on the horn. In all his connection with gunning Mr. Denny has seen but one other double-barreled flint and steel gun.—*Baltimore Sun.*

More Rosy Reports from Maine.

DEAD RIVER, Me.—Sportsmen and readers of FOREST AND STREAM will perhaps be pleased to learn that Maine is talking of beating her last year's big-game record, and I should not be the least surprised if she did. As I am a Maine guide, and have been through the woods and at the merry ponds more or less all summer, I have had a chance to see something of the big game myself, and I will truthfully say that I have seen more than double the game this summer I ever saw before. Thirty-seven deer were seen all at one time in the water while crossing the pond. All kinds of game are more plenty than ever before except caribou.

Any sportsman visiting Maine this fall surely will have no trouble in getting what game the law allows him to take, and this is all due to the good enforcement of the game laws. Our wardens have and are doing their best to protect our game, and Maine will this fall get her reward for it. J. G. HARLOW.

Still-Hunting in the Town of Schroon.

STILL-HUNTING, so called, but accompanied by the baying of sleuth hounds, has been going on for some days in the town of Schroon. Several hunters have been engaged in the chase, as above noted, and fifteen deer have been killed, all ahead of dogs, as we are informed by one who has been on the ground. Venison sold at Schroon Lake last week for 7 cents a pound. The latter part of the week a deer was taken to Schroon Lake and offered for sale, but did not find a purchaser at any price, showing that the market had been glutted. It is indeed too bad to know that such lawlessness is being permitted within the borders of Essex county. The best men of Schroon are against such outrages, and public sentiment throughout Essex county does not uphold the breaking of law. Would it not be well for game protectors to be more alert? We verily believe it would.—*Elizabethtown (N. Y.) Post.*

Another Egg Whopper.

"THE wooden nutmeg makers of Connecticut have to yield the palm to the English egg collectors," said B. F. Martin, of San Francisco, at the Shoreham. "The islands along the Pacific coast are infested with thousands of gulls that build their nests and rear their young there. English egg men have begun to purchase these eggs in such quantities that gulleries are being established along the coast, and the exportation of gull eggs bids fair to almost equal the exportation of California fruit in value. There are millions of the eggs on the islands. The remarkable thing about it is that the gull eggs, as such, are not salable in England except to the dealers. They are the size and shape of some eggs that are rare and valuable, and the Englishmen palm them off on collectors as very rare specimens, coloring them, when necessary, to carry out the deception."—*Washington Evening Star.*

In Colorado Mountains.

MR. H. S. CLARK, paying teller of the Lincoln National Bank, whose success with the rainbow was noted in these columns last season, left New York last Saturday in company with Mr. H. H. Todd, his hunting companion, and Col. Royal E. Morse, for Dunkley, Routt county, Colo., just over the Continental Divide. They go for elk and bears, and reports from a local hunter and guide, who will meet and accompany them, are very promising for a successful hunt. They expect to be gone a month. They will go by stage fifty miles from civilization, and then by pack horse fifty miles further to their camp in the grouse region. As Mr. Clark has taken his camera, we may expect some views as well as some remarkable stories, of which you shall hear in due season.

JACOBSTAFF.

Washington Game.

OKANOGAN County, Wash., Sept. 1.—This has been rather an unfavorable year for game in our corner of Uncle Sam's preserve; it was a very cold, wet and backward spring. The grouse did not do well, although there are in some parts of the county quite a lot of blue grouse. The sharp-tails do not seem to thrive on civilization. The ruffed have done better. As the northern half of the reservation was opened for prospectors this spring, it was soon flooded and the deer were either killed or run across the line into British Columbia, where they are afforded much better protection than on this side. But never mind, we will have some protection thrown around their old haunts after the game is exterminated.

Quite a number of Canada geese hatched along the Okanogan this year. LEW WILMOT.

Connecticut Quail.

QUAIL have been heard and seen in this section more frequently during this summer than for many years; also partridges are quite plenty, and if we have the usual flights of woodcock the coming open season should be better than an average for many past years. A.

HADDAM, Conn., Sept. 8.

Pennsylvania State Sportsmen's Association.

MR. H. M. F. WORDEN, chairman of the legislative committee of the Pennsylvania State Sportsmen's Association, has issued the following call for a meeting of that committee:

"The legislative committee of the Pennsylvania State Sportsmen's Association, of which I am chairman, and you a member for your county, will meet for permanent organization at the Commonwealth Hotel, Harrisburg, Pa., the evening of Sept. 30, at 8 P. M.:

"First, to consider some effective system of protection to our game and fish under a properly formed department to enforce the laws.

"Secondly, the consideration of a general revision of our game and fish laws, and such other needed alterations governing the same as may come before the committee.

"I trust that you will be willing to assist in assuming the initiative, and if necessary make some personal sacrifice to attend this meeting.

"Any who have given this subject any thought cannot but realize the need of prompt and united action, in order that the game of our Commonwealth shall receive protection similar to that accorded it by our sister States."

Barnegat Birds.

BARNEGAT INLET, Sept. 12.—The fishing here during the past week has been poor, nearly all the captains reporting small catches. Large flocks of snipe and plover are seen daily in the vicinity of the Sedge Islands and Sea Dog Shoals, and seem quite tame, as only few sportsmen have tried this fascinating sport. Black ducks are arriving in Barnegat Bay in bunches of ten and twenty-five, flying high and headed to the South. SEA DOG.

Game and Fish Protection.

THE TEXAS CONVENTION.

SAN ANTONIO, Tex., Sept. 10.—While all the sportsmen of Texas welcomed the prospect of meeting in Waco on the 5th inst. for the purpose of laying the foundation of an organization for the protection of game, all were agreeably surprised at the large attendance, the evident enthusiasm in the cause and the prompt manner in which the convention expedited the business at hand.

About 125 delegates were present and every section of the State sent its quota of representatives.

A committee on permanent organization was appointed by temporary chairman Lockett, of Austin, consisting of J. H. Quarles, of Waco; L. Howe, of Ft. Worth, and O. C. Guessaz, of San Antonio, and they reported the following officers, who were promptly elected: President, R. R. Lockett, of Austin; Secretary, Turner Hubby, of Waco; Treasurer, Walter V. Fort, of Waco.

The president was empowered to appoint a vice-president for each county in the State, and the committee recommended the appointment of a legislative committee into whose hands will be placed the material necessary for a bill embodying the demands of this body, to be presented to the next Legislature, which convenes in Austin this coming winter.

The following communication was read: "Victoria, Tex.—Reliable information of shipment from here this season of over 54,000 plover and great preparation for slaughter of quail impresses upon us the necessity for game protection. We suggest a law prohibiting the transportation out of the State, but will cordially cooperate to secure the passage and enforcement of any law your judgment may deem will secure the desired result. F. C. Proctor, William Peticolas, Lloyd Ward, I. W. O'Connor, Theodore Buhler, Eugene Sibley, W. A. Wood, H. Gervais, H. D. Applegate, Dave Cassety, L. A. Fritz, B. F. Williams, F. J. Allnoche, A. S. Thurmond, J. Johnson, L. P. Leibold, I. S. Bushler."

The convention adjourned to meet in Austin during the session of the incoming Legislature, subject to the call of the president. TEXAS FIELD.

Chairman Lockett read several suggestions regarding organization and plan of work, suggesting a commission to protect game.

A committee was appointed to consider and report on the same. J. B. Gilbert, of Houston, deputy sheriff of Harris county, circulated among the members copies of proposed amendments to the present game law formulated by the Harris County Game Protective Association and submitted to the last session of the Legislature. The amendments passed the Senate, but were so butchered in in the House they were withdrawn. These amendments provided for the protection of fish (except hook and line fishing) from Feb. 1 to July 1 in non-tidal waters; and forbid nets and traps, or use of poison or explosives for killing fish, with penalties for possession of fish out of season. Close season for deer, Jan. 1 to Aug. 1; wild turkeys, April 1 to Oct. 1; prairie chickens, Nov. 1 to Aug. 1; quail (partridge), April 1 to Oct. 1; trapping or netting forbidden at all times; wildfowl shooting at night forbidden. Antelope protected from Jan. 1 to Aug. 1; possession of game or fish prohibited in close season; killing game for shipment out of the State forbidden; exportation forbidden.

The committee to take action on Mr. Lockett's recommendation reported as follows: 1. Game to be declared the property of the State. 2. The duties of game warden to be added to that of Fish and Oyster Commission. 3. Pheasants to be protected for five years; doves to be protected from March 1 to Aug. 1. 4. Possession out of season of any game bird, wildfowl or other animal protected by laws of this State shall be *prima facie* evidence of guilt.

The committee also advised the adoption of the amendments of the Harris County Game Protective Association, as printed above, with slight changes in Articles 427, 428 and 429, the same to be used as the basis of a bill to be presented to the Legislature. This was adopted by the convention and the permanent chairman instructed to appoint a committee to draft the bill.

The Texas Game Protective Association was adopted as the title of the organization.

NEW JERSEY GAME AND FISH INTERESTS.

THE monthly report of State Fish and Game Protector Charles A. Shriner, for August, says:

"Only two events worthy of special mention have transpired during the month, the first being an appeal taken to the Supreme Court in the case of a number of convictions, the defendants attacking the constitutionality of the general fish and game law. The defendants referred to are a number of Italians in Atlantic county whose depredations were interfered with by Warden Schneider. The accused were convicted in the lower court and took an appeal to the Common Pleas, where the judgment below was sustained. They have now obtained a writ of certiorari removing the cases to the Supreme Court for review, citing as their reasons the alleged unconstitutionality of the Voorhees act, by which lay judges were abolished, and also attacking the fish and game act, claiming that the latter is special legislation and that the title does not indicate the purport of the act. The Supreme Court has already in another case decided the question of the validity of the Voorhees act, thus disposing of that question, a point which had been rendered additionally weak in the case of the Italians by their having recognized the Atlantic Common Pleas as at present constituted by taking an appeal to that tribunal. The question of the validity of the general fish and game act will be argued at the next term of the Supreme Court. Counsel informs me that there is little doubt that the judgment of the Atlantic Common Pleas will be sustained.

"The other matter worthy of special mention is the purchase of a considerable quantity—50,000—trout from an Eastern trout hatchery. In connection with this purchase I desire to call the attention of your honorable body to a large number of applications which have been received from different parts of the State for some of these trout. I have received sufficient applications to dispose of ten times the number of trout purchased, and it is evident that some of the applicants will be disappointed. The trout at present average over 2in. in length, and as the full number of 50,000 is to be delivered in New York City, there ought to be little loss between the metropolis and the streams where the fish are to be planted. If some of the applications made were to be acceded to, a large portion of the whole consignment would be wasted, for I have applications for streams where no trout has lived or could possibly live, and in some cases the demand is altogether out of proportion to the size of the water desired to be stocked. In accordance with instructions from your honorable body, I have informed all persons making applications for trout for private streams, or for streams where adjoining land owners restrict fishing, that the Commission will stock no waters to which the public is denied access. The trout will not be distributed until the latter part of October, up to which time applications may be made for them, blanks for which can be obtained on application to my office."

The record for the month shows twenty-nine prosecutions for killing song birds, hunting on Sunday, fishing with set lines, having bass under size, and other offenses, with a total of over $550 collected in fines.

PROTECTION IN FLORIDA.

THE sportsmen of Ocala have organized a game protective association, with Dr. Wm. Anderson as general manager and a governing board consisting of Wm. Anderson, F. A. Teague, B. T. Perdue, O. T. Green and James W. Sanders. Some seventy-five members were enrolled. The object of the association is not only to rigidly observe the present game laws of the State, but each member has made a pledge to do all in his power to see that other people do the same. These men recognize the fact that unless the game of the State is protected as the law already directs, in a few years the prestige that Florida has enjoyed as the huntsman's paradise will only be a memory. The general manager, Dr. Anderson, is the right man in the right place, as he is a true disciple of rod, reel and gun.

It is worthy of note that only a day or two after this step by the Ocala sportsmen the Jacksonville *Times-Union*, which is the leading paper of the State, printed this most sensible editorial on the need of better game protection for the State:

"The *Times-Union* has for years urged upon the people of Florida the necessity of preserving the game now remaining in the State. For years tourists, visitors and the home population have slaughtered the wild beasts and birds in such wanton manner that an emergency now arises which demands a halt upon this wholesale killing. The Eastern States have passed through the experience that is now threatening us, and the West has seen the same process almost denude its prairies and forests of the birds and beasts which should be protected by law.

"From the experience of other sections Florida should learn the lesson of caution. The preservation of the wild game of the country is a question that has forced itself upon other sections of the country, and its importance is rapidly becoming apparent in Florida, the State in which game abounds most plentifully. Only a few years back deer, turkey, quail, partridge and other game were to be found in great numbers in our woods. To-day the conditions have changed to such extent that a hunt upon the part of the sportsmen involves much labor and small returns.

"Pot-hunting is largely responsible for this, and should be suppressed. There is ample game remaining in Florida to breed each year, and still keep the State at its present high status as an unexcelled field for the sportsman. But to perpetuate this condition new and comprehensive laws must be enacted fully covering the situation, and these laws must be rigidly enforced. Game laws without full operation are worse than useless, and unless every county in the State, through its local authorities, administers the law in a strict and conscientious manner, the people of the State must suffer in the future the same expensive experience now being undergone by other sections in the endeavor to restore game species almost extinguished by wanton slaughter. At present the fish in Florida waters are so plentiful as to seem well nigh inexhaustible, but State laws should be enacted for their preservation to a much more practical extent than now exist, and these questions should occupy the early and serious attention of the new body of lawmakers who meet in Tallahassee next year."

A Sullivan County Grouse Snarer Brought to Time.

A GAME case of much interest was tried in Monticello, Sullivan county, N. Y., last week, and the conviction of the offender is said to be the first ever had for the violation of the game laws in that county. The action was one brought by Game Protector Kidd, of Newburgh, against John H. Davis, of Emmonsville, Sullivan county. Davis is a storekeeper, who has long carried on a traffic in snared grouse shipped to the New York market. On Sept. 30, 1895, some of the local sportsmen observed at the express office of the New York, Ontario & Western R. R. a small box labeled poultry, directed to Wm. H. Cohen & Co., commission merchants, of this city, and with a tag bearing Davis's name. They called the attention of the express agent to the box, telling him that he must well know that it contained game and that he was forwarding it contrary to the law which forbids the transportation of game unless accompanied by the owner. More than this, they informed the game constable, who seized the box and sent for Protector Kidd. Dr. Kidd found that the box was full of grouse, and an examination showed that at least six of them had been snared. He proceeded against Davis; but on Davis's representation that the box had been left at the express office temporarily, while he was waiting for the train to go with the game himself to New York, the action was made one to cover the penalty for having in possession snared grouse. The case was tried before Judge Fursman, of Troy, in the Supreme Court of Sullivan county, Messrs. Headley & McClung, of Newburgh, appearing for Davis, and ex-District Attorney Couch being associated with Clarence Moss, of Waring Bros., for the prosecution. The defense relied upon the contention which they advanced that when the birds were seized they were not in the possession of the defendant, but of the express company. Judge Fursman, however, summarily squelched Mr. McClung by pointing out that the possession had been already acknowledged in the answer filed by the defendant. Among the amusing features of the trial was the testimony of Davis that he had shot the birds, using double BB shot; if that were true, Judge Fursman suggested, the BBs would be likely to leave some shot marks, and there were five witnesses to testify that there were no such marks on the birds. The defendant's wife also testified that she had gone with her husband to see him shoot the birds, and that he had drummed them up within range; it was not shown, however, that the defendant had wings to drum with. The jury convicted on three birds, making the fine $75, and the costs will amount to $100 more. The sportsmen of Monticello are outspoken in their satisfaction at the result of the trial and all commend the way in which Protector Kidd handled the case. It is believed that the good effect of the conviction will be manifest. At least one industrious shipper of snared birds will be less active for a while.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XII.—Garrett Van Hoesen.

THE village boys called him Garry Van Hooser, and I am not sure but the whole family pronounced it in that way, but Garry could write, and he spelled the name as it is given above. He had been a clerk in the grocery of Thomas B. Simmonds since my earliest memory, and had none of the Dutch accent common to his people, for at this late day the descendants of the original settlers of the Upper Hudson often spoke Dutch, and their English had an accent which Garry had lost by frequent contact with other people. He was older than I by some six to ten years, and was a shy young man, who never seemed to have any companions, and often went fishing and shooting alone or with his spaniel Coody, which was a good retriever. He told me where he got the dog, but where its name came from even he did not know. He said: "Oh, I do' know, he had to have a name and I just called him Coody."

That settled the matter to the satisfaction of Garry, the dog seemed to be pleased with his name, and who could object.

One day in '48, after the election of Gen. Taylor as President, when the ice was just thick enough for skating, I had been told to stop at the grocery for something when I came home to supper, and Garry said: "I am going up to the mill pond in the morning to spear eels. How would you like to go with me?"

"First rate; what must I take along?"

"Nothing but a pair of woolen mittens; your hands will freeze without them. I'll put up all the grub we want. Meet me here about 9 in the morning and we'll start."

During the night about 2in. of snow fell. The morning was still and clear, and the snow was soft and dry. Garry carried the basket and axe, while I shouldered the long spear up past the schoolhouse and along the railroad, which then came down to the lower ferry, to the mill pond away up by the red mill. The snow was blinding as we faced the morning sun, and it also reflected every sound. The far-off crows seemed close at hand, a little sapsucker pecking on a tree made a great rapping, and we could hear what the men were saying down at the mill. "Why is it so still after a fall of snow?" I asked.

"It's always that way after a snowstorm," he answered, and I went along not entirely satisfied with his laconic answer, but accepted his statement of fact. Some philosophers give us equally lucid explanations and take a whole volume to do it in.

"A week from now the ice will be too thick to spear eels," he said, "and it would take half an hour to cut a hole. It's just right now, nearly 4in., and no one has been spearing here this year. Down yonder, in the bend, is where they bed; the water is deep there."

All eels bed in the mud in cold weather, and an eel spear for soft bottom has a stout central tine barbed on both sides; then come flexible tines, about five on each side, with barbs on the inside only. The tines are nearly a foot in length and radiate from the pole-socket in a flat plane, which is some 10in. wide at the lower end. Rigged with a light pole 20ft. or more long, the mud is sounded in a regular manner in a circle of perhaps 30ft. in diameter. When an eel is struck the spear does not pierce it, but holds it by the spring of the tines, which open and clasp it.

It was soon apparent why woolen mittens were an essential part of the outfit. As they became wet they were warm, even with ice on the outside of them, just as a boy's foot will be warm after the first chill when his boot is full of ice water if his stocking is of wool. But continual freezing to an icy spear handle is hard on a mitten.

I watched Garry begin sounding under the hole and then increase the circle until the spear handle was at an acute angle with the ice, throwing the spear strongly into the mud and then withdrawing it. He brought up sticks, brush and an occasional eel which soon stiffened on the snow. "How can you tell whether it's an eel or a stick?"

"That's easy enough, try it."

He chopped me a new hole and I made a thrust. "Harder," said he, "shove it hard or the barbs won't snap on 'em," and I sent the spear into the mud. An eel? No, a stick! After landing several sticks something was struck that wiggled and sent little thrilling pulsations up the staff, and then I knew all that is to be known about spearing eels through the ice. It is not a high class sport, but it gives a boy an excuse for an outing in winter and is a healthful exercise. This thing of exercise is better understood to-day than when I was a boy, and men who go out with rod and gun are not thought to be idle, good-for-nothing fellows, as they were thought to be half a century ago. Not that I was not an "idle, good-for-nothing fellow," who preferred a day's shooting or fishing to a week's confinement in school, but I am speaking in a general way, excepting "present company."

About noon Garry flung the spear in the snow and said: "I'm hungry, what do you say?"

Now that the matter was mentioned, there did seem to be something lacking, and without giving it that profound consideration which Garry gave to questions, I answered him in his own simple style: "So 'm I." All the morning I had been as silent as he; in fact, when a fellow gets shut up with such short answers as are here recorded there is nothing for him to do but to shut up. But how I did want to talk about the habits of eels, what they found to eat in the mud and other things. Away up the pond, a quarter of a mile away, a man was chopping wood. The sound of his stroke did not reach us until his axe was raised again. I asked father about this when I got home, but I did not intrude the question on Garry. He did not then encourage talk.

We went ashore by a spring and made a fire. Garry opened the basket and brought out bread, butter and sausages. Just how he could cook the last was a mystery, and they could not be eaten raw. Bolognas were unknown then, as this was before the German invasion and the era of limburger, schweizerkäse, bolognas, pretzels and lager beer. I gathered dry fire wood and watched. He dragged two long limbs and rested one end of each upon a low stump. This was table and chairs. Then he took birch twigs and ran them lengthwise through the sausages and stuck them up before the fire. The ground being frozen, he held them nearly erect by pieces of wood and there they fried in their own fat, the birch twigs imparting no bad flavor. A tin cup of water from the spring served for both, and if a hungry boy astride a branch of a tree with a big birch chip for a plate did not do full justice to his appetite then, he never did.

Many a dinner did I eat after that one, but this was so exceptionally good that it stands out in bold relief. During weary months in military prisons the odor of those sausages came in hungry dreams. The white bread from Jonas Whiting's bakery and the butter from Dennison's farm were often remembered in days when such remembrance was more substantial than anything in sight.

That dinner is memorable for another thing. It opened up a human mind. John Atwood had said: "Garry Van Hooser never talks because he doesn't know anything to talk about. He just knows enough to weigh a pound of tea and say, 'Yes 'm, fifty cents.'" When I told John a little of this trip he was incredulous. The eels were in evidence, however, he couldn't deny them.

After we had destroyed the dinner and Garry had lighted his pipe, he remarked between puffs: "When spring comes we will go down in the dead creek and shoot ducks. I often go there alone, but have felt that I wanted some one to be with me, some one to talk to at times. I went down there once with John Atwood, but he talked all the time and scared the ducks away. Now you don't break in when a man is thinking, and we've had a good time. I don't know what you were thinking about when we were spearing, but I thought that if it is true that this world is round and turns over every day, how is it that the water does not spill out of the holes we cut in the ice, and why the weight of the trees does not pull 'em out of the ground when they're upside down. I don't say that I don't believe it, but I can't understand it; and men that know more than I seem to believe it, but they can't tell just how it is. I never had much schooling, and this thing has bothered me for years. It keeps me awake nights and bothers me daytimes. If I ask about it they make fun of me. Now you've had a good education and I want to know what you think about this thing, and if you don't know how it is don't tell that I asked about it; for there's a lot o' fools that don't know the first thing about this business, and don't care, that are always ready to make fun of a fellow who does want to know."

This was the longest speech that I had every heard Garry make up to that time. I explained the rotation of the earth as well as I understood it, and afterward gave him what literature bearing on the subject I could find, and his reserve was thrown off. He was a different man to me, and I soon liked his simple, honest ways, his studious mode of looking into things and his philosophical conclusions. Every man's mind is a study, a curiosity, if you will, if you have time and inclination to look into it. It is curious because it differs from yours.

After his long speech, delivered between puffs on his pipe, and my explanations, there was a period of silence. Then he asked: "Did you ever trap any rabbits?"

"No; I've shot a few, but never trapped any. Why?"

"What time do your folks have breakfast?"

Without seeing any intimate connection between the trapping of rabbits and the hour when our family broke their fast, I replied: "In summer at 7 and in winter at 8. What's that got to do with catching rabbits?"

"I was thinking that you'd have time to tend the traps if you could get up about 6 o'clock. Then you'd be back in time to get breakfast and go to school. There's lots o' rabbits up in the woods back o' the rye field, and I've got six box traps stored in the old barn there. If you'll see to 'em every morning we'll go over there now and set the traps before we go home. What d' you say?"

"Tell me all about it, and I'll do it. It must be heaps o' fun. Come on."

We crossed over to the rye field—a field so well known to every boy as the ball ground, where no one drove us off, but which had been a pasture since my recollection—and carried the traps into the woods. Garry had got some sweet apples and we set a trap here and there where rabbit signs were thickest.

"When you come to a trap in the morning," said he, "if it is still set you want to see that the bait is there and the cord or the spindle is not frozen so that it can't work. If it has been sprung you want to go slow and find out what's in it. If it's a skunk he'll let you know when you touch it with your boot, and then you want to tie a long string to the cover and let him walk out. If it's a rabbit, put in your hand and take it out."

"Won't it bite?"

"No, they never bite. The best way to kill them is to hold their hindlegs in your left hand, and hit 'em with a stick in the back of the neck."

"I don't believe I could do it. I can shoot one, but I know I could never do that."

"Yes, you could; it's easy enough. But if you are afraid to do it that way, take a bag, put the mouth of it over the trap, dump them into it, and bring them down to me."

That seemed the best way. I was not afraid to kill a rabbit by shooting it—Garry did not understand me—but the bag scheme let me out and it was settled in that way. We went back to the mill pond, gathered our basket of eels and went home. I promised to let Garry know how many rabbits I had and to let him do the killing.

Next morning I was up very early. There had been a light, drizzling rain during the night, and now there was a hard crust on the snow which crunched under foot and made a great noise. The first trap was approached with a quickening pulse, and my heart was beating high as it was neared. Alas! it was unsprung and the cord was frozen fast. The crust did not tell if the trap had been visited, but the apple was untouched. All the traps were in the same condition, but I fixed them so that they would spring, and on the way home reported the facts to Garry.

"You needn't have gone to them this morning," said he, "for you might have known that a rabbit would not go out and get all covered with ice in a rain like that one last night."

I might have known, but with a head filled with the excitement of a first visit to rabbit traps, with the expectation that at least one rabbit might be found in each, I never thought that they might prefer dry hides to my traps.

The next night was clear and crisp, and oh, how cold that morning was! The stars seemed to echo my tread on the crackling crust as I trudged along. The first trap was unsprung and my faith in taking rabbits in box traps was shaken. Old tracks, made before the crust was formed, were abundant, and there was "sign" on the crust where no tracks could be seen. Surely there were rabbits there, if they could only be caught. These were the thoughts when the second trap was sighted. It was sprung! The rapid puffing of an early freight train on the railroad below did not exceed the beating of my heart. Cold as it was, a perspiration broke out all over me. Pshaw! Perhaps the string had broken or the trigger had slipped from the notch!

I stood for a moment like one in a dream. Could it be that the trap actually held a rabbit? I went up to it and kicked it lightly with my boot. There was no indication of an "essence peddler" in the air, and I peeped in. There was the game crouched in the far end. I let the trap down and for a few moments enjoyed my triumph. I was a mighty trapper! Me!

This was long before the deer episode related in No. VII., and a rabbit was the largest game that I aspired to. Heart never beat faster over a first grizzly or bighorn than mine did then. As I have said, I had shot an occasional rabbit; but this early morning tramp over crusted snow seemed somehow to make the event seem like the life of a real woodsman. A great part of Greenbush was asleep, and here was I in the forest with its largest game in my power!

I carefully adjusted the bag over the trap and then opened it. There was a thud in the bottom of the bag, and then a glimpse of something gray and a sound of "zip, zip," and if that was really a rabbit it was gone. The unexpected had happened. That was all I knew, and there was a period of depression such as always follows intoxication. After pulling my scattered senses together, I reset the trap and went on. The third trap held a rabbit, and with the last failure in mind great care was exercised in arranging the bag. No mistake this time! I knew how to hold him. I knew how, but somehow the same thing happened again. The second time the unexpected occurred, and some old philosopher has said that this is the only thing that ever does occur. I was despondent and demoralized, especially when the next two traps were found empty. As the sixth and last trap was sighted, the fact that it was sprung started no heart pumping. I was cooler now that I had seen just where the last rabbit got out. The bag had been tight around the trap until the traps was opened; the top and front end were nailed together, and the bag left a hole on each side when the trap was opened. Twice was enough. The mistake should not occur again. Remembering what Garry had said about a rabbit not biting, I put in a hand and brought the trembling animal out in some way, either by the ears or the hindlegs; memory fails to recall how, but it does bring back the pitiful cries that rang through the woods. This troubled me, but I hardened my heart and dropped the game in the bag, and started for home with my prize, in triumph not unmixed with other feelings.

With bag on shoulder I stopped at the foot of the hill to drink the strong sulphur water of Harrowgate Spring, of which Col. Raymond and I were so fond, as told in sketch No. VIII. Here the events of the morning were reviewed in cold blood. Hardly two hours had passed, but the crowded events made it seem ten times as long. The little creature was still now, probably wondering what would come next. After pondering for a while on the escape of the two rabbits and taking another swig of Harrowgate, the recollection of those pitiful cries came up in full force. Then I seemed to realize that they came from a poor, terrified and harmless thing that I was taking to be killed without the excitement of the hunt. I peeped into the bag. Two large eyes and a trembling form were in the corner. Somehow the grip on the mouth of the bag was loosened, the bottom was turned up and a white lump of cotton in a field of gray went bobbing off into the brush.

When I entered Tom Simmonds's store I said to Garry: "Here's your bag; I haven't got any rabbits and don't want any. I'll go up and spring the traps after school; it's time for breakfast now."

It was months afterward before I told him the whole story, and he said: "Well, I don't know as I'd like to kill a rabbit if it cried like that. The fact is I built the traps some two years ago, and after some such scrape as yours I left them in the barn. Some boys like to trap rabbits, but I don't care anything about it; I only thought you might like it."

I am not so chicken-hearted as this story makes me out. I have been a trapper for fur, will tell you about this a few weeks later, and I never had the slightest feeling of pity for a bloodthirsty mink, marten or other animal of that class. I have killed them in steel traps, found them frozen to death in them, and have seen where they left a leg behind, and never felt more pity for these merciless brutes than I do for an oyster when I eat it alive. Somehow the very helplessness of a rabbit appeals to a fellow, and its plaintive cries —. I give it up! I let that rabbit go that morning by the waters of Harrowgate and that is all there is of it. I have tried to make a story of it and failed.

Once or twice after the eel spearing scrape Garry asked me to fish with him, and the other boys wondered at it. Some years later we shot ducks, yellow-legs and rail along the dead creek, an inlet on the island below Douw's Point, and above the hilly dwelling of "der Yawcum Stawts wot lives on de Hokleberic."*

This creek is now filled up and is known no more except as a low, marshy spot. We had a good day once; two mallards, a wood duck and some half a dozen rail. A very good day it was, for ducks were wild and not plenty, when Garry crawled up to a flock and got three. Coody retrieved them, but unfortunately they proved to be tame ducks, and the owner came down on Garry. I was below and kept still, hoping for a shot if anything came my way. After waiting a while a mud hen got up below me, flying low, and I shot. I missed the mud hen, but hit Garry in the back of the leg, and he promptly yelled. He had paid the man for his ducks and then went around back of me, hidden by the brush, and was just in time to intercept a few shot that the mud hen failed to get because of its haste. The shots, some half a dozen, were only under the skin in the calf of his leg, and I had no trouble in taking them out with a pocket knife.

Said Garry: "It's lucky that I was below the bird or your lead would have gone in deeper."

"What were you doing down below me and how did you get there? I didn't see you. I thought you were up above squaring it with the man for his tame ducks. I suppose he wanted twice what they were worth."

"No," said Garry, "he won't charge much; he trades with us, and will bring me the ducks and settle to-morrow. I wouldn't like to take up a lot of tame ducks; the boys would laugh. Now, see here! If you will promise never to tell that I shot into a flock of tame ducks I'll give you my word that I won't say a word about your shooting me in the leg. Is it a go?"

"It's a go!" Garry is dead and it's a long time ago. As both stories are told now for the first time, I don't see that any harm is done to him. Neither of us meant to do it, and after all the intention, in a shooting case, is always carefully considered by a jury.

Garry was short and stout, wore his face without hair, and his teeth were stained by tobacco. I should think he might have been born about 1825, but while I knew of his death and attended his funeral, I have pressed every button in memory for an approximate date, but the wires seem to be crossed and I can't say between which of the epochs from which I date things his death occurred. These epochs are: first, going West in 1854; second, coming back like the Prodigal Son in 1859; third, entering the army in '62 and returning in '65. Mr. Garret M. Van O'Linda thinks he died in 1861, and that seems likely.

I only know that he married about three weeks before he died. It was like this: I was in Greenbush one day. Here a wire seems to straighten out in memory and indistinctly buzzes: "Then it was after 1860, for you were often there then," and then the circuit is broken. I went into his store and he invited me into the back room.

"I want your advice," said he, "and I ask it because I am only a raw countryman and you have more knowledge of the world than I have."

This almost took my breath. If he was contemplating the opening of a grocery in opposition to Tom Simmonds and Mat Miller it was useless to consult one like me, whose only object in life so far had been to get what fun he could out of it, and whose knowledge of business was *nil*. Of course I did not formulate all this then—I was merely surprised, and asked: "What's up, Garry?"

He thought a moment and then said: "I am thinking about getting married, and am in doubt whether it is the best thing to do or not. What do you think?"

If memory reflects my mind at that time, I did not think. Here was a man who was shy of men and boys, one whose business compelled him to talk to women and girls, but whose shyness cut the conversation to the strictest business limits. I was astounded! Pulling my scattered wits together, I said: "Why, Garry, I never heard of your keeping company with a girl; who is she?"

He told me, but it was no one that I had ever heard of. Said he: "She is the nicest girl I ever saw, and she comes to the store every day and I can talk to her by the hour. She is not a bit like the other girls that come in. I wish you could see her."

That settled the marriage question. Of course, I had nothing to say and he didn't expect I would have, but he was compelled to confide his secret to a human being of some kind and the one before him served his purpose.

In after years whenever a box trap was stumbled on in the woods it brought up the picture of Garry Van Hoesen, the shy, sensitive fellow who longed for human sympathy, but from a lack of aggressiveness or an excess of diffidence, self-consciousness, or whatever you please to call it, seemed lonesome in this great bustling world. If I'd

* This is a phonetic spelling, as the Albany Dutch spoke it when they referred to Joachim Staats, who lived on the Hogleberg, or "hog's back," the only hill on the island, just back of the landing known as Staats's dock.

brought him that rabbit in the bag he never would have killed it. It's sixteen to one that he would have done just as I did.

If Garry had read Sterne he might have quoted the remark of Uncle Toby when he released the fly, but his reading had not included "The Life and Opinions of Tristram Shandy," and consequently he did not know of the incident, but Garry's heart was kind and true. His few intimate friends he held fast and he followed the advice of Polonius to his son:

"The friends thou hast, and their adoption tried,
Grapple them to thy soul with hooks of steel;
But do not dull thy palm with entertainment
Of each new-hatch'd, unfledg'd comrade."

In after life I have fished with men of all conditions in life, men of high character and men of no character to speak of, men of education and intelligence and those who had neither, but among them all I have a warm spot in my memory for simple, honest Garry Van Hoesen.

FRED MATHER.

Editor Forest and Stream:

In your issue of Sept. 5, following my article on Capt. Ira Wood, is a little note from Mr. O. H. Hampton which under a complimentary disguise invites those whom I have fished with to write me up. Now, my dear Mr. Hampton, I appreciate your kind intentions. You mean well; but don't you see that the men whom I have written up are all dead with the exception of Col. Charles H. Raymond, in sketch No. VIII.? When I gave him warning that I would write him up as one who had sat on a log while I did the fishing, he replied: "Go ahead if you have no fear of retribution; I know more bad things about you than you know of me," and he declined to give me a photo, or at least "regretted" that he had none. From relatives I got a picture and some facts of his life and wrote him up. He cannot do this to me, because I left Albany and went vagabondizing in the West as soon as I was old enough, and the only "facts" that are accessible are those musty ones in Fish Commission reports, which no one would read.

No, Mr. Hampton! I will quote Robert Emmet: "Let no man write my epitaph," not even the tombstone man with his chisel, because if he lies, as tombstones generally do, the readers of FOREST AND STREAM will be deceived, and if he tells the truth my surviving relatives will be shocked.

I thank Mr. Hampton very much for the implied compliment, but must decline to yield the floor, until I get through, to any of the "Men I Have Fished With."

F. M.

A MONTH AT LAKE WINNEPISEOGEE.

BOSTON, Sept. 10.—*Editor Forest and Stream:* "Report your luck," says the editor. But suppose a fellow didn't have any luck worth reporting. Report anyway how you tried and how the fish wouldn't bite, and all about it. So here is a brief story of our outing on the shores of New Hampshire's beautiful lake.

Saturday, July 22, at 4.30 P. M., saw our party unload at the little station of Spring Haven in the town of Alton, and on the west shore of Winnepiseogee, midway between Alton Bay and Lakeport. There were Mr. and Mrs. Wm. F. Seaver, of East Boston; Mrs. Smart, our Annie and Seaver's intelligent shepherd dog Jack.

Temple cottage, the summer home of the Seaver famiIr, is situated on high land overlooking the broadest part of the lake, and is as snug and cozy as one could wish. Our baggage once there, it didn't take long to get the shutters off and things straightened out for four weeks of good solid comfort, away from the noisy city and free from all business cares. Next day the cedar boat Henrietta was taken out, the fishing tackle put aboard and a good, honest endeavor made for bass. But there were no bass for us either on that trip or the next. We fished and fished—we had all kinds of tempting lures—but a regard for plain facts compels me to say that I didn't catch but two bass while I was there, and those were under 1lb. in weight. When we wanted a mess of fish, we were obliged to content ourselves with perch and horn pouts, and they were both good eating. There were plenty of bass near the gravelly bottom, but take the bait held out to them they would not. I rigged up a minnow net and got a good supply of very lively young whiting—so lively were they that they frequently took the slack line through the guides in such a fashion that I thought sure I had a bass on, but on striking I was soon undeceived. I was by no means alone in my ill luck, for campers all about had poor fishing so far as bass were concerned.

The second week was devoted to building a boat house for the Henrietta, and as my friend Seaver is a very handy man with tools, and I can drive nails reasonably well, we put up a very good-looking structure 16ft. long, 6ft. wide and same in height. Indeed, we flatter ourselves that it will compare favorably with others along shore both in architectural design and construction. Although I hadn't any particular use for them, I set up several rods complete, just to see how they would look on the brackets: not wooden pegs, mind you, as in some boat houses, but good solid iron brackets. Among them was my favorite—a hornbeam fly-rod made by the famous Amasa Ward, who many years ago built the first camps at Hell Gate Falls on the Dead Diamond River.

A handsome series of views of the camp—the big pool, the old roll dam at the head of the causeway, the falls and the starting point just above the forks—hangs over the desk at which I write this screed. Honest, faithful old rod, after ten years' service it is as good as new. Not a season has passed since my first trip up the Diamond in 1884 that I haven't used that piece of handiwork on the Diamond, the Magallaway, the Perham stream and Sandy River at Phillips, or the Auberton stream at Rediugton, and always with a feeling of intense satisfaction. But I have got off considerable distance from Lake Winnepiseogee. Of course, we kept on fishing, and when not fishing we went through the fields and pastures for berries, both blue and black, and we picked quantities. Strolls through the woods were frequent, especially during that terribly hot week, when we had a chance to find out where there cannot fail to be good shooting this fall; for, go whichever way we would, partridges were sure to scurry out from our vicinity. We heard an occasional gun too, and I am very much afraid there were poachers abroad.

But now before closing I want to propound this query to those of your readers—and there are many that I personally know—who fish at various seasons in this lake, and that is, Why is not black bass fishing better? And of course there will be various reasons advanced, one of which may be that I am not much of a fisherman, or that I don't know where to look for them. The first may be true, perhaps it is as to bass; but the second can't be, because I didn't go out after bass that I didn't see big fellows in plenty. I am inclined to the belief that the true reason is that there is so much natural food in the lake that they have no interest in anything that looks to them out of the usual course. The lake is literally full of small fish—smelt, shiners, whiting, etc.—and when the bass wants a meal all he has to do is to go into the shoal water and get it. Frequently we saw big red perch, pickerel and bass driving the little ones so hard that they threw themselves out on to the sandy beach to escape their voracious pursuers.

I would really like to hear from others on this subject. Last year, referring to my poor success, G. L. G. W. told of his excellent fishing, and I trust he repeated this year; but all I know is that they were not for me. However, we had a most enjoyable four weeks, and were really sorry to be obliged to house the boat, close the cottage and return to the city.

WM. B. SMART.

THE LAKE CLAIR.

Editor Forest and Stream:

Our season is drawing to a close. Only about three weeks of fishing remain, and already the birches and maples begin to show some red and yellow leaves and the cedar cones are turning brown. We have discontinued fishing in some waters, but in Lake Clair the trout spawn so very late that we do not scruple as yet to take all we want to eat, which in fact is all we ever do take. Trout are never wasted at our camp.

The fishing has been good all the season except for a few days in the unparalleled hot weather of July and August. Our fish never run large, as I have often told you. "Herring size" is our pattern, but this year we think they average decidedly larger than usual.

A few days ago one ouananiche of about 2lbs. weight was taken, a result of our hatching in 1892 or 1893. Its presence in this lake was accidental, as we did not purposely put any fry into it. The waters of this hatchery, however, discharge into it and some eggs were spilled from the troughs. We have accordingly reason to expect good results from the waters where fry was placed, though we so seldom visit them that so far we really know little about them. My catch last year of one of ½lb. and one of 1½lbs. would indicate that the fish were thriving.

We have had about our usual number of visitors this year, with perhaps more than the usual amount of life and gaiety. More than once has our workshop been turned into dancing room and concert hall. Our camp register is rich in contributions and decorations, and our ladies' room in ornament of painting and wood carving, especially the latter. I inclose a copy of an ode written in the register, adapted to an air familiar to many of those of us whose years now run into the sixties, "The Lake of the Dismal Swamp."

LAC CLAIR.

(Air, "The Lake of the Dismal Swamp.")

Some glacier hollowed a winding bowl
  And furrowed its rocky rim,
The springs welled up from each cranny and hole,
And down from the hills the waters stole
  And filled it up to the brim.
Then bush and tree from their burrs and cones
  Sent seeds on the moving air,
To cover with forest its rugged stones,
With branches that utter the wind harp's tones,
  And thus was made Lac Clair.

Then birds and beasts in its forest shades,
  Secure from peril or fear,
A home for their tender nurslings made,
  No hunter or fisher near.
But soon the hungry red man came
  And builded his hut on its shore;
He fed his children and dusky dame
With its swarming fish and wandering game,
  And furnished his meager store.
The white man came with his stalwart arm
  And ransacked its forests through;
Little he recked of its subtle charm,
With fire and steel he wrought it harm
  And sullied its waters blue.

Then soon the men of the city throng
  Would come to breathe its air,
And fill its forest glades with song,
  And lo! a new Lac Clair.

We have enjoyed more than usual the songs of the Canadians, of which we have had a great number and variety, and, as not always happens, people who could sing them. The many of your readers who have fished and hunted with Canadian guides know and appreciate the charm of these songs, sung around camp-fires or on canoeing trips. "En Roulant ma Boule," "A la Claire Fontaine" and many others will come to their recollection at the mere mention. We had a score of those familiar and another score or two of less known airs.

These songs are not especially Canadian, being mostly old French, with now and then some slight local adaptation. Some of them have been printed in Canada, but the majority are only known here traditionally. The Canadians have no distinctly national music. One version (I think not the best) of "A la Claire Fontaine" has been adopted as a sort of national air, and is played at concerts and the like in connection with "God Save the Queen."

At our festivities we close our entertainments with both of these and "The Star Spangled Banner" in addition, as both my brother and I are American citizens.

Both the Union Jack and Old Glory are raised and lowered morning and evening whenever either of us is present at the camp, either with or without guests.

Our greatest "function" of the season was the formal naming of our new gondola, a craft built on the premises and combining some of the features of a canoe with the capacity of a steam launch, and withal decidedly Italian in general appearance when in the water. I send you a photo of her as she now lies, hauled out for another coat of paint. The ceremonies were jovial and original without being burlesque, and took place by torch light. The faithful Nazaire was present by special invitation and naturally held a special place among the *personnel* of the camp, an honored guest.

The following evening the work-people gave him a *fête* that he will remember as long as he lives. It was in loving recognition of the qualities that kept him twenty years in our service and endeared him to everyone, though lately advancing years have shown him that he can no longer endure the fatigues and hardships inseparable from the duties of *garde forestier*. Dear old Nazaire! The tears came into his eyes when the unlettered *doyen* of our present staff, with a dignity and grace that many an orator might envy, made him a little speech.

So you see that at Lake Clair there are many pleasures besides those of catching trout. Your readers will perhaps have difficulty in locating our particular Lake Clair, for of lakes Clair, Long, Croche, Travers, à la Vase and the like there are naturally very many in this province. Ours is *the* Lake Clair.

G. DE MONTAUBAN.

QUEBEC, September, '96.

THE PHILOSOPHY OF REX.

Editor Forest and Stream:

In one of my hermitical moods, which tend to philosophical meditation, I pored over the contribution of Alice Demarest in FOREST AND STREAM of Aug. 8.

The article is so delightfully feminine that I should be glad to know more of the writer of it. Ordinarily I am not much interested in femininity, and have sojourned for some years a number of miles distant from any representative of that portion of my race. When in town at intervals I have noticed the undoubted better half of humanity on various occasions. I have seen it in the offices of lawyers manipulating typewriting machines, in the telegraph cages, some of it in bloomers and upon bicycles, and not long since I saw a portion of it in convention endeavoring to arouse a hurrah for universal suffrage. Indeed I have noticed a fair proportion of it all over my nearest town.

In these woods and mountains, however, women are never seen; therefore it is reasonable to presume that the fish here know nothing of them, and that they know nothing of the fish. But there are otherwheres and other fish, and there are other philosophers, such as Rex, who seems to have too much assurance.

The fair contributor to these chronicles leaves us to conjecture some several material matters. Among them the proper words to adopt in addressing her, the amount of familiarity we may venture in replying to her observations, and finally her whereabouts and the variety or varieties of fish that her one particular fisherman, Rex, discourses about. However these things be, the latter individual is peculiarly fortunate in having the former individual quote him so gracefully, and rely so implicitly upon the science which he, ah! only he, can make adorably interesting.

With all the deference allowable to her confidence and faith in Rex, in urbane language, with as much French in it as I can spare, I really must insinuate that in my opinion Rex at times articulates through his *chapeau*. This is really no disparagement to Rex, chiefly because most men when they speak about fish are inclined similarly. Yet they shouldn't do so.

Now, Alice—begging pardon—but how can I adopt a prefix that I don't know is correct, unless I say madam—and I abhor madam—I say that Rex, with all his profundity and scientific lore, knows no more about the feelings of a fish than I do. And I differ with him, and hence I write.

As to fish feeling pain, the topic has been discussed in this journal heretofore, and much has been said and much more might be said "on both sides." I think they do feel, and feel pain, and nobody knows. I will only object here to the arguments or logic of Rex, who makes me jealous by the way he has hypnotized—or that is, inspired some folks.

After admitting, forsooth, that fish are intelligent, and that they reason only from "facts and previous experiences" (by the way, that is a good start for them to reason from; I usually commence there), he hence infers that when a fish takes a fly his only idea is to get away with it. Permit me here to interpolate that it always appeared to me that when a fish took the fly, and felt the hook, he always tried to get away from it. According to Rex, "in his joyous struggle" the fish is only anxious lest the fly should get away. Let me re-insinuate that it is usually apparent that in his frantic struggle the fish is only anxious to get away from the fly. Then, Rex says, no matter how much his mouth is torn, he is always ready to renew the struggle by taking a second fly. Verily, Rex has been catching starving fish with very, very callous mouths.

After the fish that Rex catches is taken into the boat or "out of the swim," his struggles are only the result of "reflex action." The fish, according to the philosophy of Rex, feels no pain—merely an impulse to struggle, gasp, shiver and go through a series of physical contortions entirely independent of and exempt from pain or feeling. In this, as the court sometimes remarks, I fail to concur. Let Rex imagine himself going through the experience. Would he not, in all probability, be reflexibly actuated doubly automatically, with all the physical alacrity of a fish unless he got so full of water as to make him stupid and sulky?

Illustrative of reflex action, Rex explains it very neatly. He says, Alice, that if the sole of your pretty little foot (by which I confidently assume you are not of Chicago) were tickled you would withdraw it immediately, not because you felt anything, but because you couldn't help it. Hey, there, Rex—your logic will not connect unless you obliterate the word and definition of feeling entirely, substituting therefor your reflex action notion. If the pretty foot was tickled without warning or in the dark, would it not withdraw? What sense other than feeling would cause the effect? Like you, Alice, I adore science properly administered, but there is a kind of logic that fills the world with words—signifying nothing.

The wisest of our counsellors doubt the possession of their fondest acquisitions of knowledge and hesitate to claim their particles of wisdom. Indeed, man can scarcely analyze his own feelings, sentiments and emotions. How may he then, by process of reasoning, analyze the feel-

ings of others or of other animals? It is pleasant to conjecture and believe that the lower orders of animals suffer little pain, but it is dangerous ground to allege they suffer not at all. True humanity will not presume the latter possibility, but deal considerately with every living creature. Fish must be, and will be, victims, and it is well to let them fight for their lives when hooked; but they should be killed at once when taken—not left to flounder in a boat, die impaled with a barbarous stick, or suffocate in a bag or creel. A sportsman is known by some of these things, and some of them denote the instincts of the barbarian. RANSACKER.

SHASTA MOUNTAINS, California.

P. S.—In the perusal of the paper by Alice Demarest, referred to, I think I detect traces of sarcasm. I think I perceive that she does not implicitly rely upon everything Rex says; that is, as regards fish. But she expounds his dangerous doctrine. R.

THE LEHIGH VALLEY'S STOCKED WATERS.

THE Lehigh Valley Railroad Company has for the past few years, with the assistance and coöperation of the New Jersey, New York and Pennsylvania State Commissioners of Fisheries, given particular attention to the stocking of rivers and streams along its line with the fry of game fish, selecting waters already noted for their excellence from the angler's point of view.

The following is a complete list of these stocked streams. If there is any preference as to locality it would seem to be that part of the Upper Susquehanna between Wysox and Falls, including such points as Wyalusing, Laceyville, Skinner's Eddy, Black Walnut, Meshoppen, Mehoopany, Vosburg and La Grange. The list gives the creek stocked, the river into which it empties, and the nearest point with railroad station:

Creek.	*River.*	*At or Near.*	*R. R. Station.*

THE McCLOUD RIVER.

BAIRD, Shasta County, Cal., Sept. 1.—*Editor Forest and Stream:* In the excellent article recently contributed to FOREST AND STREAM by Ransacker, under the above heading, I noticed one or two slight errors which I am sure that Ransacker will be glad to have corrected.

The Indians' name for the McCloud is pronounced by them more like "Winni-mame" than "Winne-mim," as Ransacker gives it; and it does not mean Clear Water, but the Middle Water.

As Ransacker says, the Pit River, the McCloud River and the Little Sacramento were named on the early maps of California the East Fork, the Middle Fork and the West Fork. The Indian names for these streams are very similar, practically almost identical—their name for Pit River being Poo-ee-mame, or East Water; for the McCloud, Winni-mame, or Middle Water; and for the Little Sacramento, Numpty-mame, or West Water. So, after all, it will be seen that the Indian name, Winni-mame, which Ransacker recommends so strongly for the McCloud, is not much more romantic than its English name, McCloud.

I think I may take exception also to Ransacker's wholesale condemnation of the catfish. Anyone who has had more than a very limited experience with the catfish knows that in many waters they are considered, as they really are, a very palatable and valuable fish. In the great city of Philadelphia, for instance, there is no more valued fresh-water fish than the catfish, and no one more in demand.

The following paragraph appears in Ransacker's article: "About twenty-five years ago, or in 1871, the Government established a trout hatchery on the Winne-mim (or St. Cloud), and later a salmon hatchery. Some years ago the trout hatchery was abandoned, having fulfilled its mission, and the State having gone into the business on the Sacramento. Now only salmon eggs are taken on the Winne-mim."

The facts in regard to the matter are that the salmon hatchery was established on the McCloud by the writer in 1872. It was not till 1879 that there was any trout hatchery on the McCloud. The salmon breeding station has been maintained by the Fish Commission continuously since its inception in 1872, except that for four years, from 1884 to 1888, no active work was done in collecting eggs.

Ransacker makes another mistake in saying that salmon eggs are taken here early in August. They are not collected till the last part of August.

Several paragraphs in Ransacker's article are devoted to establishing the proposition that "Such an establishment (as Baird Station) conducted by this Government should incubate many times 600,000 salmon eggs."

I need reply to this only by saying that Ransacker was away off in making this statement, for the output of this station was 10,000,000 salmon eggs, instead of 600,000, as he has it.

As the writer founded this station originally, and has had charge of it nearly twenty-five years, he may possibly be pardoned for being a little over-sensitive in regard to printed misstatements about the place, and Ransacker will doubtless accept this article in the kindly spirit in which it is written. LIVINGSTON STONE.

Sept. 1.—The salmon spawning season here has opened with a larger take of eggs than has ever been known at this station during the month of August, viz.: 1,477,400. This is unquestionably due to the successful work that has been done at this station by the U. S. Fish Commission in the last few years in the artificial hatching of salmon eggs. LIVINGSTON STONE,
in charge, U. S. Reservation, Baird, Cal.

A RANGELEY LANDLOCKED SALMON.

BOSTON, Sept. 12.—Col. D. W. Farquhar, of the staff of the late Gov. Greenhalge, is much of a lover of fly-fishing. He had a piece of delightful sport at Rangeley Lake the other day, and all the better because it was unexpected. His family had been summering at the Mountain View, Rangeley Lake. He was called down there by the illness of his little boy. Fortunately he found the little fellow better. Borrowing a 5½oz. split-bamboo of a friend, with a small line and a few flies, tied on No. 8 hooks, he had a guide row him down to Smith's Cove. There he found a friend who had been fishing, but was just on his way to South Bog Stream. Mr. Farquhar asked his friend where he should fish. His friend suggested just beyond the lilypads, near the shore, where he had just taken a few good trout. The first cast Mr. Farquhar made he hooked a handsome trout, and soon had him in the net. The second cast, made as for trout, clearing the line with the left hand, the flies went out about 40ft. There was a mighty swirl, but the strike was too quick, and the fish was not hooked. Again Mr. Farquhar cast, dropping the fly, a yellow hackle, exactly on the same spot as before. There was a big splash, and the fish was hooked. The next instant the fellow was out of the water full length and Mr. Farquhar was greatly excited. The guide called out: "Salmon! salmon! Look out!" The fight was a masterly one, the salmon taking every tactic known to that most gamy fish; leaping free from the water and then sulking toward the bottom. The little rod, under skillful management, was master of the situation. The guide evidently knew his business, and caught every inch that would bring the boat out into clear water. The fight lasted over three-quarters of an hour, when Mr. Farquhar was victorious, with a 6½lb. landlocked salmon in the boat, landed on a hook the bend of which was scarcely more than ¼in., and a 5½oz. rod. Mr. Farquhar says the strike, the leaping and the runs were all perfection, such as the landlocked salmon alone can give. He freely acknowledged that he was excited, knowing what his rigging was, and seeing what the fish was doing, but the excitement gave him the forethought and skill that is a part of the expert fly-fisherman's action. Justly proud of his achievement, he is showing the little hook and fly—much worn and frayed—to his friends. He has purchased a tract of shore land at Hunter's Cove, Rangeley Lake, and will immediately build a cottage there. Fortunately for sportsmen, land can be purchased on the shores of a part of Rangeley Lake, but everywhere else on the Rangeleys camp lots can only be had by lease.

Sept. 12.—Mr. L. O. Crane, who with his wife and father went down to Round Mountain Lake in July, has made a much longer stay than he anticipated. The other day Mr. Crane wrote his father: "The fishing is fine, and trout from 1lb. to 1½lbs. are taking the fly freely. I took nine yesterday morning in an hour and a half, and after 3 o'clock we took fifteen, all with the fly. We do not bring in all we catch, for we cannot eat them, and put back many trout every time we are out of from 1lb. to 1½lbs. in weight." Mr. Crane believes that the partridge shooting will be good in that vicinity in the open season. He saw them at almost every trip through the roads and old lumber roads.

Mr. Charles L. Bly has just returned from Round Mountain Lake, where he has been for several weeks. At the camps are Mr. Julius Wolf, of Colorado, and Mr. Hugo Kiefin. This is Mr. Kiefin's first trip to Maine, and he likes it so well that he will stay till Oct. 1, possibly later. Mr. H. W. Smalley and Mr. R. S. Harvey were also guests there. Mr. Harvey has been to nearly every camp in the Dead River Region, as well as Kennebago. Mr. W. S. Eaton, with his family of six, was to go in to Round Mountain on the 12th. Mr. J. N. George is going in on the 19th, with his family, for a three weeks' stay. Mr. George was at Round Mountain on the first of July, and was so pleased that he determined to come in the fall with his family.

The Scordon Club is another shooting club, formed of eight Boston sportsmen. They have a lease or have purchased a large tract of land at Scordon, on the Cape, and have erected a club house, with boat houses and guides' quarters. They have an ideal spot for shooting, including a good tract of marshes, where the flights of birds past the Cape most naturally stop. Their upland is also well adapted to grouse and quail. A year ago they put out several dozen quail and they believe that the birds have done well. Mr. A. L. Finney, one of the earnest members of the club and a great lover of quail shooting, was down the other day, and in driving along the road in the vicinity of the club house he started several broods of quail. The members of the club have strong hopes of good shooting in due season.

Never have the plans for fall shooting been more marked among Boston sportsmen than at the present time. A great many men will go to Maine as soon as the open season on moose and deer begins. Many will go to Aroostook, with points along the Aroostook Railroad already selected. Guides are engaged, and the slaughter of moose and deer will be great again. Others will wait for the first snows. The feeling is general to seek the more distant and inaccessible spots and to avoid the resorts that have been too much boomed in the papers. SPECIAL.

CHICAGO AND THE WEST.

Grayling and Trout.

CHICAGO, Ill., Sept. 11.—Mr. F. L. Bridgman, of Chicago, is just back from a fishing trip in the southern peninsula of Michigan, where he had very good fortune. He fished the Au Sable, below Grayling, doing all his work within fourteen miles, or as far as Wakeley's Bridge. In a day and a half to his own rod he took seventy-five trout, some very fine ones, and says he saw thousands of trout in the stream. He was also so lucky as to take two grayling, one a very fine specimen of 14in., which he kindly brought to me at the FOREST AND STREAM office, and which I am having preserved, so that I can look at it and make myself feel bad all winter. Unless Mr. Bridgman caught the last grayling there was, I shall need one of my own next summer.

It would seem that the trout have taken the Au Sable, and that the grayling is doomed in the last of the great grayling streams. Yet it is possible even to-day to get a grayling if one be well posted. Mr. Bridgman told me that during his visit a man went over to the South Branch of the Au Sable and in one day took nine grayling that weighed 8lbs. He said that the grayling were still abundant there. Always just a "little further on."

A Chicago-Wisconsin Fish Story.

Mr. Frank K. Dunn, of Logan & Co., Chicago, fishing from an anchored boat on Tenderfoot Lake, Wis., west of State Line, this month caught, in the time of fifty-five minutes from the time the anchor was dropped, and with twenty-one consecutive casts, twenty black bass, smallmouths, an average of one each two and two-thirds minutes. Mr. Dunn did not spit on the bait or use other unfair means of angling.

Bass Fishing on the Johnson.

Mr. Will R. Post, of Detroit, owner of the beautiful yacht Queen Anne, writes to his friend, Mr. C. W. Stansell, of Chicago, and invites him to join the party for a two weeks' bass fishing trip on the Johnson Channel, St. Clair Flats, they two then and there to decide who is the only and absolute boss fisherman for the Flats, on which honor they both claim a tie. Mr. Post is so good as to include in his invitation also Mr. W. P. Mussey, of this city, and myself, and it is rather discomforting to have to send regrets. I couldn't have a bit of fun in this country if I was turned loose for a few years.

Wishininne and Others.

Members of the Wishininne Club, of Chicago, meet in a little dinner to-day, and bid good-bye to several members who start this week to State Line, Wis., for a fishing trip. Mr. W. L. Wells, Dr. A. M. Fuller, Mr. Cleveland and one or two others of this city go together, and may be joined later by others. The fishing now is excellent in waters adjoining that point, more especially the bass fishing, though a number of good 'lunge have recently been taken.

Bass in Indiana.

Dr. B. W. Hollenbeck, of Westville, Ind., with whom I discovered the source of the Calumet River last summer, called at this office, and reports the big-mouth bass as taking the frog in an engaging and enthusiastic fashion in the waters of that region.

A Large Rock Bass.

Mr. Jos. Irwin, of Little Rock, Ark., speaks of taking on a recent fishing trip on a lake of the Arkansas Valley "a beautiful rock bass, or bar fish, as it is called in this country, weighing 3lbs." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

An Extraordinary Catch.

PHILADELPHIA, Sept. 10.—It was the first muster of the Naval Post after the arrival home of the delegates and visitors to the thirtieth national encampment of the G. A. R. at St. Paul, Minn.

After the close of the Post the returned visitors were entertaining the stay-at-homes with incidents of the trip. The Senior Vice-Commander told of seeing a big-mouth black bass caught in Bear Lake weighing 38lbs. The Aid-de-Camp switched off the encampment trip on to the big fish side line with the story of catching a jewfish on the South American coast weighing 600lbs., when the Inside Sentinel, who by the way is an Irishman, chipped in with: "When I was out on the west coast of Africa we caught a castor oil whale." A chorus of voices all in the rising inflection: "A castor oil whale!" "Yes," said the Inside Sentinel, "where do you think castor oil comes from? And we took 188 barrels of castor oil out of him." And a solemn silence settled down over the group that you might have thrust a marline spike into and it would have stayed there. VETERAN.

Politics and Dynamite.

SHELDON, Vt., Sept. 10.—Large catches of black bass are made in the Missisquoi River and in the waters of Silver and Crystal (Dream) lakes. After a long fight Mr. Leach has succeeded in having one Hugh Green convicted and fined for using dynamite in Crystal Lake. The fine was $100 and the costs at least another $100 or over, making the whole amount about $225. Green is a local politician of some repute and brought every influence possible to escape the conviction—but he has learned a lesson. The mills of the Vermont Fish and Game League grind surely if slowly. STANSTEAD.

Munising Bay.

MR. A. ST. JOHN NEWBERRY, who described Munising Bay in our issue of Aug. 22, writes: "Have just returned from a second trip to these waters. On Monday, Aug. 24, between 2:30 and 5 P. M., I took twelve trout weighing 13lbs. All taken on the fly—coachman, silver-doctor and Montreal; No. 3 hooks."

NIAGARA COUNTY ANGLERS' CLUB.

LOCKPORT, Sept. 11.—The Niagara County Anglers' Club had such poor success last spring in their tournament at Youngstown that they decided to have another trial of their fortunes with the black bass. Accordingly a committee was appointed and arrangements made for a day's fishing on the Niagara River near La Salle. Fifty members of the club took the 7 o'clock train yesterday morning for the rendezvous, resolved to accomplish great things piscatorially.

When the fishermen reached Tonawanda an electric car was in waiting which conveyed them to La Salle, where boats and bait had been prepared. Each boat was numbered and on the train the fishermen drew to see which boats they would occupy.

J. Frank Smith, one of the party, who is a Republican, drew No. 16, but by mistake got in boat No. 1. The fishermen have since been addressing him as 16 to 1.

Twenty of the fishermen tried their luck in Canadian water and the remaining twenty-six fished on the American side. A steamer visited the fishermen every two hours, supplying them with bait and lunch, and at 6 o'clock the small boats were towed to La Salle, where an excellent fish chowder was in waiting. Tables had been set in the long boat house of Jos. Mang.

The sportsmen returned to La Salle by the electric cars and caught the Erie train to this city, arriving at 9:10, well satisfied with the day's outing. There were many amusing incidents of the occasion. Jake Fisher felt a heavy bite at his hook and was nearly pulled from the boat. He called for assistance and the steamer arrived in time to lend a crew, which assisted in landing a 12lb. mullet. John A. Merritt was not as successful a fisherman as a politician, as he only secured one black bass. The following is the individual catch as recorded by Secretary F. K. Sweet; the bass, unless otherwise designated, are black bass:

F. K. Sweet, 6 bass; George W. Batten, 1 bass; W. R. Hoag, 6 bass, 3 rock bass; Charles Warren, 4 bass; John Wilson, 3 bass, 1 perch; Frank Reynolds, 2 bites; Charles Whitmore, 1 bass; E. Carey, 1 bass, 1 perch, 2 rock bass; John Craddock, 1 yellow pike; W. W. Steele, 1 perch, 1 rock bass; Cris Wolf, 3 bass; J. T. Davison, a collection consisting of about 400 of the following: clams, tadpoles, beetles, perch, rock bass, dogfish, bullheads, leeches, sunfish, snakes and crabs; A. H. Stevens, 2 bass; Fred Williams, 3 bass; W. B. Ryder, 1 bass, 1 perch; E. J. Emerforpher, 3 bass, 1 perch, 1 rock bass, 1 sheepshead, 1 sunfish; J. E. Emerson, 1 bass, 1 yellow pike, 2 rock bass, 2 catfish; O. D. Prudden, 5 bass; J. F. Davis, 12 bass; A. L. Smith, 12 bass, 1 blue pike; La Barr, nothing; J. Frank Smith, nit; James Carter, 3 bass, 3 perch; L. H. Sureman, 3 bass, 2 rock bass; D. E. Broug, no fish; T. H. van Horn, 2 fish; Bert Furgason, 6 bass; D. G. McKim, 0; W. J. Jackman, 3 bass, 1 yellow pike, 1 perch, 1 rock bass; John A Merritt, 1 bass; Jake Fisher, 2 bass, 1 sucker; W. R. Smith, not worth mention; F. B. Lewis, 7 bass, 2 rock bass; David Millar, 1 bass; F. N. Trevor, 2 bass, 2 rock bass, 1 blue pike, 1 perch; W. E. Huston, 7 bass, 2 rock bass.

M. H. HOOVER.

Senator Quay's Tarpon.

"I HAVE not been so near death since the war," said Senator Quay yesterday at the Walton, "as I was last week after catching that 263lb. tarpon off the Florida coast,"

"How is that?" asked Senator Penrose, who, with Judge Durham, ex-Sheriff Connell, Senator Thomas, and a number of other anti-combine leaders, had gathered to discuss politics.

"It was this way," said Senator Quay, with his quiet smile. "I hooked the tarpon and made ready for a long struggle to land him. Curiously enough, he did not adopt the usual tactics of running to sea, but began a series of somersaults out of the water. He jumped about fifteen times, sometimes going up twelve feet. In five minutes he had quit, and I pulled him alongside the boat, where he lay quietly. Then I noticed that I had a very poor hold on him with the hook, and the boatman jabbed his gaff hook into him. Immediately he resumed activity as he was hauled aboard. We were in a little fourteen-foot skiff, and the tarpon at once took possession. He jumped up and down at a furious rate, knocked me over, and nearly broke my leg; then he jumped up and hit the gunwale of the boat and tipped it over until the water poured in. If it had not happened that at the same time he knocked the boatman down, who fell on the other edge of the boat and partially righted it, we should have all been in the water.

"The tide was running out very fast, and if we had turned over the boat would have drifted to sea, and we should have certainly drowned. I was never so near death since the war. I got to one end of the boat and managed to right it, but the tarpon kept jumping up and down and we expected him to break the boat in two. Fortunately he got caught under the seats, which confined him, but his struggles continued, and I thought he would certainly break the seats and capsize the boat. Fortunately he died too soon for this. All this happened in a short time, but they were anxious moments, and I am free to say that I was never so scared in my life."

"Then you went home, I suppose," remarked Senator Thomas.

"No," said Senator Quay, with a quiet smile. "We started for another tarpon."—*Philadelphia Inquirer.*

Cayuga Lake Fishing.

ITHACA, N. Y., Sept. 12.—Exceedingly fine perch fishing has lately been enjoyed by local anglers at the Ithaca end of Cayuga Lake. Strings of from twenty-five to fifty are taken frequently during a few hours' fishing. The perch are of exceptionally large size. Rock bass and pickerel are also caught in goodly numbers, and with the advent of cooler weather the angling for them will grow still more elating.

The black bass fishing has scarcely been up to the average.

Messrs. Willson, Selkreg and Kinney, anglers all, have gone to Redwood, and will report in due time.

M. CHILL.

Bass in Millsite Lake.

LOCKPORT, N. Y.—My better half (who is also the better angler) called my attention to J. H. S.'s notes on bass in Butterfield Lake. In that lake my wife is particularly interested, as it was there that she took her first lessons in angling from the veteran angler H. H. Thompson. This was in 1852. At that time Mr. Thompson often visited the many lakes in that vicinity with my oldest brother, Dr. James Davidson, but he seldom took any one of the fairer sex to these places; and in showing his gallantry to a stranger he found one whose taste for angling was in keeping with his own and in whom he found an apt pupil indeed. So apt was she that during a shower, while he was holding an umbrella over her, she hooked and landed a 3lb. black bass, for which he dubbed her "the completest angler."

Besides black bass, Millsite Lake once contained salmon or lake trout. About 1850 I remember weighing one that weighed 42½lbs. It had been speared (I am sorry to say) by one Schuyler Soper. While hunting the wary ruffed grouse around the shores of the lake I have seen in its clear waters, from the high rocks above, fish that must have weighed more than 20lbs. J. L. D.

Outings Near Home.

Editor Forest and Stream:

Now, I have been enjoying (oh! how much!) the many good things from other pens in dear old FOREST AND STREAM for a long time, and have not even tried to add my poor mite, as far as you know; but the truth is I have many times thought of making an attempt to tell of some of my little outings for game and fish, and above all for health and pleasure, and then I would recall the many splendid outings splendidly portrayed which I had read from week to week in your journal, and it would take all the "starch" out of me and my pencil would refuse to move. Between you and me, I did have many quiet little tramps last fall—mostly alone—and gathered in a few of the brown denizens of the shaded and dense covers; and during the past spring I brought to basket more than the usual number of trout, one of which I judged would have weighed 1lb.; another fisherman said 1¼lbs. I did not bring it home, but sent it to a sick friend, or I should have weighed it; it was certainly the largest trout I ever caught in this locality, and maybe I wasn't proud! But you know my little stories of the bagging of a few partridges, quail or woodcock, or the catching of a few trout, would seem so small beside the achievements of many others that I had not the courage to present them in due season. But, my dear Mr. Editor, if you or some other man will get up a contrivance whereby we can measure our enjoyment in these things—something like the cyclometer they use on wheels to measure distance—I shall be ready to compare results with the most of my brother sportsmen, for I know I have much real pleasure in getting the few birds and fish I bring to my table. How would it do to advertise for such a machine? It would beat Edison's inventions "out of sight." But alas! every man has to measure his own pleasure in this world and hope for the next. A. S. C.

CONNECTICUT.

Salt-Water Fishing Near New York.

SALT-WATER fishing in the vicinity of New York has improved considerably within the past week or two. Few bluefish or weakfish are caught, but sand porgies and snappers are very numerous. On the south shore of Staten Island, near Prince's Bay, one can catch a good mess of either of these fish in a few hours. They are also running well in Jamaica Bay, but small messes only are caught in Sheepshead Bay.

Sea bass and blackfish have begun to bite in the vicinity of Sheepshead, and last week several good catches were brought in from the "stone pile." This is a pile of rocks lying off the Oriental Hotel on Manhattan Beach, and can be reached by row or sailboat from Sheepshead Bay. The heavy swells make fishing extremely uncomfortable for some people here, and it is also dangerous on a stormy day.

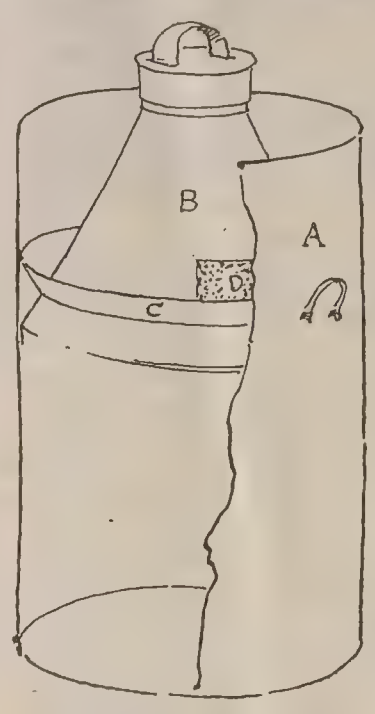
A few striped bass can also be picked up by trolling in this vicinity, but they are scarce. One weighing 12lbs. was caught here last week, but most of them are smaller. Blood worms is the favorite bait for striped bass. G. F. D.

A Corrector Corrected.

HERE is a shooting story from the West Highlands of Scotland. A party of gentlemen had just set out for a day's sport when Mr. B., the lessee, found occasion to send the head keeper back with a message to the house. On the latter's return he mentioned that the "Miss B's" had told him to say so-and-so. "That's wrong, Donald," intrusively remarked a glib-tongued youthful member of the party; "you ought to say 'the Misses B.'" Donald made no reply, but he had his revenge later in the day. His censor was an indifferent shot, and having fired twice at a covey of birds without causing any damage, he exclaimed, "A miss, by Jove!" "That's wrang," shouted the keeper at the top of his voice; "it oucht to be 'misses!'"—*Westminster Gazette.*

Round Mountain Lake.

EUSTIS, Me., Sept. 6.—I have been here six weeks and cannot say enough in praise of the place after a fruitless search for fly-fishing in the Adirondacks for the last six years. Any one who understands fly-fishing can take from twenty-five to fifty trout a day here that will run from ¼lb. to 1½lbs. in size; and in my opinion that ought to satisfy most people. L. O. CRANE.



ROBINSON—"Did you hear about Travers? He went fishing the other day, and an hour afterward his hat was seen floating down the stream just below where he'd been." Jagway—"You don't say. Heavens! where was Travers?" Robinson—"He was trying to fish it out with his pole."—*Harlem Life.*

Can for Carrying Fish Fry.

PLYMOUTH, Mass., Sept. 1.—*Editor Forest and Stream:* I give a cut and description of an improved fish can used at the Nook Hatchery of the Plymouth Rock Trout Co., Plymouth, Mass. An ordinary galvanized iron ash barrel, A, with smooth interior, is fitted with a tin cone, B, carefully soldered in. A short distance above the lower edge of the tin cone is soldered securely a rim also of tin, C, and just above this are three openings in the cone covered with fine strainer, one of which is shown at D. The can is filled with water to about the level of the strainer, D, and in the space between A and B is put chopped ice, as much as needed. As the ice melts, the water runs through the strainers into the can and a low temperature is thus obtained. We have given the above can, which is of our own designing, a thorough trial during some very hot weather and find it has many advantages over anything we have seen. No separate receptacle is required for the ice; the ice cannot come in contact with the fish and bruise them; we get the combined advantage of a conical top and refrigerator can without the bad features of many of them, and in pouring the water for purpose of aeration you may have the whole top to pour into and so avoid all spilling. A covering of felt, held in place by some poultry netting stretched tightly around it, makes a most complete protection during hot weather.

Our idea is not patented, the cans may be fitted up at any tinsmith's, and many neighboring fishculturists have adopted them and are well pleased with the result.

By means of rubber tubes extending a few inches below the water and connected at the other end with a foot bellows, air is supplied the fish as often as necessary, and when transporting a lot of fish we sometimes successfully aerate six or more cans at once. C. C. WOOD, Supt.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. Louis Steffen, Sec'y.

Sept. 22 to 25.—Queens County Agricultural Society's bench show, Mineola L. I. J. Mortimer, Manager, Hempstead, L. I.

Sept. 23 to 26.—Stockton Fair Association's bench show, Stockton, Cal. D. J. Sinclair, Sec'y.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbuy, Conn. G. M. Rundle, Sec'y.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detriot, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

C. F. T. C.'S CHICKEN TRIALS.

THERE was neither the interest nor the support in respect to the Continental Field Trial Club's trials on chickens which the club has cause for expecting, considering the success of the trials last year, the great region which is the habitat of the chicken, and the vast number of shooters, owners of dogs, who reside therein. The club was a loser to the extent of several hundred dollars, another lesson in the erroneous financial system which has worked so much harm in the past by discouraging members who have to make good a club deficit, and making other sportsmen hold aloof from club responsibility. There is no reason why any club should guarantee fixed prizes, since it is not a money-making concern, nor can it make money. The sweepstake plan is the only sound one, and the only one which does not make club membership synonymous with an assessment sooner or later.

Mr. W. S. Bell, of Pittsburg, Pa., judged throughout.

There was a light attendance of sportsmen, much less in number than what was anticipated. From St. Paul there were Paul H. Gotzian, S. A. Smart (general baggage agent of the N. P. R. R.), Dr. L. C. Bacon and C. R. Wilkinson; from Toledo, O., came Prof. Edm. H. Osthaus and A. P. Draper; from Chicago, J. H. Robbins and T. A. Thompson. There were Dr. W. M. Evans, St. Louis, Minn.; Robert Alexander, Herman, Minn.; A. Chapin, St. Thomas, Minn., and E. K. Cavalier, Pembina, Dak.; Thos. Johnson and Mr. Reed, Winnipeg, and others.

The trials were run at Kennedy, Minn., on the Great Northern R. R., about thirty miles from the Canadian and United States line. The running began on Monday, Sept. 7.

The Derby.

There were but five starters, and the quality of the work done was of a commonplace character; the grounds were in part unfavorable and in part favorable.

This stake was for setters and pointers whelped on or after Jan. 1, 1895. First prize, $125; second, $100; third, $75; fourth, $50. Entrance, $10; $5 additional payable July 15, and $5 to start.

The dogs were drawn to run as follows:

S. P. Jones's b., w. and t. setter dog Hurstbourne Zip (Tony Boy—Dimple), D. E. Rose, handler, with Del Monte Kennels' b. and w. pointer dog Tick's Kid (Tick Boy—Lulu K.), C. Barker, handler.

H. Ames's b., w. and t. setter bitch Guenn (Blue Ridge Mark—Lou R.), D. E. Rose, handler, with Del Monte Kennels' l. and w. pointer dog Tony Works (Tick Boy—Lulu K.), C. Barker, handler.

H. Ames's b., w. and t. setter bitch Christina (Blue Ridge Mark—Lou R.), C. Barker, handler.

The winners are: First, Hurstbourne Zip; second, Christina; third, Guenn; fourth, Tony Works.

Monday.

The weather was clear, warm and pleasant.

First Round.

HURSTBOURNE ZIP AND TICK'S KID began at 8:44 and were run about 5 minutes when they were taken up and taken to other and better ground, that at the start being covered with heavy grass and was unfavorable for chickens. The heat was resumed at 9 and ended 24 minutes later. Zip had the better of the competition in every respect—range, speed, style and work on birds. A bevy was marked down and Zip secured three points on the scattered birds, Rose shooting over the last one and Kid chased. Kid was lame in front, though he ran gamely nevertheless. Mr. Barker explained that the dog was crippled from rheumatism.

GUENN AND TONY WORKS started at 9:47. Tony did some very erroneous work on a bevy, flushing twice under favorable conditions for pointing, stopping to order on the remaining birds. The birds were followed, but no good work was secured. They ranged middling well at fair speed, though with ordinary judgment.

CHRISTINA, the bye, was started at 10:41 and ran alone 38m. Christina located and pointed a bevy prettily. Sent after the scattered birds, she wheeled to a point on a single at the moment it flushed. Sent on, she pointed the rest of the bevy nicely. Next she caught a wounded bird. Another good point on a single bird ended the point work. She showed a middling good range and fair judgment Her point work was commendably good in the worst hours of the day for it.

Second Round.

Four dogs were kept in the second series. The party took lunch in town. The afternoon work was done on the east side of town, where there was little good going for the dogs, the grass being heavy, and where birds were scarce, few being found. The afternoon work was decidedly inferior.

HURSTBOURNE ZIP AND TONY WORKS were started at 4:20. Zip immediately took the lead in ranging and held it through the first part of the heat. Tony at times trailed after Zip. The latter was first to make game and was roading to a point when the bird flushed. Toward the close of the heat the dogs were ordered up and led on chain to more favorable ground and were started again in a few minutes, though what with leading and dodging about standing grain nothing was accomplished. About twenty minutes before the heat ended Zip showed strong signs of having had enough, and was beating out his ground close in front of his handler. Tony was maintaining his range and pace well, though they were inferior to Zip's in the previous part of the heat. Up at 5:25.

CHRISTINA AND GUENN began at 5:32. Guenn was stopped to a flush. Guenn pointed on the footscent of some birds flushed by the handler, then she flushed one; then went on and pointed a bevy. Up at 5:50. Their range was narrow and they beat out their ground with little regard to taking advantage of it. It was a commonplace exhibition on the whole.

The Derby running was suspended and two heats in the All-Aged stake were run next.

Tuesday.

The morning was beautifully calm and pleasant, but gradually the sky became overcast till at noon the temperature was much lower, though not uncomfortably cool, and a storm threatened. The Derby was continued.

HURSTBOURNE ZIP AND CHRISTINA ran 36 minutes without finding, the heat beginning at 8:11 west of town. The grounds seemed favorable for birds, but it was clear that they were very scarce and that the dogs were not at all to blame for the lack of finding. Both dogs ranged faultily, both returning frequently to their handler for orders and beating out a moderate range in an erratic manner.

This heat finished the Derby competition.

The stake was so flat and meager in detail, and the class of work so decidedly inferior, that extended comment on the dogs is unnecessary. There was not a heat which could be called good ordinary, for while recognizing the fact that birds were very scarce, the work done on such birds as were found was very faulty.

The All-Aged Stake.

This stake had seven starters, drawn to run in the following order:

——— ———'s b., w. and t. setter dog Noble Leo (Count Leo—Minnie T.), N. B. Nesbitt, handler, with T. T. Ashford's l. and w. pointer dog Von Gull (Kent Elgin—Fannie Croxteth), D. E. Rose, handler.

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone IV.—Gleam's Maid), N. B. Nesbitt, handler, with Blue Ridge Kennels' b., w. and t. setter dog Domino (Antonio—Ruby's Girl II.), D. E. Rose, handler.

N. P. DePauw's l. and w. pointer bitch Sister Sue (Jingo—Rooney Croxteth), N. B. Nesbitt, handler, with ——— ———'s setter Greenway (Columbus—Maud á Rose), D E Rose, handler.

Del Monte Kennels' b., w. and t. setter dog Sam T. (Luke Roy—Bettie B.), C. Barker, handler.

There were four prizes: $125 to first, $100 to second, $75 to third, $50 to fourth; $10 entrance, $10 additional to start.

First was awarded to Von Gull, a pointer of excellent performance, a worthy son of his illustrious sire. He carries a high nose, which he uses with constant industry, and locates and points his birds with admirable precision. His style is spirited, and on point it is all that one could desire, he carrying his head and tail high in a graceful attitude. His range was conducted with speed, desirable width and judgment.

As for the work of the others there is little to add to what is said in the report of the heats.

Monday.

First Round.

NOBLE LEO AND VON GULL began at 5:53 and were worked toward some scattered birds. Von Gull soon pointed a single nicely, and Leo joined in the point; both were steady to shot. Von wheeled nicely to a point, and hearing one of the handler's whistles moved on and flushed it. Next he made a flush, and soon afterward made a point or flush, it was difficult to determine which; next he made a flush, then another down wind, then a slack point on a single. He seemed careless in his work, though searching for birds industriously and using his nose constantly. The conditions for good work were not of the best, but his work was far inferior to the opportunities. Leo loafed a good deal till near the close of the heat, when he ranged out and worked up well, doing nothing, however, to redeem his previous poor showing. Up at 6:28.

GLEAM'S RUTH AND DOMINO began at 6:28 and ran till about 7, doing nothing on birds, though both worked industriously. Domino much the wider ranger, Ruth waddling in range, though working prettily. This heat closed the day's work.

Tuesday.

SISTER SUE AND GREENWAY were cast off at 9. Sue had a good opportunity to display her powers on point work among birds, but flushed two or three times in succession, doing some very inferior work. She ranged wide, as did Greenway; but they kept together most of the time, neither working independently.

SAM T. was cast off at 9:45 and ran till 10:26 without finding. His range was very faulty, for though making long casts in the early part of the heat, he often came back on the same ground he ran out on, and left large tracts untouched. Toward the latter part of the heat he ranged close to his handler and loafed betimes, showing little interest in searching.

VON GULL AND GLEAM'S RUTH began at 10:35. They were worked toward some birds marked down in a wheat stubble after having beaten out a lot of ground without finding. Von pointed a single bird nicely and Ruth flushed some other birds. Then Ruth pointed nicely some remaining birds, Von pointing or backing, a bird being flushed near by him. Next Von flushed a single bird excusably down wind. Von roaded and pointed a cat. Gleam backed. Up at 11. Von showed excellent range and diligent attention to finding. Ruth too made a good showing, though somewhat overshadowed by Von Gull's superiority.

The party took lunch at a farmhouse, where keen appetites gave a relish to the ample spread of simple eatables.

SISTER SUE AND DOMINO were cast off at 1:46. Soon Domino struck scent, began to steady when Sue close by caught sight, backed, and Domino backed Sue. They next began roading, but were up wind of the bird, though Sue was roading toward it when turned by her handler's whistle. The bird was afterward flushed by the wagons. On open stubble Domino got among some chickens nicely spread out for good work, but he flushed two in succession, then finished by flushing all the rest. He seemed heady both in his ranging and point work. Sue ranged well at good speed. Her manner of searching was excellent; her work on birds was decidedly poor. Up at 2:24.

The judge then announced the awards, and the work for the day was closed.

The Northwestern Stake.

This stake had nine dogs on which was paid the final fee to start, though Kingston being absent there were eight which actually started. The quality of the work, considering it as a stake, was of a higher grade than that of either of the previous stakes. The dogs were more attentive to their business, had a better understanding of it, and most of the dogs showed incomparably better training, and they were handled quietly and skillfully, which demonstrated that amateurs can handle quietly even if professionals cannot.

Birds were found in much greater numbers than on previous days, though still short of the numbers desired for field trial competition.

ALBERTA JOE, the winner, showed excellent judgment, a well-sustained pace and skillful work in locating and pointing his birds, his point work being very clean cut and precise. He was admirably obedient to orders and had a thorough understanding of their purport. The cheerful obedience of this dog was a pleasure to witness.

SCHWAB too displayed excellent range and judgment; her point work, while very commendable and really superior, was lacking in the excellent precision displayed by Alberta Joe. She also was admirably obedient. She won second.

PATTI showed an excellent range and good judgment, but was unfortunate in finding few birds, though working out a great area most diligently. Her range was shortened a good bit toward the end of her first heat, though at no time was she loafing. She won third.

On the whole it was a most satisfactory display of the powers of the working dog, a far greater grade of merit than that often displayed by the half-hour sprinters which run because they feel good and give little thought to game birds unless they actually run across them.

The spirit of competition was most generous and hearty congratulations were bestowed on the winners. Mr. Johnson bore his honors modestly, and while his gratification was great it seemed to be less than it would have been had the honors been won by his friends who competed.

The dogs were drawn to run in the following order, but as there were two owners expected on the early train the drawing was made subject to later changes in the actual running. Owners handled their dogs.

The conditions were $5 to enter, $5 to start, 20 per cent. of entrance reserved by the club for expenses. Cup and 25 per cent. of balance to winner of first, 50 per cent. to second and 25 per cent. to third. The cup was an elegant trophy, well worthy of keen competition. It was intrinsically valuable as well as being a work of art.

J. W. Peterson's o. and w. setter bitch Lady of Gloss (Gath's Mark—Cozette), with Thomas Johnson's l. and w. pointer dog Alberta Joe (Ightfield Upton—Ightfield Blythe).

Thomas Johnson's b. setter bitch Psyche (Manitoba Toss—Pitti Sing), with Paul H. Gotzian's lem. and w. setter dog Lawrence (Doc Quenn—Minnesota).

Thomas Johnson's b. setter dog Sancho (Manitoba Toss—Manitoba Bess), with A. C. Reid's b. and t. setter bitch Schwab (Manitoba Toss—Pitti Sing).

Thomas Johnson's b. b. setter bitch Patti (Duke of Gloster—Flora), with C. E. Dickey & Co.'s b., w. and t. setter dog Kingston (Chance—Bessie Avent).

Thomas Johnson's l. and w. pointer dog Lonsdale (Coton—Psyche), a bye.

Wednesday.

The morning was cloudy and cool.

LADY OF GLOSS AND ALBERTA JOE were cast off at 8:08 and ran 20 minutes. Joe roaded with accuracy to a point on a bevy. Lady galloped in and flushed it, afterward being heedless to wing, Joe standing stanchly without variation from correct form. Sent on, Joe wheeled beautifully to a point on a single, and Lady backed. Soon Joe roaded about 80yds. accurately, the birds flushing wild across wind. Joe pointed a single, which Lady flushed. Joe's range was excellent, as was also his judgment and point work.

SANCHO AND SCHWAB were started at 8:35. Both beat out the ground fast, each casting wide and with judgment. Schwab pointed a bevy which he skillfully found and showed perfect stanchness. Sent on, both ran into a bevy down wind, and both neither increased nor diminished their speed till they stopped promptly to order. Sancho was called in to be watered; at the same time Schwab took a long cast and pointed; Sancho coming up, backed to caution. Up at 9:02. The range and speed were well sustained; from start to finish they showed judgment in beating out their ground and were hunting for birds diligently.

LONSDALE, the bye dog, was next started; time 9:06, and he was run 42 minutes without finding. He had in the morning eaten a lot of biscuits not intended for him, and thus started with a loaded stomach, which put a heaviness on his gait and probably a dullness in his nose. His range was fairly good in the first part of the heat; toward the last it gradually contracted till he was working a narrow range. He was cast off again at 10:33 on some marked birds, making several flushes inexcusably. Down 5 minutes.

PSYCHE AND PATTI were run 38 minutes, starting at 9:52. They ranged wide and fast till toward the close of the heat, when their range contracted to narrowness. No birds found.

The running was suspneded while the party ate lunch. Mr. Paul H. Gotzian had arrived in the meantime, and after lunch his entry was started.

LAWRENCE ran alone, beginning at 10 o'clock. He pointed a bevy nicely, and Mr. Gotzian as nicely killed a bird, which Lawrence retrieved. Up at 1:30. His range was narrow and he acted puppyish. Mr. Fay explained that it was but two weeks since the puppy first pointed.

Final.

ALBERTA JOE AND SCHWAB were cast off at 1:34 to contest for first honors. Schwab pointed a bevy in stubble and the birds flushed wild. Schwab pointed at the same instant a single flushed. The dogs ran about 10 minutes.

PSYCHE AND PATTI at 1:46 were worked toward some scattered birds marked down in a difficult place for good work. Patti pointed, roaded, and Psyche pointed, pressing the bird to a close and flushing. Moved on and Patti pointed a single. The judge then ordered them up and announced the winners.

Field Trial Jottings.

A NOVEL feature of the Continental Field Trials Club's trials, at Kennedy, Minn., was the introduction of more sociable features by the management. Each evening was devoted to a game of progressive euchre, which was participated in by all present and enjoyed with a zest which evokes wonder that diversions of this kind were not introduced before. The prizes were all useful to men who shoot or go afield. On the second evening a camera was the prize of the victor in the innocent game, a prize the management was able to offer through the liberality of the judge, Mr. W. S. Bell.

Messrs. A. P. Draper and E. K. Cavalier and Prof. Edm. H. Osthaus took an afternoon trip on Wednesday of the week of the Continental trials and brought in thirty-two chickens, a tribute to the home talent of the dog of the chicken country as well as an evidence of the skill of the shooters. Mr. Draper's gun is a sky scraper, and the manner in which he could jerk ducks out of the clouds with it excited the admiration of his audience.

The judge at the Continental trials, Mr. W. S. Bell, was accompanied by his wife, who skillfully handled the reins in driving the sedate horse which drew their carriage across the prairie. If ladies could appreciate the benefits to be derived from an outing in the chicken country, the prairie country where earth and sky meet on a horizon further away than in any other section of country, and where the pure and bracing air brings bright eyes and cheeks glowing with health, there would be more to follow the trials, much to their own gain and the gain of the trials also.

The trials of the Manitoba Field Trials Club had an unfortunate turn, so far as its finances are concerned. It is regrettable that its treasury was unequal to the demands

upon it in the way of settlement of prizes, and that therefore the trials lacked all that completeness which cash makes in satisfying all that is promised. Better luck next time.

The silver cup of the Northwestern Stake was a work of simple elegance, much admired by all who saw it. There were a number of local sportsmen who regretted that they had not prepared for an attempt at its ownership.

The Continental Field Trials Club's trials on chickens resulted in a large deficit, and was another lesson in field trial finance worth heeding, though the impossibility of offering large guaranteed purses under present conditions in the field trial world was pointed out in FOREST AND STREAM long since. Field trials are not money-making institutions, nor are they intended to be such; therefore there is no reason why club members should be made responsible for the deficit. The ones who are the material gainers by the trials, the competitors, should make their own purses, and this is equitably secured by the sweepstake plan, that adopted by the new club in Indiana being a case in point.

The Northwestern Stake was very popular, and several desired to enter at the last moment. There should be enough home support to make several local stakes of like kind.

Mineola Show.

Editor Forest and Stream:

The following is a correct list of entries in the different breeds for this show: 5 mastiffs, 26 St. Bernards, 5 bloodhoods, 11 Great Danes, 2 Russian wolfhounds, 9 greyhounds, 4 foxhounds, 15 pointers, 12 English setters, 12 Irish setters, 9 Gordon setters, 29 spaniels (Irish water, Clumber, field and cocker), 15 collies, 8 poodles, 31 bull dogs, 14 bull terriers, 11 Boston terriers, 7 dachshunde, 10 beagles, 45 fox terriers, 12 Irish terriers, 1 Scottish terrier, 2 Bedlington terriers, 1 Skye terrier, 1 Dandie Dinmont terrier, 11 Black and Tan terriers, 4 toy terriers, 6 pups, 10 toy spaniels, 1 Italian greyhound, 3 schipperkes, 6 miscellaneous; total 338.

All things considered, a very satisfactory entry, for which I must thank you in a great measure, and I wish to take this opportunity of thanking those exhibitors who have so kindly supported me with their entries.

The following Fox Terrier Club stakes will be judged at this show, namely: The Tomboy Stakes, the Apollo Stakes, the Yankee Stakes and the second division of the Produce Stakes. JAS. MORTIMER, Sec'y, etc.

Ithaca Show.

ITHACA, N. Y., Sept. 11.—The dog show given in connection with the Tompkins County Agricultural Society's exhibition, Sept. 8–11, excelled any of those previously given by the society. It was a clean, tidy little affair, in which sixty-two dogs were benched.

The judging in all classes was done by Mr. C. S. Wixom, of Covert, N. Y., his decisions being satisfactory; local fanciers accepting them as educational in character. The foxhound class had twelve entries and was excellent in quality, the winner being a particularly good specimen.

M. CHILL.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

SCOUTING WITH BICYCLES.

THE bicycle is now in use in nearly all the armies of Europe and in that of Japan. In the United States General Miles fully recognizes its value, and in his last annual report recommended "that a force equal to one full regiment of twelve companies be equipped with bicycles and motor wagons, and their utility fully demonstrated by actual service."

According to General Miles, there are at present in our little army more than 4,000 men who are able to use the bicycle as a means of transportation. Bicycle corps have been put in the field at a number of points, among them Fort Missoula, Mont., where the Twenty-fifth U. S. Infantry Bicycle Corps has been organized under the command of Lieutenant Moss. This corps recently made a scouting trip through a rough, mountainous country lasting three and a half days, during which time they traveled 126 miles, despite adverse weather conditions which made the riding unusually hard. They carried 15lbs. of rations to the man, with field equipments, including shelter tents, which raised the average weight of the packed bicycle to 76½lbs., so that the weight of the individual load in most cases must have exceeded 50lbs.

Lieut. Moss' official report will give an idea of the difficulties surmounted:

"The bicycle corps, consisting of seven soldiers commanded by myself, left Fort Missoula at 6:20 A. M., Aug. 6. The roads were somewhat muddy from a recent rain. About nine and a quarter miles from the post we struck a section of clay, which we had a great deal of trouble to cross on account of the mud sticking to the tires. After crossing this section of clay we were delayed about thirty minutes cleaning our wheels and fixing a puncture. We had to cross our first mountain near De Smet Station, eleven and three-quarter miles from the post. Distance from foot to summit, half a mile; distance from summit to foot on other side, a mile and a half; time to go from foot to foot, fifteen minutes. After leaving Marant's Trestle, a point eighteen miles from the fort, we had hilly, rocky and muddy roads for about twelve miles, over about six miles of which we had to dismount fully twenty times on account of mud puddles and fallen trees. We reached Finley Creek, thirty-three miles from Fort Missoula, at 12:30 P. M. At this point we stopped two and a half hours to rest and eat. We crossed Finley Creek on our wheels; width, about 25ft.; depth, between 8 and 9in. Two men fell off in the stream. After leaving the creek we took the high-water trail over the mountain to avoid fording the Jocko River. It was hard work to get over the mountain, as the ascent was quite steep. For several miles after crossing the mountain we traveled along a path in thick woods. We had to roll our wheels up several small grades before crossing the Jocko a little below Ravalli Station at 5:20 P. M.; distance from Fort Missoula, forty-four miles. Stopped forty-five minutes at Ravalli to weigh wheels and repair puncture.

"Left Ravalli for the Mission at 6:10 P. M. We had to go over three small mountains between Ravalli and the Mission. It took us thirty-two minutes to reach the summit of the first and largest mountain; distance from bottom to summit, two miles. In going down on the other side we made one and three-quarter miles in five minutes. Ascending these hills was very tiresome work. We reached a point at 7:30 P. M. on Mission Creek about half a mile above the Mission, where we pitched our shelter tents and camped for the night; distance from Missoula, fifty-one miles.

"We attracted a great deal of attention all along the route. Horses and cows ran from us and dogs ran after us, while the inhabitants stopped their work and gazed at us in astonishment. The soldiers did not seem to be very tired, as they stayed up until 11 o'clock, talking and getting off jokes.

"The next morning at 11 o'clock we started for McDonald Lake. One seat spring broke about three miles from the Mission. We had extra springs with us and immediately replaced it, causing a delay of about two minutes. We stopped about twenty minutes at a ranch to get some water, and also some oil to clean our wheels. We rode and walked about two miles through a rough, hilly and grassy field. After leaving this field we struck a rough, stony and little-traveled road, which we traveled for a mile and a half, when we reached the lake and made camp. Time, 1:30 P. M.; distance from Mission, twelve miles.

"After dinner the soldiers gave their wheels a thorough cleaning and oiling. Five punctures were found, two soldiers having one each in their wheels, and a third soldier three in his. No further move was made this day, and we encamped for the night.

"About 1 P. M. a strong wind came up, and it began raining. The rain kept up almost incessantly until 12 o'clock in the day, when it stopped altogether. We left our camp, however, at 3:30, in the midst of a heavy rain, and, on account of the mud, had to roll our wheels a mile and a half. We then struck a good down grade and made good time until we reached a section of hammock mud. Before we knew it our wheels were clogged with this gummy stuff, and we were delayed fully thirty minutes in a drizzling rain cleaning our wheels in a ditch. We again started for Ravalli, over muddy, hilly roads, with the rain and wind in our faces. By this time we were drenched to the skin, our wheels were covered with mud, and our shoes filled with water. In some places we walked long distances in mud 2 or 3in. deep. This part of our journey was exceedingly tiresome. In mud and rain we were plodding along, one after another, rolling our wheels up hill, and, with much care, riding down slippery hills.

"Every once in a while we would strike an Indian cabin, and the dogs' barking would announce our approach, while the occupants would run to the door to gaze at us. Our shoes were filled with mud, and it was very difficult to keep our feet on the muddy pedals. At 11 A. M. we reached Mission Creek, twelve miles from the lake. We forded the stream in nearly 3ft. of swift water. * * * Upon crossing the stream we found that twelve tires were loose, from the cement having been washed out. We rolled our wheels from this point to Ravalli, six miles, reaching Ravalli at 12:30 P. M., having traveled eighteen miles. We left Ravalli at 6 P. M. for Arlee. Rode a little over a mile on the wagon road, and then had to take the railroad to avoid the mud and also to avoid fording the Jocko. We reached Arlee at 8:45 P. M., having traveled during the day thirty-one miles.

"On the next day, Sunday, at 1:30 P. M., the corps reached post, having traveled altogether 126 miles under most adverse circumstances. The Lieutenant says: 'The wheels were not spared in the least, and stood the work extraordinarily well.'"

The following table gives the weights of riders and wheels when packed:

	Pounds.	Bicycle Packed.
Lieutenant Moss	135	74
Corporal Williams	153½	83
Musician Brown	145½	71
Private Findley	183½	77
Private Foreman	164	75
Private Haynes	160½	68
Private Johnson	151½	81

Average weight of riders, 155 7; of bicycles, 76.2.

CYCLING FOR SQUIRRELS.

GREENVILLE, Pa., Sept. 6.—*Editor Forest and Stream:* Squirrel shooting with a bicycle was given its first trial in the vicinity of Greenville, Pa., last Tuesday by Dr. C. A. Miller, E. A. Stroud and G. H. Grauel.

They left at 12:30 o'clock for Stoneboro, about eighteen miles distant. The roads were in fine condition and, although hilly, they have a good surface for wheeling. They arrived at the hunting grounds on the farm of Mr. Zahniser, about three miles south of Stoneboro, at 2:30 P. M. The woods lie along the shore of Sandy Lake, a very pretty little body of water. Hunting until 6 o'clock, the party bagged seven squirrels. Then they went to the house of Mr. Zahniser, where they found a supper awaiting them that delights the hunter's heart, to say nothing of his stomach.

At 9 o'clock the party went to bed, and were in the field early in the morning. They succeeded in bringing down thirteen squirrels before noon.

At noon they bid Mr. Zahniser good-bye and went on about three miles further, where they got their dinner, after which they started home, arriving in about two hours.

All were more than pleased with the use of the bicycle in hunting, and hereafter say they will go no other way.

Going over, Dr. Miller and Grauel had their guns attached to their wheels just as Mr. J. L. Davison fastened his, as described in the last issue of FOREST AND STREAM, with the exception that they used no strap from handle of gun case to lower tube. They had not seen Mr. Davison's sketch at the time, nor had they any trouble with gun flapping against their legs by not using strap. Mr. Stroud carried his gun over his shoulder, but coming home he followed suite and strapped it to his wheel, and was much surprised to find how much easier it was to ride.

Squirrels are very plenty this year, and the prospects for field shooting in the way of quail and pheasants are exceptionally good. ROBERT E. BEATTY.

NOTES.

The other day two wheelmen were riding along a country road. One had toe clips and the other did not, and each believed his style to be the best.

As they were bowling along at a good gait, at the extreme right side of the road next the grass a negro boy on a spirited horse came along behind at break-neck speed.

The leading wheelman, who was also on the inside, heard the noise of the galloping horse, and, looking back over his shoulder, saw that the negro boy was attempting to pass on the inside and threatened to run him down; so he turned suddenly to the left to avoid the danger. In doing so his hind wheel scraped the steering wheel of the other cyclist and the latter was thrown from his bicycle directly in the track of the approaching horse. Fortunately he fell on his feet, and comprehending what had happened jumped back almost as quickly as he had fallen, and so by a hair's breadth avoided being crushed under the horse's hoofs.

This man rode without toe clips.

Later in the day the wheelman who favored toe clips tried to ride up on a sidewalk, as was permissible in that neighborhood, but the angle at which he took the edge of the pavement was not well calculated, and his wheel slewed along sideways for a few yards, and then threw him violently on the flagging.

Several small parts of the wheel were broken, including, fittingly enough, one of the toe clips, and the rider received a bad shaking up, not to mention bleeding fingers and bruised limbs.

Placing the two incidents side by side, the man who rode without the clips thought he had the best of the argument.

Lieutenant Moss with his Twenty-fifth Infantry Bicycle Corps has not been idle since his rough ride of Aug. 6. On the 15th he set out on a 1,000-mile scout, the corps carrying several days' rations, rifles, cartridges, cooking utensils, shelter tents, blankets and extra bicycle parts. The average weight of packed wheels was 77½lbs., and with rider the weights ranged from 205 to 272lbs. The route was to include the Yellowstone National Park and return to Fort Missoula, Mont., by way of Fort Assiniboine. From Fort Missoula to Mammoth Hot Springs, Wyoming, the distance of 323 miles was covered in fifty-three hours' actual traveling time. The route was across the main divide of the Rockies and over some of the rockiest and hilliest roads on the continent. Most of the streams encountered had to be forded, and on this portion of the trip the corps encountered almost constant head winds, so that their average of six miles per hour with their heavily loaded wheels is remarkable.

From Mammoth Hot Springs the corps made a tour of the Park, taking in all the points of interest. On their return to Fort Yellowstone they found orders awaiting them to return to Fort Missoula to take part in a field practice march, and were obliged to give up the detour to Fort Assiniboine and retrace their former route. The distance from Fort Yellowstone to Helena of 191 miles was covered in three forced marches aggregating twenty-seven hours actual riding time. The corps was out about four weeks, during which time they are reputed to have covered 1,100 miles. They procured their supplies from army posts *en route*, and generally carried rations for several days. Lieut. Moss is quoted as saying:

"Ours is a test of durability. The party was not made up of expert bicyclists who are scorching through the country, but of eight ordinary riders selected from the soldiers at Fort Missoula. We have made and broken camp in the rain, ridden through mud, sand, dust and water, over rocks, ruts and stones, crossed mountain ranges, forded streams, stopped for nothing, carried rations, cooking utensils, rifles, ammunition, 30lbs. to every man, blankets, tents, underwear, extra tires and parts; in fact, all the baggage needed."

Yachting.

FIXTURES.

S indicates races sailed by the Yacht Racing Union of L. I. Sound.
M indicates races sailed by the Yacht Racing Ass'n of Massachusetts.

SEPTEMBER.

18. Hempstead, closing day.
19. Eastern, knockabout class, Marblehead.
S 19. American, fall regatta, Milton Point, L. I. Sound.
26. Hull, club, Hull, Boston Harbor.
S 26. Riverside, special, Riverside, L. I. Sound.
26. Squantum, Burkhardt cup, Squantum, Mass.

OCTOBER.

Cor. Atlantic City, mosquito class, Atlantic City.

WHOEVER may be directly to blame for the sad disaster to Isolde, it is evident that one contributory cause was the mixing of the large and small yachts at a common point in the courses of each class. Undesirable and even dangerous as this is, we are not inclined to condemn the Isle of Wight or even the Clyde courses, because with all their faults they are the only practicable ones in their respective localities The danger of such courses increases each year with the size and speed of the larger yachts and the greater number of small ones; but it is difficult to see how any other courses could be had. There is nothing for it but to make the best of the only waters available, strictly enforcing the racing rules and inflicting summary punishment upon any who willfully violate them. It is quite certain that had such a mishap occurred on the broad Atlantic outside Sandy Hook it would at once have been utilized by our British contemporaries as an unanswerable argument for the transferral of all American races to Marblehead.

The Knockabout Bo Peep.

ONE of the successful yachts of the season in Eastern waters is the new knockabout Bo Peep, designed by George F. Lawley. Not only is she of an excellent type, but she was built late in the season and raced at a disadvantage as compared with others of the class. The following summary of her history is from the Boston *Globe:*

Just a month ago Bo Peep was launched and had her trial trip. Since then she has started in fourteen races; six of these were unfinished, however, for lack of wind. Out of the eight races sailed she took three firsts and four seconds and one third.

This is a very good month's showing for any boat, but it is even better when analyzed. But three boats have beaten Bo Peep outside the little Bristol flyer Cock Robin. She of course is an easy winner always. Of the others, the home built craft, only Jack Tar, Tautog and Water Lily have scored once each over Bo Peep in the eight races sailed.

Jack Tar's win in the Hull club race Aug. 22 was a clear case of outsailing. She was just off the ways, and sailed a fine race, while Bo Peep was a little off her form, not having been tried in such conditions of weather.

Water Lily's victory was an equally clear case of winning by a fluke, and Tautog also won her lead over Bo Peep, the single time she beat her, by sailing in different water.

Thus, leaving Cock Robin aside, it is not too much to say that Bo Peep is decidedly the best of the other knockabouts, although the margin is not enough to prevent the others taking a race now and then, as Jack Tar's win under the conditions noted goes to show.

Altogether Bo Peep has made a very creditable record, both for her designer and builder, George Lawley, and for her helmsman, Mr. L. M. Clark. Mr. Lawley did not receive the order until July 5, and the boat was launched Aug 4. Necessarily there was little time for working the design down to the last refinement, but the slight faults were all in the right direction, and the boat shows an improvement over Mr. Lawley's other creations, as well as those from the boards of the other Boston designers.

The boat floated somewhat above her lines on being launched, and required 150lbs. of inside ballast, as well as the weight of her crew on board, to bring her down where she complied with all the restrictions. Mr. Clark considers that with a little less weight in some details of spare rigging and equipment, and with the above 500lbs of extra weight (crew and inside ballast) taken off her displacement, fixing up her bow and stern a trifle, the boat after a good tuning-up would be quite a little faster than at present.

Some stress has been laid on these points, because taking everything together the boat has undoubtedly made a good up-hill fight, and has shown that after all the model is not outclassed to the extent to which at first it appears Cock Robin can beat the Boston-built craft.

At all events, it has been a sporting proposition that Messrs. Clark and North made to celebrate July 4 that they would give the class another try at the eleventh hour of the season.

Mr. Clark had had the first and second Spinster in the class, and had failed in many a ship of many a class before that, as every Boston yachtsman knows

Mr. North has only taken up yachting the past three or four seasons, and went in for knockabouts from the first. His first boat was Otatsu, one of the sturdy pioneers. Last season he had the unfortunate Toyo, a very fast and nice-looking boat, but just outside the class on some of her dimensions, so that she was not eligible for many of the races.

Mr. Clark has sailed the Bo Peep and has made as little of the handicap of an untried boat as any one could. Altogether Bo Peep is rather an encouragment than the reverse to those who look forward to seeing Cock Robin matched and the knockabouts again a good fighting class next year.

Southern Y. C.

EL HEIRIE has been sold by C. H. Crane to T. G. Bush, of New Orleans, through Tams & Lemoine, and will be the first of a fleet of 15-footers which it is proposed to establish on Lake Ponchartrain. The Southern Y. C., of New Orleans, is undoubtedly noted as one of the oldest yacht clubs in the United States, and as one of the first to encourage yacht racing; for forty years or more it has labored to support the racing sandbagger built under a length rule, it has owned the fastest yachts of the type ever built, and it has offered most liberal prizes for their races. The experience of the club is identical with that of clubs in the North and West, that the days of the length rule, of unlimited crews, ballast and sail have passed away; that this type of yacht costs a great deal and provides but a limited amount of sport, keen enough at times for a brief interval, and then declining for an indefinite period. The members of the club are fully awake to the present unsatisfactory condition of their racing fleet, a lot of yachts of all sizes and classes, and also to the benefits to be derived from the building up of a few strong classes, and they are about to start in with the 15ft. class, as giving a craft of moderate cost and draft, capable of good class racing and useful for general sailing in the abundant shoal water. The *Times-Democrat* says:

It is not in the indiscriminate building of yachts, as it now goes on from year to year, with but one new boat in one or two different and almost obsolete classes, that will most benefit yachting here. There are too many classes, and not enough boats in a class. The old timers should be left to fight it all over alone from season to season, and the new boats that are ordered for next season should be restricted to one of three classes. There are those who consider that if racing was restricted to three classes here there would be considerable more enthusiasm. As it is now, with thirteen classes, there is hardly an average two in a class, which a man with half an eye can see does not make good racing.

A half-rater or 15ft. class, a 20ft. open sloop class and a 25 to 30ft. waterline cabin sloop class would afford all the sport the most enthusiastic yachtsman could desire. The half-rater has proved one of the most popular boats and the class has produced more racing than all other classes combined in the North. The 20ft. open sloop, of the Jeanne and Alice type, will afford the "sandbagger" all the sport he desires. If a larger boat is desired it should be between 25 and 30ft. waterline and a cabin sloop. As they are building yachts nowadays with overhangs, a craft of that waterline length would have fine accommodations, a length over all of 40ft., and would be a fine all-round cruiser. Something should be done for racing. A beginning should be made with the half-rater and a class of more evenly matched boats got up for next season. A dozen or more of them can be built in the Southern Y. C., as many yachtsmen want to build, but wait for some one else to take the initiative. Com. Lawrence O'Donnell has within the last few days made known his intention of building a half rater. Others who will build are T. W. Campbell, E. Feste, T. W. Boone, Jr., Jack Campbell, Garrette Drown, Joe R Behrens, F. F. Claussen, P. S. Anderson, W. H Brunet, Holmes Harrison, B. B. Howard, R. A. Palmer, E. L. Cope and L. D. Sampsell.

There are a number of others who would build if the racing becomes exciting, and there is no reason why the owners of the large sloops and schooners should not have them, as one could be easily carried on a big cruiser. A sweepstake race could be sailed every Sunday, and the club would offer a handsome cup to be won by the boat making the most wins during the season.

Knots and Miles.

THERE is, unfortunately, a growing practice of making an improper use of the word knot, not only with landsmen, engineers and shipbuilders, but also with sailors, who ought to know better. The prevailing idea at present appears to be that the knot is the same thing as the geographical, nautical or sea mile, and the word knot is used to prevent any possible confusion with the statute land mile. But this usage is quite wrong. The knot is the cosmopolitan unit of speed, employed at sea by sailors of all civilized nations. One knot is a speed of one nautical mile an hour, the nautical mile being the mean sexagesimal minute of latitude on the earth's surface, so that it is 90×60=5.400 miles from the equator to the pole, and this is the only mile the sailor knows and uses. The nautical mile is a little over 6 080ft, the Admiralty measured mile (we do not say the Admiralty knot), so that one knot is a speed of a little more than 100ft. a minute, more nearly 101 to 102ft. a minute; thus, on a log line, with a half minute glass or interval of time, the distance between the knots should be 50ft. or a little over, say 51ft. The word knot is derived from the knots on the log line; the number of knots that pass over the ship's taffrail during the half minute, or other interval of time, giving the speed of the ship in knots. The only occasion then, in which it is permissible to use the word knot as the equivalent of a length, is in spacing the knots on the log line, and then, by a familiar tendency in language, the "distance between two knots" is abbreviated in speech to the "length of a knot." By a curious perversity and straining after precision, the incorrect expression "knot an hour," to express the speed of a ship, is creeping into general use, with the effect of displacing the word mile by knot; so that now it is common to read a steamer's daily run as given in knots (*e. g.*, Teutonic's daily runs, 473 knots, 496 knots, etc., total distance, 2,806 knots); and the coal endurance of a man-of-war given as say 26,000 knots at 10-knot speed, thus using the word knot where mile should be used. No real sailor would say that a rock or the land was half a knot, one knot, etc., away. It is too often urged that the expression "knots an hour" is so much clearer and more definite; but we might just as well measure pressure in "atmospheres per square inch" Not only in navigation, but also in astronomy, the nautical mile should be the unit of length, and the knot the unit of velocity. To summarize, distance at sea is measured in miles, and speed in knots; and the expression knots an hour per speed, and knots for distance in miles, are nautical barbarisms.—*Nautical Magazine.*

The Meteor-Isolde Collision.

FOR the second time in two seasons British yachtsmen have been shocked by a fatal collision during a race, in which the largest class of cutters have played a prominent part. In July, 1894, the second Valkyrie was sunk in collision with Satanita, of her own class, at the start of a race in the Clyde, one of her paid hands being fatally crushed between her and a steam yacht. The latest collision, of which we have already published the first incomplete cable reports, took place off the Isle of Wight on Aug. 18, the principals being the cutter Meteor II., owned by the Emperor of Germany, and the smaller cutter Isolde, of 20-rating, owned by Baron von Zedtwitz, a friend of the Emperor and one of the foremost of German yachtsmen, who was killed almost instantly. The day was cloudy and rainy, with a moderate and puffy S.W. wind. The largest class, Meteor, Ailsa, Satanita and Britannia, started at 10 A. M. to sail the Nab and West Buoy of Ryde Middle course, two rounds; the 52ft linear rating class, the old 20-raters, Penitent, Audrey, Saint, Isolde, Samphire and Niagara, started at 10:45 A. M. to sail the Warner and Northeast Buoy of Ryde Middle course, also two rounds. At noon the two classes fell in together as both approached the committee vessel, the gunboat Ant, anchored off the Spit Fort, to pass to leeward of it; they were close together, all on the wind, and both classes in a hot fight, as the times at the end of the round show:

Samphire	12 05 13	Isolde	12 07 27
Audrey	12 05 23	Meteor	12 07 30
Ailsa	12 06 09	Saint	12 07 30
Niagara	12 06 35	Satanita	12 08 00
Britannia	12 07 26	Penitent	12 08 15

The fleet of a dozen yachts passed the committee boat within three minutes, the four larger yachts having just overtaken the smaller ones. They were about 200yds. beyond the mark when the collision occurred. The exact details will probably never be known; the evidence at the coroner's inquest was not of a nature to bring them to light, and there is a material difference in the views taken by two opposing parties. The leaders, Samphire, Audrey, Ailsa and Niagara, were clear ahead; of the second quartette Britannia was the leeward and outside yacht, with Isolde inside of her, close on her weather beam. Meteor was astern of Britannia, somewhere near her weather quarter, while Saint was on the lee quarter of Isolde; the distance between Britannia and Isolde as they ran side by side was very small, it is stated as but 30ft. Not only were the big boats traveling much faster than the 52-footers, but Meteor was gaining on Britannia, being in the position of an overtaking boat with regard to all three.

The first movement was a luff on the part of Saint across Isolde's stern, for the reason, as given by her crew, of avoiding Meteor, dangerously close astern. In crossing Isolde, Saint's topmast stay fouled Isolde's boom end. Meteor, trying to get through Britannia's weather, struck Isolde, the bowsprit piercing the mainsail and then sweeping the deck; then Meteor's boom swung over Isolde's deck and brought down her mast, Isolde at the same time being thrown into Britannia by the force of the collision.

According to the claim of Meteor she had an overlap on Britannia and thus could not possibly bear away and go on Britannia's lee side; while at the same time, as all were going just before the luffing of Saint, she had plenty of room to pass between Isolde and Britannia. The cause of the collision, as she claims, was the luffing of Saint in order to pass Isolde, the resulting foul between the stay of one and the boom of the other, and the throwing of Isolde off her course and directly in the path of Meteor, there being no time to avoid her and no chance to do so save by running over Britannia.

On the other side it is claimed that Meteor in the first place was under every obligation to keep clear of the yachts just ahead, which she was approaching at a high speed; that she could and should have gone to leeward of Britannia instead of trying to force a weather passage through the crowded fleet; and that at no time was there space for her safe passage between Britannia and Isolde. The original luffing of Saint is ascribed to the dangerous proximity of the larger and faster boat; and it is also claimed that Isolde was diverted but little from her course by the first foul, as it was very slight.

The *Field* lays the blame entirely on Capt. Gomes, and calls in very strong language for a more searching investigation on the part of the Royal Albert Y. C.: "The attempt to shift the blame from the right shoulders, as allowed by the Isle of Wight deputy coroner, was one of the meanest things ever perpetrated in the history of yachting, and the matter ought not to be allowed to rest. The Royal Albert Y. C., however, has, we understand, complacently concurred in the amazing summing up of the coroner, and attributes the disaster to the act of Saint, whereas, if she had not made the timely luff, she would herself have been run over by Meteor. The club committee appear to have shown a want of appreciation of the real facts of the situation."

The other English yachting journals take a very mild view of the matter, setting it down to an unavoidable accident, and laying the blame, if at all, on Saint. We are unable to reproduce the photos published in the *Field* and *Yachting World*, a number of good views having been obtained of the various stages of the disaster; and with our inadequate knowledge of the facts at this great distance we are not competent to pass our opinion; but all that we have read, backed by the evidence of the photos, inclines us to the belief that Capt. Gomes is to blame, and he alone. The following report of the inquest is from the London *Times*; our readers can form their own opinions as to the thoroughness of the investigation.

The inquest on Baron von Zedtwitz, who was killed while sailing on his yacht, the Isolde, on Tuesday, Aug. 18, when she was run down by the German Emperor's yacht Meteor, was held on Wednesday at the Elephant and Castle, Ryde, by Mr. E. F. Blake, Deputy Coroner for the Isle of Wight. Mr. C. H. Lindon represented the deceased gentleman's family, and Mr. R. W. Beale, Imperial German Vice-Consul, Portsmouth, watched the proceedings on behalf of his Government, and obtained permission to make notes of the evidence.

William Miles: I am captain of the yacht Isolde, and live at Woolston. I was in the service of the deceased, and have been captain of his yacht since Jan. 1 last. I have been captain of yachts from 20 tons downward for twelve years. The Isolde took part in the racing yesterday, the others in our class being Penitent, The Saint, Audrey, Niagara and Samphire. Three classes started before us; the Britannia, Meteor, Ailsa and Satanita went round the Nab Lightship and our class round the Warner. Between 12 and 1 we were coming from the Northeast Middle Buoy crossing Southsea. Both classes—the first and the fourth—got in together. Ailsa was ahead of us in the large class, but there were several of the 20-raters ahead of me. Ailsa was going alone, then went Samphire, then Audrey, and then Niagara. They were astern of the Ailsa, and we all had just rounded the markboat. The Niagara had passed before us. Closely following us was The Saint, within a length of us, then came the Britannia and Meteor. Both were on the lee side of us, and the Meteor was closer to us than the Britannia. The Saint was just under Isolde's lee quarter. The first thing I noticed was The Saint luffing to try to get to windward of me. Her topmast stay caught my boom end, which caused my yacht to slew. That drove my bow to leeward and toward the Meteor. At that time the Meteor had not got up to me. I was not watching her, but the next thing I saw was the Meteor's bowsprit coming up under my lee. It was under my lee quarter. I could not say if the Meteor was going out of her course, as I could not tell how my bows were bearing at the moment, whether my bowsprit had been payed off to leeward to get out of The Saint's way. When I saw the Meteor's bowsprit it was only about 6ft. from me. It was then impossible to avoid the collision. Instantly her bowsprit struck our mainsail and swept our deck of everything. I jumped into the water and was rescued by a lifebuoy. I did not see the deceased at the time of the collision. The last time I saw him alive was when I went forward to get clear of the wreck. Before that he was not near the helm. At the time of the actual collision he had not been struck. When I got on board again the deceased was under the rigging. Two of my crew were already on board, and helped to get him up. Others from the other vessels were helping. He was put into a small boat, and from there to a steam yacht, Bohemia II. If The Saint had not touched the boom the Meteor would have been under my lee, and from the time I was slewed round to the moment of the impact was about thirty seconds. We were only off our course for a moment or so. I should say The Saint, having touched us, had to do with the cause of the accident. We were heading for the Warner, and the larger vessels for the Nab; and the Nab is to leeward of the Warner.

Mr Lindon produced a set of models of the several yachts, and the witness placed them in the order in which the yachts stood at the moment of the accident. The Saint's bowsprit, he explained, struck the Isolde's mainboom at the stern, slewing her bows round into the course which the Meteor was taking. He was not prepared to swear that if he had not been touched by The Saint the Meteor would have passed him clear; he could not say whether or no the Meteor could have altered her course in time to avoid the accident.

By the Foreman: We had luffed round and flattened our sheet when The Saint tried to luff us, and struck us with her topmast stay. From the time The Saint touched her and the accident happened it was about thirty seconds.

By Mr. Lindon: The Saint slewed us out of our course three or four points. The course to the Warner would be several points southward of the Nab, but at this point the angle would not be observable. We had nine hands on board, and she was well founded both as to crew and gear.

John Richard Carter, captain of the Britannia, said: I was in charge of the yacht Britannia. Yesterday I formed one of four which started for the race. We started at 10 o'clock. This accident occurred a little after 12. There were several ahead of us of two different classes. The Ailsa was in front of those of our class, and she got clear of the markboat The Samphire and Audrey led the fourth class and they were clear; then came the Isolde and The Saint, Isolde being nearest the markboat. We were overtaking them and going faster. Passing the mark abreast of them, I saw The Saint's bowsprit touch the end of Isolde's boom. That slewed her head round to port. The Saint only just touched Isolde and immediately cleared herself, going by on her starboard side. I was about 30ft. from them at the time. The Meteor was coming about a length astern of us. When the accident happened the Britannia was clear of the committee boat and the Meteor was in the act of rounding. The Meteor could see exactly where they were, and her right position would have been to have taken the lee or port side of Britannia. She was coming up to windward, thinking there was room, but, according to the rules of the sea, as she was the overtaking vessel, she ought to have passed me on the lee side and not to have tried to come under my weather. If she had gone under the Britannia's lee the accident would not have happened.

The Coroner: You think, then, that it was an error of judgment on the part of the Meteor to try to pass you to windward? Capt. Carter: Yes, sir.

The foreman explained that in the rules of the sea there was no law to compel the overtaking vessel when both were on the starboard tack to go to the leeward side of the forward vessel, but the custom of racing was for the forward captain to do all he could to prevent the following vessel from passing on the weather. This explanation of the rule of racing Capt. Carter acquiesced in.

By Mr. Linton: Witness could not say if there was time after the two 20s had touched for the Meteor to bear off to leeward in time to avoid the accident.

By a juryman: As the Meteor was the overtaking ship, it was her place to give way on the lee side to everything. The mixing of the different classes of yachts while rounding was a rare occurrence.

Robert Gomes, cautioned as to answering any incriminating question, said: I am the captain of the Meteor and have been in the service of the German Emperor for the past five years. The Meteor took part in a race at Southsea, starting about 10 o'clock. After the Isolde and The Saint passed the mark Britannia and Meteor passed, overlapping them. I saw The Saint touch Isolde; she gave her a knock and slewed her round. I attempted to come up on the weather side of Britannia and came in contact with the Isolde. We were on the weather side of Britannia and could not go astern if we wanted to. I do not know of any rule that I should have gone to the lee side, but if the Isolde had not payed her head off out of her course I should have got through clear. From the time The Saint put the Isolde out of her course to the moment we struck was not, I should say, more than ten seconds. If the Isolde had kept in her course we should all have cleared, for we all had room. If we had turned to leeward to clear Isolde we should have run into the Britannia, for we were already overlapping her, and could not have passed under her lee. If the two 20s had not touched we should all have had plenty of room; the two blocked our way. Her headgear was knocked away by the Britannia, and the Meteor struck the Isolde amidships

William George Jameson said: I was on board the Britannia when the accident occurred. I represent the Prince of Wales. I saw there was danger in keeping too close to the 20-tonners. There was a procession of yachts around the markboat. We passed almost abreast of The Saint, but to leeward, and the Meteor came after us. I heard a good deal of shouting on board the two 20s, and we had our attention on them all the time because we wanted to keep as near to them as possible without running into them. I did not actually see the two 20s touch one another. The Meteor was going a great deal faster than we when rounding the mark.

By Mr. Lindon: The Meteor altered her course to come to windward of us. She had room to come up on the lee side of the Britannia. Explaining the position from the models, witness said the Isolde was slewed round and struck the Britannia, when the accident immediately happened. The Isolde did not touch the Britannia until the Meteor collided with her, and then she was driven round into the Britannia's bows.

William Terrell Dawson, of New York, said he was a qualified medical practitioner. He was on the White Ladye, steam yacht, which was anchored at the Spit Buoy when the accident happened. He saw the collision very plainly. He was about a mile from the spot; he went to see if he could render any assistance. When he reached the scene the deceased was in the Britannia's dinghy. The witness made a superficial examination of him, but could not see any external signs of injury. He accompanied the deceased to the steam yacht Bohemia II. The deceased had expired by that time. He was taken into the cabin. The witness had not made an internal examination of the deceased, but had not the least doubt that death was the result of internal injuries.

The coroner remarked that other witnesses were ready to be called, but he did not think it necessary to call them. The jury had the facts before them, and the witnesses appeared to have given a clear and straightforward account of the event. He had come to the conclusion in his own mind that this unfortunate accident took place through the regrettable circumstance of The Saint having turned to some extent the Isolde out of her straight course. All the evidence pointed to this conclusion, and it was clear that if the Isolde had continued her course there would have been sufficient room for the Meteor to have passed between the Britannia on the one hand and the Isolde and The Saint on the other. Unfortunately, however, just at the time when the Meteor was almost level with the Britannia, The Saint, by a simple accident, touched the Isolde and threw her out of her course. The Meteor was at the moment coming up nearly double the pace of the Isolde, and the accident happened. If the jury looked at the matter as he did, their verdict would be one of accidental death.

The court was cleared for about twenty minutes, during which time the jury arrived at the following verdict: "That, on the 18th in

the deceased was sailing his yacht the Isolde in the Solent, when the yacht the Meteor accidentally struck the yacht Isolde, causing her mast and gear to fall, which accidentally fell on the deceased, causing divers mortal internal injuries, of which injuries he then and there instantly died."—*Times.*

Beverly Y. C.

BUZZARD'S BAY.

Saturday, Sept. 5.

THE 243d regatta, fifth open sweepstakes, was sailed off club house Sept. 5 in a pretty good S.E. breeze with a tendency to shift toward the south, which it did on the fifth class course; water smooth.

In special class Cero was not ready, and started with a handicap of 1m. 10s., and her clubtopsail jammed under the jib stay. Cero when she got on the wind found it too heavy, and had to put in a couple of reefs, while it was just to Ashumet's liking.

Race between May King, Ulula and Anonyma was very close, but Anonyma took it on allowance. Nobska beat Melro badly, while Elsa, as usual, sailed a great race.

In fourth class cats Sally won easily, with Grilse second, and the Herreshoff knockabout Edith only 12s. behind her. Edith is a remarkably handsome boat, very able and comfortable, with a good cabin; she holds her own well to windward, but cannot run with the others unless it blows. If she ever gets a hard breeze she will show up well.

999 won hands down, but protested Raccoon, who entered a counter protest, and regatta committee must take evidence before deciding it. Imp scored again over her old rivals.

Courses triangular; 17⅛ for special, 12 for second, 8⅜ for third and fourth, 3⅛ for fifth. Fifth class had a free wind race, though the sloops had a long and short leg on last leg, while the cats made it without tacking; others had a good beat:

Winners.—Special Class, Ashumet; second class sloops, not named; second class cats, Anonyma first, May King second; third class cats, Nobska; fourth class cats, Elsa first, Dawdle second; fourth class sloops, Sally first, Grilse second; fifth class sloops, in doubt; fifth class cats, Imp.

Judge, W. Lloyd Jeffries.

Monday, Sept. 7.

The 244th regatta, second open race, was sailed Sept. 7 off the club house.

The day opened with a trifling S.E. air, dying out to a dead calm, and at 1 P. M., the time of the advertised start, there was no wind and few boats at the line, though the bay was white with sails becalmed trying to get there. At 1:55, a light S.W. air having brought in the boats, the race was started and the wind soon increased to a fair wholesail breeze. In this race the crews were the old number, viz., one to every 5ft. w.l. and fraction thereof.

Cero and Ashumet sailed a very close race, the former having very bad luck; carrying away first the rail to which jib halyards led, letting down the sail, and when this was repaired the throat halyard block broke and the sail came down. A new block was lashed to the mast and the sail got up after a fashion, but as this happened during the windward work it cost her a good deal.

In second class Surprise, Kalama and May King made a beautiful finish, crossing line within a very few seconds of each other.

The third class rounded buoy on starting line two-thirds through the race in a bunch, Nobska leading; but later she picked up a couple of bushels of floating seaweed on her centerboard and hauled out. Grilse got a long lead, but on last leg also picked up seaweed and lost time by it, though she won by 4s. In this class the last boats got a better breeze and quite a fluke on the leaders.

Vif turned tables on Imp, and 999 won as usual.

Course for special class, 15 miles; second class, 11¼ miles; third and fourth classes, 7¾ miles, and fifth class, 5⅓ miles. There was a good beating to windward on all courses.

Raccoon, B. Y. C., J. L. Stackpole, Jr.	13.04	2 08 20	1 50 57

Winners: Special class, Ashumet first; second class sloops, No Name first; second class cats, Kalama first, Surprise second, May King third; third class cats, Melro first; fourth class sloops, Grilse first, Heiress second, Sally third; fourth class cats, Elsa first, Daisy second, Coquette third; fifth class cats, Vif first, Imp second, Irene third; fifth class sloops, 999 first, Waskite second.

Judges: T. S. Edwards, W. Lloyd Jeffries.

New York Yacht Racing Association.

NEW YORK HARBOR.

Monday, Sept. 7.

If the New York Yacht Racing Association is to be judged by the one regatta which it gives every year, it is not at the present time enjoying that prosperity which should attend a union of the small yacht clubs about New York Bay and the Hudson. In the number of associated clubs, of local club races sailing under its rules, and of starters in its great annual regatta, it shows a falling off rather than an advance on a few years ago. As the interest in yachting is increasing, and as more yachts are added each year to the smaller classes about New York, there is an ample field for such an organization, and every reason why one should grow rapidly. The regatta this year brought out but forty yachts from eighteen clubs—by no means a large fleet. The start was made in Gravesend Bay, the courses being out in the Lower Bay; a wait was made until 12:30 for yachts that were delayed in reaching the line. The race was sailed in a light N.W. wind, the times being:

	Start.	Finish	Elapsed.	Corrected.
CLASS D—CABIN SLOOPS.				
Kelpie	12 34 55	Did not finish.		
CLASS E—CABIN SLOOPS.				
Forsythe II.	12 35 56	5 27 23	4 51 27	3 59 25

Adele Rae	1 00 00	3 36 17	2 36 17	1 52 20
Cinch	1 00 00	Did not finish.		
Maggie P.	1 00 00	3 38 43	2 38 43	1 53 57
Little Deane	1 00 00	3 44 53	2 44 53	2 00 28

Louise broke her gaff, Minnie was dismasted, and Millie protested Mercedes and Baby protested Minnie H. for fouling at the outer mark. The regatta committee included Messrs. Adams, Langerfeld, Ross and Kilbourne.

Stamford Y. C.

STAMFORD, CONN.—LONG ISLAND SOUND.

Saturday, Sept. 5.

THE Stamford Y. C. sailed its annual regatta on Sept. 5 in a strong S.E wind and sea, many yachts failing to start. There was no class for the 15-footers, as Yola declined to start, so Paprika went up a class and raced against Eos and B. O. B., saving her time. Drift, Annie, Elsie, Bubble, B. O. B. and Onaway withdrew. The times were:

	Start.	Finish.	Elapsed.	Corrected.
51-FT. CLASS.				
Uvira	12 19 00	2 42 26	2 32 26	2 32 26

Commander, J. H. Grant	Time not taken.	
Olio, W. H. Richards	Did not finish.	

Atlantic Y. C.

BAY RIDGE—NEW YORK HARBOR.

Saturday, Sept. 5.

THE Atlantic Y. C. has just been the victim of a novel and unpleasant experience, one of its members having resorted to the courts instead of to the club and the regatta committee for a decision in a dispute over a prize. Fortunately such things are very rare in yachting; although protests and disputes are inevitable and by no means infrequent, it is seldom that any occasion arises to seek a means of settlement outside of the recognized yachting authorities. The dispute in the present case arose over the contest for the Adams cup, offered last spring by Vice-Com. Adams, to be the property of the yacht first winning it twice. The first race was a very close one between Choctaw, owned by J. Montgomery Strong, and Penguin, owned by George E Brightson; and a dispute arose over the measurements of the two. It was finally agreed that both should be measured on a certain day by John Hyslop, measurer of the Seawanhaka, New York and Larchmont clubs, and Penguin appeared at the appointed time and was duly measured, but Choctaw did not present herself for measurement. The second race, on June 13, was won by Choctaw by a safe margin, but the first race was claimed by Penguin It was finally decided by the regatta committee that both yachts should be measured at the Atlantic Basin on the morning of Sept. 5, and that they should sail the deciding leg for the cup in the afternoon Again Penguin was on hand and measured, but Choctaw failed to appear. Before the race started, however, her owner was heard from, a New York lawyer, D. A. Wise, appearing for him and serving an injunction on the regatta committee, restraining it from holding a race for the Adams cup. Under the circumstances there was no course for the committee but to postpone the race indefinitely. Three other races were scheduled for other classes, and these were started at 2:15 in a fresh S.E. wind, the course being a triangle off the club house Rain fell during the afternoon to the discomfiture of a number of members and ladies who were watching the race, but they took refuge in the cozy parlors of the house. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CUTTERS.				
Gaviota	2 17 54	4 27 31	2 09 37	.. .. ..
Awa	2 19 08	4 33 50	2 14 42	.. .. ..
Moccasin	2 16 23	4 32 55	2 16 32	.. .. ..
Eclipse	2 16 13	4 42 06	2 25 53	.. .. ..
CATBOATS—CLASS 1.				
Squaw	2 25 38	4 26 19	2 00 41	2 00 33
Dorothy	2 25 47	4 27 08	2 01 21	2 01 21
Estelle	2 26 31	Did not finish.		
CATBOATS—CLASS 2.				
Scat	2 26 02	4 38 44	2 12 42	2 09 11
Streak	2 27 02	4 38 04	2 11 02	2 11 02

Monday, Sept. 7.

The club had two races scheduled for Monday, one for the cutters, being for the prize won in a sailover by Eclipse in the annual regatta last June, and returned to the club by L. J. Callanan; the other for catboats, for a prize similarly won and redonated by R. B. Lynch, of the sloop Lynx. In addition the club offered second and third prizes, $35 and $25 for the cutters, and $30 and $20 for the cats. Up to 4 P. M. there was no wind; then a light southerly breeze came in and the race was started. The starters were Gaviota, Awa, Moccasin, Eclipse, Dorothy, Squaw, Scat, Estelle and Streak. After drifting until after dark all gave up but Awa and Moccasin, the former finishing first and the latter winning the second prize, a $35 cup.

Tuesday, Sept. 8.

The race for the catboats was started again on Sept. 8, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Dorothy	2 21 11	5 09 32	2 48 21	2 48 21
Squaw	2 20 38	5 16 32	2 55 54	2 55 46
Estelle	2 20 56	5 21 21	3 00 25	2 58 54
Streak	2 22 11	5 21 55	2 59 44	2 55 16
Scat	2 21 26	5 20 08	2 58 42	2 50 43

Dorothy was disqualified for fouling a mark. The last race of the season, on Sept. 12, was postponed to Sept. 19 on account of a calm.

Commonwealth Y. C.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, Sept. 5.

THE Commonwealth Y. C. sailed its first open race on Sept. 5 and made a success of it, there being good entries and plenty of wind, a hard reefing breeze from the east, with a heavy sea. Harbinger, when in second place, missed a buoy and withdrew, and Satanic broke her steering gear. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Emma C., P. A. Coupal	29.04	1 47 50	1 14 28
Beatrice, J. Cavanagh	25.06	2 05 50	1 28 00

New Jersey Athletic Club.

BAYONNE—NEWARK BAY.

Saturday, Sept. 5.

THE New Jersey Athletic Club sailed a race on Sept. 5 for pennants offered by Howard M. Cook, the course being three rounds of a triangle, 10 miles in all, on Newark Bay. The wind was fresh S.E., with rain. The 15-footer Brownie won in her class and equaled the time of the larger boats in other classes. The official times were:

	Start.	Finish.	Elapsed.	Corrected.
OPEN SLOOPS.				
Brownie	2 54 41	4 36 38	1 41 57	1 01 57
Iroquois	2 53 33	4 32 38	1 39 25	1 05 02
CABIN CATS.				
Tiche	2 53 48	4 36 06	1 42 18	1 10 36
Volage	2 53 43	4 39 30	1 45 47	1 11 24
OPEN CATS.				
Doctor	2 53 13	4 38 29	1 45 16	1 03 41
Henrietta	2 53 59	4 34 19	1 40 20	1 03 55
Chip	2 53 53	4 53 50	1 59 57	1 15 32
Yankee Boy	2 54 06	Did not finish.		
Flirt	2 53 16	Did not finish.		

Sewaren Land and Water Club.

SEWAREN, N. J.—LONG ISLAND SOUND.

Saturday, Sept. 5.

THE Sewaren Land and Water Club held a race for naphtha launches on Sept. 5, the times being:

	Elapsed.	Corrected.
Urchin, H. M. Seguine	1 18 32	1 18 32
Amelia Victoria, Walter Luttgen	1 30 32	1 25 22
Lispeth, W. M. Ballard	1 23 33	1 16 43
Conchita, F. A. Ostrander	1 38 37	1 29 27
Elga, H. M. Seguine	1 49 48	1 36 13

The winners were Lispeth, Urchin and Amelia Victoria.

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Sept. 5.

THE special race of the Larchmont Y. C. for the 34ft., 30ft. and 15ft. classes, on Sept. 5, was sailed in a strong S.E. blow and a sea, the yachts being reefed. No 15-footers were present, but the two 21-footers Celia and Houri started. Acushla led her class on the first round, but at the end she fouled the markboat, a strongly built scow, and stove in her port side, being compelled to run into the harbor. Dragoon sailed a good race and won by half an hour over Adele, the McGlehan 34-footer. Hera led the 30ft. class all day; at the finish all the thirties crossed the line in the wrong direction, but both Hera and Musme recrossed and finished properly; Mai going straight for the harbor. Departure was sailed by Capt. Chas. Barr. The times were:

	Start.	Finish.	Elapsed.
34FT. CLASS.			
Dragoon	12 23 45	4 16 03	3 52 18
Adele	12 25 05	4 45 30	4 20 25
Acushla	12 22 50	Disabled.	
30FT. CLASS.			
Hera	12 31 00	4 04 45	3 33 45
Musme	12 31 00	4 06 15	3 35 15
Mai	12 31 00	4 07 21	3 36 21
Departure	12 31 00	Withdrew.	
21FT. CLASS.			
Celia	12 23 20	2 28 53	2 05 33
Houri	12 25 45	2 29 49	2 04 04

Monday, Sept. 7.

Every preparation was made for a very large fleet on Labor Day for the fall regatta of the club, but for the second time this year the club has met with such bad luck as falls to the lot of all clubs on the Sound at times; while there was too much wind on Saturday, on Monday there was none at all. The start was set for 11 o'clock, but was postponed half an hour waiting for wind, and finally started in a light S.E. breeze which lasted but a few minutes. The fifty yachts drifted about the Sound until late in the afternoon, when a light S.W. wind came in and enabled some of them to finish. The 20-footer Eos was the first one in, winning in her class by a big margin. Only Colonia and Amorita started of the schooners, though the Commodore's cup was offered in this class. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—SPECIAL CLASS.				
Colonia	12 06 07	6 39 12	6 33 05	6 33 05

The Tom Boy was protested for exceeding her allowance of crew. Classes 6, 7 and the special yawl class, with class 9, failed to make a race.

Hempstead Bay Y. C. Annual Regatta.

HEMPSTEAD, L. I.—HEMPSTEAD BAY.

Tuesday, Sept. 8.

THE annual open regatta of the Hempstead Bay Y. C. was sailed on Sept. 8, starting in a reefing breeze from S.W., but finishing in a drift. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SLOOPS.				
Aglaia	2 10 38	5 49 32	3 38 54	3 38 54
Eleanor	2 11 24	5 19 15	3 07 51	3 03 34
Mystery	2 11 55	Did not finish.		
Fleetwing	2 11 01	5 44 00	3 32 59	3 21 05
Brooklyn	2 10 46	5 08 04	2 57 18	2 57 18
Jupiter	2 11 00	5 47 05	3 39 05	2 33 55
Sybil	2 10 55	4 00 00	3 40 22	3 37 26
SECOND CLASS CATS.				
Beulah	2 20 48	5 00 43	2 40 00	2 40 00
Ellen	2 16 22	5 36 37	3 20 15	3 19 11
Lottie	2 16 28	Did not finish.		
Ourisa	2 18 35	Did not finish.		
Mardi	2 16 35	5 29 53	3 13 18	3 09 58
Zepher	2 16 32	5 38 25	3 21 53	3 17 48
Mattie	2 18 05	5 35 27	3 17 22	3 13 04
THIRD CLASS CATS.				
Ripple	2 17 51	5 40 02	3 22 11	3 22 11
Rambler	2 17 25	5 33 25	3 16 00	3 11 15
Grace	2 18 30	5 36 35	3 18 05	3 10 28
Spray	2 18 24	Did not finish.		

Aglaia lost her centerboard, but finished the race.

An Extraordinary Opportunity.

THE following letter comes to us from a Western State. We will gladly furnish the name and address of the writer to any one who may wish to avail himself of this opportunity to obtain a steam yacht even faster than some of those which now claim the speed record of the world.

Editor of Forest & Stream

DR SIR

i am not anxious to be Rich at all But would like very much to be of some good use to my God & my People while i am left in this Tabernacle here Below. i want $100,000 or more for the Purpose of Raising an Institution that is badly Required in our Midst To Rais the Money i Propose the following Invention to wit a Steam Yacht that will run from i to 2 miles Pr Minute. i Guess you have quite a number of *honorabl* ackwaintances who might be interested in such an invention If you will Please show them this Letter or send to me a few of the Likelyest Names i will be very thankful to you & may God Blessing rest upon you

yours truly D. E. G.

It is reported that Alden S. Swan, of New York, has ordered a racing 15-footer from H. F. Hodson, of Toronto. Mr. Hodson built several of the Montreal 15-footers, and it was his foreman who went to Montreal and built Glencairn.

Model Yachting.

ON Labor Day the model yacht sailors of Brooklyn were busy with three separate races: two in the morning over the A. M. Y. C. course, and one in the afternoon over the Wave Crest M. Y. C. course. The first, postponed from July 4, was for the A. M. Y. C. trophy, Ripple, W. Wallen, of the W. C. M. Y. C., being the challenger.

A nice breeze was blowing from the N.N.W., when the little craft took their positions ready for the start. The defender of the trophy was Star, the property of Geo. W. Townley and Geo. F. Pigott, the start being made from between the bulkheads off Thirty-seventh street, around the Channel Buoy and return, ½ mile, making a long and a short leg to the buoy, a run to leeward to the starting line; Geo. F. Pigott sailing Star. Two heats were sailed, Star winning each, the second by 38s.

The second race was for the Eagle cup, defended by Gracie, W. W. Neff, sailed by Geo. F. Pigott; the challenger being Streak, R. C. Wallen, Wave Crest M. Y. C. Gracie won the first heat, but lost the second by going outside a mark; Streak won the third heat by 2½s.

The contest for the Eagle cup was the last race at Thirty-fourth street, and in the afternoon the trophy committee boarded their alcohol vapor launch (another being sent from the works to accommodate the press and friends) and proceeded to the Wave Crest M. Y. C. off Fifty-sixth street and raced over the latter's course for the *Outing* trophy, defended by Wave, of the Wave Crest M. Y. C. and challenged for by Minerva. Wave won the two heats.

Trophy Committee—T. W. Neilson, W. C. M. Y. C.; Frank Nichols, A. M. Y. C.

Referee—Frank Nichols, Phila. M. Y. C.

Sea Gull, S. Higgins	1 24 00

Lake Geneva Y. C.

15 AND 18FT. CLASSES.

Sept. 5.

THIS was the third race for points in the 15 and 18ft. classes. Little Dipper won 4 points, Puckachee won 2 points, Tiya won 4 points, making a total of 6 points for Little Dipper, 6 points for Puckachee, and 4 points for Ysabel; this being the last race for the 15ft. class. The Puckachee and Little Dipper will sail off the tie next Saturday (Sept. 12). Distance 8 miles. Wind strong S.W.

	Start.	Finish.
15FT. CLASS.		
Ysabel, Benj. Carpenter	11 06 00	1 10 50
Little Dipper, Miss Rosalie Sturges	11 06 00	1 11 20
Puckachee, Miss E. V. Rumsey	11 06 00	1 15 12
18FT. CLASS.		
Tiya, Miss Frances Norton	11 06 00	1 23 30
Iris, Miss E. Davol	11 06 00	Did not finish

Fifteen foot class: First prize, Little Dipper, 4 points; second, Puckachee, 2 points. Eighteen foot class: First prize, Tiya, 4 points.

Ysabel was disqualified on a foul.

Judges: G. P. Hall, L. C. Fuller.

Margarita II.

THE new steam yacht, Margarita II., arrived at New York from the Clyde on Sept. 12. She is described as follows by the New York *Sun:*

With the possible exception of W. K. Vanderbilt's Valiant, the most magnificent steam yacht afloat is A. J. Drexel's new twin-screw flyer Margarita, now anchored off Sixty-fifth street, Bay Ridge. She attracted any amount of attention yesterday, and scores of spectators in small boats and naphtha launches hovered around as her crew put her in shipshape condition after the long voyage. In spite of the fact that the Margarita encountered tremendous head seas from the time she left Troon, Scotland, she made an average speed of 11½ knots under natural draft, and on her trial trip made 16½ knots under forced draft.

In appearance, except that she is larger, the Margarita bears a close resemblance to the new Sovereign, though her bow and stern have the graceful characteristics of all Watson's boats. The Margarita in point of tonnage and size exceeds all of our steam yachts, with the exception of the Valiant, as the following comparison of the over-all lengths of some of our larger steam yachts will show:

Valiant, 332ft.; Margarita, 285ft.; Nourmahal, 250ft.; Atalanta, 243ft.; Namouna, 234ft; Eleanor, 232ft.; May, 226ft.; Josephine, 225ft.; Sapphire, 218ft.; Conqueror, 203ft.

However, it is not on account of her size and tonnage alone that the Margarita will attract attention, for her construction embodies all that is novel in marine architecture, and whatever may be thought of G. L. Watson's ability as the designer of cup challengers, he is certainly one of the foremost designers of steam yachts in the world to-day.

The Margarita's stem has an easy rake, and the flare of the bow makes her a very dry boat in a seaway. Her counter is of the usual graceful Watson type and free from the heaviness which the large tonnage of the yacht would suggest. The Margarita has a large yellow funnel and is rigged as a fore and aft schooner with a light yard on her foremast. She has good freeboard, and her high teak bulwarks will keep almost any sea or spray off her snow white decks.

Forward there is a topgallant forecastle to keep her crew dry in a heavy sea, while a novelty in the shape of what is called a sun deck, which extends from rail to rail, forming the roof of her cabin and supported by light steel stanchions, will undoubtedly attract the attention of our yachtsmen on account of its utility. On the sun deck is a small deck house, which includes a beautiful little smoking cabin and the usual accommodations for the navigating officers. The smoking cabin is reached by a stair from the fore and aft alley along the shade deck, and is finished on the outside in teak and on the inside with wainscot oak, while the upholstery is in maroon-tinted morocco. The shade deck below affords a covered promenade on each side between the deck house and the rail.

The library is in the fore end of the sun deck house, and is finished in mahogany, Chippendale style. From the library an alley runs aft on the starboard side, from the windows of which you can look in the engine room, with its tons of polished steel machinery. This alley is hung with tapestry paneling and leads to the dining cabin, which is one of the finest apartments of its kind on any yacht afloat.

Aft of the engine room the alley leads to the boudoir, which takes the place of the usual drawing-room. The decorations here are white and gold, while ample side windows give light to this dainty apartment. From the boudoir a stair leads down to the sleeping cabins, which include ten staterooms and numerous bath-rooms.

She can carry coal for the longest voyages, has capacious storehouses, pantries, ice chests and wine cellars, and can make her own ice and fresh water. She has three galleys, a fully equipped laundry, and a crew of fifty-three men. She is commanded by Capt. Raynor, a veteran of the British-Australian trade, while her chief engineer is Andrew Haddon, formerly of the American liner Paris. She carries two steam launches, a ½-rater, two lifeboats, a gig, a cutter, and a dinghy in her davits. It is said that Mr. Drexel and his family will shortly start on a tour around the world in her.

The Oldest Known Boat.

THERE is in Chicago to-day one of the five oldest small boats known to exist in the world. It has just come, all packed and stayed for its long voyage, from the Gizeh Museum of Antiquities at Cairo. To the generosity of Mrs. Cyrus McCormick the Field Columbian Museum and this city and country are indebted for a rare gift.

With this boat, which will be installed in the museum, and the two which remain in the Cairo museum, were two more, which still rest on the sands which stretch desolately from the Darshur pyramids, near which they were all found. It is expected that before long the remaining two will be brought to Cairo and properly installed.

The five boats were found buried at a considerable depth not far from the famous largest pyramid, and in such orderly form and with such mathematical relationship to the great pile of stone that it was evident that they had been buried with design at that particular spot. All were brought to the light and air at once, and after examination by scholars, proving their marvelous age, their preservation from the elements was at once deemed necessary.

The boats were found to be alike in the material of which they were constructed and in their general dimensions. The cedar of antiquity, which entered into so much of the construction of things of wood, was used for building these boats. While the equipments of the boats had generally disappeared with time, and the edges and ends were ragged and little warped, their shapely outlines still remained so rigidly in evidence that the modeler's skill in giving grace and shapeliness was evident. The boat that is in Chicago now was as well if not better preserved than any. It is 30ft. long, 8ft. beam and 4ft. hold. It had been propelled, of course, by oars, but the points of contact for the oars were not in evidence. A well-preserved and peculiarly marked and designed piece of a rudder of wood was found near the boats and that has been brought to Chicago as the accompaniment of the boat now here.—*Chicago Times-Herald.*

YACHTING NEWS NOTES.

The New York Y. C. has lost an honored member in Joseph R. Busk, who died at his home in Newport on Sept. 2 at the age of fifty-nine years of Bright's disease. Mr. Busk was an Englishman, long resident in this country, a member of the firm or Busk & Jevons, steamship owners. For many years he lived on Staten Island, joining the New York Y. C. in 1869; in 1875 he built the sloop Madcap, from designs by A. Cary Smith, and after a very successful career she was replaced in 1879 by the famous old "iron pot" Mischief, also designed by Mr. Smith. Mischief, the first radical attempt at what was afterward termed the "compromise sloop," was a remarkably successful yacht under the spirited ownership of Mr. Busk and the skillful handling of the late Capt. "Than" Clock; her battles with the larger and older wooden sloops are now historic. She was selected in 1881 out of four trial boats to defend the America's Cup against the Canadian sloop Atalanta, and did so with ease. The fact that Mr. Busk was by birth and education an Englishman caused no comment in connection with the Cup races, as he was a most determined partisan of the centerboard sloop and of the New York Y. C. He was held in the highest regard by his fellow members and yachtsmen, and though of late years he has not been a yacht owner and has largely drifted out of yachting, his loss will be felt by the club.

The Royal St. Lawrence Y. C. has on its grounds at Dorval a very large shed for the housing of its fleet in winter, a railway running up from the water, with appliances for transferring the yachts laterally when in the house. All of the yachts are thus hauled up and placed under cover for half the year. A part of the shed is fitting for a building shop, and efforts have been made at times to get a reliable yacht builder to rent it and attend to the club's business. Heretofore the right man has not been found, but since the late races Mr. H. K. Wicksteed, of Cobourg, has arranged to take the property in connection with Mr. David A. Poe, a member of the club; they will carry on a general designing and building business under the name of the Yacht Company of Dorval. Both of these gentlemen are well known as contributors to the FOREST AND STREAM, Mr. Wicksteed through his cruises in yachts and canoes and his many attractive designs of single-handers and small cruising craft; and Mr. Poe through his writing on canoeing over the *nom de plume* of Retaw. Mr. Wicksteed has had a large personal experience in cruising in canoes and yachts, in designing, and in building. Mr. Poe has this year done all the metal work and fittings for the Montreal 15-footers, being engaged in the machine business.

Norna, schooner, designed by A. Cary Smith and built in 1879 for C. H. Contoit, of New York, has recently come into the hands of a newspaper syndicate, which have planned for her a most adventurous and ambitious cruise around the world, carrying special staff of writers to the places less known and not accessible by the ordinary routes of travel, which will be duly written up in syndicate letters. The prospectus, an exceptionally good specimen of the modern artistic pamphlet, contains an extraordinary amount of misinformation about this yacht, which is described as "Clyde-built, rated A1 at Lloyds, and possessed of the world's record for sailing from New York to Palm Beach, Fla.," on the strength of which it is proposed to enter her in "the spring races at Cowes" in the course of her voyage. Her outfit will include a table service of solid silver and Dresden china, two rapid-fire Hotchkiss guns, twenty-four Springfield rifles with bayonets, twenty four revolvers of .44 caliber, together with cutlasses and other weapons; a geologist, botanist, photographer, physician and two newspaper correspondents.

The Pacific Interclub Yacht Association is a new organization, formed on May 12 of this year at San Francisco, and including the local clubs, the San Francisco, Pacific, Corinthian, Encinal and California. The officers are: Pres., C. G. Yale; Vice-Pres., C. L. Tisdale; Sec'y, R. R. l'Hommedieu; and Treas., C. W. Platt. Each club has three representatives, one of whom shall be a non-yacht owner; the three voting as one. The racing rule is a unique modification of the Seawanhaka rule, the waterline and spar measurements are taken in the usual way, the so-called "actual sail area" is then obtained by actual measurement of all sails which the owner at time of measurement signifies his intention of carrying on the wind; the square roots of these two measurements being added to the l.w.l. and the sum divided by two. The result is such a heavier tax on sail as the strong winds call for, but we fail to see any good reason for the two different measurements.

Sovereign, steam yacht, designed by J. Beavor Webb and built by the Erie Basin Dry Docks Co. for M. C. D. Borden, has been in commission since the New York cruise and doing some very fast running. We place very little value on the alleged performances of steam yachts alongside of the various fast passenger steamers about New York, for the reasons that both sides generally claim the victory, and the conditions of the alleged races are so indefinite as to amount to nothing. At the same time it is generally conceded that in a recent informal run with the Sandy Hook steamer Monmouth the honors were on the side of the steam yacht. She was engined by the W. & A. Fletcher Co., having two sets of triple expansion engines for her twin screws, cylinders 15, 20 and 39 by 21in.

We have received from the *Yachting World*, 28 Paternoster Row, London, a copy of its special summer number, very handsomely made up, with a cover in colors. It contains a number of yachting stories, a well illustrated article on the Royal Victoria Y. C. and many pictures of yachts, including some large plates of Ailsa, Satanita, Meteor, etc. Among other portraits is one of Charles Sibbick, the designer and builder of so many fast yachts in the smaller classes. On Aug. 12 the ownership of the paper changed hands, and it is now under an entirely new management. After Oct. 1 the offices will be at 27 Wallbrook, London.

The Rochester Machine Tool Works is steadily improving the Buckley Safety Water Tube Boiler, built by it, and has recently been allowed several additional patents on it. J. T. Gardiner, of East Hampton, L. I., who has used two of these boilers for a year, speaks of it in the highest terms; one has been used with great satisfaction by D. F. Fairchild, of Westminster Park, N. Y., in his steam launch Helen.

Canoeing.

The British Canoe Association Meet.

THE following account of the annual meet of the British Canoe Association was written by F. C. Lane, late Vice-Commodore for the *Field:*

On Pencarrow Point Field, better known perhaps as Mylor Point, in Falmouth Harbor, the camp was pitched this year on July 27, and a more suitable place for a salt-water canoe meet could not be found in the British Isles. There was something to see and somewhere to go in all directions; a racing or cruising breeze, generally from the N.W.,

veering to W.N.W., blew straight on to the tents every day, while the warm sun, shining on the wide expanse of water in front, the distant wooded slopes of the Fal, Trelissick, St. Just in Roseland, and Trefusis, made a *coup d'œil* of beauty, so that those who did not come will never know what pleasure they missed. Indeed, there was to be found every requisite for a canoe meet, except canoeists, and these numbered only twenty-seven, who brought fifteen boats, viz.: Lily, Vestal, Sunbeam, Undine (late Tavie), Jub Jub, Roulette, Turtle, La Babet, Pepita, Dabchick, Winnie, Thalia, Marjorie, Prucas III and Waitangi. The B. C. A probably never during its existence had so perfect an opportunity for the formation of a large camp, and all hands were puzzled to account for the absentees; however, those on hand were the right sort, and everything moved throughout with the spirit that rolls the world along merrily.

Capt. Coke, R. N., H. M. S Ganges, his officers and men, were most kind and courteous. The Royal Cornwall Y. C. and the Falmouth Sailing Club offered hospitality, honorary membership and races. The neighboring local regattas gave prizes for B C. A. boats. The Green Bank Hotel, Falmouth, opened its pleasant doors as our headquarters, and bar one or two half days of rain and dense cloud there was nothing to mar perfect enjoyment. Hardy's success as *chef de cuisine* (with a battery obtained from Constantine, rightly styled Treasure Range) was marked, and his stews, curious camp sauces, dumplings, etc., were items to dream of. The piano was requisitioned for sing-songs after mess, and unexpected talent was discovered. A well-known member found the Boy at the Nore after many years of search, and the honorary treasurer was vociferously desired to "let her go" whenever he ventured on a sweet melody about the Isle of Man and Harrogate.

A cricket match on the Ganges Recreation ground resulted in a victory for the camp, T. S. Comber knocking up 100 out of 156 for the B. C A, whilst the bowling of Messrs. Nickerson and Ferris proved deadly for the Ganges, who scored 36 in first innings, and second innings followed on five wickets down for 34—time called. In 1890, when the B. C. A. were first at Mylor, the Ganges beat the B. C. A.

The regatta on Saturday, Aug. 8, was the most important day of the meet, and all were astir early. There was a fine fresh wind from N.N.W., and at 10:30 A. M., the time fixed for the start, increased considerably in strength; so much indeed that the sailing committee postponed the start one hour. At 11:30 the wind against a flowing tide caused a nasty jump of sea for small boats, so reefed sails and "oilies" were needed in all except La Babet.

The course planned was all in sight from the camp, and was nearly an equilateral triangle, from an imaginary line between the camp flagstaff and the Turtle as a markboat, thence E.S.E. around St. Just Buoy, thence to the flagboat above Mesac Point and back to the Turtle, leaving all marks to port, four times round, making about ten miles. Owing to an unfortunate misunderstanding, the flagboat above Mesac Point was not moored in position before the start, and after the limit boat had started a semaphore signal to the Ganges caused a markboat from that ship to be moored in St. Just Creek, nearly half a mile to leeward of the spot intended to be marked. While this was being done, Com. Bartley, in the Lily, with a mark flag around his shoulders, paddled to the proper spot above Mesac Point, and La Babet, observing this, ignored the Ganges-laid flagboat (of which she knew nothing) and worked to windward until she could round the Commodore and his shoulder flag. Dabchick alone followed La Babet; the other four boats chose to round the Ganges-laid flagboat, and thus to shorten their leg to windward by at least one-half the distance, and so the race continued to the end, La Babet and Dabchick scrupulously working into the valley, in the mouth of which the Commodore had been stationed for one round, and thereby sailing the full course of ten miles, and Vestal, Thalia, Marjorie and Prucas III. sailing around the Ganges mark, making a course of about eight miles only. The committee gave Dabchick a gun, but subsequently considered the position and ordered a resail on the 10th inst.

The following were the times of the abortive race on the 8th, the asterisk showing the boats which rounded the Ganges mark:

	Starting gun.	Started.	1st round.	2d round.	3d round.	4th round.
La Babet	11 30 00	11 30 45	12 11 47	12 51 35	1 30 09	2 06 43
*Prucas III.	11 38 00	11 38 20	12 04 10	12 31 18	12 54 13	1 23 20
*Vestal	11 41 00	11 41 25	12 08 30	12 35 10	1 00 25	1 26 05
*Marjorie	11 44 30	11 44 37	12 12 01	12 37 47	1 02 27	1 27 45
Dabchick	11 48 00	11 48 20	12 21 37	12 54 50	1 27 51	2 02 12
*Thalia	11 48 00	11 48 31	Gave up.			

The next race for canoes was won by Roulette. Prucas, in difficulty with her main sheet, made a bad start, and finished 3m. 34s. astern.

The third race for canoe yawls was well won by Dabchick.

The fourth race was for boats not exceeding 1-rating, belonging to the Cornwall Y C. or Falmouth Sailing Club, over four rounds of the Ganges mark B. C. A course, for prizes presented by the B. C. A. Five entered—Fal, Pixie, Centipede, Lassie and Firefly. Lassie did not start, the halves could not save their time over the ones, the winner being Fal at 5:04:43; Prixie second at 5:05:58.

A capsize race between Marjorie and Prucas was smartly accomplished, Marjorie winning. Then races in "oilies" and sea boots and various tugs of war finished the proceedings, when afternoon tea in the marquee was served, where Mrs. and Miss F. C. Lane did the honors.

Monday, Aug. 10, the day of resailing the cup race, turned out light and fine, with not nearly enough wind for such boats as La Babet or Vestal, but quite enough for the rest. Mr. Laws, in Prucas III., scored a good win although Dabchick, Mr. Pedlar, was overhauling her fast in the windward work, and another few hundred yards of weather going would have done Prucas. However, she was well sailed, and won the Lough Erne cup by 1m. 18s.; Dabchick second, Thalia third. After the race the winner's kit was examined and weighed, and although his boat tent and lamp were of an ephemeral and will-o'-the-wisp character, and not at all practical, he was allowed to pass muster with a caution, and was awarded the prize. The proposal next year to have a real practical cruise, everything being carried in the boats, with shifting camps, seems to meet with favor, and many believe it would do the B. C. A. good to leave luxury in tents and fittings at home one year, and go for a trip down the Shannon and into Lough Derg in light cruising order. At all events it would be more in accord with the spirit and principle of the Association rules, and might perhaps induce a larger number to assemble under the flag of "Bonhomie, Camaraderie and Amiability."

Rifle Range and Gallery.

Presque Isle Rifle Club.

ERIE, Pa., Sept. 5.—The Presque Isle Rifle Club held a handicap prize shoot at its range to-day. The prize was a silver water set, donated by Mr. Disque Notwithstanding the rain and a fishtail wind, some exceptionally good work was done. Germann won the prize with a total of 246 out of a possible 300. The conditions of the shoot were: 200yds., off-hand, standard target, 7-ring black:

The .30 Military as a Target Rifle.

VICTORIA, B. C.—*Editor Forest and Stream:* I read FOREST AND STREAM every week and gain quite a lot of information from it. In a letter *re* .30cal. military and sporting rifles from H. B. S., Norwich, Conn., he seems to doubt the gentleman in New Brunswick, who informed him that "in England last year a battalion team of eight men shooting at Queen's ranges (200, 500 and 600yds.) averaged 96 points per man with the Lee-Metford rifle." Allow me to inform H. B. S. that this is quite true. It was not a 70-round match, but 21 rounds, 7 rounds at each range, bullseye counting 5. I sent and got the names of the shooters, etc., otherwise I should have answered H. B. S.'s letter sooner. Here are the records:

Fired at the Curragh camp on July 27, 1895, with the Lee-Metford rifle and Cordite ammunition:

	200yds.	500yds.	600yds.	Total.
Highest possible scores	35	35	35	105
Lance Corp T Lynch	33	34	35	102
2d Lieut R B Magee	33	32	35	100
Sergt J McGinnell	31	34	34	99
Color Sergt H Trill	32	32	34	98
Sergt A McCann	32	32	34	98
Musketry Inst P Kelly	29	34	32	95
Sergt T Ryan	31	30	30	91
Sergt J C Duthie	27	30	32	89
	248	258	266	772
Averages	31.00	32.25	33.25	

Average of team, 96.50.

I don't know who the experts were that tested the rifles H. B. S. speaks of, but if he wants to see some good rifle shooting he can do so any Saturday afternoon at Clover Point range, Victoria, by men who do not profess to be experts. We have scores of 101, 100, 98, 99 and 97 made with the Martini rifle out of 105 at Queen's ranges. Every one who uses the Lee-Metford makes steadier shooting than with the Martini-Henry; the recoil of the Lee-Metford is almost *nil* and wind does not affect the bullet nearly as much as the Martini.

The experts that H B. S. speaks of must be very poor shots, indeed our third-class shots can make better shooting than he speaks of

VICTORIA RIFLEMAN.

Cincinnati Rifle Association.

CINCINNATI, O., Sept. 6.—The following scores were made to-day by members of the Cincinnati Rifle Association. Conditions: 200yds., off-hand, standard target and Columbia target. Scores on the standard target were:

A. C. PATERSON.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 23-24.—ATLANTA Ga.—Tournament of the Fulton Gun Club. Targets and live birds; $200 added money.

Sept. 25.—WINDSOR LOCKS, Conn.—All-day shoot of the Windsor Locks Gun Club.

Sept. 26.—HACKENSACK, N. J.—Fourth tournament of the New Jersey Trap Shooters' League, under the auspices of the Bergen County Gun Club. Sweepstakes at 10 A. M.; League team race in the afternoon. C. O. Gardiner, Sec'y.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

Oct. 14-15.—GREENSBURG, Ind.—Second annual tournament of the Greensburg Gun Club. Targets only. Web. Woodfill, Sec'y.

1897.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex Com.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

The New Utrecht Gun Club, of Brooklyn, seems to have been singled out by the fire demon from all the other clubs in this vicinity for special marks of his approval or disapproval—whichever way you look at it. One Saturday early in the season, while a club shoot was in progress, the trap house, four or five traps, and several barrels of targets went up in smoke in spite of the efforts of those present to save them. All that happened on their target grounds at Dyker Meadow, away down in South Brooklyn. On Thursday, Sept. 10, this city and the vicinity were visited by a terrific thunderstorm, the display of lightning being such as is very seldom witnessed outside the limits of the tropics. In the height of the storm a bolt struck the club house at Woodlawn, L. I., the live-bird grounds of the club. The house was hit fairly in the center and took fire, the yellow pine with which it was finished affording good material for the flames to feed on. There is now nothing left of the house, platform or puller's house, all having been consumed. The club was fully insured, we understand; but just now it is without any shelter at the Woodlawn grounds, hence its live-bird contests are at a standstill. There will be no live-bird shooting for the club members until October.

W. J. Price, of Spruce Cabin House, Canadensis, Monroe county, Pa., was in the city on Friday, Sept. 11. Mr. Price was in W. Fred Quimby's store looking at several Smith guns with an eye to purchasing same, when we ran across him. He is very sanguine as to the outlook for game the coming season. Speaking with him about the State shoot at Harrisburg, he said that business would prevent him being present, but added that he hoped the next Legislature of the State would make the open season on trout from May 1 to Aug. 1, instead of from April 15 to July 15; he argued that trout at the early date set for the opening of the season were not in condition, and stated that the pot-hunters in his district cleaned up the streams before April 15, so that when the season did open there were no sizeable trout to catch. Mr. Price, and all Pennsylvanians who have the preservation of game and fish in the State at heart, should become members of the State Sportsmen's Association, and strengthen the hands of the executive body in the fight that will come in the spring.

The annual meeting of the Cobweb Gun Club was set for Friday evening, Sept. 11, at the club's new rooms, 2277 Third avenue. Owing to the extremely short notice given, due, we believe, to an error on the part of the printer who had charge of the notices, and also probably owing to the fact that several members of the club are yet out of the city, the secretary, F. A. Kerker; E. P. Miller, one of the proprietors of the grounds at Baychester, N. Y., and the trap editor of FOREST AND STREAM were the sole representatives of the seventy-seven members in good standing that go to form the popular club named above. The election of officers for the ensuing twelve months was part of the business put down for the evening's work. President George A. Barker will doubtless instruct the secretary to call another meeting at an early date.

Harry Thurman had a good deal to say about the coming State shoot at Harrisburg, Pa., Sept. 29-Oct. 2. The prospects are good for a capital tournament, Harrisburg being centrally located and boasting of several good shots who are members of the Harrisburg Shooting Association. Gun clubs that are members of the State organization, and others who are contemplating becoming members, should see to it that they are represented at the annual meeting. The State Legislature sits next year and special concerted efforts will be made to obtain much-needed legislation in behalf of the game and fish of the State.

The Bergen County Gun Club, of Hackensack, N. J., one of the new clubs organized this season, has been spending a good deal of money putting its grounds in shape. It has built a capital club house and has all the conveniences of a well appointed gun club. The grounds are only a couple of minutes' walk from the depot of the New York, Susquehanna & Western R. R. at Hackensack. The secretary of the club, Mr. C. O. Gardiner, writes us that the club will hold its first handicap target shoot for the silver cup presented by the American E. C. Powder Company on Saturday next, Sept. 19.

J. S. Hildreth, one of the Southern representatives of the Winchester Repeating Arms Co., was a new face at the traps in New Jersey during the three days' shoot at Marion last week. Hildreth shot right along and showed considerable improvement toward the end, when one takes into consideration the strong wind that blew almost all day on Tuesday and Wednesday. He was in warm company too, and, as he put it, "They didn't do a thing to me, did they?"

In remembrance of a long and pleasant friendship of twenty years' standing and of his —— year on earth, Lieut. Gibson on Sept. 12 presented to Mr. Ed. Taylor, the well-known W-A powder man, a handsome cane of Congo wood, with a handle of a genuine Japanese War Turk. The occasion was made a very happy one among those who were present, J. A. R. Elliott, J. Hildreth, Jr., Lieut. Gibson and others joining in wishing him as many more years as he has already so happily spent, and wishing him prosperity and success in his new field of labor.

The Patten cup, shot for on Saturday last, Sept. 12, on the Hollywood grounds, was won by Edgar Murphy. The conditions were 50 live birds, $50 entrance, handicap rise. Murphy on the 30yds. mark, and Albert Loening on the 26yds. mark, tied with 46 out of 50. On the shoot-off, miss-and-out, Murphy won in the 4th round, Loening's bird in that round falling out of bounds. L. B. Hooper (26) scored 45, and G. S. McAlpin (30) 44; Fred Hoey (29) 40 out of 49, and Al Ivins (30) 25 out of 30, were the other contestants.

Lieut. Peter Gibson, who has been East for a couple of weeks or so, found time to put in a few days in this city. While in New York he met Ed Taylor and at once tried to bring off their long-talked of rifle match. Mr. Taylor was willing to shoot on Friday (his best day), but the Lieutenant held out for Saturday (his lucky day). Neither party being willing to give in, the match will hardly come off in the near future.

The State Association of New Jersey, that has been slumbering for several years, will very shortly be aroused from that long slumber and become a factor in the shooting world once more. Al. Heritage, the president, will call a meeting at which such action will be taken as will put the State organization on an equal footing with other associations of a similar nature.

A. W. Adams, a brother of Platt Adams, of the New Utrecht Gun Club, has been East on a visit. While here he has found time to do a little target-shooting, a sport to which he is no stranger, being a prominent member of the Eureka Gun Club, of Chicago. At Marion, on Monday, Sept. 7, he had to take a back seat, Mr. Platt Adams leading him by 30 targets out of 200 shot at.

The date for the next team race of the New Jersey Trap-Shooters' League has been changed, Sept. 26 being the date now set, in order that the shoot may not clash with the 100-target handicap event at the grounds of the Boiling Springs Gun Club on Saturday, Sept. 19.

The Arizona State Sportsmen's Association will hold its fourth annual tournament at Prescott Jan. 4-5, the shoot being given under the auspices of the Prescott Gun Club. The secretary of the State organization is Ray Hill, of Prescott.

Elmer E. Shaner, who will manage the Pennsylvania State shoot at Harrisburg, says that the city of Pittsburg will be well represented at that shoot or else there are a good many shooters in the Smoky City that are not given to speaking the truth.

Five members of the Joplin (Mo.) Gun Club shot a 100-target race one day last week. The targets were thrown at unknown angles. The scores made were: W. G. Sergeant 92, Huffman 91, Kinmouth 90, Cox 86 Leeman 84.

On Monday of this week, Sept. 14, Jack Winston shot a race at Elkwood Park, N. J., with Dr. Gagnon. The conditions were 25 live birds per man, $100 a side. Winston won the match by scoring 22 to 20.

The experts will find the handicap imposed on them at the Pennsylvania State shoot rather severe. It is similar in every respect to that in force at the New York State shoot at Buffalo.

The local gun club at Windsor Locks, Conn., will hold an all-day shoot on Sept. 25. The club will make every effort to give its guests a good shoot and an enjoyable time.

The Quanah, Tex., Gun Club's second annual shoot will take place at the Quanah fair grounds, Sept. 24 and 25. First day's shoot will be at live birds, second day at bluerocks. B. F. WILLIAMS.

It is not at all unlikely that T. W. Morfey, of Paterson, N. J., may try another bout with Edgar Murphy on the Hollywood grounds and at the same number of birds, 200 per man.

The Boiling Springs Gun Club, of Rutherford, N. J., will hold an invitation 100-target handicap on its grounds on Saturday, Sept. 19. The race will be started at 1 P. M. sharp.

The programme for the traps at the Hollywood, N. J., traps for Saturday, Sept. 19, is the Epilogue handicap, 100 birds per man, $100 entrance.

The Fulton Gun Club, of Atlanta, Ga., will hold a tournament Sept. 23-24. The club will add $200 to the purses. Both targets and live birds will be used.

A synopsis of the programme for the Pennsylvania State shoot appears in another column of this issue.

The programme for the Newburgh (N. Y.) shoot, Oct. 7-9, will be ready for distribution very shortly.

The Greensburg (Ind.) Gun Club will hold a tournament Oct. 14-15. All events will be at targets.

SEPT. 15. EDWARD BANKS.

The Interstate at Marion, N. J.

THE Interstate Association's series of tournaments for 1896 was brought to a close on Wednesday evening, Sept. 9, after three consecutive days of target-shooting on the grounds of the Endeavor Gun Club, of Jersey City. The first day, Sept. 7, Labor Day, was not, properly speaking, a part of the Interstate's tournament; it was the regular annual Labor Day shoot given by the Endeavor Gun Club. For years past it has been the custom of this club to hold an all-day shoot on the above holiday, and as a rule these annual affairs have been well attended.

This year's shoot was no exception to the general rule. The attendance of club members was very satisfactory, and most of them shot along in the sweeps, either for "birds" or cash, it being optional whether one put up the regular entrance fee or only paid for the targets at 2 cents each. As practice work for the tournament of the next two days the Labor Day shoot fell in just right, and several of those who intended to shoot through the Interstate's programme took advantage of the "sweeps at popular prices" to get their eyes on the targets.

The preparations for handling the shooters and the arrangements made for their comfort were all right. Those who attended the Marion grounds on either of the three days of the shoot found everything just as it should be. Two sets of traps were placed in position, although practically only one set was used on Labor Day. The second set was required to run off the extra expert events on the two days of the Interstate shoot. Both sets of traps were bluerocks, and bluerock targets were thrown during the entire shoot. The No. 2 set, the set on which the expert events were shot off, were traps of which Elmer Shaner was very proud. He has thrown very nearly 300,000 targets from them since they were first placed in the kit of the Association, and they are throwing as well now as they did the first day he used them.

Of course the shoot was run by Elmer Shaner, the annual Labor Day shoot taking the place of the usual "preparation day." On that day the secretary of the club, J. A. Creveling, acted as entry clerk, his place being ably filled on the two succeeding days by W. A. Richards. The cashier was Edward Bock, a gentleman who has often acted in the same capacity at Marion when "Uncle Al" Heritage was the moving spirit of the shoots at these grounds. The puller, Frank Post, and the blackboard man both did their work well. The greater portion of the referee's work was done by the club's president, A. R. Strader, while Carl von Lengerke denied himself the pleasure of shooting right along, devoting himself to taking a hand at anything to help out his club. The Rose system of dividing purses was adhered to on all three days, and no fault was or could be found with the division of moneys under that system.

Among the trade representatives present on Labor Day were: J. A. R. Elliott and J. S. Hildreth, of the Winchester Repeating Arms Company; U. M. C. Thomas, of the U. M. C. Company; Justus von Lengerke, senior partner of the firm of Von Lengerke & Detmold, the U. S. agents for Schultze powder; Noel E. Money, secretary of the American E. C. Powder Company; Ed Taylor, of the Laflin & Rand Powder Company; E. D. Fulford, shooting Schultze powder in U. M. C. Company's factory-loaded shells; Jack Winston (147), shooting Austin powder and looking out for a match or two while here in the East.

The neighboring clubs were fairly well represented on Labor Day, the fact that nearly every club holds a shoot on holidays militating against large entries on such days at any one tournament.

Platt Adams, of the New Utrecht Gun Club, was accompanied by his brother, A. W. Adams, of the Eureka Gun Club, Chicago. The Passaic City Gun Club sent "Count" Lenone and Bennie Abbott, the latter shooting under his old *nom de fusil* of Bluerock; Hackettstown was represented by J. L. Smith; F. A. Thompson, of the Vernon Gun Club, of Brooklyn; J. S. Duston and E. A. Geoffroy came from Newark; Uncle Billy Sigler, one of the oldest and most reliable shots in New Jersey, made his appearance at the traps for the first time in many months; T. Christy came from Paterson; Jack Brewer also took a hand at target breaking, but did not strike his old gait. The home club was well represented, the following upholding the credit of the Endeavor Gun Club: G. H. Piercy, captain of the club; E. Ingram, C. W. McPeek (Jersey), L. H. Schortemeier, Edwards, Eddie Collins, etc.

Among the lady visitors was one who came all the way from Cincinnati, Ohio, to meet old friends and to tell us that work on King's Smokeless kept an old member of the Endeavor Gun Club, Milt F. Lindsley, from being present at the shoot. We refer, of course, to Mrs. M. F. Lindsley, so well known to shooters under the name of Wanda. Mrs. Lindsley does not shoot now as well as she always did; the loss of her pet gun, which was stolen from the special car *en route* for the Joplin, Mo., shoot last spring, has affected her shooting seriously. Pending the arrival of a new gun that is being made for her, she picks up any light gun and pluckily tries to break targets, but the result is by no means satisfactory to her.

On Labor Day a total of over 5,000 targets were thrown. Our table of scores shows the results in 15 events; as a matter of fact two other events, a 25 and a 15-target event, were also shot, but the number of entries was not large, so no record of the scores was kept. Jim Elliott led the band with a total of 123 breaks out of 135 shot at; Fulford was second with 212 out of 235 shot at. Justus von Lengerke and E. A. Geoffroy were close together with totals of 215 and 212 respectively out of 240 shot at. Platt Adams had his eye with him and landed with 174 out of 200; his brother, A. W. Adams, of the Eureka Gun Club of Chicago, was decidedly off in his shooting, breaking only 72 per cent. of the 200 he shot at. Louis Shortemeier shot well at times, breaking 25 straight in No. 6, and landing with 84.5 per cent. for 200 shot at. The "old reliable," Ed. Taylor, found time between greetings from old friends to shoot at 130 targets, breaking 108 of them. George Piercy, the Endeavor Gun Club's captain, shot in every event, but the cares of his position were against a good average; his percentage of 78 8 would be materially increased if the 25 straight he made in event No. 16 was taken into account.

TUESDAY, SEPT. 8.

To-day was the first day of the Interstate Association's tournament. The boys were slow in putting in an appearance, it being about 10:30 before the programme was commenced. The attendance was by no means what it should have been, the vast majority of the local clubs being conspicuous by reason of non-representation. Why this should have been so we are at a loss to surmise. The programme was a good one; there was a good amount of added money; the adoption of the Rose system favored the less expert shooter, and the Endeavor Gun Club and its members have always done their share to make local shoots a success. The club is a member of two local leagues—the New Jersey Trap-Shooters' League and the New Jersey Amateur Trap-Shooters' League. There are eight other clubs in the first and four other clubs in the second. Under the circumstances it is hard to account for the non-appearance of many of the faces usually seen at such gatherings in New Jersey.

Among the new faces to-day were: Capt. Money, of the E. C. Powder Co., and his younger son, Harold B. Money; L. D. Thomas, of Baltimore, a representative of Laflin & Rand's W-A powder; Ferd Van Dyke, of the Winchester Repeating Arms Co.; J. A. R. Dressel, secretary-treasurer of the Interstate Association, and president of the U. M. C. Co.; J. S. S. Remsen, of Brooklyn, one of the youngest and best target shots in this section of the United States; J. F. Paddelford, of Sherburne, N. Y.; Harry Thurman, of the Keystone Shooting League, who claims to be a "has-been," but adds that that's better than being a "never-was-a;" Slide, Dr. Fletcher, etc.

The weather, though bright and sunny, was by no means in favor of high scores. In the morning the wind blew very strongly from the northeast, and the targets, as a natural consequence, took all sorts of erratic flights, breaking up the hopes of many a shooter for a straight score just when the latter was right within his grasp. The force and effect of the wind may best be noted by looking at the scores in event No. 1, a 20-target event with four moneys, 14 breaks coming in for part of fourth money!

Justus von Lengerke was high average for the day with 89.4, an excellent percentage when the conditions are considered. Brewer lost 7 targets out of his first 15 and 3 out of his next 20; he then finished by breaking 125 out of his last 135, being second average with 88.2. Fulford and Van Dyke were third and fourth with 87.8 and 87.5 respectively. Remsen, whom we have referred to above, was fifth with 85.8, a fraction better than Schorty, who finished sixth.

In addition to the scores given in the table below, Ingram shot in event No. 6, breaking 10 out of 15: Wanda broke 11 out of 15 in No. 8, and Dr. Fletcher scored 14 in No. 10.

WEDNESDAY, SEPT. 9.

This was another windy day, scores again being affected by the wind that blew directly in the face of the shooters. The shoot ran as smoothly as possible, everything moving off with the precision of clockwork. Elmer Shaner's face began to look more cheerful as the day wore on; to-day's shoot was the last of the Interstate's work for 1896. Those who have managed shoots will realize readily what his work has been this year. Elmer's Japanese hat, that has been a feature at the Interstate shoots this season, was sent into retirement to-day. During the shooting of an extra after the programme was finished, one of the traps needed Elmer's attention; while at the traps he was asked to throw up his hat. This he did, but took all the squad by surprise except Capt. Money, who promptly placed a charge of shot through it. Before Elmer could again rescue his hat one of the trapper boys sent it flying into the air, and this time it received attention and a load of No. 7¼ from Edwards's gun. The hat has gone back to Pittsburg, and will be given to Old Hoss as a sample of the work of Jersey mosquitoes, and will be placed with the balance of Old Hoss's trophies of trap work adorning the walls of the "woodpecker's nest."

Among the newcomers to-day was M. Herrington, of the W-A powder, the president of the Arlington, N. J., Shooting Association; Secretary J. L. Lequin, of the Hazard Powder Company; Holberton, of the Oritani Field Club of Hackensack, N. J.; and Thos. G. Bell, secretary of the New Jersey Amateur Trap-Shooters' League.

Jim Elliott was on top to-day with a percentage of 88.9, Ferd Van Dyke coming next with 88.4. Remsen showed up remarkably well with 87.7 per cent., and was high man with 24 out of 25 in event No. 5. Van Dyke was handicapped during the greater part of this tournament by having to shoot his live-bird gun; to-day when partly through the programme he took up a repeater of Noel Money's and tried it, with the result that he shot it the balance of the day, making a splendid average for the last few events, and sweeping the decks in the extras shot after the completion of the programme.

SECOND DAY, SEPT. 9.

Events:	1	2	3	4	5	6	7	8	9	10

Wausau Gun Club.

WAUSAU, Wis., Sept. 4.—Your correspondent happened to strike Wausau just in time for one of the gun club's local tournaments. Although an entire stranger to all of the club members, he was given a cordial welcome and spent a very enjoyable afternoon with them. Most of them are new hands at the trap, but there is some good trap-shooting timber among them, and all the energy and love of the sport that is needed to develop their latent powers. If they keep at it some of their names will become familiar in trap-shooting circles.

The weather was very unfavorable for good scores, and rain put a stop to the sport before the programme was shot out.

Below are the scores, all events at known angles; No. 3 was at 3 pairs and 8 singles:

Events:	1	2	3	4			Per
Targets:	10	10	14	15	Shot at.	Broke.	cent.
Coney	10	10	11	14	49	45	91.8
Hampton	9	10	9	13	49	41	83.6
Pierce	7	8	11	12	49	38	77.5

O. H. HAMPTON.

Haverhill Gun Club.

HAVERHILL, Mass., Sept. 5.—Below I hand you scores made to-day by members of the Haverhill Gun Club at their weekly shoot. This is our tenth practice shoot since our club was organized, and the result shows a marked improvement in the shooting of the members, all but three or four of whom had never fired a shot at the clay birds until the afternoon of July 4 last.

Events 4, 5, 6, 8 and 9 were at unknown angles; event 13 at 5 pairs doubles, and the remainder of the events at regular angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
F J Blake	2	8	7	..	..	5	5	..	..	8	7	6	5	..	..

On Long Island.

MUTUAL ROD AND GUN CLUB.

Sept. 2.—The members of the Mutual Rod and Gun Club, the successor of the old Mutual Fishing Club, held a live-bird shoot to-day at the grounds at North Beach. The club event was at 7 birds, and Frank Dexter and J. B. Knowles were high with 6 out of their 7. The scores were:

Frank Dexter 6, J. B. Knowles 6, C. C. Treadwell 5, H. C. Stanton 5, James P. Smith 5, W. S. Massey 4, Charles Snyder 4, P. Wambold 4, Aaron Whitney 3, G. A. Tracy 3, Thomas Hudson 2.

WOODSIDE GUN CLUB.

The Woodside Gun Club held its first shoot since June on its grounds at Woodside, L. I., this afternoon. Seventeen members were present and took part in the sport, R. J. Henderson winning the club shoot, which was at 15 targets. Scores:

R. J. Henderson 13, T. W. Richardson 12, James Colgan 12. T. W. Murphy 11, Dr. Behrens 11, J. W. Heany, 10, U. V. O'Connor 9, T. J. Heany 9, Frank Williams 8, E. S. Morris 8, E. T. Kent 7, W. H. Hunt 6, Jacob Bernstein 5, Charles Thurston 5, S. P. Schleucter 5, J. J. O'Brien 5 H. P. Smith 4.

BERGEN GUN CLUB.

Sept. 7.—At the shoot of the Bergen Gun Club, of Brooklyn, held at the club's grounds at Flatlands, L. I, to-day, R. J. Valentine successfully defended his title to the President's trophy by scoring 14 out of 15 live birds in that contest. The scores in the first event, which was a sort of pipe-opener for the shooters prior to commencing the main event, were as follows:

Nelson Ellery (26) 4, T. M. Murphy (28) 3, D. G. Murray (28) 2, J. G. Kane (27) 4, R. J. Valentine (28) 3, T. H. Hardy (26) 2, L. G. Jenkins (27) 3, C. A. Richardson (26) 1.

The second event was the race for the President's trophy, 15 live birds per man, handicap rise; the scores in this event were as below:

R. J. Valentine (30) 14, T. M. Murphy (26) 12, P. H. Myles (29) 13, A. Moray (28) 12, D. G. Murray (27) 10, C. A. Richardson (26) 9, R. J. Frazier (28) 10, N. T. Ellery (27) 8, F. G. Hennessey (26) 7, T. T. Williamson (27) 9, G. O'Brien (27) 11, L. G. Jenkins (27) 5, H. J. Kane (27) 4 (withdrew on 5th round), T. T. Hardy (27) 8, W. H. Gregory (27) 5.

ENTERPRISE ROD AND GUN CLUB.

Sept. 9.—The Enterprise Rod and Gun Club, of New York city, held its first shoot this season on the grounds at Bay Side. The club event is at 7 live birds per man. R. V. Bolton won the shoot after tieing with H. L. McTammany and Daniel G. Longman on scores of 6 out of 7. In the shoot off of the tie Bolton ran 4 straight, McTammany losing his fourth bird and Longman his second. The scores in the main event were:

R. V. Bolton (28) 6, H. L. McTammany (29) 6, D. G. Longman (26) 6, G. H. Samuels (26) 5, Dr. Lewis H. Jennings (guest) (26) 5, T. H. Foster (26) 5, T. F. Dillon (27) 4, C. H. Nelson (26) 3, L. G. Harper (26) 2, S. H. Hennessey (26) 3, L. G. Schwartz (26) 2, F. K. Schroed (guest) (26) 3, J. H. Brierly (26) 2, M. J. Murphy (guest) (26) 3, P. H. Myles (guest) (29) 5, P. G. Henderson (26) 3, T. M. Schottler (26) 2, D. G. Murray (27) 3.

PARKWAY ROD AND GUN CLUB.

Sept. 9.—The Parkway Rod and Gun Club, of Brooklyn, held its monthly shoot at Dexter Park this afternoon. The wind blew strongly and made the birds hard ones to gather within bounds. The attendance was small, but there was some good shooting. In the club event, 7 live birds per man, the following scores were made:

Class A: Elias Helgans (30) 7, Anthony Botty (28) 7, H. Bookman (28) 4. Class B: Henry Bramwell (28) 6.

MONTAUK ROD AND GUN CLUB.

Sept. 9.—The regular monthly shoot of the Montauk Rod and Gun Club took place at North Beach this afternoon, seventeen members taking part in the club event, which was at 10 live birds per man. The scores were:

W. H. Wheeler (30) 9, F. E. Pettingill (28) 8, G. F. Murray (30) 8, W. J. Anderson (28) 8, J. J. McGuire (25) 7, P. J. Haines (28) 7, C. F. Bradley (30) 7, H. C. Williams (25) 7, J. Chris. Reinhardt (28) 6, H. S. Gardner (30) 6, W. J. Chapman (25) 5, D. F. Healey (28) 5, J. C. Buckley (25) 5, Sylvester Palmer (25) 5, F. S. Pomeroy (28) 4, G. H. Finnegan (25) 3, M. J. Wall (25) 2.

CRESCENT GUN CLUB, OF BROOKLYN.

Sept. 3.—Only three members of the Crescent Gun Club, of Brooklyn, put in an appearance at Dexter Park this afternoon; the occasion was the club's regular monthly shoot at live birds. The three present were President Walter D. Gilman, Secretary L. C. Hopkins and G. E. Loeble. The latter shot well and captured the Beaufort diamond badge by scoring his 7 birds in the club shoot. Mr. Gilman scored 5 and Mr. Hopkins 3.

RIDGEWOOD GUN CLUB.

Sept. 11.—The Ridgewood Gun Club held its regular monthly shoot at Wissell's Ridgewood Park this afternoon. Of the 15 members who took part in the club event at 7 live birds, only one, John Welz, scored all his birds. Lee Helgans, J. J. Young and Charles Wissell scored 6 birds. Under the rules of the club, all of the above-named shooters except Young were not entitled to the medal, as each has scored a win already this season. This left the medal to Young. The scores were:

John Welz (30) 7. J. J. Young (23) 6, E. Helgans (30) 6, C. C. Wissel (30) 6, C. Zerwick (28) 5, Peter Eppig (30) 5, J. Bermel (28) 5, Jos. Eppig, Jr. (28) 5, C. Deckelman (30) 4, A. J. Newburger (23) 4, Martin Schottler (30) 4, P. Kunzweiler (28) 4, Frank Ibert (30) 4, H. J. Wiemann (23) 2, Gus Diem (23) 0.

In New Jersey.

Sept. 5.—The scores made to-day in the monthly club shoot were as below, a handicap allowance of extra birds being allowed the weaker shooters:

No. 5 same: Huck 9 Black 8, Peck 5. W. H. HUCK, Sec'y.

BERGEN COUNTY GUN CLUB, OF HACKENSACK.

Sept. 7.—The following scores were made to-day by members of the Bergen County Gun Club, at the club's grounds, Hackensack, N. J.:

No. 1, 30 targets per man: Capt. A. W. Money 29, Lefferts 26, Bell 23, Harold B. Money 23, Linson 21, Van Keuren 21, Jackson 20, Chaffee 19, Fleischman 17, Ryan 16.

No. 2, same condi ions: Lefferts 28, Bell 26, Linson 23, H. B. Money 23, Capt. Money 22, Ryan 12.

No. 3, same conditions: Bell 26, H. B. Money 25, Chaffee 24, Capt. Money 24, Jackson 18, Ryan 14.

LABOR DAY HANDICAP AT HOLLYWOOD.

Sept. 7.—The main event at the Hollywood traps to-day was the Labor Day Handicap, 25 live birds per man, handicap allowance in yards and misses as kills. Albert Loening, of New York, was the winner, his allowance of two misses as kills making his score of 22 out of 25 equal to 24. Edgar Murphy and Phil Daly, Jr., both of whom killed 23 birds, divided second money. In a 15-bird race, $15 entrance, Al Ivins and Edgar Murphy killed straight and divided the pot. The scores in the Labor Day Handicap were as follows:

Loening (29).....2222022222122222121221222—24
Daly (30).....1221220122211022222222222—23

THE HOLLYWOOD CUP AT ELKWOOD PARK.

Sept 8.—The Hollywood cup, donated by Fred Hoey, was shot for to-day on the Elkwood Park grounds. A strong wind was blowing all the time, but the shooters did some good work, four out of the seven entries scoring 15 straight. Gustave Langen, on the 25yds. mark, outshot all his competitors, scoring 26 straight to win the cup. Al Ivins ran 25 straight before he dropped a qird, and his mark was the 30yds. line. Daly dropped out on the 4th round of the ties, McAlpin losing his first tie bird. The scores were:

G Langen (25).....2112112221112222222222112—26

A Definition of what Constitutes an Amateur.

THE New Jersey Amateur Trap-Shooters' League, an organization of comparatively recent date, has, as a direct consequence of its title, been forced to take up the question of what constitutes a professional or amateur. The protests made by the president of the League, C. F. Lenone, at the last shoot of the organization against certain members on teams taking part in the team race brought matters to a head.

A meeting was called to consider the protests, but no action was taken on account of the small attendance, action being postponed until a meeting to be held on Friday, Sept. 11. On that date only three clubs out of the five forming the League were represented: G. H Piercy, Endeavor Gun Club; Carl von Lengerke, Endeavor Gun Club, and (by proxy) Oritani Field Club; Thomas G. Bell, Bergen County Field Club. Neither Boiling Springs Gun Club nor Passaic City Gun Club were represented. Mr. Lenone, a member of the latter club, and also president of the League, being unable to be present. Noel E. Money, as a member of the Bergen County Gun Club, took part in the proceedings.

Mr. Piercy, as vice-president, took the chair in the absence of the president. After a general discussion as to the best course to pursue, the chairman left the chair and seconded Mr. Bell's motion that the protests be not sustained. Motion carried.

The secretary of the League, Mr. Bell, read a long letter from the Endeavor Gun Club putting forth its views on the questien of what makes a man a professional trap-shooter, and urging the League to take prompt action to settle the question so far as the League was concerned. In the above communication it set forth also certain definitions on amateurism and professionalism, offering the same for consideration by the League. The discussion of these rules and definitions covered a great deal of ground, and before adoption the rules themselves were subjected to a fair amount of pruning. Mr. Bell made a motion that the League appoint a committee of three men, not necessarily members of the organization, who should draw up definitions on the above points and present them to the League with a view to their being adopted. Mr. Bell's motion was not seconded, the opinion of the other members present being that the time to act had come.

The following definition of amateur and professional was finally adopted and will, we suppose, be accepted by the League:

"A shooter ceases to be an amateur by engaging in shooting either as a means of obtaining a livelihood or for gate receipts; the dropping of birds for place, or the arranging of divisions of moneys other than those allotted to him by his position in any event; accepting directly or indirectly for shooting any remuneration or compensation or expenses whatever. A shooter does not forfeit his amateur status by teaching or pursuing the art of shooting solely for the purpose of making a sale of guns or ammunition, but shooters in the employ of gun, powder, shot or ammunition manufacturers may be transferred to the professional class if in the opinion of this Association they are employed for this purpose only. Any shooter who refuses to answer any questions touching his amateur status to the satisfaction of this Association shall be declared to have forfeited his amateur status."

The handicaps for the ensuing three monthly team competitions were awarded as follows: Endeavor Gun Club and Boiling Springs Gun Club, scratch, each man on the team shooting at 30 targets; Passaic City Gun Club and Bergen County Gun Club, three extra targets per man; Oritani Field Club, five extra targets per man.

Under the constitution and by-laws of the League, no man who has once shot on a team is allowed to shoot on another team during the season. The score of Gus Greiff was, under that rule, ordered to be stricken from the score of the Endeavor Gun Club's team made on the Passaic City Gun Club's grounds, Aug. 29. The remainder of the team's total stands, and will be counted in the team averages at the end of the season.

Cook County Trap-Shooters' League.

CHICAGO, Ill., Sept. 5.—The scores given below were made to-day on the grounds of the Douglas Gun Club, the occasion being the sixth monthly contest of the Cook County Trap-Shooters' League:

W. D. KENYON, Sec'y.

Lake Side Rod and Gun Club.

BURLINGTON, Vt., Sept. 5.—Below are the scores made to-day by members of the Lake Side Rod and Gun Club at the regular weekly shoot held this afternoon. The recent tournament of the Interstate Association, held on our grounds, put new life in our members, and they anxiously waited for to-day's shoot, at which they were going to find out why "this one" or "that one" got away from them when they were holding as true as possible. I do not think they were satisfied, but will try again at our next shoot. You will see that there are a few new names among the shooters present, and that shows new life in our club—thanks to the Interstate Association. Scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

TWO HUNDRED DOLLARS ADDED MONEY.—The Fulton Gun Club, of Atlanta, Ga., will hold a two-days' shoot at targets and live birds on Sept. 23-24. The club will add $200 to the purses.—*Adv.*

PUBLISHERS' DEPARTMENT.

Good News from South Dakota.

THE glorious results of this season's harvest of golden grain will pour a stream of sound money into the pockets of every Dakota farmer.

South Dakota has thousands of acres of choice farming and ranch land lying east of the Missouri River, and within one day's ride from Chicago or Milwaukee, which can now be bought reasonably cheap, but which before the end of another year may be advanced in price.

The stock raising industry in South Dakota is profitable, and Eastern capital is now being invested in cattle and sheep growing in that State.

Diversified farming, the growing of live stock and the products of the dairy are placing South Dakota foremost in the ranks of the successful Western States.

Those desiring full information on the subject, and particularly those who wish to seek a new home or purchase land, are requested to correspond with W. E. Powell, General Immigration Agent, 410 Old Colony Building, Chicago, Ill., or to the local agent of the Chicago, Milwaukee & St. Paul Railway.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 26, 1896.

VOL. XLVII.—No. 13. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE

346 Broadway

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

NON-EXPORT LAWS.

THE laws forbidding export of game and fish from a State in which they are taken may be divided in two classes: one is of those which forbid export absolutely, and the second of those which limit it to taking out game only when accompanied by owner. Of the first type is the Connecticut law, which reads:

Sec. 2546. No person shall at any time kill any woodcock, ruffed grouse, or quail, for the purpose of conveying the same beyond the limits of this State; or shall transport, or have in possession with intent to procure the transportation beyond said limits, any of such birds killed within this State. The reception by any person within this State of any such bird or birds for shipment to a point without the State shall be *prima facie* evidence that said bird or birds were killed within the State, for the purpose of carrying the same beyond its limits. Sec. 2547. Any person violating any of the provisions of the preceding section shall be fined not less than seven nor more than fifty dollars.

The New York section relative to the transportation of venison is a good example of the laws of the second type; it reads:

Sec. 46. Deer or venison killed in this State shall not be transported to any point within or without the State from or through any of the counties thereof or possessed for that purpose, except as follows: One carcass or a part thereof may be transported from the county where killed when accompanied by the owner. No individual shall transport or accompany more than two deer in any one year under the above provision. The possession of deer or venison by a common carrier, or by any person in its employ then actually engaged in the business of such common carrier, unaccompanied by the owner, shall constitute a violation of this section by such common carrier. This section does not apply to the head and feet or skin of deer severed from the body. Whoever shall violate or attempt to violate the provisions of this section shall be deemed guilty of misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer or part thereof had in possession in violation of this section.

Similar provisions apply in New York to game birds and trout. These are only two of a score of statutes forbidding game exportation. Recent legislation has been directed along these lines. The principle has been shown to be the correct one, and it is encouraging to note that in States so widely separated as Texas and Vermont similar laws are now contemplated. While either of the two types will accomplish the purpose if the executive service is efficient, the choice between them depends upon the character of an individual State as a sporting resort. In Maine, for instance, where sportsman travel is a recognized factor of revenue, and every inducement is held out to bring sportsmen into the State, the export law permits the man who has caught his trout or killed his deer to carry the trophy home with him. This adds to the visitor's satisfaction, and in practice is shown not unduly to impair the game supply. On the other hand, in Connecticut a State which does not seek to attract outsiders for sport, and where there is no such army of sportsmen tourists, the best law is one which shuts off game exportation without reservation. As to Texas, which is bidding for revenue from Northern sportsmen, the law permitting the export of game accompanied by the owner would be the one best suited to secure the desired end; while Vermont, which does not invite sportsman travel, might adopt the system of absolute prohibition of export. We hope to see the non-export system extended to every State in the Union. The time has gone by when any one section can afford to supply game for the markets of another section. Deer, grouse and quail are no longer legitimate freight.

AUDUBON BIRD PLATES.

THE portrait of the Black Duck is the first one of a series of reproductions of the famous plates of Audubon's "Birds of America." The engraving is by photographic process direct from an original copy of the magnificent double elephant folio edition of 1827–35.

The FOREST AND STREAM has provided these reproductions of Audubon's bird portraits chiefly for the purpose of affording to its readers an opportunity of seeing for themselves the pictures of which every one has heard, but which few have ever been privileged to see in the original because of the extreme rarity and inaccessibility of the work. The copies of Audubon now in existence are confined to a few libraries and fewer individual possessors; and when the work falls upon the market, as it does now and then, it sells at prices ranging from $2,500 to $3,500.

Our reproductions are the most perfect that can be made with the wonderful engraving processes of the day; but a few short years ago to represent the original with such fidelity of detail and successful translation of the spirit of the artist's own hand would have been beyond the engraver's skill.

The birds we have chosen for illustration comprise several species of ducks—including the beautiful plate of the canvasback—two species of grouse and several of the waders.

BIRDS AND THE FARM AND GARDEN.

IN response to a demand for Miss Florence A. Merriam's paper, "How Birds Affect the Farm and Garden," we have reprinted it in a pamphlet of thirty-two pages, and it is now for sale at this office. Price, 5 cents per copy, postpaid; with special prices to individuals or bird protection societies who may wish it in quantities for distribution.

DELAWARE RIVER SALMON.

THE Pennsylvania Fish Commission has made repeated attempts to stock the Delaware River with salmon. In 1871 10,000 salmon eggs were brought from Canada, were hatched in Dutchess county, N. Y., and were sent to Easton, where the 2,500 surviving transportation were put out in the Bushkill, a tributary of the Delaware. In 1872, under the personal direction of Thad Norris, 11,000 more were put into a Delaware River tributary. Then in 1873 Prof. Baird sent to Pennsylvania a lot of eggs from Bucksport, Me., and the fry were put into the river at different points, making a total of 58,500 planted during the three years. The results were meager. In 1877 a 32in. salmon was taken in the Bushkill, and a few were caught in the Delaware; infrequent specimens were reported in 1878 and 1879, one of them weighing 25lbs.; then all trace of the fish was lost, and for ten years nothing further was attempted. The commonly accepted conclusion was that the Delaware and Susquehanna were not salmon waters; the files of FOREST AND STREAM for those years show that the Fish Commission had severe critics for its alleged misdirected zeal.

Ten years later, however, the project was taken up again in earnest, and in 1889 and 1891 400,000 eggs were hatched at Allentown and Corry and planted in the Delaware. There is reason to believe that some of the fish have survived, for several salmon have been taken in Delaware waters this year. Mr. Geo. B. Taylor reports in the New York *Times* that in July seven salmon were speared by "eel spearers" in Lakins Eddy, near Hancock Junction, on the East Branch. The identity of the fish was determined beyond question by Superintendent Edward Canfield, of the Ontario & Western Railroad. Again on Aug. 12 General Passenger Agent Anderson, of the same road, received for identification a "trout" from Walton, on the West Branch, which proved to be a salmon of seven pounds, and a photograph of another one weighing ten pounds. In addition to those taken, numerous fish have been seen leaping, which from the description given of them may be counted salmon. There appears to be a good basis of confidence that if the fish could be protected from the spearers we should in time see the Delaware a salmon river. It is preposterous that the enterprise should be defeated by the lawlessness of the gangs of spearers who infest those waters.

SNAP SHOTS.

The best word that could be said for the former New Jersey non-resident shooting law was that it shut out the untamed horde of songbird gunners who, without such check, invade the territory adjacent to New York and overrun farms and woodland. These shooters are for the most part of foreign origin and have brought with them to this country foreign notions of sport. Whatever flies is game; here as in Italy and France no bird is too small for their potting; they take everything. The statutes which forbid the killing of song and insectivorous birds have no meaning for them. Since the present Fish and Game Commission took hold of the work of protection in New Jersey and for the first time converted the game law into a living force, the monthly returns of the wardens have shown that these pot-hunting songbird gunners are contributing more than any other class of violators in fines for offenses in which they have been apprehended. Farmers, landowners and officials who have had experience with these gentry know perfectly well that they are a dangerous class of ruffians who must be dealt with in a summary way.

Occasionally in scuffles between the songbird shooters and the game wardens shots are fired and somebody is wounded. This happened in a Lyons Farms case last week when Game Warden W. H. Chandler was endeavoring to take into custody three Italians from Brooklyn, and shot one of them in the hip. The newspapers have expended a good deal of sympathy upon the victim, but the feeling is not shared by any New Jersey farmer who has ever been at close quarters with Italian songbird shooters from Brooklyn.

Mr. Hammond's paper on posted covers and on the ways of sportsmen who shoot over property not their own is an instructive lay sermon which deserves to have wide reading. A sportsman owes it not only to himself but to the entire fraternity to observe the rules of good conduct in his treatment of the farmer by whose tolerance he pursues his sport. He must remember that there are others who will come after him, and whose reception will be determined very largely by his own record with fence and stone wall.

Because of his own hardy nature and the roughness and inaccessibility of the cover he makes his home, the ruffed grouse is of all our upland game birds the one best equipped to take care of himself against pursuit by man. In Minnesota and Wisconsin the grouse is found in cover so dense that, as some one has said, it makes the sportsman tired even to look at it; and in the East he takes refuge in sanctuaries where one encumbered with a gun would not think of following. Experience has demonstrated that the partridge will hold its own against the shooter, but cannot withstand the work of the snarer.

The forthcoming report of the New York Fisheries, Game and Forest Commission promises to be a valuable document. It will be elaborately illustrated with fourteen colored plates of fishes, one of deer, and another of the ring-necked pheasant. The text will comprise special papers on fish and game.

And now we have the regular annual reports of destitution and starvation on the Labrador coast, with appeals for help. The most humane disposition of the problem would be the wholesale deportation of the unhappy people from that bleak land to a more favored clime. The world is wide; there is room for all in those quarters of the globe where comfortable living is practicable the year around; and it is one of the mysteries of the human kind that people will elect to dwell in such unfavored countries as Labrador.

The Sportsman Tourist.

ARKANSAS BEAR LORE.

MOUNTAINS OF POLK COUNTY, Arkansas.—On June 29 we left Dallas with our equipage with the proposed object of exploring the lodes of manganese ores in the different mountains of the Cossetot range in Polk county, Arkansas, but determined to get all enjoyment possible from the sport that the bass of the mountain streams could furnish. We were Messrs. F. M. Reeves, Edwin Walters, J. F. Ward, and myself.

We left Dallas early in the morning and reached the foothills of the mountain about 11 o'clock. As we approached the ford of Board Camp Creek, a deep pool resting against a base of a high rocky cliff attracted our attention, and on examination we saw plenty of black bass from 1 to 2lbs. in the clear, pure water, basking close to the rocky cliff. We decided to camp and have broiled bass for dinner. The fish refused flies and spoons, so an old gunny sack was put to use for catching minnows, and it was astonishing how hungry those bass were. Although standing in plain sight of them, at every cast of a minnow several would rush for the bait, and the first one would swallow it without ceremony. As we had agreed previously that our catch should not exceed twelve at any one time, as soon as the dozen were secured we ceased fishing, and it did seem that, as Capt. Ward said, the many left in the pool were disappointed in not being given a chance to get a minnow for dinner.

Leaving the creek valley, we followed the road up among the giant pines, which here cover all mountain tops, and over the top of the Cossetot Mountain down to the valley of the Cossetot River for several miles to Twin Springs, in the gap where the river breaks through the Hannah Mountain. Here we encamped by the east end of the West Hannah Mountain, near the home of Capt. Bill Wylie, the noted bear hunter of this region; and after supper we were visited by him.

Wylie stands 6ft. and has muscles of iron. He is afraid of nothing but the extra large black and gray timber wolves of these mountains. He told us that two years before a pack had driven him and a companion upon a towering rock, and had given up the battle only after the men had emptied the magazines of their Winchesters three times in the dim light from their nearby camp-fire, leaving thirty-one dead wolves upon the field of battle. "Since that night," Captain Bill said, "hit haint any use to deny hit, I haint any use for and haint ashamed to deny I'm afraid of the cussed varmints."

"Is there much game in these mountains now, Captain?" I asked.

"There's a big lot of turkeys, a heap of deer and some b'ar; but hit's only time now to kill old gobblers and bucks, and the b'ars are going to begin to git fat on the huckleberries, and just as soon as he gits in good order on acorns I'd like to have you fellows here when I go after one big he there is in here."

The geologist asked, "Do you know all the bears in this region?"

"Pritty well, sum-at. There's an old she and two cubs on this West Hannah; a she and one cub and a two-year-old he on East Hannah; a three-year-old he on East Sugar Tree, and a big old he that I can't git acquainted with. I don't know whether he sleeps on Eagle* and feeds on Fodder, or whether he feeds on Eagle and sleeps on Fodder, but soon 's he begins to git in good order, he's my meat."

"How can you tell when he gets in good order?" asked the geologist, to be met with such a look of disgust, surprise and commiseration as the bear hunter looked at him for a moment, and then walked to the fire, where he applied a live coal to his pipe, puffed a moment, came back and sat down, replying, "Wall, I'll be gol-darned. I thought you knowed sumthing. Why, when a b'ar gets in good order he hulls his acorns. When he's poor he's like a hungry hog; he eats them hulls and all. But just as soon as he begin to git fat he takes time and bites the shucks off, and only eats the kernels. When you're on his track if you look at his droppings you can mighty soon tell by the acorn hulls coming through whether he's poor or fat."

"How can you tell whether it's a two-year-old or a three-year-old he bear on Sugar Tree Mountain or the Hannah Mountain?" I asked.

"Wall, you lawyers don't know everything, but you can beat the devil axin' questions. I'll tell you all about b'ars if you'll just let me alone. We a he one gets to be two years old he begins to think he's something of a b'ar, and about once a day he's got to measure how he's growed, by reachin' up and gnawing and scratching a big tree, leavin' his mark. He gits more sense when he's three years old and has had some tussels with other he-s, and he's mighty careful about his mark and only makes hit about once a week."

"What does a bear live on in spring and early summer?" I asked, at the same time offering my tobacco pouch to Capt. Bill for a fresh fill.

"When he's got the mast all cleaned out on the mountains by spring he's mighty fat, and can stand poor picking for a time, and hit's mighty poor picking he gits, bugs, grubs, once in a while a pig or shote, till suckers runs, and then he goes grubbing, standing in the riffles of the big creeks and rivers, and grubs lots of suckers out of the lot crowdin' up stream, throwin' them on the bank with one swipe of his paw. When he thinks he's grabbed all he can eat he makes his meal, unless a bigger one comes along; and then, mister, he don't make any fuss, but lights out for another shoal.

"After the suckers are gone he gits some crayfish, but has a mighty poor living till huckleberries git ripe, and then he camps in the patch and eats and sleeps till dewberries git ripe; and then it's dewberries and huckleberries all through May. The high blackberries git ripe in June and 'arly in July the white washitaws† are ripe, and he has a picknic till fox grapes are fit, and by the time they're gone acorns and chinquapins are gittin' fit to eat, and when you see by the trees that he's begin lappaing‡ he's fat enough to make mighty good eating; and you see he lives about as well the year round as most folks."

As Captain Bill sat quietly smoking after the delivery of this long speech, I remarked: "Captain, from the number of bears you know of in this region, they must be pretty thick and more plenty here than usual, are they not?"

He blew a cloud of tobacco smoke and said: "No, sir, there hain't any bears in here to speak of, but if you will go with me this fall over in the Kiomesh§ or the Blue Bouncer Mountains when the bears is lapping you'll think from the dead leaves on the trees that there's be'n a big fire, and in one day with Ketchum [his dog, about the size of a Scotch terrier, and of unknown breed] we can kill more bear than two horses can pack out."

As I sat meditating on the knowledge of nature the old man had acquired in the school of experience, and how superior it was for ministering to his wants to all that I had learned in school and college, the subject of conversation was changed and in a short time Capt. Bill took his departure, and the drowsy god of slumber chained us all until day broke in the valley at 5 o'clock next morning.

After a dip in the waters of the Cossetot, what enjoyment we realized as we breathed in the ozone of this mountain atmosphere laden with the perfume of the pine, sweet-william, pennyroyal and wild honeysuckle, and as we watched the sun rise just east of the slope of East Hannah Mountain, over the crest of Raven Roost Mountain, thirty-five miles away, in Montgomery county, the scene defies words of description. Ten minutes' work at the pool above the ford with jointed rod and minnows gave us our twelve black bass, each weighing about 1¼lbs. when caught, for our broiler, and as soon as breakfast was eaten I started ahead of the party on foot, following the road as it passed up over a spur of West Hannah to avoid a long bend of the river around the foothills of the mountain, carrying my 10-gauge breech-loading shotgun, in case I might be in danger from the attacks of the gray and fox squirrels, whose number is legion.

As I reached the crest of the spur I paused and gazed in admiration at the tall trunks of the pines and oaks rising heavenward, with no trace of hand of man. Walking on a short distance, I saw a small dust cloud hovering over the road about 200yds. ahead of me, which by close attention I discovered to be caused by a mother wild turkey and her brood of about two dozen young, about as large as full-grown quail, taking a dust bath. As I stood watching them the watchful eye of the mother saw me, and as she jumped into the air with a cry of "*q-r-r-r-tt!*" all darted down the mountain side and disappeared in the bushes.

Half a mile further on, as I looked across a small gulch, at a distance of about 250yds., I saw a deer family taking a morning walk—a stately buck, with wide, branching many-pointed horns, followed by a meek-looking doe, with a lovely spotted fawn closing up the rear. As they did not discover my presence, I watched their stately march down the mountain side until they vanished from sight in the underbrush.

We made our camp that night near the end of West Hannah. The next morning we crossed over another spur of West Hannah Mountain to the bed of Brushy Creek Valley and ascended it until we came to the gap in the Sugar Tree Mountain and camped in an empty cabin here. At this camp we were visited by Capt. George Tibbs, a Virginian, who made the charge with Pickett's Brigade at Gettysburg, and who is noted for his prowess as a deer hunter, as Capt. Bill is as a bear hunter. We gathered around the light knot fire in the stone fireplace of the cabin in conversation and smoking, and it is astonishing what a place in the lives of these people the fat dry pine light knots fill. As an illustration, we stopped for a drink of water next day on our return journey at the cabin of a former West Virginian, who had filed upon a homestead on a mountain slope of the 160 acres, of which not more than ten acres can be cultivated. I asked him how he ever came to select such a rocky mountain side for a home. "Mister," he said, "that patch of clearing will raise all the corn and truck we want; there's lots of grass and mast on the mounting for hogs and cattle; there's as good a spring as you'll find anywheres, which never goes dry; and there's more light knots on that mounting than any place you ever seed."

Capt. Tibbs has a tame doe running loose accompanied by her two yearling bucks and her two fawns as tame and as fond of petting as any Jersey cow. The herd is protected by a bell upon the neck of the doe and strips of red flannel around the necks of the young ones.

"Don't the hounds run your deer off, Captain?" I asked.

"We don't allow hounds to run deer in this neck of woods, leastwise they don't run long after we hear them, our deer's got to be still-hunted. Two hounds came in here a short time ago and got after my two yearlings and I took my big shotgun and got after them. Mister, I don't know where them hounds come from, but I know where they're now, and they won't run no more deer." Asked about turkeys, he said he had three hens with big broods of about two dozen each on West Sugar Tree, four more on East Sugar Tree, and two or three dozen more up toward Boar's Tusk and Smoke Rock Mountains, and there was one big drove of about fifty big gobblers that stayed nowhere, but just gadded round from mountain to mountain.

The conversation changing to incidents of the civil war, our geologist, a veteran of "the Blue," and Capts. Ward and Tibbs, veterans of "the Gray," fought the battles of the war over again, long after, as I was told next morning, "You dropped over and snored so you almost shook the cabin, and kept it up till we had to quit talking."

At peep of day next morning the cabin door was opened by Capt. Tibbs. He said he had invited himself to breakfast, and not wanting all the bass caught out of the Brushy, had brought something to take the place of the fish, and he deposited upon the cabin table six three-quarter grown chickens all ready for the broiler. While we had not expected such a change from our regular ration of twelve broiled bass for each meal, we gladly accepted it, and were soon partaking of hot corn bread, canned corn, broiled chicken and black coffee. And what appetites we had for the bountiful supply! If all invalids suffering from dyspepsia or lung troubles could but spend the month of May in camp in the Cossetot Mountains by the side of some of their clear running streams, drinking the clear, cold, absolutely pure water of the legion of springs, and breathing the life-quickening, ozone-laden air, perfumed by the breath of the pines and wild honeysuckle, they would gain more health and strength in one month than can be obtained in swallowing the remedies of their favorite physicians for years.

After breakfast we examined the rocks in the tunnel and climbed the mountain side to the shaft on the manganese lode, examined five other lodes of manganese, and then descended to the valley of the creek, inspecting two veins of kaolin. I can see that the advent of the railroad into and through this country means an entire change of everything in the near future. Miners will develop these stores of mineral wealth, farmers will clear and cultivate the sections now covered by heavy timber, towns and cities will spring up to minister to the wants of the miners and farmers, and in addition to all these will come an army of sportsmen to deal destruction to fish and game. It can be but a few years at most until there will not be a deer, bear or turkey here, where they are now so plentiful. And I could but ask myself the questions, "Where can such men as Captains Tibbs and Wylie go and find contented homes? Where can they discover a region like this, so full of game? Do they realize what the whistling of the railway locomotive in these mountain solitudes will do for them?"

These Arkansas mountain hunters are a new class of men for me to become acquainted with. They are free, generous, warm-hearted. The latch-string is always outside the door of their cabins, and their time is always at the disposal of the true sportsman who can rough it with them in camp and on trail; and who, like them, can (or will learn to) still hunt deer or bears, and be satisfied to kill enough for present needs; will do his share of the camp toil and not attempt to boss it over them. But woe to the game hog who wishes to take away with him all the game he can kill; they will turn out and drive all the game out of his reach, and if he brings hounds with him to run the deer the dogs will never return to camp. As for the dude sportsman, who relies upon his wealth to hire guides to find and kill game while he sits in state in camp, he will find that his money is useless, and that their services and knowledge of game and mountains are not for sale at any price.

On our return to the cabin we broke camp and returned to Dallas, without further incident except drinking of the clear water of Wooden Shoe Spring. This is encased in a rock casket attached to the rock of the mountain side, exactly resembling a large wooden shoe, the water filling the shoe about 4in. deep, flowing in at some point in the toe and overflowing at the heel, colorless as ether and icy cold. It is a queer spring in its queer setting of rock.

W. F. RIGHTMIRE.

* Eagle Peak and Fodder Stack are local names for two mountain peaks about half a mile apart, each about five miles long and between Cossetot Mountain and the Hannah Mountains, which do not approach the Cossetot River valley.

† White washataw is the common name of a wild white grape (the ouachita, as named by horticulturists) that is as large as the Concord and of a most delicious flavor, unequaled by any cultivated grape. It grows so abundantly upon the north and west slopes of the mountains that its vines form a network barring all travel except in the game paths under the vines.

‡ Lapping is the name given to the action of bears breaking the smaller boughs and branches of oak and chinquapin trees (a small species of chestnut) as they pull themselves up to the larger limbs that will bear their weight, for they feed upon the acorns and nuts before these are ripe enough to fall to the ground.

§ Kiomesh is the local term applied to the Kiomeche Mountains, forty miles west of Dallas in the Indian Territory, a game and fish paradise, fifteen miles from any settlement of either white men or Choctaw Indians. The Blue Bouncer Mountain is one of this range.

Natural History.

AUDUBON BIRD PLATES.

A series of reproductions of Audubon plates of game birds, from the original edition, 1827-35. Half-tone engravings from photograph made especially for FOREST AND STREAM. The description of the Black Duck, or Dusky Duck, which follows, is from Audubon's "Ornithological Biography."

THE DUSKY DUCK.

Anas obscura, GMEL.

PLATE CCCII.—MALE AND FEMALE.

THIS species, which is known in all parts of the United States by the name of "black duck," extends its migrations from the Straits of Belle Isle, on the coast of Labrador, to the province of Texas. Strange as the fact may appear, it breeds in both these countries, as well as in many of the intermediate districts. On May 10, 1833, I found it breeding along the marshy edges of inland pools, near the Bay of Fundy, and on Whitehead Island, in the same bay, saw several young birds of the same species, which, although apparently not more than a week old, were extremely active both on land and in the water. On April 30, 1837, my son discovered a nest on Galveston Island, in Texas. It was formed of grass and feathers, the eggs, eight in number, lying on the former, surrounded with the down and some feathers of the bird, to the height of about 3in. The internal diameter of the nest was about 6in., and its walls were nearly 3in. in thickness. The female was sitting, but flew off in silence as he approached. The situation selected was a clump of tall, slender grass, on a rather sandy ridge, more than a hundred yards from the nearest water, but surrounded by partially dried salt marshes. On the same island, in the course of several successive days, we saw many of these ducks, which by their actions showed that they also had nests. I may here state my belief that the gadwell, blue-winged teal, green-winged teal, mallard, American widgeon and spoon-billed duck all breed in that country, as I observed them there late in May, when they were evidently paired. How far this fact may harmonize with the theories of writers respecting the migration of birds in general is more than I can at present stop to consider. I have found the black duck breeding on lakes near the Mississippi as far as its confluence with the Ohio, as well as in Pennsylvania and New Jersey; and every one acquainted with its habits will tell you that it rears its young in all the Eastern States intervening between that last mentioned and the St. Lawrence, and is of not less frequent occurrence along the margins of all our great lakes. It is even found on the Columbia River and on the streams of the Rocky Mountains; but as Dr. Richardson has not mentioned his having observed it in Hudson's Bay or further north, we may suppose that it does not visit those countries.

On arriving in Labrador on June 17, 1833, we found the dusky ducks in the act of incubation, but for nearly a month after met with no young birds, which induced me to suppose that this species does not reach that country at

AUDUBON'S PORTRAIT OF THE BLACK DUCK.

so early a period as many others, but lingers behind so as to be nearly four weeks later than some of them. At the end of four weeks after our arrival all the females we met with had young broods, which they led about the fresh-water ponds and along their margins, either in search of food or to secure them from danger. None of these broods exceeded seven or eight in number, and, at this early period of their life, we found them covered with long soft down of a deep brown color. When alarmed they would dive with great celerity several times in succession, but soon became fatigued, made for the shore, ran a few feet from the water and squatted among the grass, where they were easily caught either by some of our party or by the gulls, which are constantly on the lookout for such dainty food. At other times, as soon as the mother apprehends danger, she calls her young around her, when the little things form themselves into a line in her wake and carefully follow her in all her movements. If a hawk or a gull makes a plunge toward them she utters a loud cry of alarm and then runs as it were along the surface of the water, when the young dive as quick as lightning and do not rise again until they find themselves among the weeds or the rocks along the shores. When they thus dive they separate and pursue different directions, and on reaching the land lie close among the herbage until assured by the well-known voice of their parent that the danger is over. If they have often been disturbed in one pond their anxious mother leads them overland to another; but she never, I believe, conducts them to the open sea until they are able to fly. The young grow with remarkable rapidity, for by the middle of August they almost equal their parents in size, and their apprehension of danger keeps pace with their growth; for at the period of their southward migration, which takes place in the beginning of September, they are as wild and as cunning as the oldest and most experienced of their species. Each brood migrates separately, and the old males, which abandoned the females when incubation commenced, set out in groups of eight or ten. Indeed, it is not common to see birds of this species assemble in such flocks as their relatives, the mallards, although they at times associate with almost all the fresh-water ducks.

The males, on leaving the females, join together in small bands and retire into the interior of the marshes, where they remain until their moult is completed. My young friend Cooledge brought me a pair shot on the Fourth of July in Labrador in so ragged a state that very few feathers remained even on the wings. On his approaching them they skimmed over the surface of the water with such rapidity that when shot at they seemed as if flying away. On examining these individuals I found them to be sterile, and I am of opinion that those which are prolific moult at a later period, nature thus giving more protracted vigor to those which have charge of a young brood. I think, reader, you will be of the same opinion when I have told you that on July 5 I found some which had young, and which were still in full plumage, and others that were broodless, almost destitute of feathers.

As many of the nests found in Labrador differed from the one mentioned above, I will give you an account of them. In several instances we found them imbedded in the deep moss at the distance of a few feet or yards from the water. They were composed of a great quantity of dry grass and other vegetable substances, and the eggs were always directly on this bed, without the intervention of the down and feathers, which, however, surrounded them, and which, as I observed, the bird always uses to cover them when she is about to leave the nest for a time. Should she be deprived of her eggs, she goes in search of a male and lays another set; but unless a robbery of this kind happens she raises only a single brood in the season. But although this is the case in Labrador, I was assured that this species rears two broods yearly in Texas, although, having been but a short time in that country, I cannot vouch for the truth of this assertion. The eggs are 2¼in. in length, 1⅝in. in breadth, shaped like those of the domestic fowl, with a smooth surface and of a uniform yellowish white color, like that of ivory tarnished by long exposure. The young, like those of the mallard, acquire the full beauty of their plumage before the season of reproduction commences, but exhibit none of the curious changes which that species undergoes.

Although the dusky duck is often seen on salt-water bays or inlets, it resembles the mallard in its habits, being fond of swampy marshes, ricefields and the shady margins of our rivers during the whole of its stay in such portions of the Southern States as it is known to breed in. They are equally voracious, and may sometimes be seen with their crops so protruded as to destroy the natural elegance of their forms. They devour with the greatest eagerness water lizards, young frogs and toads, tadpoles, all sorts of insects, acorns, beechnuts, and every kind of grain that they can obtain. They also at times seize on small quadrupeds, gobble up earthworms and leeches, and when in salt water feed on shellfish. When on the water, they often procure their food by immersing their heads and necks, and, like the mallard, sift the produce of muddy pools. Like that species also, they will descend in a spiral manner from on high to alight under an oak or a beech when they have discovered the mast to be abundant.

Shy and vigilant, they are with difficulty approached by the gunner, unless under cover or on horseback, or in what sportsmen call floats, or shallow boats made for the purpose of procuring waterfowl. They are, however, easily caught in traps set on the margins of waters to which they resort, and baited with Indian corn, rice or other grain. They may also be enticed to wheel around, and even alight, by imitating their notes, which in both sexes seem to me almost precisely to resemble those of the mallard. From that species indeed they scarcely differ in external form, excepting in wanting the curiously recurved feathers of the tail, which nature, as if clearly to distinguish the two species, had purposely omitted in them.

The flight of this duck, which, in as far as I know, is peculiar to America, is powerful, rapid and as sustained as that of the mallard. While traveling by day they may be distinguished from that species by the whiteness of their lower wing coverts, which form a strong contrast to the deep tints of the rest of their plumage, and which I have attempted to represent in the figure of the female bird in my plate. Their progress through the air, when at full speed, must, I think, be at the rate of more than a mile a minute, or about seventy miles in an hour. When about to alight they descend with double rapidity, causing a strong rustling sound by the weight of their compact body and the rapid movements of their pointed wings. When alarmed by a shot or otherwise, they rise off their feet by a single powerful spring, fly directly upward for 8 or 10yds., and then proceed in a straight line. Now, if you are an expert hand, is the moment to touch your trigger, and if you delay be sure your shot will fall short.

As it is attached to particular feeding grounds and returns to them until greatly molested, you may by secreting yourself within shooting distance anticipate a good result; for even although shot at, it will reappear several times in succession in the course of a few hours, unless it has been wounded. The gunners in the vicinity of Boston in Massachusetts, who kill great numbers of these birds on account of the high price obtained for them in the fine market of that beautiful and hospitable city, procure them in the following manner: They keep live decoy ducks of the mallard kind, which they take with them in their floats or boats. On arriving at a place which they know to be suitable, they push or haul their boat into some small nook and conceal it among the grass or rushes. Then they place their decoys, one in front of their ambush, the rest on either side; each having a line attached to one of its feet with a stone at the other end, by which it is kept as if riding at anchor. One of the birds is retained in the boat, where the gunner lies concealed, and in cold weather amply covered with thick and heavy clothing. No sooner is all in order than the decoy ducks, should some wild birds appear, sound their call-notes, anxious as they feel to be delivered from their sad bondage. Should this fail to produce the desired effect of drawing the wild ducks near, the poor bird in the boat is pinched on the rump, when it immediately calls aloud. Those at anchor respond and the joint clamor attracts the travelers, who now check their onward speed, wheel several times over the spot and at last alight. The gunner seldom waits long for a shot, and often kills fifteen or twenty of the black ducks at a single discharge of his huge piece, which is not infrequently charged with as much as ¼lb. of powder and ¾lb. of shot.

The black ducks generally appear in the Sound of Long Island in September or October, but in very cold weather proceed southward, while those which breed in Texas, as I have been informed, remain there all the year. At their first arrival they betake themselves to the fresh-water ponds and soon become fat, when they afford excellent eating; but when the ponds are covered with ice and they are forced to betake themselves to estuaries or inlets of the sea, their flesh becomes less juicy and assumes a fishy flavor. During the continued frost they collect into larger bodies than at any other time, a flock once alighted seeming to attract others, until at last hundreds of them meet, especially in the dawn and toward sunset. The larger the flock, however, the more difficult it is to approach it, for many sentinels are seen on the lookout while the rest are asleep or feeding along the shores. Unlike the "sea ducks," this species does not ride at anchor, as it were, during its hours of repose.

My friend, the Rev. Dr. John Bachman, assures me that this bird, which some years ago was rather scarce in South Carolina, is now becoming quite abundant in that State, where, during autumn and winter, it resorts to the ricefields. After feeding a few weeks on the seeds it becomes fat, juicy and tender. He adds that the further inland the more plentifully does it occur, which may be owing to the many steamers that ply on the rivers along the sea coast, where very few are to be seen. They are, however, followed in their retreats and shot in great numbers, so that the markets of Charleston are now amply supplied with them. He also informs me that he has known hybrid broods produced by a male of this species and the common domestic duck, and that he had three of these hybrid females, the eggs of all of which were productive. The young birds were larger than either of their parents, but although they laid eggs in the course of the following spring, not one of those proved impregnated. He further states that he procured three nests of the dusky duck in the State of New York.

The young of this species, in the early part of autumn, afford delicious eating, and in my estimation are much superior in this respect to the more celebrated canvas-back duck. That the species should not before now have been brought into a state of perfect domestication only indicates our reluctance unnecessarily to augment the comforts which have been so bountifully accorded by nature to the inhabitants of this happy country. In our eastern markets the price of these birds is from $1 to $1.50 the pair. They are dearer at New Orleans, but much cheaper in the States of Ohio and Kentucky, where they are still more abundant. Their feathers are elastic and as valuable as those of any other species.

I have represented a pair of these birds procured in the full perfection of their plumage.

RECOVERY FROM RATTLESNAKE BITE.

Editor Forest and Stream:

It is perhaps worth the space in your columns to chronicle authentic facts in regard to snakes occasionally, and I perceive that it is done.

I am prepared to supply an affidavit to all statements about snakes that I make, because it is sometimes intimated that snake lore is unreliable—like that of fish and politics.

I solemnly assert that a Chinaman was bitten by a rattlesnake in this vicinity about a week ago, and at this writing the man survives.

The Chinaman was engaged in placer mining, and in removing some stones he aroused the rattler and endeavored to kill it. The snake ran off, according to the Chinaman's account, but when he reached for a stone it turned unexpectedly and struck him above the middle finger on his hand. The Chinaman sucked the wound, tied a string above it on his arm and came to Shasta, walking about four miles. He had been bitten over two hours when he reached medical attendance.

I interviewed both the patient and the physician. The latter, Dr. T. J. Edgecomb, of Shasta, stated his treatment of the case to have been as follows: Ben, the Chinaman, applied for treatment for a rattlesnake bite about 7 P. M., having been bitten about two and a half hours. He was bitten on the first phalanx of middle finger and had a ligature at the elbow joint, but not tight enough to be of much benefit. This was tightened immediately and kept so for eighteen hours, being loosened for a few minutes every two or three hours.

The wound was thoroughly cauterized with C. P. nitric acid. The forearm and hand were considerably swollen, and the swelling continued to extend upward until the chest was involved the fourth day and was much discolored. The arm was bathed once or twice with ammonia water and later with tincture of iodine and carbolic acid. For the first twelve hours whisky and quinine was given freely and afterward iodide of potash.

The swelling began to subside on the fourth day after the man was bitten and he went to work on the tenth day completely recovered.

The snake was a medium-sized rattler and ornamented with eight rattles. The Chinaman was of the ordinary variety found in the mines hereabouts. RANSACKER.

SHASTA, Cal., Sept. 5.

THE GOODNIGHT BUFFALO HERD.

PETTY, Texas, Aug 26.—*Editor Forest and Stream:* The domesticated buffalo, of which a small herd still remains in western Texas, are the property of Mr. Chas. Goodnight, who is one of the largest ranchmen in the State.

He started the buffalo herd in June, 1878, by roping young calves from among the few wild ones that were left at that time near his ranch. This was done at the suggestion of Mrs. Goodnight.

There are now forty full-blood buffalo in this herd, with a number of half and three-quarter bloods. Four have been lost by various accidents, and twelve head have been sold at an average of a little over $300 each. Those sold were the oldest cows and oldest bulls. Mr. Goodnight still has for sale four very large bulls, which will weigh about 2,000lbs. each.

From these facts it will readily be seen that Mr. Goodnight's experience with the domestic buffalo has been very satisfactory. It shows how easily the species could be maintained. If a few of our enterprising ranch owners would procure a sufficient number of the young to get a start there would be in a few years, if handled as Mr. Goodnight has handled his, a great increase in the number of the domestic animal. It is by no means an unprofitable venture, for all those which Mr. Goodnight has sold have netted him a very respectable return.

If one could make a trip to Mr. Goodnight's ranch he would be treated to a rare chance of seeing and studying almost the last remaining herd of the noblest and largest of North American large wild game animals. PROVO.

[Mr. Goodnight's herd is one of the largest, being only exceeded by those of Charles Allard (230) and Austin Corbin (75). These numbers include this spring's calves.]

Kingsnake and Blacksnake.

THE following is an interesting paragraph in a letter sent to friends here by Harry Hammond, formerly of this city, who is now making his home in Florida: "To-day I had the good luck to see a curious sight, that of one snake killing and swallowing another. We came on the scene just as a kingsnake was killing a blacksnake, each a little over 3ft. long. The king was tied and coiled around the black, and the latter's tail could just wriggle. After a few minutes, during which the king tied himself in the most curious knots and ran his head up and down his victim's writhing body, biting it here and there as if examining his supper, he turned to the black's head, gave it a preliminary bite, and then slowly proceeded to take the blacksnake into camp. It seemed impossible that he could swallow a snake as long and as large as himself, but he did. This is how he did it: He would stretch his head as far as possible, get his teeth hooked in his victim's scales, then slip his body up till it was in wrinkles at his neck and for some way down, then loose his tooth hold and slide his head forward for another grip, just as if you were putting on a tight glove, in fact. It was the most interesting operation I think I ever witnessed, and the king swallowed all but 3in. of the tail of the poor blacksnake, and then, with that dangling from his mouth, glided off into the grass. We let him go, as he is a known enemy of the rattlesnakes, and often kills them."—*Indianapolis Journal.*

The Plates of Audubon's Work.

PORTLAND, Conn., Sept. 14.—*Editor Forest and Stream:* In your issue for Sept. 12 Reignolds asks about the final disposition of the original copperplates of Audubon's birds, elephant folio edition. I have two: plate XLVII., ruby-throated hummingbird, and plate CCLXVII., arctic yager. They were given me by the Hon. Thos. R. Pickering, President of the Pickering Governor Co., of this place, who purchased a number of them several years ago for old metal in a junk shop in New York city. All of the plates were scratched and bent, those in my possession being the only ones in the lot that could be put in fairly good condition. JNO. H. SAGE.

[We believe that some of the copperplates may be seen framed in the American Museum of Natural History in New York. These, if we recollect aright, were a gift to the museum by Wm. E. Dodge. There are also some in the Smithsonian Institution in Washington.]

Wild Pigeons in Illinois.

JERSEYVILLE, Ill., Sept. 14.—Last Sunday, the 6th, a small flock of wild pigeons, seven in number, was seen by Mr. Fred. Bertman, of this city, flying southeast at an early hour in the morning. The same evening Mr. B. saw a bunch of like number going northwest, and from this fact concluded it was the same bunch he had noticed in the morning.

No other notice of these birds has been taken, and it is not known whether they are stopping for a time in their annual journey south or whether it is but a stray bunch, the lone survivors of the great droves of pigeons that once made this section their regular stopping place during their migrations.

Stray bunches are still occasionally seen, and three years ago one was killed in our camp on the Illinois River. L. S. HANSELL.

Encounter with Mountain Lions.

SHASTA, Cal., Sept. 5.—A German by the name of Sieger, living on the Sacramento River, twenty miles north of here, had a desperate encounter with a pair of mountain lions or panthers a few days ago.

He shot one of the animals, fatally wounding it, but its cries brought its mate upon the scene. Sieger killed the

second one, but in the meantime the first succeeded in killing his dog, a large hound, and then attacked Sieger. The man was almost stripped of clothing by the animal and severely cut and torn. RANSACKER.

New England Copperheads Again.

MR. WM. H. AVIS notes the recent killing of a rattlesnake in the vicinity of Hamden, Conn., near New Haven, and of two copperheads in the same locality. Mr. Thos. J. Morrow sends us a note of the killing of two copperheads on Mt. Tom, Massachusetts, in the current month.

Game Bag and Gun.

DID IT EVER HAPPEN TO YOU?

SEPTEMBER 15 arrived at last. It is not necessary to inform the sportsmen of Massachusetts that I was anxious for its coming; they all know what Sept. 15 in this State means, and they were probably as anxious as myself for its arrival.

The night of the 14th I retired early, in order that I might get a good night's rest and be in good condition to start on the first train on the following morning for the covers, where I had roamed through nearly every Sunday since last May with my good setter friend Rusty. We had always found our brood of patties and woodies in about the same locality each time we visited the covers, and we had watched their rapid growth with pleasure from the little wee fellows to almost full-grown, strong birds. Each Sunday I would tickle myself with the anticipated pleasure that Sept. 15 would bring with its arrival. On our Sunday outings we would roam for hours through the birches and alders, never once meeting or seeing a sign of a human being.

As I said before, I retired on the 14th early, but with a feeling of uneasiness. Suppose some native hunter runs into my marked broods before the first train can land me in the town, fifteen miles from the Hub. Oh, but no! I never met any living person in my cover in all my wanderings this summer. With this last thought I dropped off to sleep.

When I awoke the glorious 15th had arrived. Hustling into my togs and snatching a hasty lunch, I whistled to Rusty, and in a few minutes we were on the first train on our way to pay our friends a visit with gun and shot.

When within about five minutes' walk of the first small cover, where my friends the partridge family resided, I saw a sight that almost made my heart stop beating.

What was that?

I wiped my eyes. Do I see aright? It can't be true. Surely no one would waste time in that small cover.

Ah yes, too true! for out trotted friend V.'s pointer that I knew so well, followed a little later by V. himself, with a well-filled bag. It was now 7 A. M.—he a native just going home after his early morning sport, and I an outsider just going in.

I hunted the covers out, but not a feather did I start till late in the afternoon, when I succeeded in bagging one partridge; then started for home, happy with the world in general, because it was Sept. 15 and I had not returned empty handed. KIRK.

BOSTON, Mass.

SPORT IN NOVA SCOTIA.

Editor Forest and Stream:

Your correspondent C. B. T., in issue of Sept. 12, makes some statements which, for the benefit of brother sportsmen, I am afraid to let pass unchallenged. And first I must ask his pardon. I can see he is a stranger to Nova Scotia, and I am afraid his credulity has been sorely taxed by the different people he has met, who all had axes to grind.

Last year, when on my way to a hunting ground in New Brunswick, I was approached on the train by a man purporting to be the proprietor of a hotel in Campbellton with the following story, which, in short, was to the effect that the week previous he, in company with another, had spent four days moose hunting on the outskirts of the town, and had each killed a very large moose. One of them, among other unheard of things, had horns spreading 14ft. from tip to tip. Needless to say, I told him I would be sure to come to Campbellton to hunt the next time. This actually was told me on the train, and the man was sober too. I have often wondered since if the man really thought I would believe him.

However, to our subject. First, in place of being known only to a favored few, the country is overrun with hunters, so much so, in fact, that time and again I have been moose calling, and on going out to the barrens some still morning have been exasperated to hear, some mile or so away, the sound of some one else calling too; or when making camp to hear in the stillness of the evening some other camper's axe ringing on the trees, and all this, too, fifty miles or more from the nearest house. Surely there are more here than the "favored few." There are moose here, and lots of them too; but you cannot get them by simply going out with your canoe, rifle and camp outfit, and expect to find Mr. Moose waiting to take his lead pill. Oh, no! not by a good deal.

I have been lucky, never having been skunked but once, and that my first hunt. However, I know men, and good hunters they are, who go out year after year and often fail to make connections. There are four men in Nova Scotia who, if you will give them three weeks to do it, can go out and show you a bull moose. I think I can go out myself now and do the same, and perhaps a little better, but I don't hanker after doing it on a wager.

So much for moose. Now as for caribou, I do not believe there are twenty betweeen Halifax and Yarmouth, in Nova Scotia. Not one has been killed for two years in western Nova Scotia.

The same applies to salmon as to moose; there are some salmon in the rivers, and if you are lucky possibly you may get four or five fish in one day, but they will all be small compared with Restigouche salmon, for instance. The country truly does swarm with trout; every lake, stream and river estuary contains abundance of trout of one kind or another.

Partridges in places are plentiful; ducks in their season very much so; woodcock and snipe are fairly abundant.

As C. B. T. says, the sail from Yarmouth to Halifax is truly beautiful; all of Nova Scotia is so, but it is by no means so inaccessible as reported. There is not one place along the main shore but is within twenty-four hours' reach of Halifax by the daily mail conveyance. Sportsmen going after moose can reach almost any part of the country by the ox-team express, and where he cannot go by road he can go by canoe.

We have a beautiful country here, and its wooded hills and valleys, and moss-covered barrens, beautifully studded with lakes innumerable, and traced with a perfect network of rivers and brooks, contains many a lordly moose, and the coy, capricious caribou wanders through the land. The salmon jump in the streams and the trout are always at hand, but—and here comes the rub—they all require a master hand to get them, and he who comes out of the woods with a moose head as his prize may well be proud; he has accomplished a feat to be proud of, and many there are who will envy him. He will indeed be a mighty hunter.

Now again humbly asking pardon of C. B. T. for doing what I consider my duty, I am in the interests of the sportsmen TIAM.

POSTED.

How often at the present time does the sportsman when out on a shooting or fishing trip discover the warning signboard, placed in a prominent position, that tells him that "shooting or fishing on these premises is forbidden under penalty of the law." Not the least factor in causing his sadness as he turns away and seeks other fields is the thought, nay the assurance, that within the forbidden grounds unlimited sport is lurking in every bosky dell, or that every ripple of the laughing waters is sparkling with gleeful admiration of the beautiful forms that are so gracefully sporting in the sunshine and shadows of the forbidden waters.

The practice of posting the resorts frequented by sportsmen has greatly increased within the past few years, and if the increase continues it will be but a short time before the sportsman will be so hemmed in, or rather shut out, that the pleasure that should attend his outing will be entirely gone, and perforce the gun and rod will be laid away to rust and moulder, fitting emblems of the blighted hopes and aspirations of the once enthusiastic sportsman.

The causes that have led up to this state of affairs are many and various and not at all difficult to determine. First and foremost of these causes are the lawlessness and selfishness of many. Alas! far too many who go afield with rod and gun in innumerable instances outrage the feelings and destroy the property of the landowner, until forbearance ceases to be a virtue, and as a sequence all of those who are entirely innocent in the matter upon their next outing are confronted at their favorite resort with the conspicuous signboard which tells them that "shooting or fishing on these premises is forbidden under penalty of the law." The worst feature in the case of the lawless or selfish individual is that vigorous warning or gentle pleading are alike useless. The faults are inherent, and so long as actual punishment does not follow his misdeeds he will continue to break the farmer's fences, trample his grass, shoot his chickens, steal his fruit and commit numberless other outrages so long as he continues to go afield. Trespass signs he does not heed, except perhaps to be a little more wary; in fact, he rather likes them, and considers them as useful to him in that they keep away others from his favorite resorts. Thus you see, dear reader, that you and I not only suffer for his misdeeds, but have the added aggravation of knowing that he actually profits by the very means that are taken to punish him.

As a rule, I have ever found the farmer to be a pretty good fellow, and during an experience of more than half a century in all sections of the country it has very seldom been the case that my request to shoot or fish through his grounds has been refused; and even since the aforementioned signs have become so plentiful the same rule holds good, and very many times have I obtained permission to shoot over posted grounds.

It is not that the farmer begrudges the sportsman his pleasure, and it is nearly always the case that a polite request will secure permission to shoot or fish, and in every instance gentlemanly and sportsmanlike conduct will secure a cordial welcome for future visits. It is very rare that a surly disposition prompts refusal, in fact I can recall very few instances where this was the case. Having devoted considerable time to probing for the reasons that influenced landowners to post their grounds, I have been forced to the conclusion that the unsportsmanlike conduct of many who go afield with rod and gun will account for a very large proportion of the trespass signs that are now so plentiful.

It is not always the case, however, that the predatory shooter or fisherman, in whom the vice is inherent, is alone to blame for damage done the landowner, for it often occurs that with the best intentions one may inadvertently, in the heat of an ardent chase, do something that he would not do in a cooler moment and in consequence the farmer's property is damaged thereby. Your bird may fly directly in line with buildings or cattle that are unseen by you. A vigorous fish may lead you through growing crops, or in your haste to reach a desired position you may break down a crazy fence or leave down a bar. Should either of these or any other accident occur by which the landowner's property is damaged the well-disposed sportsman should at once do all in his power to repair the damage. In nearly all cases of this nature a properly worded apology will make of the farmer a friend instead of an enemy, especially if, in case actual damage is done, the apology is coupled with an offer to pay an amount sufficient to make the loss good. It is best to go easy over crazy fences, but in case you should break one down you should at once repair it to the best of your ability.

Once, when out shooting with a companion, in getting over a stone wall, we tumbled down at least a rod of it, and, although we were very anxious to get among the birds, we laid down our guns and set to work building it up again. We had been at work but a few minutes when the landowner put in an appearance, with a club in his hand and a most ominous frown upon his face; but when he saw what we were up to his grip on the club relaxed, a smile lit up his countenance and he greeted us cordially, at the same time telling us he heard the wall tumble and had come out to collect pay for the damage and then drive us off his land; but, added he, "I guess that you are not that kind," and he took hold with us, and we soon had the wall as good as new. "There," said he, when the job was finished, "you are the first hunters that I ever heard of that stopped to put up a wall that you had tumbled down, and I guess it is safe to let you hunt anywhere." Then he directed us to a run that was unknown to us, where he said we would find woodcock, and told us to be sure to come to the house when the horn blew and get some dinner. When we finished the run we had eight woodcock, and as we smoothed their feathers and returned them to our pockets my companion exclaimed: "Verily, virtue hath its reward." But this was not all; we also had a good dinner, and better still, we made a friend who was always glad to see us, and, although he posted his grounds soon after, and enforced the law with that big club, we were always welcome to shoot or fish on his grounds, and it was through his kind offices that his neighbors allowed us free admittance to their grounds.

I was once shooting in a covert that bordered posted grounds, and to get around a dense brier patch I got over the fence into the forbidden grounds and walked along the edge, coming to a cross fence in which was a bar-way. I let down two bars and was about to pass through when my companion, a short distance away, signaled a point and bade me hurry. Telling him I must first put up the bars, and doing so, I started to climb the fence into the covert, when I was confronted by the owner of the posted grounds, who exclaimed: "It is all right; go and get that bird, and then come back and I will show you where there are lots of them. A man that will stop to put up bars when his dog is on point can shoot on my grounds all he wants to." I lost perhaps half a minute in time; what I gained cannot yet be estimated, as for years I have shot over these grounds, and hope to do so for many more to come.

I do not wish it understood that I mention these things boastingly, or that any credit is due me for their performance. They are jotted down merely to illustrate my argument and to demonstrate that the farmer is not always the churl that the lawless hunter would have you believe him to be. A large experience prompts the belief that when all of us who go afield shall do unto the farmer as we would that others should do unto us were we in the farmer's place, then will be the hunter's millennium, and "Shooting and fishing on these grounds is forbidden under penalty of the law" will not stare us in the face when next we visit our favorite resort. S. T. HAMMOND.

WHAT IS A TRUE SPORTSMAN?

Editor Forest and Stream:

In one of your numbers some years back a correspondent asked: "What is a sportsman?" and himself offered as answer, that in Scotland a man was entitled to a sportsman's badge when he had killed a salmon, a buck and an eagle. Your recent letters from Joe and Armin Tenner *et al* raise the question again in a more acute form, viz.: "What is a true sportsman?" Now I propose that FOREST AND STREAM establish an order, with an appropriate silver badge—that should be quite easy in view of silver prospects—an order of True Sportsmen. Each member shall be—to take it backward and analytically—through and through a man, a sport and true.

But maybe this isn't much help—this offering three difficulties for one. Well, then try again. Each member must pass in ten of the following subjects—qualification, I mean:

1. Keep the game laws of his State.
2. Walk five miles in one hour.
3. Land a 10lb. fish with an 8oz. rod.
4. Kill a buck with his own rifle.
5. Kill a bear with his own rifle.
6. Ride a century a-wheel in a day.
7. Light 100 camp-fires with 100 matches.
8. Relate a fishing expedition with liquor left out.
9. Swim.
10. Own the best dog in the world.
11. Never have killed a perching bird within five paces.
12. Make some kind of a rattling good revolver target (I know nothing of such things).
13. Subscribe to FOREST AND STREAM.
14. Prove that on at least one occasion he could have shot more game than he possibly could use and didn't.
15. Never have poisoned his neighbor's dog.
16. Bring down ten flying birds in succession with ten cartridges.
17. Own and sail the "neatest little craft afloat."
18. Had the buck ague. (This is psychologically important.)
19. Must have seen the hoopsnake and the glass snake or the sea serpent.
20. Never have killed a doe when he could have killed a buck, or a deer 100yds. off when he could get one at 50.
21. Run a mile in— (I'll let you fill this up.)
22. Rode over a five-barred gate (I know that should come in).
23. And he must do it all for pure love, at least most of the time.

I am not sure that this last just fits on to all the others, but you can see what is meant, and as you are going to supp[illegible] .he medals you may add a few more qualifications you want to. I don't mind.

N. B.—1, 13 and 23 are not optional. SLOAT HALL.

P. S.—It's time I stopped. I find I've frozen myself out. No. 13 is the only one I'm quite sound on, and I'm away behind on that now.

P. S. No. 2.—I'll send design for badge next week. Send check for same, of whatever value you think proper, provided it goes into two figures.

In Western Illinois.

JERSEYVILLE, Ill., Sept. 14.—Our duck and chicken season opens to-morrow, but it will create little stir in local shooting circles. There are some few chickens, but the corn is so tall and thick that the birds are in very little danger.

Quail have bred well and are now many of them well grown. The dense growth of weeds, corn and other cover will, however, prevent many sportsmen from hunting them until the latter part of October, unless we have earlier frost than common.

While hunting squirrels recently an old pheasant very defiantly flirted his brown tail almost in our face. He knew that safety was assured, as we were armed only with a .22 rifle. But there are other days, and we may happen down that way with a surprise in the shape of a catter gun in store for the old rascal. L. S. HANSELL.

VITALITY OF MOOSE.

Editor Forest and Stream:

In the issue of FOREST AND STREAM for Sept. 12 Aztec asks, has any one ever seen a deer drop "as if struck by lightning" when shot through the heart? I have seen a moose do so on one occasion when I was in at the death of a large four-year-old moose; my companion, using a .45-90 Winchester solid ball, shot him at some 90 odd yards while he was standing perfectly still, trying to catch some scent of danger, and he dropped instantly and never moved. I never saw an animal, even shot in the brain, die more quickly. Still another instance was told me by a man whom I can depend upon, an old hunter. On one of his many trips he shot at a deer running fair away from him; the ball ranged through the animal from back to front just under the back bone, but without touching it, and the yearling buck simply wilted, the force with which he was running driving his spike firmly into the ground when he fell, but he was absolutely dead on striking the ground. Now, on the other hand, I shot a moose three years ago just as it crossed on the run a small opening in the bushes ahead of me. I only had the opportunity to shoot once and my shot apparently had no effect, as the bull did not stop nor flinch, nor drop its head a little, as an animal almost invariably does when hit. He kept on and we found not a drop of blood and his tracks apparently quite strong. Now, I was just as confident that I had hit as my Indian was that I had not hit; so in spite of his assurance of "You shoot too quick; you not hit," I followed on the trail and found the animal about 400yds. away, quite dead. Afterward we discovered that the ball from my .50-110 Winchester had cut the apex of the heart clean off. Surely he should have dropped, but yet there is the cold fact, he ran 400yds.

Again in the fall of 1895 I shot a caribou, breaking the spinal column just above the fore shoulders. The animal was one of a group of four cows and one bull. After the shot, which we at once saw was fatal, we watched the other animals as they ran away and circled back to look at us, and then made off for good, for fully five minutes, and then we went up to our prize. We found him still living, his head up in the air watching us closely, and all the muscles in the fore part of his body working violently in an endeavor to rise. I was on the point of firing another shot to put it out of its misery, when its head fell to the ground and in a moment more it was dead. There was 4in. of the backbone blown clean to atoms—in fact, blown right out by the mushroom bullet.

Now there are four facts, two of which counteract the evidence of the other two, and the last two being apparently in complete opposition to theory. Who will get up in the amen corner and tell us the why and the wherefore? I would like to know very much myself, and I am sure so would many others. Above you have the experience and the facts. We all know the theory. Who will reconcile the two for TIAM?

HALIFAX, N. S.

WISCONSIN WANDERINGS.

Sharp-tail Grouse Shooting.

BABCOCK is a little town in the central part of Wisconsin. It is on a sandy plain, consisting of dried up marsh, with many "islands" of brush and small trees; most of the islands are small, many of them covering less than an acre. The place has somewhat of a reputation for "chickens." In the course of his wanderings your correspondent found it needful to stop there over night, "wan day lasht week," as the Irishman expressed it. The hotel was a very good one, and the host thereof was inclined to be sociable, so some inquiry was made about the chickens.

The landlord said there had been a great many killed, and they were still to be found in considerable numbers, but surely few to what there were at the opening of the season. He said a man named James Varney had a dog, but no team, and would doubtless be willing to go with some one who would furnish a team.

Varney was soon found, and said he would go to-morrow, but his dog was pretty well worn out and had a sore foot. Then we hunted up the livery man, and he said he would take us out for $3 a day, so he was engaged and we went to bed to be ready for a start at 7 o'clock the next morning. A little after that time we were off in a comfortable and roomy spring wagon, well provided with lunch and a big jug of water. The poor dog's foot was very sore; so bad that he did not allow anything to touch it. We drove out three miles and got out of the wagon. Varney took a shot bag, a needle and thread from his pocket, and proceeded to make a stocking for the dog's foot, which he did by neatly folding the cloth around and under the foot and then sewing it snugly around the leg. I supposed the dog would chew the stocking off as soon as he got a chance, but he paid no attention to it, and went to work at once. The stocking stayed on all day, but wore through on the bottom.

Our hunting ground spread out all around us for miles—all level, covered with grass and weeds, popple thickets and islands of brush so far as could be seen. Off to our left was a little strip of corn, an acre or two of mullet and a similar patch of ripening buckwheat, which I at once pronounced the place to find chickens. At the end of the buckwheat and near the corn the dog began to trail and a minute later there came the inspiring, though startling flop of chickens taking wing. Turning quickly, I was just in time to see an old cock clearing the tops of the corn some 40yds. away. The first shot made him flinch and drop one leg, the second made him swerve again and hang down the other leg, but he kept right on and three others with him. It was too bad; there ought to have been two birds bagged right there. The gun and the load had been tried many times and had never been found lacking. Well, it didn't kill this time anyway. The crippled bird settled out of sight behind the corn a hundred rods away and the others flew on.

Marking the direction of the cripple by a dead tree, attention was turned to the dog, who was not working on these birds and was still working a trail which he followed to a flush. It lay close, and when it rose was shot inside of 35yds. It fell at once, but was not clearly killed. We started after what birds might still be in the corn, and had hardly reached the edge when one flushed, to keep me from stepping on it, and flew back between us. Looking first for Varney and next for the bird, I waited until it swung out from between us, then dropped it in the grass, and was surprised that this one was not shot dead. Just after retrieving this one another rose from the corn. It was nearer to me than to Varney, but I only "tickled" it and a moment later Varney laid it dead. The corn was but a narrow strip; so one of us went along either edge, with the dog between us, in the corn. He presently flushed one, which I ought to have killed, but missed with both shots. The gun was only just loaded again when another bird came out of the corn 60ft. in front of me and circled sharply to the right and rear. It was missed with both barrels just like the other one.

Then the old man just laid the gun on the ground, folded his arms and gave himself a general talking to on the subject of being an excitable old fool, that couldn't shoot at a few chickens without getting rattled so badly he couldn't hit the ground if he fell out of a tree, and wound up by telling himself that if he missed another bird before noon the gun should be laid in the wagon.

Then he took the gun and started along the edge of the corn again, and another bird flew out in front and circled round to the rear. This bird was so close and circled so slowly that I took the time to shoot it in the head without hitting its body, and did it neatly.

Perhaps the reader wonders what my partner was doing all this time. He was looking after the dog and taking shots only at such birds as I was unable to shoot at, for, said he, "You will only have to-day to shoot at them, while I can shoot at them all summer." He did not shoot at any bird that I could have a chance at.

About this time we heard some shots and saw that another party of three had flushed our three birds that had flown out of the corn, and soon after they flushed about fifteen that Varney expected to have got into, so they about spoiled the rest of our sport in that locality. We went after the old cock that had gone off with hanging legs and found him unable to fly. One flushed wild and was marked down in a popple thicket. The popple bushes grow as thick as straws in a wheat field and are about 4ft. high. A very thick growth of tickle grass grows knee high among the popples. The dog found this bird, and it had to be actually kicked out before it would fly. It had been shot inside of 30yds., but had life enough to run several feet. But one more was found before noon. It got out from almost between my feet, and, like the others, was not shot dead. After we had had a hearty lunch and were lying in the shade for a two hours' rest, I fell to thinking how poorly these birds had been killed, and that I must have been very near missing them entirely, and resolved that during the afternoon I would concentrate every effort on putting the center of the shot charge into the bird instead of only scraping it with one side of the charge.

Our tramp during the morning had been a hard one, for the ground was very rough, the cover very thick, and many small logs were concealed in the rank growth of grass, just right to stumble over, and we decided that two hours was none too long for a rest and settled ourselves on the ground for a nap; but our minds were too much stirred up by the excitement of the morning to go to sleep or let our bodies rest. So after an hour Varney said he thought there must be some birds just at the point of our island, where there was a patch of buckwheat, so we picked up the guns, and the dog, poor fellow, picked up his sore foot, and we started, all of us feeling a bit stiff and sore and wishing the ground was smoother. At the edge of the buckwheat Varney walked up a strong old bird and laid it low in beautiful style. He had just retrieved his bird when ten others got up 35yds. from me and flew sqi.rely to my left. Remembering that every bird was to be centered this afternoon, I held carefully, one foot ahead and a little high, for the bird was still rising, and was delighted to see it fall like a wet rag. Quickly covering the next one in the same careful manner, I saw it wilt as the shot struck it. Varney was some twenty steps behind me, and was pulling his trigger for this bird when it dropped from under the muzzle of his gun, but not in time to hold his fire; but he scored with his second. On going to my birds I found that neither of them had made any struggle, and there were but few whole bones left in them.

We hunted round to see if there was not one or two in close hiding under the rank cover, and I came near stepping on one that almost flew in my face and then went back toward Varney. Waiting until it had swerved away from him and had gone past him, I swung the gun after it, intending to shoot at the instant the gun caught up with it. In turning my foot caught under something, and on that account the aim was delayed a little, and when the foot was got free the gun swung 4ft. too far; but fortunately I did not shoot. By this time the bird was 45yds. away, flying level and straight from me. It had got so far away and was going so fast, it seemed it must be shot before it got a foot further if it was shot at all; but I remembered that every bird was to have the center of the charge, and swung the gun back till the bird was covered just right, steadied long enough to make sure it was just right, then pulled. "A great shot," cried Varney, as the bird tumbled into the weeds, turning over and over as it went down. "I thought sure you were not going to get him, and was just about to shoot."

Here we had bagged five inside of five minutes, and thought we had marked down the seven that flew away. We thought we had them marked in a popple thicket, and probably had; but the popples were so thick and it was so hot the dog could do nothing, and we failed to raise any of them, though we tramped till we were tired. Then we got into the wagon and rode several miles to where we hoped to find more birds. Part of the way was over hay roads, and the rest of the way seemed to be mostly over logs, roots, stumps and other roughnesses that were hidden in the dense growth of grass, popple bushes and "tickle" grass. For some miles there was no sign of civilization in sight; the afternoon was cloudy and our way a devious one on account of the many obstructions. I soon lost all idea of direction, and had I not known the direction of the wind, which was blowing a steady breeze, would have been lost. I also remembered that the Wisconsin River was some miles to the east, and a railroad some miles to the west. As we were crossing a "mowing" an old cock rose wild from the short grass. We stopped the wagon to better mark the bird, and had no sooner done so than the dog leaped out on the windward side and pointed. Then we saw the heads of two birds stretched above the short grass some 60yds. away. When we got within 40yds. they flew, and we were fortunate in winging both of them. We then went after the wild old cock, but he was wary and flushed wild and out of sight behind some trees. A moment later another one flushed wild, but Varney took a shot at it and thought he hit it, and was sure he did when we marked it down 80 rods away. We went after it, and Varney flushed and killed it. The walking after these birds was very trying. The ground seemed to be covered with obstructions, and was all hidden by the rank growth of grass.

It was now 4 P. M. I was tired, hot, thirsty and had a headache. I felt that the hunt was fast losing its interest for me. Going to the wagon for a drink, I remarked that the water was very warm and stale. The driver said he had some coffee left, and got it out. It was in a tin canteen, with air-tight stopper; nearly a quart of good, strong coffee, creamed and sugared just right. I drank it all, and wished there was more. In ten minutes every trace of fatigue, thirst and headache had vanished, and for two hours longer we tramped steadily, and I wished as the sun went down that the day was longer.

Starting out again, the dog found a trail, and after ten minutes pointed an old cock, and Varney and I divided honors. The dog at once took up another trail, and while he was somewhat puzzled over it three young birds arose in front of us, two straight away and one flying back on my left. As Varney was on my right, I took the left hand one, as it was just opposite and not 20yds. away, and smashed every bone in it; then took the left hand one of the other two and dropped it just as Varney shot the other one. Varney was expecting to take care of both birds, and being busy with the first one did not see the other one fall. When he looked for it a puzzled look came over his face and he said: "How did that bird get out of sight so quick?" I told him it fell in the grass. Half an hour later the dog found another trail, which he followed for ten minutes, and at last flushed an old bird within 10ft. of him without getting the body scent at all. Being close by, I had a very easy shot, and made a clean kill. Half an hour before sundown the dog found another trail—evidently of a considerable number of birds that had been traveling in all directions—and worked on it until it was too hot to spend more time on them, but did not find them.

This ended my first day with the Wisconsin prairie chickens, which were not chickens, but sharp-tailed grouse.

There are said to be some pinnated grouse on the ground we hunted, but we saw none. It was a good day, and next winter when the cold keeps me indoors it will be set in array with many other similar days, and enjoyed again. O. H. HAMPTON.

WINONA, Minn., Sept. 14.

GREENHORNS AND TENDERFEET.

Editor Forest and Stream:

In a recent editorial sketch in this journal you allude to and comment entertainingly on city and country greenhorns, and to what are recognized in the West as tenderfeet. Unquestionably men are fashioned by environments and associations.

That the old man from the country should attract attention on Broadway in his method of hailing a cable car is a natural consequence. Undoubtedly he felt himself so insignificant a particle in the throng and bustle as to imagine that he must make extraordinary exertions to attract notice and stop so dumb a thing as a cable car.

Your allusions to both city and country greenhorns are very brief, for the topic might furnish material for many volumes. It is my opinion that the thoroughbred city man is quite as conspicuous in the backwoods as the backwoodsman is in the city—with the exception that there are fewer to observe or criticise him. We should be careful how we form opinions of greenhorns. Perhaps the awkward denizens of the distant woods and fields, nearer nature and natural conditions, are also nearer the truer, in that they are subject to the least artificial environments and influences.

In my observations I am free to credit the backwoodsman with one superior trait at the least. He is usually, I may say almost invariably, proud of his city cousin. When the latter visits his shack in the wilds he must admit that he is favored with the sincerest hospitality and truest friendship. The country cousin in the city is often made to feel very differently—perhaps through no intentional indifference, neglect or pride, but nevertheless through things that the polished cousins of the city seem powerless to correct.

Under the oddest or roughest exterior, we should remember, there may lie the tenderest sensibilities—the truest as well, for they are not so deeply disguised or so often made callous by constant contact with the things met with in crowds and cities. Indeed, in these very differences there is a profound theme for books and sermons. The honesty and loyalty of the rustic (for instance) is often miscalled verdancy, and he is considered by his shrewder cousins the legitimate victim of conventional wile and shrewd practice. But I stray from my plan, which was to contribute an anecdote of some tenderfeet in the far West.

It was at Winnemucca, Nevada, years ago, at that time a small railway station. There were about a dozen Shoshone Indians on the platform of the depot playing cards. They were half civilized red men and had seen the railroad trains so often that they were no longer wonders to them. An emigrant train came slowly in from the East, its numerous cars loaded with palefaces westward bound.

As the train slowed up at the station a dozen men and boys jumped out in the sage brush armed with .22caliber pistols, with which they were aiding to tame Western wilds by popping away at jack rabbits and sage hens. The train stopped for some time, and gradually a large group of assorted Easterners of both sexes and with tender feet surrounded the group of Indians. There were several Indian women with their pappooses sitting on their fancy-colored blankets, and six or eight stalwart braves playing cards, with their shell counters and chips spread upon the blanket they used for a table. The Indians played silently, without exchanging words or manifesting any emotion. The paleface crowd increased and edged nearer as they saw there was no danger.

The female passengers were most curious about the Indians and approached the squaws daintily and much as they would have approached any other strange animal that they knew nothing about.

"O, my! are those real wild Indians?"

"Why, that baby would be cunning if it was white!"

"See what a funny dress it has!"

"Just look at that wrinkled old woman. See her dress. Her moccasins are awful dirty."

There were several young girls among the whites, and some old girls too, and all of them found many things to remark and giggle about. All the while the Indians played their cards silently, except for an occasional grunt.

A white man said, "Those fellows are pretty good sized men, average well with white men for size."

Another said, "I wonder how they make a living here—all beggars, I suppose."

"Oh, they eat rabbits and coyotes," said another, the smart passenger, "and the Government gives them blankets."

"I wonder if they can talk English yet," said another spectator.

About this time one of the Indians looked up for the first time and said to the last speaker: "Say, you d—n fools don't know anything until you live in this country awhile. Give me half a dollar, will you? I'm about broke on this game."

The emigrant withdrew without contributing, while something like a flush of brand new intelligence crept over the palefaced crowd, which soon dissolved and sought the train.

The incident is one of those that cannot be reproduced satisfactorily with words. But perhaps enough has been given to exemplify that tenderfeet and greenhorns are somewhat allied, and that men are victims to circumstances and the circumscriptions of their comprehensiveness. I don't like to resort to such formidable words, but they must be used once in a while to aid our desire to be expressive and keep in advance of aboriginality.

SHASTA MOUNTAINS, California. RANSACKER.

NITRO IN THE RIFLE.

Editor Forest and Stream:

A correspondent writes in your issue of Saturday last that he has tried nitro powder in his rifle and that it did not come up to his expectations. Now I have tried it and it exceeded mine.

A chum of mine, who has the same make and caliber rifle as mine, .32-40 Winchester, model of '94, who uses nitro, finally after a lot of arguments got me to try it. But before I took the step I wrote to the Winchester Arms Company to see what they had to say about it. They answered my letter very promptly and to this effect: That they didn't recommend the use of nitro powder, and then went on to say: "Of course it (nitro powder) can be used and is used satisfactorily, but we cannot see any advantage in it except the slight absence of smoke. It is not as good as black powder and we believe you will do better work and get better results with black powder." They recommended 17grs. by weight of Du Pont's No. 1 smokeless rifle powder primed with No. 2½ W. Winchester primer, and finished by saying I must use metal patched bullets.

After quite a little experimenting I found that 15grs. of powder with four $\frac{1}{16}$in. cardboard wads and a 165gr. bullet, hardened, did the work. If you use ten parts lead to one of tin in making your bullets there is no need of using metal patched bullets at all. I have caught the bullets so made in rags after firing and found no signs of stripping.

As for accuracy, I can put most all my shots in an 8in. circle at 100yds. Of course I realize this is very common shooting, but I blame neither the ammunition nor the rifle, because I have seen it put four shots out of five in a 4in. circle at the same distance; the only difference in the conditions being the man behind the gun.

In the use of black powder it is always a source of annoyance to think after a shoot, "Now before I reload those shells they'll all have to be cleaned and dried." Now I'll acknowledge I am a little lazy, but I've never seen the man yet who enjoys cleaning dirty rifle shells, especially when they are as small as .32-40s are. If you use nitro powder you will find cleaning unnecessary, and your shells last so much the longer. Your rifle is also much easier to clean. An oily rag passed through it once or twice is sufficient. How about noise? A .32-40 cartridge loaded with 15grs. of smokeless makes about as much noise as a .25-20 loaded with black.

To sum up the whole matter, I think by the judicious use of nitro powder you have the same accuracy, range and penetration as black powder, without the noise, recoil, smoke, weight or dirt. F. E. JACKSON.

CHICAGO AND THE WEST.

SEPT. 19.—Mr. E. C. Carter, assistant chief engineer of the Chicago & Northwestern R. R., left this week for a trip through the Rockies, to last till the close of the season. He goes to Missoula, Mont., and will outfit there for some point to the north of that place probably, though he may go south into the Bitter Roots.

I hear of no large bags of prairie chickens in this State or any other State except the future state. Mr. B. Waters, of the FOREST AND STREAM staff, New York city, who shot in Minnesota, near Kennedy, last week with Prof. Edmund Osthaus and Mr. Draper, of Toledo, O., states that the high bag of the party was thirty-six birds, with almost no birds missed. About half a dozen coveys a day was the average found. I have heard of no better bags than this so far.

Jacksnipe are down from the North on the first flight. A bag of thirty-eight was made two days ago by a member of English Lake Club, Kankakee River, Indiana.

The Packing of Bob White Quail.

I remember that some time ago I spoke of seeing a pack or large body of Bob White quail in Texas, which numbered as I thought 75 or 100 birds. The statement was doubted by my friends, who thought the flock was made of meadow larks, and who believed that the Bob White never packs up into large flocks of that sort. Yet afterward I have met four different shooters who have seen such packs, and by this morning's mail have a letter which speaks of such an occurrence. The letter comes from Mr. H. B. Jewell, of Wabasha, Minn., who says:

"I shot the first quail yesterday. I have shot for over fifteen years in this vicinity. Saw four large packs of from thirty to fifty each, and could have killed many more than the few I did had I taken the time. They were all in a radius of forty acres."

I am disposed to believe, from what Mr. Jewell says, that the quail which have suddenly appeared in lower Minnesota this fall are migratory birds, and perhaps their presence does not mean any great abundance next year. Why they should be migrating to the North is something not easy to say. Of course all old quail hunters know that these birds do migrate, somewhat as squirrels do, though usually with more regularity. The line of movement of the quail in lower Illinois and in Missouri is known and often spoken of by shooters of that part of the country. It is very much more apt that birds on such a movement would be in large bodies than when under the home habits on their native grounds.

Believes in Selling Game.

Out in St. Paul is the young sporting periodical called the *Western Field and Stream*, which carries no less a name than that of Charles Hallock on its editorial page. Editorially this paper states that its mission is to foster good laws and preserve the game supply of the country. Yet in the business columns of the paper this month I find two large display advertisements of game dealers, each of whom calls upon the sportsmen not to "throw their game away," but to ship it into the market for sale. "Write for tags and shipping instructions," says one of these dealers, and "state where you want your money forwarded." This concern guarantees "an honest count and prompt returns." These advertisements are so at variance with the announced purpose and platform of the paper that the thought occurs that they must have been overlooked in the make-up. Let us trust that they disappear next month. Such an appeal is useless to the real sportsmen of Minnesota or any other State to-day, and the misuse of that term must be an offense to readers who are really sportsmen. I suggest the advertisements be replaced by two large one-quarter page cards reading "Stop the Sale of Game!" That will be consistent, sportsmanlike and useful.

1206 BOYCE BUILDING, Chicago. E. HOUGH.

PENNSYLVANIA STATE SPORTSMEN'S ASSOCIATION.

THE legislative committee of the Pennsylvania State Sportsmen's Association, that will convene at Harrisburg, Pa., next week, is constituted as follows, there being but one representative from each county:

Adams—Conrad Meyers, York Springs.
Allegheny—H. M. Brackenridge, Natrona.
Armstrong—C. J. Jessup, Kittanning.
Beaver—H. W. Nair, Beaver Falls.
Bedford—A. J. Zeth, Hopewell.
Berks—Henry D. Green, Reading.
Blair—G. G. Zeth, Altoona.
Bradford—W. F. Dittrich, Towanda.
Bucks—Elmer Boileau, Hartsville.
Butler—Edward Gumpper, Butler.
Cambria—J. B. Holsinger, Johnstown.
Carbon—Samuel M. Downs, Mauch Chunk.
Chester—E. W. Baker, West Chester.
Clearfield—Frank B. Row, Clearfield.
Clinton—James W. Frederick, Lock Haven.
Columbia—J. H. Mercer, Bloomsburg.
Crawford—C. F. Emerson, Titusville.
Cumberland—R. E. Shearer, Carlisle.
Dauphin—H. M. F. Worden, chairman, Harrisburg.
Delaware—Richard J. Baldwin, Chadds Ford.
Erie—Hon. J. Ross Thompson, Erie.
Fayette—Jesse O. Allen, Uniontown.
Franklin—Thomas Nelson, Chambersburg.
Greene—J. F. Bell, Carmichaels.
Huntingdon—G. G. Harmon, M.D., Huntingdon.
Indiana—A. D. Sutton, Indiana.
Juniata—L. Banks, Mifflintown.
Lackawanna—T. J. Snowdon, Scranton.
Lancaster—Geo. Crane, Mountville.
Lawrence—Fred W. Grace Newcastle.
Lebanon—J. C. Bucher, M.D., Lebanon.
Lehigh—J. F. Weiler, Allentown.
Luzerne—J. F. O'Neill, Wilkesbarre.
Lycoming—F. P. Abercrombie, Williamsport.
Mifflin—A. T. Hamilton, Lewistown.
Monroe—J. F. Brownell, M.D., Stroudsburg.
Montgomery—Wm. Metz, Lansdale.
Northampton—A. W. Miller, South Bethlehem.
Northumberland—S. A. Peck, Northumberland.
Perry—James S. Magee, New Bloomfield.
Schuylkill—F. C. Palmer, Pottsville.
Snyder—H. H. Grimm, Middleburg.
Somerset—Dr. Lenhart, Jennertown.
Susquehanna—John M. Kelly, Montrose.
Union—C. K. Sober, Lewisburg.
Venango—John A. Wilson, Franklin.
Washington—Norwood Johnson, Canonsburg.
Westmoreland—J. O'H. Denny, Ligonier.
Wyoming—Charles A. Alexander, Vernon.
York—W. H. Burnham, York.
Philadelphia—James Wolstenscroft (Frankford).
Philadelphia—Thomas S. Dando, 34 South Third street.

No member of the committee has yet been named from the following counties: Cameron, Center, Clarion, Elk, Forest, Fulton, Jefferson, McKean, Mercer, Montour, Pike, Potter, Sullivan, Tioga, Warren and Wayne.

The 30-Caliber on Game.

NEW YORK, Sept. 14—*Editor Forest and Stream:* While out on the cattle ranges recently, and obliged as usual to rely on my rifle for fresh meat, I made quite a full trial of the .30-30-160 Winchester, using a half jacketed bullet, the nose being of naked lead. The bullet mushroomed both on tissue and bone, and it is as wicked shooting a little weapon as I have ever handled. Nothing that I struck got away. There is no recoil and no smoke; the weapon is very light and handy, and the range and penetration are excellent. I have not made a long enough trial to speak about the accuracy with certainty, but according to my own experience it is as accurate as the .45-90, and it is equally good in long range shooting at antelope and in cutting off the heads of grouse. In my rifle there was a slight tendency to lead, which necessitated careful cleaning at the end of each day; but on the whole I think it the most satisfactory rifle that I have ever had. It knocks down an antelope as if the beast were hit by a sledge hammer, and I should myself use it without hesitation for any game in America. The last shot I made with it I was in company with a Western friend, with whom I killed my first buffalo thirteen years ago. The antelope was 180yds. off, running; I struck him in the flank, ranging forward and coming out at the opposite shoulder, bringing him down before he had made another jump. My companion came up and looked at the hole the bullet made, shook his head and said solemnly, "I guess that little .30-30 is the ace;" nd I quite agree with him. THEODORE ROOSEVELT.

Roe Deer Hunting in Germany.

Editor Forest and Stream:

"When in Rome do as Romans do." In the far-away fatherland nearly a year ago an American of most excellent standing was invited by some of his numerous German friends to take in a deer hunt. This American had seen deer before, but always in the zoölogical garden, never in their wild state. He gladly accepted the invitation; the novelty of hunting deer in Germany was not to be missed. The party was gotten together, the start made and the beating and howling begun. Under the circumstances imagine our American brother's disgust, standing by a "drive" armed with a 16-bore shotgun furnished him by a "German sportsman" who either forgot or willfully neglected to warn him to stop and examine the sex of each deer before pulling the trigger of that "German deer gun."

Two roe deer fell to the crack! crack! of that little gun, "a double on deer," and this his first deer hunt.

Joe, your delight was genuine, your zeal that of the true sportsman; your gladness was only exceeded by that of your companions, and only excelled by your ignorance of German deer shooting.

Your cablegram and letter received a warm welcome from those who have followed you over the rocky ridges of Pike county after the fleet-winged grouse, and cared for you when the chase had been pushed so fast by your friends that your strength failed you. By those companions of the quail fields of North and South Carolina, where your grit and good qualities are well known and never forgotten; in the old Berkshire Hills of Massachusetts, where, should you accept all the invitations sent you, you would be obliged to give up business, be not annoyed by Mr. Armin Tenner's uncalled for criticism; stick to the sport, and hope some time to know as much as he. But in the future, while visiting foreign countries, be careful of the company you keep. THOMAS ELMER.

Editor Forest and Stream:

It is true that great poets and painters are born, not made; but a true sportsman is made. Some indeed may be born great sportsmen, but as a rule the road to a high standard is a long and tedious one, though it has many delights by the way, and is well worth what it costs to attain. One who has attained the heights is naturally an object of mild envy to those who are still struggling in their barbarous delights. But one who is on the heights should not soon forget that those floundering below cannot see from their point of view. It seems, for instance, almost impossible to me now that anyone could shoot a grouse on the ground or sitting in a tree; yet I can remember—and my memory is none of the worst—a time when I might have done such a thing myself.

Mr. Armin Tenner has not only a commendable knowledge of the methods by which deer are to be killed, but he evidently carries his knowledge into practice. But what I wonder is, whether there ever was a time when he went on his first deer hunt, armed only with a muzzle-loading shotgun well filled with buckshot. Poor Joe! He has been believing for several months that his German friends were trying to give him a rare treat, and when he saw the pair of roes within easy range he thought they had succeeded. But now it appears that the ignorant or deep designing Germans have only put his name under a cloud in his own country.

Do not take it too much to heart, Joe. Do not resolve never to slay another deer, even of the fair sex. Buy a rifle and practice with it diligently. Think of the time when you may hope to know as much as your critics, and when you would scorn to turn a shotgun upon a lady.

L. W. B.

Wild Rice for Wildfowl.

WILD rice has been successfully grown to furnish attraction for wildfowl. Mr. E. E. Thompson concludes an illustrated paper on wild rice in the Aug. 25, 1892, issue of FOREST AND STREAM with these practical points: "Wild rice is very prolific and grows annually on the same grounds, requiring no care to cultivate. It will grow well in almost any water that has a muddy bottom, is not too cold and has not a strong current, and is not more than 8ft. deep. It will succeed in any of the Middle States and Northwest as far as latitude 50°. Rice has been found doing well on prairie sloughs of Minnesota, the water of which is tinctured more or less with alkali; it has been successfully introduced into many of the salt marshes of the Hudson River and Long Island, and it grows well in fresh-water marshes and on the banks of slow-running streams. The proper time for sowing the seeds is immediately after it is gathered ripe, *i. e.*, in September. The plant is hardy, prolific and aggressive, and usually more than maintains a footing once established. Its failure to grow in so many cases is due to the fact that the seed has been impaired by too long keeping, and in a number of cases the seed used has been threshed by the Indians, who scorch the grain to facilitate the operation. A few months seems sufficient to destroy the vital germ, so that though spring sowing has succeeded in some few cases, the trial of winter storage is usually too much for this delicate grain."

Off for Maine.

NEW YORK, Sept. 18.—*Editor Forest and Stream:* Indications point to an unusually large exodus of New York sportsmen to the Maine woods this fall. The better known guides have long ago ceased booking sportsmen for the early part of the hunting season. Jock Darling, for instance, writes Mr. Eagle, of the New York C. C., that he cannot promise him a guide for October, though he will do what he can for him if he comes into camp.

Charlie Hebbard, of the Empire Target Co., with a party of four, leaves next week for Norcross. Their hunting ground lies back of Katahdin. Mr. G. H. Haulenbeek, the well-known advertising agent, with a party of about the same number, will try the country tapped by the new line of the B. & A., going in from Masardis, this week.

Mr. C. H. Webber, New Fredonia, Pa., passed through New York Sept. 16 on his way to Jackman. He had with him a fine three-barrel gun in which the two rifle barrels lie on top and the shotgun barrel underneath, in the place generally assigned to the rifle in guns of American manufacture. This gun weighs about 8½lbs. and was made in Germany. The barrels are of fluid steel and the gun is finely sighted, the rear and tang peep sights folding into recesses when not in use. The triggers are provided with set screws. The stock is very straight and fitted with

cheek piece on the usual German style, and the gun is provided with a sling. Separate receptacles for cartridges are provided on the under side of the stock, which contain half a dozen rounds of ammunition. The rifle barrels are .40cal. and the cartridges are loaded with a charge of Troisdorf smokeless that would be equivalent to about 80grs. of black powder, and a heavy, flat-pointed bullet with three canelures. B.

New Jersey Game Law Working.

THE fish and game laws of 1895 were undoubtedly the best laws for the preservation of our fast disappearing game that we ever had. Unfortunately they were only in force one year, but the observing sportsman can see the good effect they have had even in that short period, in increasing the supply of our non-migrating game, such as quail, ruffed grouse and rabbits. The laws of 1895 opened the season in the northern game section upon all game, except snipe, rail, plover and wildfowl, on Oct. 25 and closed it on Dec. 10. The season was therefore closed before tracking snows fell to any extent, thus saving the game from being harassed and decimated by pot-hunters. The fact that the open season for all woodland game was of the same duration undoubtedly prevented a great deal of illegal shooting, as there was no excuse for a man's being found in the woods with a gun except between Oct. 25 and Dec. 10. The law as it now stands makes an open season on some one or more kinds of game from July 1 to Jan. 1, and the lawless hunter can take advantage of this fact to kill game not in season while pretending to be in pursuit of such as can be legally taken. Every sportsman in this vicinity knows that this was done previous to 1895, when we had a law similar to the present one, and feels sure that history will repeat itself. The parties who have habitually violated our game laws heretofore have not been the farmer, mechanic or business man, who can only spare time to take an occasional outing with the gun, but market hunters and so-called "city sportsmen." The game laws of 1896 seem to have been expressly framed so as to give the class above referred to the opportunity to evade the law and deprive the honest shooter of his fair share of this noble sport. The present law closes the season on that hardy rustler, the ruffed grouse, on Dec. 10, but poor Bob White and Molly Cottontail must run the gauntlet during every tracking snow until Jan. 1. This section of the country is capable of producing only a limited amount of game each year, and if our lawmakers wish to prevent the parent stock from being exterminated they should re-enact the game laws of 1895.
—*The Era, Dover, N. J.*

Reed Birds.

RECENT reports from Cape May county, N. J., show that the reed bird crop has been large, and great bags have been made on the meadows between Cape May and Atlantic City. Didymus sends us a report from Philadelphia in which it is said that "the unusual run of birds is attributed to the prevailing high tides, which partly cover the meadows and force them from their nests." "It seems too bad," writes Didymus, "that the poor little things should be forced from their warm nests by cruel hunters just as the cold weather is coming on."

Something of the extent of the slaughter of reed birds is indicated by the figures given in the same report. A party of Philadelphia gunners, in six days at Cape May, killed 800 birds. A party of eight on a Thursday killed 481. Two Atlantic City gunners killed 462 in two days. The Atlantic City *Press* of Sept. 10 recorded these scores for Pleasantville on Sept. 9: "Mr. Horton and George Forrest were out from Fleming's Hotel from 7 until 10 A. M. and bagged 250 hens. The record was equaled by Gene McGuire, who brought home a similar number. Jerry Showell caught 75, Charley Gale 96, Bert and Paul Wooton 103, Jesse Yates 96, Sumner Reed 66, Richard Smith 103, John Conover 115, and John Parker 102. Harry B. Leeds and S. H. Shinn killed 250, Somers Wolbert and S. Willets 236, Robert Warke 20, Silas Wooton and George Graham 115, and Lewis Glenn 71. Among the other gunners were Samuel Gale, Bill Gale, Harry Brown, Joseph Loder, Joseph Price, Ben Comley, Ike Conover, 40; Joseph Nailor, John Risley and John Algar." The record totals up 1,819 birds killed at this one place in one day. Mr. Frank M. Chapman's recent inquiry respecting the distribution of the bobolink has a partial answer right here.

A Novel Arm.

TROY, N. Y., Sept. 14.—*Editor Forest and Stream:* Capt. J. B. Taylor, of East Albany, whose illustrated article on a "Maine Moose Hunt" appeared in recent issues of FOREST AND STREAM, leaves Albany this week for the Maine woods. He will have same guide as last season, Joe Francis, and expects to get on his old stamping ground Oct. 1.

Mr. Taylor takes with him on this trip a quite unique gun, the same being the barrel of a .45 90 Winchester, cut down to 24in., engrafted on the stock and breech mechanism of a folding Burgess shotgun, the carrier block Mr. T.'s own handiwork. A very convenient arm in transit to the woods or on a carry, and a perfect working one in every respect, as the writer, who has tried it, can testify. S.

A Connecticut Shooting Point.

Editor Forest and Stream:

I am not looking for free advertisement, but simply the good fellowship of the ardent and true sportsman prompts me to let all your readers in on a good thing. I know a paradise for any man who loves his dog and gun, and because I believe that only gentlemen read your paper, I am advising any who want good shooting when the season opens to write to Albert Anson, Woodville, Litchfield county, Conn. It is the home of the partridge, quail and woodcock, and as I don't believe I can get there this year myself I write for my more fortunate brother.
E. W.

The Boer and his Cartridges.

GEN. W. F. MOLYNEUX tells, in "Campaigning in South Africa and Egypt," about going to the house of a Boer to become his guest on a deer hunt. The General arrived on horseback, accompanied by one servant. Dismounting, he carried into the house a bag containing what would measure a peck or so of cartridges. The Boer looked at the bag in astonishment and exclaimed: "You Englishmen must be very rich. Cartridges cost sixpence each here." Rather mystified, and declaring that there are poor Englishmen, Gen. Molyneux asked: "Where are your cartridges?" "In this," replied the Boer, tapping his double-barrel. "Then you don't intend to do much shooting?" "Well, two spring buck are as much as I can carry." "Suppose you miss?" "Nobody misses when a cartridge costs sixpence." The sequel was that the Boer got his two deer, one for each cartridge, while the General fired five shots and got one.
—*Evening Post.*

Currituck Duck Shooting.

A CORRESPONDENT living in this city tells us that he is going to Currituck for ducks in December, and can arrange for a party of two, three or a half dozen who may wish to join.

Sea and River Fishing.

THE ST. LAWRENCE SEASON.

Editor Forest and Stream:

The true disciple of Izaak Walton does not strive to display his skill with line, rod and reel by capturing great numbers of fish which he cannot use, neither does he boast of making large catches. His pride lies in taking trout, bass, muskallonge or other members of the finny tribe, as the case may be, under conditions when the efforts of less dextrous anglers are attended with but meager returns, or perhaps utter failure. He also takes pleasure in bringing to his creel or boat the largest and most wary specimens that inhabit the waters he frequents. He takes more delight in securing a fair catch every time he goes forth than in bringing in at any time a remarkably large quantity solely for exhibition purposes. He is always judicious, adhering firmly to the rule he has established for himself, never to hook a fish for the mere fun of killing it, and the moment he has taken all he can advantageously use he ceases angling, no matter how hungrily the fish are biting or how great the temptation may be to continue the sport.

The St. Lawrence River is a favorite resort with many enthusiastic anglers from the larger cities who annually visit the Thousand Islands region for rest and recreation, and count angling not the least item under the latter head. Fortunately most of them possess the real Waltonian spirit, and do not countenance the lamentable practice, so common in some localities, of fishing chiefly to make a record. While this is true, the fact remains that some remarkable catches of fish were made on the river during the past season, and a record of these, as nearly accurate as it is possible to make it, will doubtless prove of interest to anglers generally.

During the early part of the season, and in fact up to about July 20, anglers on the St. Lawrence River experienced a good deal of difficulty in getting the fish to bite, and for some time the hotels were troubled to obtain fish enough to supply their tables. The oarsmen and others familiar with the river attributed this state of affairs to the very great number of small fishes, known as menhaden, shad or alewives, which made their appearance early in the summer and remained until after the middle. The game fishes fed on these while they were so abundant, and becoming surfeited therewith ignored the angler's lure. After the menhaden disappeared, however, the fishing improved rapidly, and excellent catches of pickerel, bass and muskallonge were frequently made.

The regulations in regard to fishing in the State reservation of the St. Lawrence River, or so-called International Park, provide that no black bass less than 10in. in length shall be taken, and that no person shall take, catch, kill or possess more than twelve black bass of the size permitted in one day; and when two or more persons are fishing from the same boat, the aggregate number of bass taken, caught, killed or possessed by the occupants of said boat in any one day shall not exceed twenty-four.

On July 24 G. Hopkins, president of the Cotton Exchange, New York city, who was sojourning in Clayton, brought in twenty-one black bass, the aggregate weight of which was 48lbs., as the result of half a day's fishing.

Among the most successful bass fishermen on the St. Lawrence River during the summer were Theodore Smith and Lody Smith, of Brooklyn, who made their headquarters in Clayton. On July 28 they captured twenty-four bass, the full number allowed by law, and one wall-eyed pike, a fish which is comparatively rare in that locality. Three of the bass taken weighed 3lbs. apiece and six of them 2½lbs. each. Another day Lody Smith, accompanied by a friend from Brooklyn and a guide, brought in twenty-four bass ranging in weight from 1 to 3lbs. On Aug. 19 Lody Smith and Mrs. Smith caught twenty-one handsome bass, two of which weighed 5lbs. each. Theodore Smith on Aug. 9 caught a 4½lb. bass, and on Aug. 19, accompanied by his son Theodore Smith, Jr., brought in twenty-four splendid bass, the three largest of which weighed 3½, 3 and 2½lbs. respectively.

Capt. M. Schmidten, of Hoboken, N. J., who was stopping in Clayton, made a fine catch of bass in the forenoon of July 28, taking the full number permitted, and in the afternoon Mrs. Schmidten met with the same success. The bass all weighed at least 1lb. apiece.

On July 29 G. C. Hopkins, of New York, had twenty-four black bass in his boat on returning to Clayton after a day's fishing, and A. Rainey had the same number. On the day following R. P. Lee and Messrs. Rainey and Hopkins each caught the number of bass allowable, the first two gentlemen having 40lbs. apiece. The three were guests at the Hubbard House.

Miss Clara Ludrick, of New York, captured a black bass weighing 5lbs. while fishing near Round Island Aug. 12.

About the middle of August E. E. Kirkland and party, from Utica, who were guests at the Pullman House, Grenell Island, caught 155 black bass in two days' fishing near St. John's Island.

W. B. Pierson, of Brooklyn, and Judge Charles Kense, of Cincinnati, on Aug. 15 captured twenty-two bass weighing 34lbs. in the aggregate, the largest weighing 4¼lbs.

Morris Hahn, of New York city, and Judge George D. Archer, of Greenwich, Conn., guests at the Hubbard House, Clayton, each made a splendid catch of black bass Aug. 9, the former taking the full legal number.

The first muskallonge captured on the St. Lawrence River this season was taken near Central Park on July 3 by John McIlrath, of New York city. It weighed 10½lbs.

On the day following, or Independence Day, Mr. and Mrs. C. F. Marquis, of Oneida, guests at Westminster Park Hotel, caught a muskallonge which weighed 33½lbs.

A party consisting of John W. Lotten, Brooklyn; Mr. and Mrs. W. P. Hawes, of the New Windsor Hotel, Clayton; Mr. and Mrs. M. P. Howe, Mr. and Mrs. George Theo. Tallmadge, Watertown, and some others, chartered the steamer Otsego and went to Oak Point for a day's fishing on July 21. They returned carrying three muskallonge flags, having made the first catch of these fish by a party from Clayton. The muskallonge weighed 27, 18 and 15lbs. respectively. Good catches of bass were also made by members of the party.

Prof. Oscar Kapps, of Round Island, captured a 9½lb. muskallonge on July 28, and on the same day a 15lb. specimen was caught near Murray Hill Park.

Ex-Mayor W. B. Kirk, of Syracuse, who was sojourning at Round Island, took a muskallonge which tipped the scales at 17½lbs. on Aug. 9. On the same day Robert Levy and J. N. Gans, of New York, guests at the Hubbard House, Clayton, caught a 23lb. muskallonge.

Dr. J. Livingston Reese, of New York city, who was stopping at the Hubbard House, Clayton, brought in a fine muskallonge on July 28 and the day following two more, one of which weighed 18lbs. and the other 26lbs. On Aug. 13 he bettered his own record by taking a muskallonge weighing 31½lbs.

Judge George D. Archer, of Greenwich, Conn., captured three beautiful muskallonge within a few days of Aug. 11, the fish weighing 16, 28 and 32lbs. respectively.

William Stevenson, of New York city, who was a guest at the New Windsor Hotel, Clayton, made the most remarkable record of the season as far as the number of muskallonge caught in one day is concerned. On or about July 20 he captured three splendid specimens, which weighed 12, 15 and 26lbs. respectively. On July 29 Mr. Stevenson took two more muskallonge, one of which weighed 10 and the other 16lbs.

The nine-year-old son of Randall Morgan, of Philadelphia, Pa., a guest at the Walton House, Clayton, brought in an 18lb. muskallonge on Aug. 6. This fish was taken in Joy's Bay, four miles above Clayton.

Dr. Nellis, of Albany, who was stopping at the camp of the American Canoe Association at the foot of Grindstone Island, captured a muskallonge weighing 36lbs. while trolling on the north side of the island Aug. 24.

The largest muskallonge taken on the St. Lawrence River during the season was caught by Mrs. F. Hasbrouck, of New York city, a guest at the new Gananoque Inn, Gananoque, on the Canadian side. The fish weighed 39½lbs., and was 4ft. 1in. in length. Frank D. Hasbrouck and a guide were in the boat at the time, but Mrs. Hasbrouck asked no assistance of the gentlemen until she had played the fish tired and had it at the boat's side ready for the gaff hook.

One of the most fortunate of those who angled for pickerel was W. H. Crane, of Binghamton, a guest at the New Windsor Hotel, Clayton. On Aug. 9 he brought in eighteen pickerel and the next day twelve. The largest weighed 12½lbs.

Miss Katherine Bowen, of Utica, who was spending her vacation at Thousand Island Park, caught a pickerel which tipped the scales at 20lbs. This was late in August.

During the last week in July W. H. Hayes, of Utica, a guest at the Pullman House, caught 34lbs. of pickerel and bass in one day.

On July 30 M. A. Deimel and B. G. Loomis, of Herkimer, who were guests at the same hotel, caught 42lbs. of pickerel and bass.

Dr. W. A. Rowlands, of Utica, a guest at the New Windsor Hotel, on Aug. 17 brought in 91lbs. of pickerel taken in four hours' fishing. Three of the fish weighed 10lbs. apiece.

L. P. Peirier, of New York city, who was stopping at the same hotel, made an excellent catch of pickerel on Aug. 19, the largest specimen weighing 12lbs.

The largest catfish reported to have been caught during the season was taken Aug. 9 by A. O. Miller, of New York city, a guest at the Central Park Hotel. Its weight was given as 18lbs.

On Aug. 12 a sturgeon weighing 77lbs. was captured off Grenell Island.

The largest sturgeon taken in the St. Lawrence River this year, and of course the largest fish, was caught about Aug. 10 by James Wheeler, of Gananoque. It measured 6ft. 6in. in length and weighed 153½lbs. Mr. Wheeler also caught two other sturgeon of smaller size on the same day. PORTSA.

UTICA, N. Y., Sept. 17.

Michigan Whitefish and Muscallonge.

CENTRAL LAKE, Mich., Sept. 14.—Two whitefish were sent from Beaver Lake to Charlevoix last week, the two weighing about 35lbs. One of them (sent to W. A. Smith, editor of the *Sentinel*) weighed 17lbs. dressed. It was seen by a friend, of whom I asked if these weights had been verified. He did not know, but stated that the one he saw was an enormous fish, with a comparatively small head and a "roll of fat at the shoulder like that of a buck sheep." The largest whitefish I have previously heard of was taken in Torch Lake, and weighed between 14 and 15lbs.

One day last week a maskinonge, said to have weighed 33lbs. was taken in Central Lake. Such fish are scarce nowadays.

I have caught this season three bass and about as many dozens of trout. Do you know any one who wants to buy a trout horse? I have decided to sell mine and take a "stramble." When I get somewhere you will probably hear from me. KELPIE.

A Minnetonka Bass.

THE biggest bass landed in Lake Minnetonka within ten years was brought to boat in Stubbs Bay in August of this year by a party consisting of Dr. Hedderly, Charles Hamilton and Mr. Schunemoon, and its members were casting toward shore with spoons, when one of them got a tremendous strike. The bass was skillfully played, and in fifteen minutes was sufficiently drowned to be landed with safety. The monster weighed 7½lbs., which is pretty near a record breaker for bass.

MEN I HAVE FISHED WITH.

XIII.—Capt. Stephen Martin.

STEVE was a different sort of fellow from any of the boys of whom I have written. He came into our boyish set after we went across the river to live, and I naturally dropped into Scott's occasionally by day, but frequently in the evenings. W. J. & R. H. Scott made, sold and repaired guns on Beaver street, between Broadway and Green street, and after their rival—poor Steve Van Valkenburgh—died theirs was the only place of the kind in Albany. Gunners of all kinds had business there, and every evening a few could be found in the salesroom discussing all kinds of questions pertaining to guns, their proper loads and powers, as well as telling their personal experiences while trying to conceal the exact location of a bit of snipe bog or partridge cover.

We boys soon got acquainted—it never takes boys long to do that, especially if they have a common interest in anything. Martin was one that dropped in there, and as he was about the age of our party he went with us on a fishing trip to Normanskill, a brook which rises somewhere off toward the Helderbergs* and enters the Hudson a few miles below Albany. We called it the Normanskill Creek in ignorance that "kill" was Dutch for creek, and that the added word was a repetition, but then what would you do with Kaaterskill anglicised into Catskill as the name of a village, a range of mountains and a stream? And then the word creek is used in New York for a bayou or arm of a river which forms an island, like the Popscheny, and also for a brook or even a river like the East and West Canadas which form the great Mohawk. All this has nothing whatever to do with Steve Martin, the subject now under the scalpel and microscope. A cog slipped and some ink went astray, only this and nothing more.

The day was quite young when we reached the stream near its mouth and some distance below the first dam. George Scott was going to try a new bait, and had brought a lot of fresh-water mussels, *Unio*, "for," said he, "if these things aren't good for bait, what good are they? What do they have shells on 'em for if it is not to keep the fish from eating 'em?"

"Lemme smell 'em," said Steve, and he took a sniff and with a look of disgust said, "George, a fish couldn't eat that thing; you can't eat it, and it's my opinion that nothing will eat it. What do you think of it, Fred?"

"I dunno, the only way to find out is to try 'em. Old John Chase has used 'em for bait in his eel pots, and he wouldn't fool his time with the things if they are no good. I've seen him pick up a peck on the flats at low tide. Hogs eat them, and Port Tyler said that some kinds of wild ducks eat the little ones. I don't see why they shouldn't be as good as clams or oysters; they live like them."

"Oysters!" yelled Steve, "I'll bet you daren't taste of one. Nobody eats them, and I believe they're poison."

"I'll eat one if you will."

"That's fair," said George Scott.

Pete Loeser remarked, "I dink Stefe he vas scart to eat von of dose muschels, he don'd got some peppersauce. Oh, Stefe! you vas scart und you pack oud."

The question had assumed a personal form, and Steve was getting warm. The reflection on his courage braced him up, and after giving Pete a look which might have meant that he would like to cut him up for fish bait, he asked, "Where is the pepper and salt?" These things put before him, he selected a mussel of medium size, groped about until he found one to match it in size and shape, and with one in each hand he offered me the choice in the courtly manner that duelists are reported to do upon the field of honor. My careless challenge might have been passed by if only Martin and I had been present, but the comment of Loeser settled it. A contest was unavoidable. A choice was made, and each opened his mollusk, salted and peppered it with deliberation. Then, eye to eye, we raised the shells and took in the contents.

Charley Scott, brother to George and the firm of gunsmiths, watched the faces of the contestants closely, and after the last morsel was swallowed by each said, "Well! if mussels ain't good to eat, you fellows lie. I've been a-waitin' to see one of you weaken on 'em, but you only looked at each other as if you were chewin' oysters."

The truth is that we afterward acknowledged to each other that fresh-water mussels might be good for fish bait, but we had no very great desire to eat any more. There is a remembrance of a combination of toughness, sweetness and sliminess which did not provoke an appetite for more. We put on a bold front and challenged the other boys to try them. Martin even went so far as to say that they were as good as oysters. This statement was received with some doubt, and Charley Scott suggested that if Steve thought so he could save money by using them in place of the salt-water product. George offered to eat one if we would each eat another, but the German was mean enough to ask: "Oof Stefe dinks dose dings was so goot we oysders, vy don'd he ede 'em some more?" A yell turned the conversation; George had thrown his line back in the wrong direction, and the hook took Loeser in the ear and tore a hole big enough to let it be taken out easily. Years afterward, at a dinner of the Ichthyophagous Club, we had a bisque or some other preparation of *Unios* fixed up by the *chef* of one of New York's crack hotels, and I tasted it, with a thought running back to an early day on the Normanskill. After tasting it I looked around to see how the rest enjoyed it. Frank Endicott made a show of taking frequent spoonfuls, but his plate seemed as full as ever. Mr. E. G. Blackford tasted it and said, "That is very fine," but somehow let it go at that; and when the waiter removed his plate you could not miss what had been eaten. No doubt the mussels are good, but you've got to learn to like 'em. I never persevered in this direction. As bait that day they took a few fish, but the verdict of the boys was that they preferred the old reliable angle worm.

Down in the lower end of Albany is a portion called Bethlehem, and on the river road was the Abbey, a noted road house a couple of miles below the city. An English sportsman named Kenneth King lived in Bethlehem, and the Abbey was kept by another English shooting man named Sheldrick, who got up pigeon shoots, and we boys used to attend them. At these affairs we used to make matches to shoot at ten birds each, the loser to pay for and the winner to have them. One day after the shooting was done Martin said to me: "We are not going to shoot any more because there are not enough pigeons for a match, but as your gun is loaded and there are a few pigeons left, I'll shoot you a match of two each. We want to shoot off our guns any way. What d' ye say?"

I had left my gun standing in the corner while I had gone on the front porch for something, and had just returned when Steve made this proposal. "All right," said I, "we might as well shoot at a couple more and empty our guns before going home." He picked up his gun, and as I reached for mine Ken King quickly passed me his and with a wink said: "Take mine."

Without thought I went to the score after Steve had killed one of his birds and missed the other, and killed both of mine. The boys laughed, and Steve looked surprised as I hastily walked back and put up King's gun. While they were talking things over outside King asked me: "Do you know why I gave you my gun to shoot?"

"No, but you gave me a wink and I asked no questions. Why did you do it?"

"When you went out on the front porch Steve drew the wads and took the shot out of both barrels of your gun. See the joke? They're talking about it now."

I went out and took my three birds, Steve paid for four and merely remarked: "Well, you beat me this time; we'll have to try it over again next Saturday."

"As we got ready to start I stepped back and shot off both barrels, and Steve asked: "What gun did you kill the pigeons with? I thought it was your own."

"No, I used Ken King's to see how it shoots, as we may want to trade. It shot very well; couldn't have done better. When I shot off my gun just now it made a light report, perhaps I forgot to put shot in it."

Steve made no reply, but Pete Loeser said: "I kess Stefe he dinks dere vas no shot dere; hey, Stefe?"

The laugh was on Stephen, and the boys guyed him so that he had to own up, but after that event we each kept our guns in sight at pigeon matches.

It was after this that I bought the pointer Nell from Ken King, the one referred to in former sketches, and King showed us the woodcock grounds on the Albany side of the river, and we shot with him over his dogs and Nell. Sometimes when he was not with us we consulted Mrs. Sheldrick, who was well posted on these matters and far more communicative than her husband. In her vocabulary "birds" meant woodcock only; all others were spoken of by name. For instance, she would say: "Well, boys, you won't find many birds in the swamps this morning; you might get an odd one up in the cornfield after the rain last night, but you can find plenty o' pigeons in yon wood, an' mebbe some plover on the hill or a few yellow-legs along shore. But birds 'll be scarce to-day."

Steve was wonderfully good on woodcock and usually beat us all in bringing down that bird of erratic flight. He used a short gun of 12-gauge. Just how short the barrels were is more than I would like to say now, perhaps 20in., while my gun was an extra long one of 12in. more. I once saw him drop five "birds" in succession in a swampy thicket where this swift dazzling bird would drop out of sight within 20yds., and this was not an exceptional case. Those who have shot this quick, zigzagging, noiseless flying bird in close thickets are the only ones who know just how quick and unruffled a shooter has to be to get a fair proportion of the birds he flushes. They had all learned from Ken King the lesson which I had been taught by Port Tyler in former years, to use small shot in small quantity, with a very light charge of powder, for this kind of shooting at close quarters, in order not to mutilate this royal game bird.

At upland plover shooting he was a good shot; but the German boy, Pete Loeser, whose slower method lost him many a woodcock that Steve would have killed, on plover always beat Steve, whose forte lay in snap shooting. Once a single wild pigeon crossed the road ahead of us while we were in a bunch and safely ran the gauntlet of six barrels from Steve, Geo. Scott and myself, while Pete brought it down with his first when, according to our pacing, it must have been 75yds. away, he shooting last. Steve went with us on several fishing trips, but never in the open season for game; fishing amused him when there was nothing else to do, it was fun, but hardly sport to him. He cared little for camping out or for the fields and streams outside of the fact that game abounded in one and fish in the other, hence I said at the beginning of this article that he differed from any of those of whom I have written. He was impatient of any delay and eager to be stirring, hence some of the ingredients of a good fisherman had been left out of his mental make-up.

Steve developed into a strong, finely formed young man, with a full, handsome face, which was perhaps overweighted by a mustache which some might have thought a trifle too robust, but he had a large, full eye which was frank and open. I have no photo of him and know nothing whatever of him except what I tell here. He touched my orbit for a brief season and then vanished into space as far as I know. When I first knew him he was connected in some way with Delahanty & Co., tinsmiths and plumbers, but just now it is impossible to say in what capacity. At the close of this sketch I will tell you the last I knew of him.

In the early 50s there was an epidemic of rifle shooting in the State of New York. Not shooting at game, that is one of our steady and never-decreasing infirmities, but this prevalent disorder took the form of long distance target shooting. Heavy rifles were shot on bench rests at 600yds., mainly in winter on the ice below the city. They had "patent muzzles," a detached piece with pins to set over the true muzzle while seating the bullet in order to leave the muzzle perfectly square; the enlargement necessary to start the bullet in the way it should go being entirely in the false muzzle. These guns were all handmade. If there were machine-made rifles in those days I never heard of them. All rifles were handmade. Soldiers did not use them, their muskets were smooth bores, and to give you an idea of guns in those days you must know that it was believed that rifling was a principle that would work well up to a certain caliber, but was only practicable for guns which were shot from the shoulder. For field pieces which threw a 6lb. shot it was believed to be useless, because it was thought that the weight of the projectile would prevent it from following the twisted groove. To-day they rifle not only the largest cannon, but even mortars. In the 60s I handled rifled guns up to those known as 100lb. "Parrots," but now such a gun is only a toy and our 10in. seacoast mortars with their smooth bores are obsolete. This digression is not for the benefit of the old fellows who know all this, but is intended for the boys of to-day who have the cartridges for their breech-loading shotguns filled for them before they go afield and whose machine-made magazine rifles are wonderful pieces of mechanism. Remember, boys, in my shooting days we went afield with powder flask on one shoulder, shot pouch on the other, cap box and either cut wads or newspapers for wadding in the pockets. If we shot the rifle we moulded our own bullets, measured our powder and carried greased linen patches to envelope the bullet, a ramrod and box of caps. Such a thing as buying prepared ammunition was not dreamed of.

There was a little squad of rifle shooters from both sides of the river which met in contests on the ice. There was Billy Wish, the ferryboat engineer; William Tallman, Sr., a machinist; Steve Martin; and John Clark, a printer, who in spite of having but little color in his eyes was the best shot of all. It has been said that gray-eyed men make the best rifle shots, but Clark's eyes were lighter than gray.

The shooting was counted by string measure, and the targets were displayed nightly at Scott's. Such discussions over the wind in explanation of a bad shot, and such arguments over the merits of rifle makers would fill volumes of FOREST AND STREAM. The merits of Lewis and James as makers of rifles was the main point. One lived in Troy and the other in Syracuse, and they were always going to shoot a match with rifles of their own makes, but, like some gladiators of to-day, it ended in talk. Billinghurst, of Rochester, was another famous maker; I remember him because he made the first open reel for fishermen. Scott made a rifle for Martin and he induced me to join the shooting and use his gun. There was no betting, just pure sport, and I tried it. The rifle was sighted long and deliberately, then a rest of the eye and it was gone over again until the shooter had it as fine as he knew how. Then the flags were watched, with the eyes off the rifle, until the long strings of muslin hanging from the poles placed at intervals showed the wind to be right, and the hair trigger was touched.

I never made much of a shooter of this kind; my eyes blurred at 100yds. then and they do at 20ft. to-day, although I read and write without glasses at sixty-three. Black-eyed Steve Martin was a fair shot, but that did not satisfy him, he always had an excuse for not being first—the powder was not as good, the patch was too thick or too thin, a puff of wind came just as he pulled the trigger, etc.

Pete Loeser once said: "Stefe he shoot pooty goot, but never so besser as he can; dere vas alvays sometings dot spile his string. Oof dot clout had not come der sun between ven he make der sixt shot he peat Shon Glark all hollow. I dink he makes besser string in te efening by Scott's stofe, by shimminy!"

To this George Scott replied: "Pete, if you could make half as good a score as Steve you might be proud. There are his targets, look at 'em; they show a splendid average, and one hard to beat. It's not a good one for two or three days and then a durned bad one, but a steady, good lot of shooting day by day."

"Dot's all ride," said Pete, "but he alvays got some oxcuse for de one shot wot makes de oder nine figger oop big on de averich."

Just then Steve came in and George said: "Steve, you are just in time. Pete says you can't hit a pancake if it's tied over the muzzle of your gun."

"That may be so, but I'll tell you what I'll do, Pete. If you'll stand 1,000yds. down on the ice and let me shoot a pipe out of your mouth I'll buy you a new hat if I don't break the pipe."

Another way in which Steve Martin differed from my other fishing companions was that he was a practical joker. Now, fun is one thing and "practical joking" is another. In the mind of the p. j. they are the same thing, but no other human being agrees with him because the fun is all on his side, and the misery of others is his joy. Therefore he is a selfish mortal and that settles him. We were once rowing round Douw's Point against a stiff current, just all that two pairs of oars could do to make a bit of way at the extreme point. The scow had a plugged hole in the bottom to let out water without tipping her over when beached. As we were near the shore Steve said: "I guess I'll lighten the boat," and jumped ashore, taking the plug with him. The water was up and wet our feet before we noticed it, and we were only saved from a ducking by promptly beaching the little scow. The author of the mischief was up the bank and off. A new plug was whittled out and we went our way scolding, not so much at what had happened as at what might have occurred.

Of course he was forgiven, although he never asked to be, but for a time he was made to feel that his fun was not appreciated by the boys that were in the boat. We often shot together over Nell at woodcock, snipe, golden plover and shore birds. He sometimes took her out alone, and when I learned that he was trying to make her retrieve I protested. Steve insisted that a pointer could be taught to retrieve as well as a setter, and instanced one that we both knew, but I still objected. She was lost for about a month before I went West in '54, but Steve found her after I had gone, and so she came into possession of my father, as mentioned in a former sketch.

When I returned, over five years later, my old chums were looked up. Steve had grown into a strong man, Pete Loeser had gone West, George Scott had accidentally killed himself while pulling a loaded gun from a bed, and quite a number of changes had taken place. I did but little at fishing or shooting for a year and then the war broke out. Some time in July, 1861, Steve told me about the scheme of Col. Hiram Berdan to recruit a company of sharpshooters, every man of which must be able to make a string of ten shots at a certain distance whose united measurements from the center of the target should not exceed a certain number of inches. I forget the figures, but they were not in excess of the scores usually made by the riflemen on the ice.

"Now," said Steve, "you can pass this test, it is not a severe one, merely intended to get men who are fair shots and know how to use and care for a rifle. After enlistment and muster every man will be given the rank and pay of a second lieutenant and will have a darky to

* This spelling is phonetic because the name is not in any work at hand. The name for mountain the Dutch pronounced "beric," and the name of this range of hills west of Albany was corrupted by the English into "Helabarricks," the only way I ever heard it spoken when a boy. Mr. A. C. Stolt kindly corrects me on the spelling of "Popscheny" and will probably straighten the kinks out of this. The Dutch spoken of in these articles are the original white settlers of New York who came from Holland.

carry his rifle and equipments. I've heard you say you'd like to go and here is your chance. I'll go if you will."

"Steve," said I, "there is much doubt if my score would pass; you know that I do not see well at a distance, and besides this my family affairs forbid my going. That's a queer story about the enlisted men ranking as commissioned officers, where did you get that?"

"Why, that's the arrangement between Col. Berdan and the War D-partment; the men will all be commissioned after they are mustered into the U. S. service, at least that is what they tell me."

While it was out of the question for me to think of going at that time, and as there was then no doubt but the trouble would all be over in a few months and my services would not be needed, still this story of the rank of enlisted men seemed strange. I knew little of military matters, but I had friends who were well posted. I met Col. Michael K. Bryan, of the 25th State Militia, afterward Colonel 175th New York Volunteers, who was killed at Port Hudson on June 14, 1863, and sez I to Col. Mike, sez I: "Col. Bryan, our friend Steve Martin tells me that in the regiment of sharpshooters which Col. Berdan is raising every enlisted man will be a second lieutenant after his muster into the U. S. service. How is this?"

"Steve proposed to you to enlist?"

"Yes, said he would if I would."

Then Col. Mike sez he to me, sez he: "That's a beautiful bit of gossamer from Steve's workshop, spun to catch such green bottles as you. A regiment of second lieutenants! I suppose the corporals must be captains and the sergeants field officers, and just how they would find rank enough for the drum major only Steve could tell. Did he tell you that he had authority to raise a company for this regiment and already had his commission as captain?"

"No, that's all news to me. Is it so?"

"Yes, he has the company partly filled and his commission has been issued."

"Thank you very much, Colonel; I think I understand the situation now. Good morning."

This was some time in late July, and I talked with Steve often and he appeared anxious to enlist if I would. Nearly six years among men who were simple in their ways had shown its effect. I was very green! The fact was painfully evident, and after a month or more of listening to Steve and doing a little thinking, I said: "I heard yesterday that the Governor had given you a captain's commission in Berdan's sharpshooters."

"Yes, I got it last week. You see, I had been at work for the regiment because I was bound to go out with it, and my friends told this to the Governor, and he said that I deserved a captaincy and issued the commission at once. Now I'm in a position to make you a definite proposition. The other company officers have not been appointed, and will not be until the company is full, and if you will enlist with me I will have you appointed first lieutenant before we leave the State."

"Thank you very much, Steve, old boy! I'll think it over. Somehow it doesn't seem much to be a first lieutenant in a regiment wholly composed of second lieutenants; but you know that I know nothing of these things, and if I should decide to go with you of course I trust all this detail to you as an old chum, for I am ignorant of all that pertains to soldiering."

"All right, old boy! If you will go with me I'll fix you all right and look after your interests as I would my own. That story about the privates being all second lieutenants is not true; it came from some fellow in the Adjutant-General's office, but that's all right between us. I'll fix it right for you."

I went home that night and in a dream John Atwood and I were snaring suckers with a fine copper wire on the end of a pole. We were landing them bravely for a while, and then things got into one of those queer mixtures that dreams are only capable of and which never untangle. John Atwood disappeared and Steve Martin stood where he had been, and as he lifted an unusually large sucker to the bank I felt that I was being choked—and awoke.

The rush of awakening thoughts brought Longfellow's lines:

"'Twas but a dream; let it pass, let it vanish like so many others!
What I thought was a flower is only a weed, and is worthless."

And then the reply of Clarence to Brakenbury came up:

"Oh! I have pass'd a miserable night,
So full of fearful dreams, of ugly sights,
That, as I am a Christian faithful man,
I would not spend another such a night,
Though 'twere to buy a world of happy days."

After this I never heard of Stephen. I looked for him in the army, but never could find any who knew him. When we lay in the trenches of Cold Harbor for ten days within 500yds. of the enemy a detachment of Berdan's sharpshooters was our picket as well as skirmish line, and as they could not leave their pits in daytime and live I used to ask after Steve when a man came over to our works at night for rations or ammunition, but none of them knew him. After the war none of the boys seemed to know what "got" Steve. Phisterer's "New York in the Rebellion," p. 517, says of this regiment: "Co. B, Capt. Stephen Martin, * * * was organized at Albany, and mustered into the U. S. service for three years, Nov. 29, 1861." The official register of volunteer officers gives his resignation as Nov. 15, 1861. Therefore I am not now surprised that I could not find him in the field, when he resigned his commission fourteen days before his company was mustered into the service.

Looking all this over in the light of riper years, I have been impressed with the high-minded and honorable way in which John Atwood snared suckers. There was no false pretense by John. He did not take the sucker into his confidence. Not he! The loop was lowered in plain sight, drifted down behind his gills in broad daylight—the pole jerked, and there is your fish.

As I recall the things which happened years ago I have great respect for John's honest, straightforward methods.

FRED MATHER.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

EARLY HISTORY OF BAIRD STATION.

From the McCloud River Salmon Fly, Aug. 29.

ABOUT a quarter of a century ago the United States Commission of Fish and Fisheries was created, and the attention of the Commission was very early called to the great opportunities which the Pacific coast offered for the work of salmon breeding.

Up to this time, with the exception of a private hatchery established by the writer in Canada, in 1868, no attempt had been made in America to obtain and hatch salmon eggs on a large scale.

In 1872, however, the United States Fish Commission sent the writer to the Pacific coast to select a suitable place for collecting and hatching salmon eggs, with instructions, if successful, to build and operate a salmon hatching station.

Just twenty-four years ago to-morrow the writer arrived on the McCloud, and after examining this locality decided that this was the place of all others in California for a salmon breeding station. The McCloud location was a most fortunate discovery. In all the twenty-four years since the finding of this place no other location has been discovered that begins to approach this station, in efficiency in procuring eggs of the summer run of salmon, although the whole basins of the Columbia and of the Sacramento have been searched for that purpose, and here it should be added, by way of explanation, that it is the summer run salmon that are so highly valued for canning, for marketing fresh, and indeed for all commercial uses.

The early history of the station is very interesting. The untried character of the work, the strangeness of the country, the scarcity of white men, and the abundance of Indians all contributed to make the experience of the poineers unique, and in no small degree exciting. Added to this, the country itself was almost in its primitive wildness. There was no town of Redding then, not a house where Redding now stands. The nearest railroad town was Red Bluff, fifty miles distant. The California and Oregon stage, with its six horses, tore through the settlement on its fast time schedule twice a day—once going north and once going south—but no locomotive whistle or rumbling of trains had then disturbed the wild beasts of the forest, and bears and panthers, and even grizzlies, came and went as they pleased along the banks of the river, almost unmolested.

The Indians, at that time, were much more interesting than they are now. Many of them still wore the primitive costumes of the tribe. The possession of firearms was almost unknown among them, and they seldom appeared anywhere away from their "rancherees" without their powerful bows of yew and their quiver of arrows slung over their shoulders, which always gave them a certain picturesque appearance. They seemed to be everywhere also. They were very numerous on the river. Every favorable hillsite or natural clearing on the river was dotted with their driftwood houses, and wherever we went, through the woods or over the hills, we were sure to meet and see the red-skinned natives in every direction. With only one or two exceptions, none of the Indians spoke English, which, while it made life among them all the more strange, somehow seemed to make them objects of greater interest.

Living among them was not wholly free from danger at that time. Indeed, we had the pleasing thought to reflect upon that every white man who had settled on the river before us had been murdered by the Indians, and when we came they made no concealment of their hope of killing us off also. Two considerations probably influenced them to postpone this disagreeable denouement. One was the terrible punishment they had received from white men for their last wholesale indulgence in murdering settlers, and the other was that we gave them all the salmon after we had secured their eggs. This last certainly went a great way toward pacifying them and reconciling them to our encroachment on their hitherto sacred river. The writer remembers one old Indian saying to him the second year: "*Mut chinney wooroos, mut dooya Wintoon noolh—challa*" (You take eggs, you give Indian the salmon,—all right).

Alas! the good old Indian times on the McCloud have passed away forever. No longer are seen the old squaws weaving their grass baskets, and the young women pounding acorns and making manzanita bread. No longer are seen the *winnem-codies* around their waists, and the grass baskets on their heads. No longer are seen the quivers of arrows and bows of yew. Tin lard buckets have taken the place of the baskets of grasses, and Pioneer flour and Royal Baking Powder have supplanted acorn soup and manzanita bread. The old arrow maker's occupation is gone, and Winchester rifles put the old bows and arrows to shame. Alas! again, for the Indians themselves. They see the last days of their race approaching. It is a pitiful prospect. May heaven have mercy on them!

Some incidents connected with the first attempts at taking salmon eggs at this station were rather amusing.

The station, which is now a Government reservation, with a store, post-office, superintendent's residence, foreman's residence and several other buildings, consisted then of only a 12×14ft. pine cabin and a few hatching troughs in the open air. The pine shanty had but one room, which was at once office, reception room, kitchen, dining room and bedroom for all hands.

Last year (1895) 10,000,000 salmon eggs were taken here. The first year (1872) the whole season's yield was 30,000.

When the first lot of eggs had been taken and placed in the hatching troughs, the chief of the McClouds, then in the prime of life, rode up haughtily on horseback and looked at the eggs. Then, turning away disdainfully, remarked in scornful tones that they would all die. He came again and again, always with the same disdainful air and the same scornful remark. On the other hand, we white men thought we knew what we were about, and that the salmon eggs would not die. By a strange freak of fortune, however, it so happened that the hatching water, having become too warm for the eggs one day, they did all die. The next time the chief called he rode off more disdainfully than ever, but with a look also of supreme satisfaction on his face. The next lot of eggs did hatch out all right, and then our turn came, and the chief was discomfited.

If opportunity offered many pages might be filled with incidents, more or less interesting, of the early history of "The Fishery," as it always used to be called, but the inexorable limits of the space allowed by the editor compel these remarks to be brought to an abrupt conclusion; but we must add that, whatever may befall this station in the future, the labors, the trials and the dangers of the early days of "The Fishery" will always have a deep interest for the writer.

LIVINGSTON STONE.

CHICAGO AND THE WEST.

A Cleveland-Wisconsin Fish Story.

CHICAGO, Ill.—An interesting question in angling honors comes up in the following description, sent me by Paul North, of the Cleveland Target Co., of the capture of a 7lb. small-mouth black bass, which is without doubt the record small-mouth of the season. It is quite susceptible of proof that the glory of the capture belongs to Mr. North. I remember I had quite a scrap with another boy over this same legal point when I was a boy. He caught a bullhead on my outfit while I was away hunting frogs, and had the nerve to claim the fish as his. As I recall the issue now, I think that Mr. North may safely cite this question as *res adjudicata*, for I licked the other kid over it years ago. Should Mr. Stevens argue too much over the matter, I should advise Mr. North to cite the precedent to him, and then he will probably admit the justice of Mr. North's claim. The description of the case at bar is given graphically in Mr. North's own words, as below:

"CLEVELAND, O, Sept. 9.—Inclosed please find photo of the big bass I was telling you about when I met you at St. Paul. You will see that he measured 22½in. in length and was 17½in. in girth. His weight was 7lbs. full, and I think, without much stretch of the imagination, he would have weighed 7lbs. 2oz., which I believe is the record for small-mouth bass. He was caught on a No. 1½ (Nautchaug) silk line with an Enterprise kidney spoon, and a live chub and a Bristol steel bass rod weighing 8oz.

"Mr. Will Stevens, of Marquette, Mich., was the lucky man that was handling the rod, but there is quite a dispute between the gentleman and myself as to just who caught the fish, and we have, or rather I have, decided to leave it to you as to who did the act.

"The facts in the case are as follows: Mr. Stevens, Mr. Spear and myself started out for the bass grounds and decided that on the way down the lake we would troll for bass or pickerel or any old fish that might come along, and as Stevens would rather row than fish any time, Spear and I reluctantly allowed him to row while we did the trolling. In a short time I had a strike that I thought at first was the bottom of the lake, but which proved to be a very large and lusty bass.

"After a long and exhausting catch as catch can wrestle with him, I finally decided that we did not want any bass, especially such big ones as he was, as you know they are not as good eating as the smaller ones, and concluded to let him go, and I had no sooner made up my mind to that effect than he went, but not till we had a full view of him, and I can assure you on the honor of a fisherman that he weighed at least 8 or 9lbs. and was the biggest bass ever hooked.

"There were some remarks made about that time by others that were in the boat about some people knowing more about rowing than they did fishing, and as a result I took the paddle and Stevens took my rod.

"As a direct result of my skillful paddling and knowing just where bass were liable to habitate, it was but a short time before Stevens had a strike, and after a prolonged struggle, during which he followed to the letter all my instructions as to just what to do, he, or rather we, finally landed him with the assistance of Spear and the landing net.

"Now Stevens claims he caught the bass because he handled the rod, and I claim I caught him because it was my rod, line and reel; because I told him just what to do in the critical moments of the fight, and because I paddled the boat, and Spear, under my instructions, handled the landing net with neatness and dispatch.

"Now of course if you can possibly decide that he caught the bass I will submit to your decision and retain a poor impression of your judgment, but of course you cannot for a moment think but that I was the man.

"Stevens was so puffed up over catching the bass, which was not nearly so large as the one I let go, that he wanted us to take the fish to Marquette and put in a window with his name in capital letters as the sole and only catcher of same. He would have done it himself, only he was going to stay at the Anna River Club at Munissing to finish his vacation. So we took the fish with us, and reaching home about midnight put it in the ice box and went to bed. Not getting up when called and delaying breakfast on that account about half an hour, the cook took advantage of the time on her hands and cleaned the bass for dinner.

"When we found it out more things were said that would not look just right in print, and half the people in Marquette looked upon us in a sort of pitying way when we told of the 7lb. bass we caught.

"The photograph and our well-known veracity, however, convinced them that we were truthful and had really caught a bass that beat the record for that neck of the woods at least.

"Am going up there next year after the one I let go, and will send you his photograph also. Will formulate a code of rules governing bass fishing before we start in and do away with any disputes that may come up in regard as to who is the catchee of any fish that may be landed.

"Would tell you just where this lake is, but you would put it in your paper and then some one would start a big hotel there to accommodate the crowd that would go, and some one would catch my 9lb. bass, which would be disappointing to me, as I want him myself.

"If you know of any one getting a larger bass than this one this year, let me know. PAUL NORTH."

Sept. 19.—The fall fishing is now good in the West, and the cold weather following hard upon the heavy rain of the present week should set the bass and pike to biting merrily on the autumn run of feeding in this part of the country. Mr. O. von Lengerke, of this city, departs to-night for Oconomowoc, Wis., to test the truth of this theory.

Mr. H. B. Jewell, mayor of Wabasha, Minn., writes that the unprecedented run of very large wall-eyed pike continues in Lake Pepin and the river below. A friend of his took one this week weighing 11lbs. Such a fish is a beauty, and moreover a treasure upon the table.

Mr. C. H. Keough, of Chicago, is lately back from Canada, where he was after trout on the Canada side not far from the Sault Ste. Marie. He says they get a trout there called the "gray trout." This is a new one for me.

E. HOUGH.

BOSTON NOTES.

BOSTON, Sept. 15.—The open season on partridge or ruffed grouse, in this State, began to-day. Some of the members of the Scordon Club have gone down to their preserve, and several Boston gunners were on hand early at different points along the Cape.

Mr. Walter L. Hill, just returned from a very pleasant gunning trip to Chatham, for shore birds, says he was accompanied by a boy, "one almost too young to go on such trips. If his parents are living they might interfere." He referred to Mr. Warren Hapgood, the pioneer and firm friend of the Monomoy Brant Club. "The boy," Mr. Hapgood, is only eighty-one years of age, and yet he loves the gun as well as he ever did, and is an excellent shot. Everybody who has gunned with him declares that he is a charming companion, both in the blind and in camp. They had very good success with shore birds. Both summer and winter yellowlegs were taken, with an abundance of plover. Curlew were in pretty good flight, and the Boston boys got their share.

Fishing parties for Maine are not all done yet. A Lawrence party of four is booked to start for the Katahdin Iron Works on Friday. From that point they will go into some camps at B. Pond. The party is composed of Geo. C. Bosson and wife, Joseph F. Shattuck, and Miss Fannie B. Lewis. Miss Lewis made her first trip into the Maine woods with her father last season, and is now a convert to woods and camp life. In the spring she saw several deer, but declares that nothing would tempt her to shoot one.

Sept. 18.—Messrs. Coes and Stoddar took fifty-five bass at Great Herring Pond, in Plymouth county, in one day's fishing, the largest weighing 4lbs., and landed by Mr. Stoddar on a rod that weighs 5½oz. SPECIAL.

A Lake Saltonstall Bass.

NEW HAVEN, Sept. 17.—On Labor Day about 1 P. M., on Lake Saltonstall, I landed on a 6½oz. rod an Oswego small-mouth bass that measured 24in. from end of mouth to tip of tail, and girthed fully 16in. He was weighed about 7 P. M., and tipped the scales at 6½lbs. Now would not it have weighed at least 7lbs. when caught? He put up the grandest fight that was ever seen on the lake.

KANGO.

Thousand Island Lake, Mich.

A WATERSMEET, Mich., correspondent writes that there is good salmon trout fishing in Thousand Island Lake, near Watersmeet; his first experience with rod and reel having been rewarded there the other day with a fish weighing 11½lbs. nine hours after being taken from the water. Ruffed grouse are found in good supply in the vicinity.

A Long Island Weakfish.

CAPT. HIRAM EASTMAN, of Islip, Long Island, took a 15lb. weakfish in the Great South Bay on Sept. 18, and with it claims the record for those waters.

Gen. George B Wingate, of Brooklyn, while fishing off Fire Island light on Sept. 12, took a channel bass weighing 31½lbs.

The Kennel.

FIXTURES.

BENCH SHOWS.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbuy, Conn. G. M. Rundle, Sec'y.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detriot, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y, Roxbury, Mass

Oct. 26.—Hempstead, L. I.—Natioonal Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 2.—Union Field Trial Club's inaugural trials. P. T. Madison, Sec'y, Indianapolis, Ind

Nov. 10—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Greene County, Pa.—Central Beagle Club's trials. L. O. Seidel, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials, Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 28.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Sept. 29.—Aberdeen Coursing Club's annual meeting, Aberdeen, S. D. Dr. F. W. Haragan, Sec'y.

Oct. 6.—Mitchell Coursing Club's meeting, Mitchell, S. D. H. G. Nichols, Sec'y.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington. Kan. C. A. Robinson, Sec'y.

Oct. 13.—American Coursing Club's annual meeting, Huron, S. D F. B. Coyne, Sec'y.

1897.

Jan. —.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

E. Bardoe Elliott Fund.

MAYWOOD, Ill., Sept. 14.—*Editor Forest and Stream:* I wish to express my thanks and gratitude to those who so generously subscribed to the fund for my benefit at the time of my husband's death, which fund has just been closed. I wish also to tender my warmest thanks to Messrs. Mortimer and Oldham for all the trouble they have taken on my behalf. BESSIE E. ELLIOTT.

A. K. C. MEETING.

THE special meeting of the American Kennel Club was held in the office of the A. K. C., Thursday, Sept. 17. The president and vice-president being absent, Mr. H. H. Hunnewell, Jr., was selected to preside.

There were present: American Fox Terrier Club (H. H. Hunnewell, Jr.), American Spaniel Club (E. M. Oldham); Associate Members (Dr. H. T. Foote): Boston Terrier Club (L. A. Burritt), Baltimore Kennel Association (William P. Riggs), Collie Club of America (James Watson), Gordon Setter Club (James B. Blossom), National Beagle Club (H. F. Schellhass), New Jersey Kennel League (F. Linck), Pacific Kennel Club (James Mortimer), Pointer Club of America (George Jarvis), St. Bernard Club of America (R. H. Burroughs), Westminster Kennel Club (Elliott Smith).

Delegates were accepted as follows: Poodle Club of America (Henry G. Trevor), American Bedlington Terrier Club (Thomas Pearsall), Wilmington Kennel Club (Ernest B. Macnair), Georgia Poultry and Pet Stock Association (O. H. P. Scott), Baltimore Kennel Association (William P. Riggs).

The report of the committee on amendments was accepted, said report recommending the adoption of certain of the proposed amendments and opposing others.

Mr. Smith suggested a new committee, to be called the board of appeals, to which any person penalized by the executive board may appeal. Such committee could consult with the members of the advisory committee to ascertain what was the testimony. Mr. Smith further suggested that instead of electing the members of the advisory committee indirectly, as at present, aside from the president, vice-president, chairman of the stud book committee and chairman of the associate members, the others be elected directly on their merits.

Mr. Watson asked: "If we are going to elect the very best men in the club for the investigation of testimony and the decision of cases, where are we going to get this committee of appeals who are going to revise their findings?"

Mr. Smith thought that such material could be found. He then moved the adoption of the proposed amendment, Sec. 6 of Art. V. This was in reference to the appointment of a committee on appeals at the annual meeting, to consist of five delegates, to be appointed by the president or in his absence the vice-president. No member of the executive committee to be eligible. Its duties were to determine all appeals taken from the action of the executive committee. After a lengthy discussion, in which motions and amendments were in clusters for a short time, the first proposed amendment relative to Rule IX. was adopted, as follows: "*A deaf dog is one that cannot hear the ordinary methods of command.*"

Also the second proposed amendment to Rule XXIV., as follows: Also, by adding the words, "*make any entries*" after the word "can" in the second line of Rule XXIV.

The proposed amendment to the bench show rules governing the licensing of clubs was rejected.

Art. IV. was adopted. It reads as follows:

SECTION 1. The regular annual meeting of this Association shall be held (on some day) in February (March or April) of each year at such time and place as shall be designated by the president, thirty days' notice whereof shall be given and published in the *Gazette. The Association shall also meet in May, September and December of the same year under similar call, but on twenty days' notice.*

DELEGATES.

SECTION 2. Each member of the Association shall have the right to be represented at the meetings of the Association (or of the executive committee) by one delegate duly authorized, and his appointment certified to by his club secretary; *but such credentials must have been filed with the secretary of the American Kennel Club at least ten days previous to any such meeting*, excepting the delegates of the associate members provided for in Article XI. Before such delegate shall be entitled to qualify in the Association, he must be accepted by ballot by the Association or by its executive (committee) *board.* A majority vote will be necessary to accept, and such acceptance may be withdrawn by a two-thirds vote by ballot at any meeting of this Association (or its executive committee).

The above amendments are approved by your committee, except in two details, and it is recommended that the call for the annual meeting be fixed at *twenty days*, instead of thirty days, and that the addition to Section 2 should follow the word Association on the last line, and should read: "*Provided such credentials shall have been filed with the secretary of the Association at least twenty days previous to the date of such meeting.*"

(Such portions as the committee disapproved are in parenthesis, and the proposed amendments are in italics.)

The last proposed amendment to Rule IX. was adopted, as follows:

In Regulations Governing Clubs are the words "*or licensed by*" added to the words "a number of," in first paragraph. Also adding to Rule IX. the clause: "*No entries can be accepted from persons not in good standing.*"

Art. V., Sec. 1, was lost by a vote of ayes, 7; nayes, 6; the ayes not having the necessary two-thirds.

The remainder of the report was on motion laid over until the annual meeting.

Mr. Vredenburgh called attention to the fact that there was no provision in the constitution for the advisory committee on the Pacific coast, and on his recommendation the following was adopted: "Art. XIII., Sec. 4. There shall be an advisory board composed of one representative from each club, a member of this Association, and located west of 110th degree of west longitude. It shall meet in the city of San Francisco, and shall hold meetings whenever deemed necessary. Its duties shall be advisory and to attend to all matters referred to it by this Association or its executive board, and it shall report the proceedings at each of its meetings to this Association. It shall act under a code of rules approved by this Association or its executive board."

The regular quarterly meeting of the executive committee was then held. The same delegates were present.

The reports of the secretary, treasurer and advisory committee were accepted as printed.

The application of the San Joaquin Valley Agricultural Association, of Stockton, Cal., for membership was accepted.

The applications for the registration of kennel names, Frontier, by Charles A. Converse, and Rensal, by Russell A. Alger, Jr., both of Detroit, were granted.

A numerously signed petition asking for a ruling by the A. K. C. debarring all cropped Irish terriers whelped after Jan. 1, 1897, from competition at all shows held under A. K. C. rules was read.

The secretary was directed to advise the petitioners that their proper procedure is to form a club and adopt a standard.

The appeal of Mr. Moorehead asking for reinstatement was granted, he having severed his connection with the Bull Terrier Club. Mr. F. F. Dole's appeal was referred to the advisory committee.

On motion that the report of the advisory committee be adopted as a whole, was carried.

On motion of Mr. Mortimer, who explained that the sickness of the secretary of the P. K. C. was the cause of the delay in attending to his club duties, and who asked that on that account the fine be refunded, it was done accordingly.

Bone in Beagles.

NEW YORK, Sept. 17.—*Editor Forest and Stream:* Within the past few months letters from various beagle owners, breeders and enthusiasts have appeared in print relative to bone in beagles.

It would appear from the general views expressed that too much bone was a thing to be avoided in beagles. There may perhaps be some practical objection to this, but I for one fail to understand how this matter of too much bone had assumed such proportions, and a thing to be dreaded under existing circumstances.

A few dogs bred in England, matured a bit large and heavy boned in proportion, were sent to this country to be sold and were sold. These dogs were shown and won under different judges. I fail to see how this fact is going to drift the tide of taste and fancy to that one type pure and simple. Many entries in under 13in. classes for beagles have won that were generally considered light in bone and too small, yet this fact has not had any radical influence on the breed as a whole. Some fancy small and some large dogs, some heavy and some light bone, some a bit long and some short, and so on.

In my experience for the past ten years as a breeder and exhibitor of beagles exclusively, I have found that the best general average dog does the most winning, be he large or small, heavy or light, so long as he possesses the general component parts to insure him a high average.

As a practical illustration take the case of champion Lou (now aged and tired). She was small and light in bone, even for her size, and yet she won about 40 first prizes before meeting her first defeat.

If upon this line of argument it can or would be conceded that the best general average dog should be the winner at both bench shows as well as field trials, what other system or method can there be used but the scoring consistently and conscientiously applied. It undoubtedly is somewhat laborious, but I strongly contend it is scientific and would result in more real good in advancing a specific breed than the present idea of judging according to individual fancy or notion.

It may have been tried before (as some will say), but it was years ago, when we were younger, and progress is feasible in all matters.

I advocated and put together a combined scoring system for beagles about a year ago, to be used at field trials, with the idea of having the best general average dog for both bench and field qualities win. The subject was brought up at a general meeting of the National Beagle Club, and after an extended discussion it was deemed and termed in advance of the times, and put aside for demand, to ripen with the time.

We will soon have the annual field trials again and probably the same old story of an inferior bench dog being superior in the field, and the some old question arising, Which dog shall we breed to get the best general average beagle?

As we now stand, we are drifting along loosely and without any fixed purpose, which can only result in one ending. H. L. KREUDER.

Proprietor Rockland Beagle Kennels.

Central Beagle Club.

SHARPESBURG, Pa.—*Editor Forest and Stream:* A meeting of the Central Beagle Club was held Sept. 13 to hear the reports of the field trial and other committees.

Messrs. A. C. Peterson, W. H. Beazell and S. B. Cummings returned from Green county on the 7th, having spent several days near Carmichaels and Waynesburg selecting grounds for the trials. Those near the latter place were finally determined upon as being most desirable for the purpose.

Better territory would be hard to find. It is within sight of Waynesburg, in a valley several miles long by a mile or more wide, with a gentle rise to the hills, from any point of which the work of the hounds can be seen. Through the center runs a swale, and on both sides of it stubble and brier fields extend—an ideal place for rabbits.

Each stake will be open to all, excepting the Members' Stake. The club has decided to give a cup as a prize in both classes of this stake. Entry blanks and running rules, giving different classes, will be forwarded upon application to the secretary.

Entrance fee for each open stake will be $5; $3 to accompany nomination and the balance to be paid on the night of the drawing. Entries will close Oct. 20. After deducting 10 per cent. from all entrance money the balance will be divided into three moneys—50 per cent. to winners of first, 30 per cent. to second, and 20 per cent. to third. A stake will be provided for dachshunde and Bassets.

A good entry is expected, and it is hoped all interested in these trials will give them their hearty support.

L. O. SEIDLE, Sec'y.

POINTS AND FLUSHES.

From dispatches in the daily press we learn that, on Sept. 19, Mr. John S. Wise had a narrow escape from injury in Richmond, Va. While leaving his summer cottage on the eastern shore, about fourteen miles from Cape Charles, his horse became frightened, kicked furiously, finishing by running away and demolishing the carriage; Mr. Wise fortunately escaping with nothing worse than several bad bruises. After his hurts were dressed he secured another horse and continued his journey.

The *Collie Club Chronicle*, a monthly issued only to Collie Club members, is the latest additon to the literature of the dog. It is intended to fill the needs of communication officially among the members, and the September number, No. 1, sets forth very fully its mission, its aspirations, and the good it can accomplish for the collie cause. James Watson, secretary, 203 Broadway, New York.

The Poodle Club of America has prepared a pamphlet for distribution containing the list of officers, extracts from the constitution, classifications, colors, weight limits, standard, judging points, and list of judges. Z. T. Baker, 13 William street, New York.

A meeting of the executive committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, on Sept. 25, at 8 P. M.

The win of second prize by Mr. H. H. Hunnewell, Jr.'s, Hill Hurst Pearl at Providence show was canceled by the A. K. C. on the ground of transfer from one class to another, and of the penalty for such transfers many warnings have been given.

Vol. XV. (1896) of the Greyhound Stud Book (England) covers fully every detail of public interest in respect to greyhounds. It is an excellent work of reference.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

IMPROVEMENT IN CYCLE CONSTRUCTION.

As the time draws near for the appearance of next year's bicycle, riders are beginning to speculate on the improvements that are likely to appear in the new models. In 1896 the changes in bicycle construction over the previous year's models were sufficiently striking to enable anyone to tell at a glance the new wheels from the old. The principal change was embodied in an increased size tubing, adopted by manufacturers with remarkable unanimity, which not only improved the appearance of the new model, but also added to its strength and rigidity.

In several minor points relating to hubs, tread, gear, etc., changed standards were adopted which tended to distinguish the new wheel from previous models, and all this had the effect of putting an enhanced premium on the 1896 bicycle as compared with new wheels left over from the manufactured stock of the previous year.

At this date it hardly seems probable that 1897 will see a repetition of this condition, though from the manufacturer's standpoint such a repetition would be highly desirable. Bicycle manufacture along the lines that have been followed in this country has apparently almost reached the limit of perfection. In lightness the minimum was reached two years ago, and in strength the maximum has been approximated during the present year. In symmetry of construction and beauty of finish there is little left to be desired.

It is asserted that wood, aluminum bronze and other materials, aside from those now in common use, will enter more largely into the construction of next year's models than heretofore, and there is undoubtedly truth in the statement. But from what can be gathered regarding the situation it would appear that innovations in this respect are more likely to come from manufacturers who take up a new thing, hoping to profit by its novelty rather than from the old standbys whose names are household words.

We repeat that along the lines of bicycle construction as at present followed by the great majority of our manufacturers there does not seem opportunity for marked improvement in next year's models, and that nothing as radical as the increased size of tubing which characterized this year's bicycles is likely to appear. By this, however, we do not mean to say that there is no room for bicycle improvement. Far from it; we believe that one of the most important possibilities for improvement has not yet received due attention. The bicycle has been logically developed along the lines of strength, speed and beauty, but in the direction of solid, easy-going comfort much has been overlooked.

We think that every thoughtful rider will acknowledge the truth of this assertion, and the reason is not far to seek. The first impetus to cycling came from racing, and even to-day the largest class of riders are those who receive their animus from the cinder path, and with whom the first consideration is always speed. This class is much more in evidence than the easy-going riders, who know nothing about records and care less for mileage, and their ideas have naturally had most weight with the manufacturers.

The pace has been set by these men, and the bicycle has been conformed to their requirements, till to-day it is a perfect machine for speeding over good roads at a rate of twelve or fifteen miles per hour, and for such riding it is above criticism. But ride slower on the standard wheel, try to sit erect, take it over poor roads or through a mountainous country, or ride in the rain, and you will find abundant opportunity for criticism. To-day riders can secure as options or extras a great many things that improve their wheels in the direction of comfort, but the road wheel still has too many points in common with the track wheel. The solid comfort man is no longer obliged to ride a saddle that supports his weight as a fence rail does, and he is not obliged to use handle bars that necessitate carrying a part of his weight on his arms. He can also have a brake put upon his wheel, though for economy's sake he refrains from using it except in case of emergency; and if he has backbone enough to carry the day against the agent's arguments and pocket, he can have large size tires that make up a thousand times in comfort what they lack in speed as measured by fractions of a second on the track.

In many cases, however, he will get none of these things unless he insists upon them, and even then he may be obliged to wait until his order can be filled from the factory.

We believe, however, that the solid comfort rider's time is coming, and from present indications it is not very far off. There are hundreds of new inventions on the market intended to make riding easier or safer: new saddles, new brakes, devices to reduce the jar from riding over rough roads, and minor devices all designed for the same ends. Straws indicate the way the wind blows, and these things taken collectively indicate the growing demand for improvement along these lines.

A standard wheel for sportsmen's use and easy-going people would embody the following specifications: Frame, the strongest that can be made within reasonable weight limits, and preferably of the older style with high crank bracket, which saves the pedals unnecessary banging on rocks or obstructions in the woods or on rough roads. Gear, 63 to 70, sufficiently low to take hills easily and ride leisurely on the road. Cranks, 6½ to 7in., according to the length of leg and muscular power of the rider; the longer the crank, the higher the gear. Handle bars, up curve or adjustable. Tires, 2 or 2¼in. in diameter; of course, the rims and forks must be adapted to the increased size. Saddle, one that supports the rider's weight on the bones of the pelvis. Brake, some strong and simple device that will stop the wheel when desired or act as a drag on a down grade. The common spoon brake applied to the front wheel is perhaps the best now in general use. The ideal brake, however, is one that acts on the wheel or crank axles, and not on the tire. When such a brake comes into general use, riders will be spared the fatigue of back pedaling on down grades. A gear case, which protects the chain from dust and mud and which very much lessens the labor of cleaning, should also be included in the specifications.

In addition to these points, some kind of a spring or cushion frame would prove very desirable for country riding or riding over the stone pavements in the city. Such a device should not add greatly to the weight of the bicycle, and should not cut away or weaken any part of the frame. Lacking it, large tires, which may be ridden comparatively soft, will go a long way towerd smoothing rough roads. Hills may be climbed with them with less effort, because jars from stones or ruts, which kill the momentum, are minimized. The old illustration of putting springs on the farm wagon applies here; without them the horses could not budge the load which, when once the springs were added, they pulled easily enough.

Large tires also make soft or sandy roads ridable, on account of their increased bearing surface, and by their springiness they save the machine considerably in wear and tear.

The 1⅝in. tires in general use pumped hard, as the manufacturers direct, in order to save cutting by the rims, are no great improvement over the old cushion tires, according to the testimony of men who have ridden both.

Let us hope that before the end of the century we shall have a perfect bicycle from this standpoint—one that can be ridden with comfort alike over poor roads and good, and that can be stopped or run at a uniform rate of speed within the bounds of safety on the steepest down grades and rockiest hills.

Meanwhile we shall await with interest the disclosures which 1897 has to make.

HE STOOPS TO CONQUER.

THERE is generally truth on both sides of an argument. The writer to the *L. A. W. Bulletin* whose letter is quoted presents the argument of the riders who assume the scorching position, and what he says is strictly to the point. For a certain class of riders this position undoubtedly offers certain advantages in point of speed and power:

"So many, through the columns of the *Bulletin*, have inveighed against the bicycle stoop, generally caused by riding with the ram's horn or racing style of handle bars, that I (being one of those who do not sit up straight when riding) take this occasion to literally explain my position.

"I am a graduate from the ranks of 'the sit bolt up… rights,' and changed my position and handle bars not out of deference to the prevailing style, but in response to a conviction that such a position and handle bars are impracticable.

"Don't misunderstand me. I am not in sympathy with the scorching element, but careful and long observation (I have ridden the bicycle in its various stages during the last fifteen years) convinces me that those gentlemen—for there are such—who adopt what may be called a semi-scorching attitude are in the main better riders, if not more graceful in appearance, than the perpendicular-backed individuals who look as though they had not recovered from their first lessons in riding.

"No sane person will question the fact that the greater the surface presented to the wind, the greater the resistance. This applies not only to track riding, but to road riding; and when he of the upturned handle bar persuasion returns from a road run (not necessarily a century run), and encounters a stiff head wind, he is like the Pharisees of old if he cannot see that his brother of the ram's horn handle bars has altogether the best of the argument, and finishes the fresher.

"Again, watch a group of wheelmen climb a hill. You will notice that almost invariably those having the low-turned bars are in the van as the top is reached. In my humble judgment this demonstrates something besides scorching proclivities; it shows that the man with the ram's horn bars gets a better 'purchase' and is enabled to apply more power to his pedals—a strong argument that he has better control of his 'wheel.'

"My favorite position, when I do not have to contend with head winds or hills, is with my hands (generally palms up) about 6in. apart on the steel bars, my body at an angle of about 50 degrees with the ground. This I find my most comfortable position, and admits of getting down to work in case occasion demands it. In short, I think anyone who undertakes to establish a 'proper' manner of riding the bicycle is undertaking too much, Providence having happily decreed that no two shall be constituted alike."

The Y. R. A. Rule.

AT the annual meeting of the council of the British Yacht Racing Association, held at Ryde, Isle of Wight, on Aug. 15, the following petition was presented, signed by thirty-four Solent yacht owners:

"We, the undersigned, being owners, or otherwise interested in the Solent classes, regret that the new rule has not produced the type of boat that we were led to expect. It would be a great boon to owners if the council of the Y. R. A. would officially notify the owners of racing boats at an early date whether they intend to alter any of the coefficients in the existing rule, and, if possible, which coefficient. We wish to point out that owners of small boats are the chief sufferers under any change of rule. The primary cost of boats has been much increased under this new rule, and also cost of keeping them going. Owners are desirous of seeing a type of boat introduced that will give more opportunity for keeping its money together, even if unsuccessful as a racing boat. They wish to support class racing if this type of boat can be produced by a suitable rule. It has been proposed to introduce a type of boat built under certain restrictions. A boat thus built will be forced to have a certain amount of body under water and yet leave latitude to designers. As this is the time of year when owners are most in touch, it is the most convenient season for them to discuss the various restrictions proposed. It would therefore be a great convenience if the council of the Y. R. A. would be good enough to give us an opinion at an early date. We are also of opinion that, however competent and careful an official measurer may be, he has great difficulties to contend with. An answer through the yachting editor of the *Field* would be considered an official notice to owners."

After discussion the council appointed a committee, Messrs. A. Manning, C. Newton Robinson, W. Baden Powell, G. F. Flemich, H. Crossley, Peter Donaldson and G B. Thompson, to consider the question of time scale and coefficients, and to report on Oct. 5

While the petitioners have not been over successful in setting forth their desires in clear and intelligible English, they have left no doubt as to their dissatisfaction with the present rule, or of the general nature of the desired improvement, the production of a yacht of less first cost and cost of running, of added accommodation, longer racing life and higher sale value after that racing life is over. These are precisely the same essentials as are needed on this side of the water in the larger classes.

Americans and Canadians.

AT the civic reception tendered to Mr. Jarvis and the crew of Canada by the city of Toronto, on Sept. 1, Mr. Jarvis spoke as follows of the reception accorded to the Canadians at Toledo:

"The little ship was called Canada for a national reason. They had tried to man her with the best men they could find in Canada, and that was why the crew were not all Toronto men. They had endeavored to get Mr. Duggan, but it was quite impossible. Regarding the treatment they received at Toledo, he was glad to state that no crew could have been better treated. In fact, he believed they treated them better than the gentlemen from Chicago. Everything was placed at their disposal, no one thing was denied them. During the whole contest strict neutrality was observed by the yachtsmen of Toledo, so much so that he would be perfectly willing to go back to Toledo and race there again for the cup. The crew of Vencedor were as anxious as men could possibly be to do everything to bring about a harmonious contest. A little stir was created once on account of a doubt as to some of the rules. It was referred to a committee of three gentlemen, who had been appointed to decide on such matters. In about ten minutes they had given their decision on the matter. It was at once accepted as final, and not another word was heard on the matter. It just showed that where sportsmen wished to get together on fair terms it was quite possible. In that respect they had taught their salt-water friends a lesson. At the inception of the contest a little cold water had been thrown upon it for the reason that the memory of last year's America Cup contest still lingered, and many thought that the late contest would result in the same way. They knew that it had not. He was sure that if the race was contested again next year the same true sporting spirit would prevail. Concluding, he asked for three hearty cheers for the vanquished Vencedor and her crew. They were given with vim."

The referee of the model yacht races reported last week was Mr Frank Mitchell, of the Philadelphia M. Y. C., and not Mr. Nichols, as tated.

Indian Harbor Y. C.

GREENWICH, CONN.—LONG ISLAND SOUND.

Saturday, Sept. 12.

THE special races of the Indian Harbor Y. C. were held off Greenwich, Conn., on September 12. What promised to be a very interesting race, particularly among the yawls, was spoiled for lack of wind. The courses sailed were the usual ones of the club, from Gas Buoy, off Little Captain's Island, to Mattinicock, Center Island and finish, 15 nautical miles. The 15-footers sailed twice around Captain's Island, making 10 nautical miles.

When the preparatory signal was given at 12:10 P. M. there was a light breeze from the southeast, so light that many of the contestants were handicapped. Balloon jibs and spinakers were carried to the first mark; to the second it was a long and short leg, the wind hauling more to southward. Center Island buoy was rounded by Vorant, Fidelio and Pawnee in order named a little after 5 o'clock. Shortly after rounding the wind, what little there was, came in ahead, making it a beat to the finish line, which was slow and tedious; Vorant, the first to finish over the long course, finally drifting across the line at 7:25 P. M.

The full times follow:

Eastern Y. C. Special Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, Sept. 19.

THE Eastern Y. C. arranged a special race on Sept. 19 for yachts of 30 to 35ft. l.w.l. and for the knockabouts, but only one yacht appeared in the larger class, Asahi. She had towed around the Cape from Newport to meet Handsel and Anoatuk, but neither was present, in fact the latter was hauled out at Stearns's yard. Asahi sailed to Boston, where she will winter at Lawley's. After a rainy morning the sky cleared and a good S.W. wind sprung up, the race of the knockabouts starting at 2:20, the course being: From the Black buoy off Lighthouse Point, Marblehead Neck, thence to the Bell buoy off Pig Rocks, thence to a stakeboat 2½ miles out southeast from the starting line, thence to the Bell buoy off Pig Rocks and home; 9 miles.

The times were:

	Elapsed.
Cock Robin, C. S. Eaton	1 54 05
Jacktar, T. E. Jacobs	1 57 06
Bo Peep, Clark & North	1 57 31
Tautog, W. O. Gray	1 59 09
Sally, D. C. Percival, Jr.	2 01 26
Water Lily, H. M. Sears	2 01 41
Maia, Everett Paine	2 03 10
Bonito, Bartlett Bros.	2 06 00
Dorothy, F. Brewster	2 06 04
Nike, C. A. Cooley	2 08 52
Ruth, E. Wiggin	2 13 12
Mayona, C. O. Stearns	2 15 09

The winners are: Cock Robin, purse of $100, presented by Rear-Com. Hemenway; Jacktar, club prize, $50; Bo Peep, $25; Water Lily, $15; Maia, $10.

Winthrop Y. C.

WINTHROP—BOSTON HARBOR.

Saturday, Sept. 12.

THE regatta of the Winthrop Y. C. on Sept. 12 was partially spoiled by a dense fog, the times being:

	Start.	Finish.	Elapsed.
FIRST CLASS.			
Almira	2 15 00	3 59 15	1 21 15
Harbinger	2 15 00	4 14 25	1 37 34
SECOND CLASS.			
Satanic	2 20 00	4 13 02	1 26 52
Harolde	2 20 00	4 14 50	1 30 26
Erycina	2 20 00	4 20 02	1 35 46
Alma	2 20 00	4 18 02	1 36 56
Eureka	2 20 00	4 45 50	2 02 46
Clara	Withdrew.		
Myrtle	Withdrew.		
THIRD CLASS.			
Mist	2 25 00	3 56 01	1 40 55
Harriet	2 25 00	4 26 10	1 44 52

Almira wins the championship, Satanic wins a second leg; Erycina, Gleaner and Clara each having one leg; Harolde would have had one leg, but she finished two minutes beyond the time limit. Mist won a leg in her class. After the race the yachts started in the fog for Hull, Harolde being first in at 8 P. M.

Hull Y. C.

HULL—BOSTON HARBOR.

Saturday, Sept. 19.

THE Hull Y. C. sailed a club race on Sept. 19 in a moderate S.W. breeze, the times being:

	Length.	Elapsed.	Corrected.
THIRD CLASS.			
Gleaner, S. O. Wellington	20.03	2 16 05	1 39 52
Beatrice, J. Cavanagh	30.11	2 26 32	1 57 25
FIFTH CLASS.			
Cleopatra, Henry Faxon	21.09	1 30 37	1 05 26
Opeechee, W. D. Barker	22.02	1 38 16	1 15 37

American Y. C. Fall Regatta.

MILTON POINT—LONG ISLAND SOUND.

Saturday, Sept. 19.

THE American Y. C. was fortunate in having a warm summer day with a moderate breeze from S.W. for its fall regatta on Saturday, though at the end a very lively squall struck the fleet and made some quick work in stowing canvas. Colonia, Amorita and Quissetta were entered for the Vice-Commodore's cup as well as for the regular class prizes. All of the 15-footers but Paprika have given up racing, and the latter, having no competitor, again went up into the 20ft. class, where she scored a handsome win on elapsed time alone. Quissetta withdrew on the second round, being far astern of Amorita. The race was nearly over when a very violent squall struck the fleet, some of the yachts lowering away everything; no serious damage was done, however. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS				
Colonia	12 10 00	4 30 34	4 20 34	4 20 34

Newport Y. C.

NEWPORT—NARRAGANSETT BAY.

Monday, Sept. 7.

THE Newport Y. C. sailed its last regatta on Sept. 7 over a 12-mile course in a very light wind, the times being:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Victor	1 45 00	4 40 15	2 55 15	2 55 15
Four Brothers	1 45 00	4 51 01	3 06 01	3 05 07
SECOND CLASS.				
Prunella	1 50 00	5 21 24	3 31 24	3 31 24
Wind Cloud	1 50 00	5 23 19	3 33 19	Not meas.
THIRD CLASS.				
Niobara	1 55 00	5 13 41	3 18 41	3 18 41
Jerboa	1 55 00	5 24 10	3 29 10	3 27 43
Ryris	1 55 00	Did not finish.		
FOURTH CLASS.				
Caspar	2 00 00	5 27 16	3 27 16	3 27 16
Truant	2 00 00	5 47 35	3 47 35	3 47 35
Shadow	2 00 00	5 48 20	3 48 20	3 47 50
Secretary	2 00 00	5 54 27	3 54 27	3 52 51

Shadow protested Truant for fouling.

The judges were Capt. Williams, President Gray and J. G. Costello.

Old Colony Y. C.

SAVIN HILL—BOSTON HARBOR.

Monday, Sept. 7.

ON Labor Day the Old Colony Y. C. resailed its fourth class race, postponed from June 17, and also a race of the fifth class, the times being:

	Elapsed.	Corrected.
FOURTH CLASS.		
Sunbeam, H. Faxon	1 58 45	1 23 13
Alpine, C. J. Blethen	1 59 05	1 25 08
Fantasy, W. Allerton	2 04 50	1 29 25
Minx, G. Silsbee	2 13 15	1 39 53
Anita	Withdrew.	
Careme	Withdrew.	
Box	Withdrew.	
Juanita	Withdrew.	
Joust	Withdrew.	
Imp	Withdrew.	
FIFTH CLASS.		
Elsa, H. M. Crane	1 05 10	0 36 31
Penguin, J. E. Robinson	1 11 50	0 42 47
Princess, Gay & Ware	1 12 10	0 43 07
Ivanhoe, H. M. Torrance	1 12 02	0 43 32

Cohasset Y. C.

Saturday, Sept. 12.

THE last race of the season was sailed in a dense fog, the course being reduced to two miles; the times were:

	Elapsed.
FIRST CLASS.	
In It, R. B. Williams	0 27 00
Banshee, H. T. Montgomery	0 28 10
15FT. CLASS.	
Swallow, John Richardson	1 12 00
Hoodoo, Gammons & Wheelwright	1 16 03
Jap, Rouve & Pegram	1 34 00

Beverly Y. C.

BUZZARD'S BAY.

Saturday, Sept. 12.

THE 245th race, fifth championship, was sailed off club house Sept. 12. Mr. A. H. Hardy was judge; wind E. and N.E., light at start, freshening to good whole-sail breeze.

Courses, 15 miles for special class, 11¼ for second class, 7¾ for third and fourth classes, 4⅞ for fifth class.

Ashumet and Cero fouled and Ashumet protested. It cannot be decided for some time, as committee and owners cannot at present be got together.

Daisy was a surprise, winning quite easily. Melro and Vif won easily also, as did Kalama, while Grilse left Heiress far off.

Sally fouled a large boat and tore her sail badly on the 11th. She started with the mainsail of a much smaller boat and withdrew.

Anonyma gave an exhibition of old-fashioned Buzzard's Bay pluck and good racing spirit. In the gale on the night of the 10th she parted a new mooring rope, went up on the rocks, stove her starboard side, and is described as looking as if she had been fired at with a charge of grape, still she raced.

999 having no competitor sailed in fourth class, and under the rule got no allowance.

	Length.	Elapsed.	Corrected.
SPECIAL CLASS.			
Cero, W. E. C. Eustis, B. Y. C.	39.00	2 37 23	2 36 29
Ashumet, C. H. Jones, B. Y. C.	34.03	2 39 32	2 33 58
SECOND CLASS CATS.			
Kalama, David Rice, B. Y. C.	26.00	2 34 09	2 21 58
Linotte, W. P. Wilson, B. Y. C.	25.10	2 41 19	2 28 56
Bernice, J. G. Young, Jr., B. Y. C.	25.08	2 41 36	2 29 01
Surprise, J. M. Codman, B. Y. C.	24.00	2 42 25	2 27 43
May King, D. L. Whittemore, B. Y. C.	26.00	2 43 06	2 30 55
Mist, G. H. Lyman, B. Y. C.	25.01	2 43 14	2 29 58
Anonyma, F. L. Dabney, B. Y. C.	24.09	2 46 29	2 32 47
THIRD CLASS CATS.			
Melro, D. L. Whittemore, B. Y. C.	20.03	1 56 31	1 42 40
Colymbus, A. Winsor, B. Y. C.	21.06	2 01 32	1 49 01
FOURTH CLASS CATS.			
Daisy, Howard Stockton, B. Y. C.	18.03	2 01 08	1 45 51
Elsa, H. & F. Burgess, B. Y. C.	19.00	2 02 14	1 46 55
FOURTH CLASS SLOOPS.			
Grilse, W. E. C. Eustis, B. Y. C.	19.00	1 49 37	1 34 18
999, R. Brewer, B. Y. C.	19.00	1 54 05	1 38 46
Heiress, G. G. Amory, B. Y. C.	19.00	1 59 20	1 44 01
Sally, W. S. Burgess, B. Y. C.	19.00	Withdrew.	
FIFTH CLASS CATS.			
Vif, A. Winsor, Jr., B. Y. C.	14.04	1 34 36	1 26 24
Imp, Geo. B. Dabney, B. Y. C.	14.05	1 36 29	1 23 34
Hebe, J. Parkinson, Jr., B. Y. C.	15.00	1 41 51	1 35 13

Winners: Special class, first protested; second class cats, Kalama first, Surprise second; third class cats, Melro first; fourth class sloops, Grilse first, 999 second; fourth class cats, Daisy first; fifth class cats, Vif first.

Race shows Melro wins and holds pennant, and Anonyma holds pennant, as she has won two races to one each for Surprise, Linotte and Kalama. Grilse ties Heiress with two legs each. This will be sailed off Sept. 19.

Larchmont Y. C.

Saturday, Sept. 12.

THE weather on Saturday was even worse than on Monday; the annual schooner race and the special class races resulting in a most unsatisfactory drift. The times were:

	Elapsed.	Corrected.
SCHOONERS.		
Colonia, C. A. Postley	6 50 25	6 50 25
Amorita, W. G. Brokaw	Not timed.

Riverton Y. C.

RIVERTON—DELAWARE RIVER.

Saturday, Sept. 5.

ON Sept. 5 the Riverton Y. C. sailed a race for catboats and mosquito boats, and the steam launches Carol and Conchita met for the second time. The wind was fresh from N E, with a sea on the river. The course for the sailing yachts was 6 miles and for the steam yachts 10 miles. The times were:

	Start.	Finish.	Elapsed.
CATBOATS.			
Seagull	3 25 00	5 00 55	1 29 14
Peerless	3 25 00	5 05 00	1 29 53
Nettie	3 25 00	4 55 50	1 30 00
MOSQUITO BOATS.			
No. 11, Al. G. Cook	3 39 30	4 40 10	. .. ..
No. 2, Chas. Biddle	3 39 30	4 43 20	. .. ..
No. 12, McIlvain Biddle	3 39 30	4 46 05	. .. ..
No. 1, S. Myers	3 39 30	4 46 06	. .. ..
STEAM LAUNCHES.			
Conchita	3 17 00	4 11 05	0 54 05
Carol	3 17 00	Did not finish.	

Carol took the lead at the start, but her cylinder burst at the turn and she was beached as soon as possible. In the first race between the two on July 4 Carol was disabled.

Tower Ridge Y. C.

HASTINGS—HUDSON RIVER.

Saturday, Sept. 19.

THE Tower Ridge Y. C. sailed a postponed regatta on Sept. 19, the course being around marks off Tarrytown and Yonkers. The wind was moderate from the south; the times were:

	Finish.	Elapsed.	Corrected.
SLOOPS.			
H. W. Beecher	3 07 44	3 46 14	2 52 04
Minta	3 05 28	3 45 18	3 00 58

EL HEIRIE—SAIL PLAN.

YACHTING NEWS NOTES.

There was a large crowd of yachtsmen and others at Townsend & Co.'s auction rooms yesterday afternoon, when the champion yacht Canada was offered for sale, according to the original intentions of the syndicate owners. Skipper Æmelius Jarvis was the only member of the syndicate present. It was evident from the start that only two men in the room wanted the yacht. The first bid was for $1,000, and came from G. E. Hamilton. This was raised to $2,000 by some one in the crowd, and then W. Hyslop, Jr., bid $2,500. The unknown voice called $2,700, Hyslop raised to $3,000, Hamilton to $3,100, Hyslop to $3,200, Hamilton to $3,250, at which price it was knocked down to him. G. E. Hamilton is the Toronto representative of W. E. Sanford, of Hamilton, and though he himself would say nothing on the subject, it is generally believed that the craft was purchased for Senator Sanford, and will be taken to Hamilton. After the sale Will Hyslop made a private offer for the yacht, to which Mr. Hamilton will return an answer to-day. Should his offer be accepted, the well-known bicyclist will sail Canada in all local races to which she would be eligible.—*Mail and Empire, Sept. 16.*

The Gas Engine and Power Co., of Morris Heights, New York, has just issued a very complete catalogue of naphtha, steam and electric yachts and launches, as built by it in connection with the firm of C. L. Seabury & Co., late of Nyack, the two firms being now combined. The catalogue is not only larger than previous ones, but very much more artistic. The construction of the hulls and engines, the various sizes and types of craft, the method of running and the prices are all given, making a complete guide to yachtsmen in search of power craft.

The contract for the steam pilot boat for the New York and New Jersey pilots, designed by A. Cary Smith, and illustrated in the FOREST AND STREAM of Aug. 1, has been awarded to the Harlan & Hollingsworth Co., of Wilmington, builders of the steel yachts Yampa, Iroquois and Amorita, as well as the Sound steamer R. J. Peck. It is stated that two similar vessels, but of smaller size, will shortly be built by the Pennsylvania and Delaware pilots.

Allegra, steam yacht, C. M. Pratt, met with an accident on Sept. 11 when off the Sunken Meadow, off the Harlem River. One of the tubes in the boiler split, permitting the escape of steam. The fireman stopped the blower and the steam and gas backed through the blower into the engine room, scalding the engineer, Christopher Anderson, and setting fire to the woodwork. The engineer was not dangerously injured, and the fire was soon extinguished. The tug Two Brothers rendered valuable assistance.

On the afternoon of Sept. 19, after a day almost as warm as midsummer, a very severe thunder squall passed over the vicinity of New York, being at its worst along the south shore of Long Island, many yachts being driven ashore and damaged. After the first squall had passed the sun came out for a few minutes, but disappeared before a worse squall, accompanied by hailstones of great size. On Sept. 13 Boston Harbor was visited by a sudden storm that did much damage among the yachts and small craft.

May, steam yacht, has been sold through Tams & Lemoine by E. D. Morgan to Mrs. J. R. Fell, owner of Barracouta, steam yacht, for $100,000.

The Pantasote Co., 39 Leonard street, New York, have a fabric which is particularly desirable for yacht upholstery, inasmuch as it is waterproof. Contracts have been awarded for upholstering two U. S. cruisers with this material, and a number of well-known yachts are finished with it, including Meteor II, Utopian, John Jacob Astor's electric yacht, and Baron Rothschild's Eros. Pantasote in appearance resembles leather. Pantasote duck, another product of this company, resembles duck, and is suitable for tents, awnings, etc.

Tom Carter, steam yacht, swamped and sunk in the Niagara Rive on Sept. 6. Two of her eleven passengers, Miss Gilbert and John Farthing, were drowned, the others clinging to the capsized dinghy of the yacht until rescued by the steam yacht Lilian.

Reva, steam yacht, G. L. Ronalds, was run down in a fog off Deer Island, Boston Harbor, by the steamboat Nantasket, and cut through to the water's edge. The hull below water was uninjured, and the yacht steamed into Boston in safety for repairs. The steamer was uninjured.

Listless, sloop, John Dunphy, of Clifton, Staten Island, was run down and sunk off that place on Sept 8 by an unknown tug; her captain and crew, asleep below, saving themselves by swimming.

The Yachtsman of Sept. 3 presents to English readers the lines of El Heirie, but we fail to find any allusion to the source from which they were taken, the FOREST AND STREAM of Aug. 22.

A series of three races will be sailed on Sept. 24, 25 and 26, between the schooners Amorita and Quissetta, under the management of the Larchmont Y. C.

We have received from Lloyd's the second supplement to the *Yacht Register*, containing alterations and additions up to Aug. 20.

The regatta of the Sea Cliff Y. C., on Sept. 12, failed for lack of wind, none of the yachts having finished at 7 P. M.

Torment, sloop, of Revere, Mass., sunk off Egg Rock on Aug. 30, her crew of five being rescued by a passing yacht.

Unquowa, steam yacht, recently purchased by W. R. Hearst, has been renamed Buckinee.

The Riverside Y. C. has abandoned the race scheduled for Sept. 26.

Society of Naval Architects and Marine Engineers.

THE third general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city, at 10 A. M., Thursday, Nov. 12. Through the courtesy of the president and managers of the American Society of Mechanical Engineers the meetings will be held in the auditorium of No. 12 West Thirty-first street, the sessions continuing through Thursday and Friday, Nov. 12 and 13. There will be a banquet, of which subsequent notice will be given, Friday, Nov. 13, to which members and their guests are cordially invited. Members intending to propose candidates for membership are requested to notify the secretary in order that the necessary blank forms of application may be forwarded and properly filled out. Papers to be read at this meeting should be forwarded to the secretary as soon as possible. The usual notice giving assignment of papers will be issued Nov. 1. By direction of the executive committee.

FRANCIS T. BOWLES, Sec'y-Treas.

Newport Races.

Sept. 5.

THE races of the 30-footers on Sept. 5 was for a cup given by Woodbury Kane, sailed in a S.E. wind over the Brig Ledge course, the times being:

	Start.	Finish.	Elapsed.
Asahi, B. Thayer	2 25 00	5 01 03	2 36 03
Puck, E. D. Morgan	2 25 00	5 01 14	2 36 14
Vaquero, H. B. Duryea	2 25 00	5 02 55	2 37 55
Wawa, J. A. Stillman	2 25 00	5 05 06	2 40 06

On Sept. 7 a sweepstakes race was sailed off Bristol, Mr. N. G. Herreshoff laying off a course of ten miles; to leeward and back in a good S.W. wind. The times were:

	Start.	Finish.	Elapsed.
Vaquero, H. B. Duryea	3 30 00	5 06 06	1 36 06
Puck, E. D. Morgan	3 30 00	5 09 39	1 39 39
Wawa, A. Van Winkle	3 30 00	5 10 24	1 40 24
Asahi, B. Thayer	3 30 00	5 10 26	1 40 26

On Sept. 11 the Dyer's Island course was sailed in a fresh S.W. wind, the times being:

	Start.	Finish.	Elapsed.
Puck, E. D. Morgan	2 35 00	4 54 20	2 19 20
Vaquero, H. B. Duryea	2 35 00	4 55 28	2 20 28
Asahi, B. Thayer	2 35 00	4 56 14	2 21 14
Wawa, J. A. Stillman	2 35 00	5 01 32	2 26 32

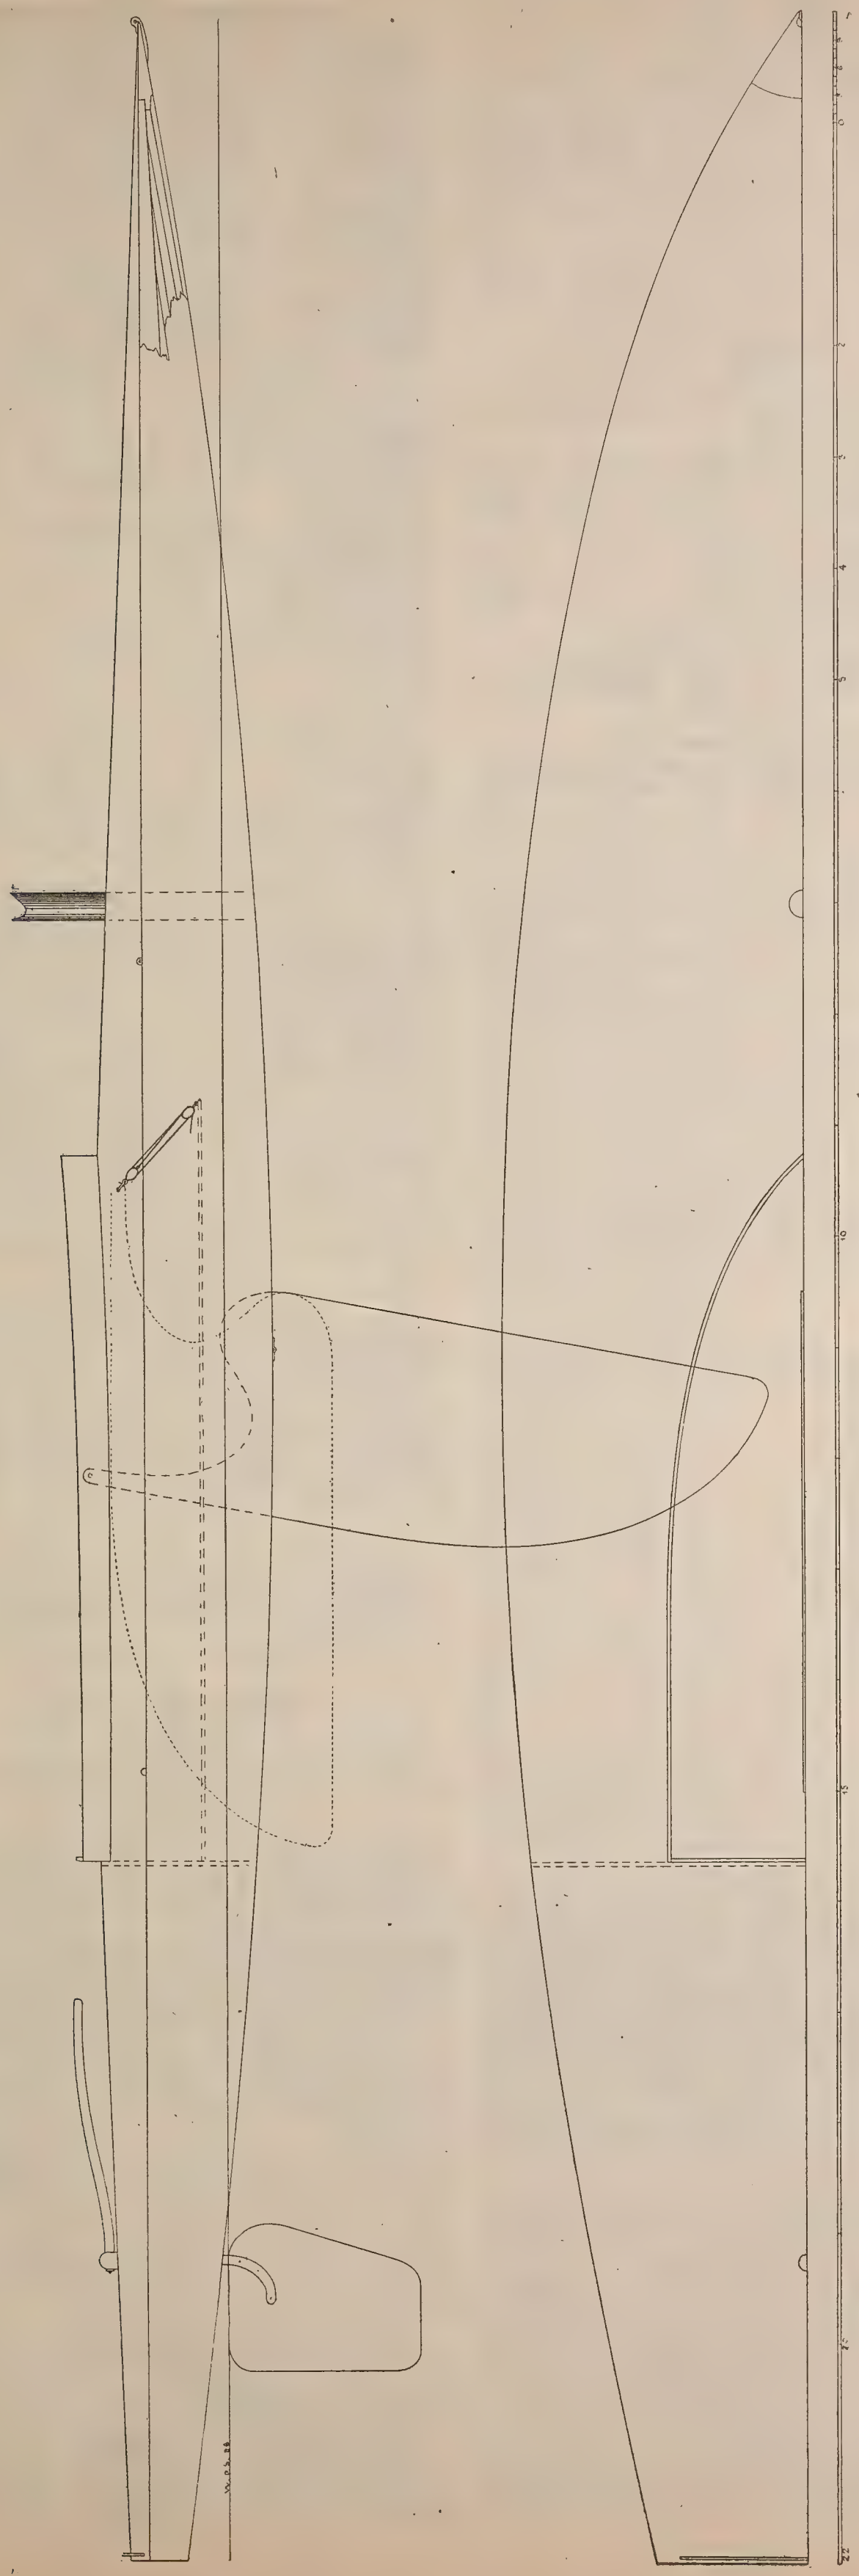
On Sept. 12 the Brig Ledge course was sailed in a rising S.E. breeze, with a calm at one time. Vaquero won again, the times being:

	Start.	Finish.	Elapsed.
Vaquero, H. B. Duryea	2 25 00	5 31 08	3 06 08
Asahi, B. Thayer	2 25 00	5 35 47	3 10 47
Puck, E. D. Morgan	2 25 00	5 35 55	3 10 55
Wawa, J. A. Stillman	2 25 00	5 40 17	3 15 17

ON Sept. 14 Asahi beat Wawa, Puck and Vaquero in a drifting race.

A sweepstakes race was sailed on Sept. 15 over the Dyer's Island course in a S.W. wind, the times being:

Start, 2:35:	Finish.	Elapsed.
Vaquero	4 40 43	2 05 43
Asahi	4 41 08	2 06 08
Puck	Did not finish.	
Wawa	Did not finish.	



Wawa went on the rocks off Rose Island, but was towed off without injury by the launches of the warship Massachusetts. The same course was sailed on Sept. 16, the times being:

	Elapsed.
Wawa	2 37 15
Vaquero	2 37 22
Puck	2 38 48

On Sept. 17 a race was sailed over the same course in a S.W. wind, the times being:

	Elapsed.
Vaquero	2 22 35
Wawa	2 23 50
Puck	2 25 30

Asahi finished her racing on Tuesday and left for Boston to sail in the E. Y. C. races of Saturday, but having no competitor she went to Lawley's to lay up.

EL HEIRIE. DESIGNED BY CLINTON H. CRANE. BUILT BY LAWLEY & CO., 1896.

El Heirie.

THE lines of El Heirie have already appeared in the FOREST AND STREAM (Aug. 22). We present herewith the sail plan and general arrangement, with the table of offsets. The name El Heirie is the Arabic term for a breed of camels with a particularly high hump, and was selected as appropriate to the turtleback deck which is a distinctive feature of the design, the sheer line being perfectly straight and level, while the deck crowns 5in. at each end of the cockpit, sloping down to the stem and transom. The cockpit is small, with a high floor, and there is a watertight bulkhead at its after end, but there was originally no bulkhead forward. In the trial races a canvas shield was fitted to the floor of the cockpit to prevent a rush of water from the cockpit to the bows, and this was replaced later by a wooden bulkhead.

The fittings are very simple; the centerboard is a plate of 1¼in. Tobin bronze, of the peculiar form shown, so hung by a pivot just below the garboard as to project 6in. outside the boat when fully raised. In spite of this large increase of wetted surface as compared with other boats, in which the board housed entirely when off the wind, El Heirie showed no loss of speed in light airs. The board is hoisted by a tackle below deck in the fore end of the cockpit.

The rudder is of ⅛in. bronze, set in a slotted stock of the same metal; the tiller is not hinged, but is fitted solidly into the rudderhead. The stem is protected by a bronze casting shown in the drawing, running back some 6in. under the stem and ending in an eye above deck to take the forestay and the hook of the jib tack. At the mast are several blocks of the skeleton pattern, of aluminum; the runners are led well aft and the traveler is out on the end of the counter.

The construction, as planned by the Lawley Company, which built the yacht, is a little out of the ordinary; there is no keel, but a single wide garboard takes the place of it. The centerboard trunk is secured to this wide plank just as though it were a thick keel. The planking is double, an inner skin of ⅛in. white cedar and an outer one of ¼in. mahogany, the planks being narrow and making an excellent piece of work; in fact, El Heirie had as good a bottom as any boat in the trial races, the seams being smooth and the planking free from all bulging. The two skins are put together with crude turpentine in place of varnish. The stem is made of a solid block of mahogany on which the deck, wales and garboard butted. In order to avoid a number of very small ends to the rest of the planking, it is carried up to butt against the wale, as shown in the drawing, thus giving a better lay to the planks than if all had been carried out to the extreme stem. The deck is of narrow white pine, ¼in. thick.

The mast is solid, 3in. in diameter; the boom and gaff are both hollow, of 2¾ and 2in. diameter; the spinaker boom is 11ft. 6in. long and 1½in. diameter, solid. The sail plan shows the full area that the spars will carry; as a matter of fact the sails were not stretched to the ends of the spars, and measured much less. The official measurement of the waterline was given incorrectly in the former description; it should be 14.29ft., or 14ft. 4in. instead of 14ft. 8in. The new owner of El Heirie is Mr. T. G. Bush, of Mobile, Ala.

EL HEIRIE—TABLE OF OFFSETS.

Stations spaced 1ft. 3in. Waterlines spaced 2in. Buttock lines spaced 8¼in. (⅛ beam). Length over all 23ft., l.w.l. 15ft. Beam 5ft. 6in. Draft 5¼in. Measurements in feet, inches and eighths of an inch. Top of plankshear above base line 1ft. 2in. Highest point of deck 1ft. 7in. Highest point of transom 1ft. 4in.

Columbia Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, Sept. 12.

THE Columbia Y. C., of Chicago, sailed a regatta on Sept. 12 in a strong N.W. wind and heavy sea, there being eighteen starters in the five classes. The times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS.				
Mistral	2 04 00	4 51 15	2 47 15	2 47 15
CUTTERS—CLASS 2.				
Siren	2 02 40	4 29 28	2 26 48	2 26 48
Charlotte R.	2 04 41	4 38 40	2 33 59	2 32 22
CUTTERS—CLASS 3.				
Valiant	2 08 14	5 04 32	2 56 18	2 56 18
Hattie B.	2 03 58	5 33 05	3 29 07	3 26 33
Peri	2 02 20	5 14 15	3 11 55	3 06 41
Pinta	2 07 19	Dist.		
Genevieve	2 05 02	5 12 28	3 07 26	3 01 06
America	2 04 21	Dist.		
SLOOPS—CLASS 4.				
Wizard	2 10 31	5 17 14	3 06 43	3 06 43
Vixen	2 10 10	5 23 25	3 13 15	3 11 35
SLOOPS—CLASS 5.				
Myrine	2 15 00	Dist.		
Skate	2 11 11	4 26 03	2 14 52	2 10 36
"B"	2 12 44	4 24 00	2 11 16	2 06 20
Dauntless	2 15 00	Dist.		
Microbe	2 13 08	4 07 30	1 54 22	Protested.
Bowery	2 11 38	4 07 25	1 55 47	1 50 19
Venus	2 13 22	4 19 10	2 05 48	1 57 48

The Steffens cup for schooners, already won twice by Hawthone, recently sunk by a lake steamer, was won by Mistral with no competitor. The Hennig cup, for the best elapsed time of the larger single-stickers, was won by Siren. The Farewell cup in Class B was won by the yacht B, the leader in the class, Microbe, being disqualified for carrying six in place of five men, and Bowery and Venus being ineligible, not being enrolled in the Columbia Y. C. Valiant, designed by F. W. Martin, won very easily in her class.

The judges were: George A. Martin, Richard Summers and A. G. Morey. The time-keeper was Joseph Ruff.

New York Y. C. Fall Regatta.

NEW YORK—NEW YORK HARBOR.

Tuesday, Sept. 15.

THE New York Y. C. attempted a sweepstakes race as the ending of its racing season, but met with very poor success from several causes. In the first place, though good prizes, were offered but few yachts started; in the second place, though the club provided one of the Iron Steamers for its members and guests, with an elaborate luncheon, a mere handful of people showed any appreciation of the opportunity thus afforded to witness a yacht race; in the third place, the weather could hardly have been worse, the yachts taking over twelve hours to sail thirty miles. The conditions were:

SCHOONERS.

A.—Class 2 and all above: $250 cup for the first and $125 cup for the second.

B.—Class 3 and all below: $200 cup for the first and $100 cup for the second.

SINGLE-MASTED VESSELS AND YAWLS.

C.—Class 5 and all above: $170 cup for the first and $80 cup for the second.

D.—Class 6: $150 cup for the first and $70 cup for the second.

E.—Class 7: $125 cup for the first and $50 cup for the second.

For a first prize two or more must start. For a second prize three or more must start. The entries are $25 each, and in each division two-thirds of the entrance money will go to the winner and one-third to second boat.

Special cups will be awarded as follows: Mr. John R. Drexel, N. Y. Y. C., offers a cup for the schooner making the best corrected time; and Mr. M. C. D. Borden, N. Y. Y. C., a cup for the single-masted vessel or yawl making the best corrected time.

For the schooners, course No. 1 of the club will be sailed; and for the single-masted vessels or yawls, course No. 2.

As soon as the yachts sailing the sweepstakes have been sent away, a special race for 30-footers owned by members of the club will be started. The course will be an eighteen-mile triangle in the lower bay.

The prizes for the "thirties" will be a $100 cup for the first, if two or more start; $75 for the second, if three or more start, and a $50 cup for the third, if five or more start.

The club boat Cepheus will leave Pier No. 1, Hudson River, at 9:45 o'clock, morning of the race, and will land at the same point returning. Tickets admitting a member and lady can be obtained from the superintendent at the club house.

The distinction made in the above programme is a very fine one indeed. "The *30 footers* will be started immediately after the *yachts* have been sent away." In the absence of the regatta committee, Vice-Com. Ward and Mr. J. F. Tams were on the committee boat Luckenback. The steamer Cepheus carried a party of about fifty.

The morning was cool and cloudy, with a very light S.W. wind. The start was made at 11:35 for the cutters, Wasp and Uvira going over after the handicap gun, the former leading. The schooners were started at 11:40, Colonia crossing at 11:44:58 and Emerald and Quissetta just astern of her, being handicapped. But three 30-footers started: Hera, Musme and Mai. The light S.W. wind made a close reach to the Spit, the tide being flood. Colonia soon had a good lead on the fleet, while Quissetta stuck close to Emerald. The wind freed them after a time, and they went on slowly for the S.W. Spit; finally it fell and left them drifting from 1 o'clock to nearly 4, all still inside the Hook. Emerald gave up, but the others kept on drifting until they covered the course at midnight. The times were:

SCHOONERS—CLASSES 2 AND 3.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	11 44 58	11 42 58	11 58 00	11 58 00
Emerald	11 45 00	Withdrew.		
Quissetta	11 45 00	12 01 00	12 16 00	12 02 59

Colonia and Emerald sailed for the autumn sweepstakes, for the club prize of class 2 and the Drexel cup. Quissetta sailed for the Drexel cup only. Colonia wins the sweepstakes, the club prize and Drexel cup.

CUTTERS—CLASSES 4 AND 5.

	Start.	Finish.	Elapsed.	Corrected.
Wasp	11 40 00	11 43 05	12 03 05	12 03 05
Uvira	11 40 00	12 20 00	12 40 00	12 27 16

Wasp wins the Borden cup. Uvira sails over for the sweepstakes of her class.

SPECIAL 30FT. CLASS.

	Start.	Finish.	Elapsed.
Hera	11 55 00	6 09 12	6 14 12
Musme	11 55 00	8 47 15	8 52 15
Mai	11 55 00	Withdrew.	

Hera wins $100 cup. Musme wins $75 cup.

Lynn Y. C. Open Regatta.

NAHANT—MASSACHUSETTS BAY.

Monday, Sept. 7.

THE Lynn Y. C. sailed an open regatta on Sept. 7 off Nahant in a very light and fluky breeze. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Emma C., P. A. Coupal	29.04	2 45 06	2 17 18
Ida J., F. E. Beckman	29.04	2 46 14	2 18 26
Beatrice, J. Cavanagh	25.06	2 51 01	2 19 29
Harbinger, W. F. Bache	28.04	2 53 31	2 24 48
Climax, M. F. Kelley	26.04	Withdrew.	
Arbutus, J. F. Small	29.11	Withdrew.	

SECOND CLASS.

Massachusetts Y. R. A.

HULL—BOSTON HARBOR.

Saturday, Sept. 12.

THE Massachusetts Y. R. A. arranged for a final race at Hull on Sept. 12 with an illumination in the evening, but a heavy fog over Massachusetts Bay spoiled the sport. A few of the yachts of the South Boston Y. C. started in the fog for a handicap race to Hull, the elapsed times being:

Julia, Perkins	1 56 42	Emma C., P. A. Coupal	2 04 46
Fantasy, W. Allerton	1 57 34	Volante, Shuman	2 07 11
Jessie	2 01 55	Cocheco, F. Borden	2 08 30
Rex, J. B. Farrell	2 02 10	Quissett, Perkins	2 08 32

A race was started at 2:30 from Hull, but only a few yachts started, the times being:

THIRD CLASS.

	Length.	Elapsed.	Corrected.
Gleaner, F. O. Wellington	24.03	2 26 33	1 54 20
Beatrice, J. Cavanaugh	30.11	2 25 10	1 56 03
Privateer, A. E. Schaaf	25.05	Withdrew.	

FOURTH CLASS.

Opechee, W. P. Barker	22.00	2 46 08	2 21 37
Cleopatra, H. M. Faxon	21.09	Withdrew.	

KNOCKABOUTS.

La Chica, C. V. Souther	21.00	2 09 16	. . . .
Torpedo, J. J. Souther	21.00	2 10 20	. . . .
Jacktar, T. E. Jacobs	21.00	Withdrew.	
Tautog, W. O. Gray	21.00	Withdrew.	
Nike, C. A. Cooley	21.00	Withdrew.	

SIXTH CLASS.

Don, Mr. Cushman	....	2 34 16	. . . .

Wood's Holl Y. C.

WOOD'S HOLL, MASS.

Monday, Sept. 7.

THE Wood's Holl Y. C. sailed a race on Sept. 7 off Penzance in Buzzard's Bay in a very light air, the times being:

KNOCKABOUTS.

	Elapsed.	Corrected.
Vicero, Forbes	2 16 44	2 07 57
Turkey, Dennison	2 19 40	2 10 56
Kitten, Forbes	2 28 33	2 20 17

SECOND CLASS.

Elytie, Veeder	2 42 15	2 26 08
Maude S., Childs	2 44 26	2 28 29

SPRITSAILS.

Hope, Veeder	1 35 44	1 19 45
Dude, Hibbard	1 43 40	1 28 20
In It, R. J. Hardin	1 44 12	1 29 12
Try, Hardin	1 47 36	1 32 30

Squantum Y. C.

SQUANTUM, MASS.

Saturday, Sept. 12.

THE second race of the Squantum Y. C. for the Burkhardt cup was sailed on Sept. 12, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Magnolia, E. Hardy	20.08	1 44 35	1 18 22
Clara Lou, W. J. Coombs	21.00	1 44 30	1 18 37
Payomet, H. Flood	21.04	1 45 01	1 19 27

SECOND CLASS.

Locia, E. A. Merrill	18.05	1 40 08	1 11 31
Burgess, Frank Burgess	19.05	1 39 06	1 11 36
Velma, J. S. Small	14.09	1 59 30	1 26 00

Clara Lou protests Magnolia on measurement. The final race will be sailed on Sept. 26.

Rifle Range and Gallery.

Presque Isle Rifle Club.

ERIE, Pa., Sept. 12.—The following scores were made to-day by members of the Presque Isle Rifle Club. Conditions as usual: 200yds., off-hand, standard target, 7-ring black:

J R Brown	10	7	8	8	10	4	9	8	10	6	—80
	6	8	4	8	6	9	7	10	9	10	—77

The Zettlers' Twenty-third Annual Festival.

NEW YORK, Sept. 21.—The Zettler Rifle Club, of New York, held its twenty-third annual festival yesterday and to-day. The popularity of these annual affairs has not been dimmed in the least by the number that are given every year in the vicinity of this city. The attendance at the "Zettler annuals" is always good and this year's festival was no exception to the rule, both ladies and gentlemen being present in numbers that could not fail to be satisfactory to the management.

The programme was a good one and the premiums offered were substantial. The Zettler trophy was won by Thomas Lloyd, who made a score of 70. The conditions of this contest were: 25-ring target, open to all. 3 shots free of charge, only one ticket allowed to each shooter. The prize was a handsome trophy presented by Zettler Bros.

Fred C. Ross, the "Schuetzenkoenig" of the National Festival at Glendale Park, took the first prize on the target of honor with a score of 71, made thus: 22, 24 and 25. Gus Zimmerman was second with 70. The judges' prizes were won by Charles Hornig (65) and C. J. Facklamm (61).

For the competition on the ladies' target of honor there were 24 competitors. Miss Frieda Blumenberg, fourteen years old, and Mrs. F. C. Ross, tied with 3 bullseyes each. On shooting off, both made a bullseye and tied again. On the next shot Miss Blumenberg made her 5th consecutive bull and won.

The scores of the prize winners are given below:

Target of Honor: F. C. Ross 71, Gus Zimmerman 70, L. Flack, S. J. Lyons, N. Mury, W. Dawson and J. Bookman, 69 each; Kronsberg 62, Dr. Groshar, Mike Dorrler and J. Martin, 61; C. J. Watson and C. G. Zettler, 60 each.

Ring target: S. Lyons 73, H. Holjes 73, M. Dorrler 72, F. C. Ross 72, Gus Zimmerman 71, M. B. Engel 70, H. M. Tope 70, O. C. Boyce 70, A. Schmidt 69, Louis Flack 69, Charles Zettler 69, L. Vogels 69, B. Walther 68, W. C. Dameron 68, W. Hayes 68, F. D. Muller 67, L. P. Hanson 67, John Glumenberg 67, R. Busse 67, J. Martin 67, G. Krauss 67.

Premium, best five tickets:

Ross	72 72 71 70 70—355	Zimmerman	71 70 69 69 67—346
Dorrler	72 71 70 70 70—354	Pope	70 69 69 69 69—346
Holjes	73 71 70 70 70—353		

Point target, best bullseyes: G. Schlicht 6¼; Geb. Krauss 9⅛, A. Pegerow 9¾, T. G. Martin 10, C. Boyer 27, G. W. Plaisted 27, F. C. Loss 29, L. P. Hanson 29.

Revolver Shooting in England.

LONDON, England, Sept. 5.—The following revolver scores were made in this city recently:

North London Rifle Club, Aug. 26. Revolver series 1, 20yds., stationary:

W Andrews	767666—38	Brading	767545—34
J MacCormack	775776—39	Robearts	756266—32
Capt W Evans	757476—37	Johnson	347746—31
Major Munday	677557—37	W Luff	674565—33
T Knapp	676665—35	Capt Baxter	775535—32
Denyer	775556—35	Parkinson	766335—29
Holmes	576467—35	Britton	655372—28
T H Howe	467567—35	Franzmann	045454—22
Lieut Howard	765675—35		

Sept. 2.—20yds., alternate hands:

T Knapp	777675—39	H Young	536674—31
W Luff	577577—38	Franzmann	446746—31
Holmes	774767—38	Andrews	357564—30
Comber	756567—35	Robearts	640066—22
Lieut J Howard	775556—34	Lieut J Richardson	236564—26
Denyer	476574—33	J Eley	555044—20
Britton	754764—33	J Gill	240334—16

Scores for revolver championship of the club now stand:

	20yds	Series 2.	Series 3.	Series 4	Total.
Walter Winans	42 41 41 40 40 40	38	39	37 36	—394
A W Carter	40 38 38 36 36 36	32	35	34 31	—368
W Luff	37 37 36 35 35 34	28	33	31 31	—347
Capt W Evans	38 36 36 35 34 33	32	30	33 31	—332
Lieut Howard	41 38 38 38 35 34	36	31	34 29	—354
T Andrews	32 33 31 30 27 21	36	28	24 24	—285

The rest have not shot enough scores to total.

South London Rifle Club, Aug. 25. Very wet and stormy. 20yds., stationary target:

Walter Winans	777775—40	C Knapp	777666—39
E Howe	776767—40	C Malschinger	453564—27
Capt T W Heath	676677—39		

Fifty yards target:

Walter Winans	776576—38	E Howe	453564—27
Capt T W Heath	465757—34	Malschinger	765600—24
C Knapp	455465—29		

Sept. 1—Rainy. 20yds., stationary target:

Walter Winans	777767—41	C Knapp	565477—34
Capt T W Heath	777757—40	C Malschinger	363557—29

Fifty yards:

Walter Winans	766666—37	C Knapp	545557—31
Capt T W Heath	465756—38		

The scores toward the revolver championship of the South London Rifle Club now stand:

	20yds.	50yds	Total.
Walter Winans	41 40 40 40 40	38 37	37—313
Capt T W Heath	41 41 40 40 39	37 37	36—312
E Howe	41 41 40 40 40	37 37	35—311
C Knapp	40 39 39 39 38	36 35	34—300
Clementi-Smith	38 38 37 37 36	38 35	34—293
Malschinger	29 27 26 26 25	25 24	23—205

The rest have not shot enough scores to add up for the total.

Middlesex Rifle Club.

LOWELL, Mass., Sept. 14.—Inclosed I hand you the score made Saturday, the 12th inst., in a friendly match between the team from Company C, Sixth Regiment M. V. M., and the Middlesex Rifle Club, shot at the new military range. This was the third meeting of the teams, and was to settle the tie, as each had won one match. Conditions: 200yds. off-hand, Creedmoor target:

Company C Team.		Middlesex Rifle Club.	
Private Haines	5444544545—44	Hartford	4435454555—44
Corp Burns	4444554554—44	Fisher	4445454544—43
Sergt Gannon	4455544444—43	Sherman	4444354555—43
Priv Worthen	5534444554—43	Randell	4354445445—42
Private Hahn	4543555444—43	Dickey	5455444353—42
Sergt Colby	4444455444—42	Morse	4453435514—41
Private Hardy	4455544434—42	Burbeck	3444444543—39
Lieut Swift	4444544444—41	Coburn	4253444445—39
Corp Rodger	4544444444—41	White	5435444244—39
Private Ahlberg	5544443344—40—423	Hunton	4344544343—38—410

The total scores in the match are as follows, viz.:

Company C.		Middlesex.	
July 11	413	July 11	412
Aug. 15	413	Aug. 15	423
Sept. 12	423—1,249	Sept. 12	410—1,245

A clean victory for the military boys by two matches and four points.

W. H. WHEELER, Sec'y Middlesex Rifle Club.

Calumet Heights Rifle Club.

CHICAGO, Ill., Sept. 12.—The scores made to-day by the members of the Calumet Heights Rifle Club are given below. Paterson won the club medal in Class A, Mrs. Chamberlin winning the medal in Class B. Scores and conditions as follows:

Class A, 200yds., off-hand, standard target, any caliber:

A C Paterson	2433353435—35	McMichaels	0204444354—30
Dr A W Harland	2343244434—32	A C Black	3042000225—20

Class B, 100yds., reduced Creedmoor target, .22cal., rest:

Mrs Chamberlin	3554454444—41	Mrs Young	0434443044—30
Miss Ervin	4444434444—39	Mrs Whitman	4444000000—16
Miss Whitman	4334454533—38	Miss H Adams	2450030000—14
Miss D Adams	3035533333—31	Miss Harlan	0020000002— 4

PATTY.

Iroquois Rifle Club, of Pittsburg.

THE Iroquois Rifle Club, of Pittsburg, Pa., will hold its ninth annual tournament Oct. 12-15. The programme will contain both rifle and trap-shooting contests. There will be members' and all-comers' contests, with a large list of cash, merchandise and medal prizes. Mr. A. C. L. Hofmeister is secretary of the club; his address is 1717 Jane street, S. S., Pittsburg, Pa.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 26.—HACKENSACK, N. J.—Fourth tournament of the New Jersey Trap Shooters' League, under the auspices of the Bergen County Gun Club. Sweepstakes at 10 A. M.; League team race in the afternoon. C. O. Gardiner, Sec'y.

Sept. 29-30.—BEDFORD, Ind.—Annual fall tournament of the Bedford Gun Club. F. T. Sherwood, Sec'y.

Sept. 29.-Oct. 2.—HARRISBURG, Pa.—Tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. First three days, targets; fourth day, live birds.

Oct. 6-7.—BALTIMORE, Md.—Tournament of the Baltimore Shooting Association. Live birds only. James R. Malone, Captain.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later

Oct. 8-10.—EAST ST. LOUIS, Ind.—Tournament of the King's Smokeless Gun Club.

Oct. 14-15.—GREENSBURG, Ind.—Second annual tournament of the Greensburg Gun Club. Targets only. Web. Woodfill, Sec'y.

Oct. 16-17.—TACOMA, Wash.—Tournament of the Washington State Sportsmen's Association, under the auspices of the Tacoma Rifle, Rod and Gun Club. G. H. Garrison, Sec'y.

Oct. 21-22.—IRONTON, O.—Third annual tournament of the Ironton Gun Club. Targets.

Oct. 27-28.—ELIZABETH, N. J.—Eighth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

Nov. 7.—HACKENSACK, N. J.—Cup contest, under the auspices of the Bergen County Gun Club. C. O. Gardiner, Sec'y.

1897.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex Com.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

In the shoot for the State team championship trophy of Michigan at Grand Rapids the other day, when Holland beat Grand Rapids for the trophy, our correspondent, Mr. C. F. Rood, says that there was considerable difference of opinion as to what should be the referee's decision in the following case, and asks us for our ideas on the subject: A man shooting at pairs of targets, and using a repeater, misses his first target and is unable to fire at his second target through the shell sticking in the barrel and preventing the feeding of the second shell into the gun. In such a case, provided the referee is satisfied that the trouble was not caused by negligence on the part of the shooter (such as using bulged shells that he knew were liable to stick in the gun, or shells too long for the chamber), we have always held that the rule applying to missfires covers the case. The shooter should be allowed another pair, but he must shoot at the first target with a charge of powder only, the result of his previous shot being scored. A. S. A. rules for target shooting do not cover this point for *any* gun, but we have always thought that Rule 20 for live-bird shooting —"Missfire with the second barrel"—should be taken to apply to such cases in target shooting. In the match at Chicago for the E. C. cup, emblematic of the inanimate target championship of the world, Heikes broke the first target of a pair, but was unable to fire at the second target owing to his gun not feeding the shell into the barrel. The referee allowed Heikes another pair.

John H. Shaffer, of Pittsburg, Pa., who won the E. C. cup at the Pittsburg Gun Club's tournament last June, has shown himself to be one of the best target shots in that city by winning outright the cup presented by the above-named company to the North Side Gun Club for monthly competitions. The conditions arranged by the club were seven monthly competitions, the highest aggregate for five out of the seven shoots to count. In the last shoot Shaffer had practically but one opponent who had any chance to beat him for the cup; that was Alex King, the noted live-bird shot of Pittsburg. King, however, could do nothing at the last try, Shaffer beating on that occasion by 7 targets. Shaffer's best five scores totaled 448, while King's five best scores figured up 441, leaving the former 7 to the good. A close fight, but good enough to win by.

Mr. H. E. Norton, of Ironton, O., sends us the following in regard to his club's tournament next month: "The annual tournament of the Ironton Gun Club, of Ironton, O., Oct 21-22, will be one of the best ever given by the club. The events will be at 15, 20 and 25 targets, unknown angles. Expert traps and blue rock targets will be used. All are welcome. The club will give ½ cent for each target thrown, as average money; first day, 40 per cent. to highest average; 30, 20 and 10 per cent. to next three. At 2 o'clock, second day, Messrs. West and Verges will shoot Clark and Stevens, of Parkersburgh, W. Va., 50 live birds, $100 per man, losers to pay all expenses. The management promises to all two days of good sport. The Rose system of dividing moneys will be used. Three moneys in 15-target events, four moneys in 20 and 25 Programmes will be ready Oct 5 For any information address H. E. Norton, Box No. 275, Ironton, O."

Lieut. Peter Gibson tells us that he has had a most enjoyable visit in this city, and adds that his knowledge of human nature has been considerably enlarged by his communings with the good people of New York. The Lieutenant is an expert on rifles and guns, but he knows comparatively little about fishing. It seems cruel, therefore, to let him go back to Cinninnati with the idea that Jerseymen habitually secure trout by clubbing them. While J. Hildreth, of the Winchester Repeating Arms Co., may have secured "thirty trout in three different runs one morning in 1869 by clubbing them," 1869 is many years ago, and Hildreth was not very big then. Jerseymen and trout don't meet very often nowadays.

Messrs. G. W. Cole & Co., 111 Broadway, New York, have asked us to state that the company will send a box containing eighteen to twenty sample bottles of its "3 in 1" compound to any gun club in the United States, application to be made through the club's secretary. This offer is open for two weeks from the date of this issue, and Messrs. Cole & Co. particularly request that all club secretaries making application will state that they saw the notice of the offer in FOREST AND STREAM. Messrs. Cole & Co.'s advertisement in our columns gives all information necessary as to what "3 in 1" is and what it can do.

We have received from Mr. Thomas Bell, president of the Bergen County Gun Club, of Hackensack, N. J., the following note: "A handsome silver cup, representing the championship of the State of New Jersey, will be shot for under the auspices of the Bergen County Gun Club at Hackensack, N. J., Nov. 7. The donor of the cup and the conditions of the contest, together with other necessary information, will be announced later in FOREST AND STREAM. The contest is open to all New Jersey clubs."

The contest for the Schmelzer Arms Co. trophy, held last year by Jack Parker, took place at Kansas City, Mo., on Friday last, Sept. 18. There were fourteen entries for the event, which was at 100 targets, reversed order. Sexton, of Leavenworth, Kans., won with 84. In order came the following: Charlie Budd 83, J. S. Fanning 82, Charlie Grimm 81, Gottlieb 81, Harvey McMurchy 80, B. A. Bartlett 78, Jack Parker 77, W. G. Sergeant 76, Norton 71, Scott 68, Rickmers 67. Miles and Hubbard did not finish. Sexton won the cup at the Schmelzer shoot last year.

The shooting committee of the Westminster Kennel Club, Babylon, L. I., has shortened the boundary line on its grounds. It has hitherto been a 50yds. boundary, short enough usually for anybody on the birds George Mott always provides, particularly when the wind blows strongly from the northwest. The boundary now is one of 30yds. measured from the center trap. Scores made now on the above grounds will have the little black dot denoting dead out of bounds, a little too numerous for high scores.

The Epilogue Handicap at the Hollywood (N. J.) grounds on Saturday, Sept. 19, had only three entries, the 100 birds a man, $100 entrance, having scared away most of the shooters. Owing to the small list of entries the event was called off, and a 25-bird race, $25 entrance, commenced. There were six entries for this event, which resulted as follows: Loening (26) 25, Edgar Murphy (30) 23, Bland Ballard (28) 21, L. B. Hooper (26) 21, Count (25) 20, Fred Hoey (28) 16 out of 21.

Trap-shooters of this city and vicinity experienced some of the vagaries of the Weather Bureau last Saturday, Sept. 19. John L. Winston was taking part in the target handicap shoot at the Boiling Springs Gun Club's grounds at Rutherford, N. J., that day, and was not at all easy in his mind when the clouds began to whirl around over his head and the day turned suddenly into night. Winston made inquiries for the cyclone cellar, and refused to be comforted when he found there wasn't one.

There will be a gathering of the clans at Harrisburg next week. Philadelphia will be in it too, and Harry Thurman doesn't think the Quaker City will be "out of sight" when all is over. The Keystone Snooting League of that city can put a team into the field that is hard to beat on either targets or live birds, but both Harrisburg and Pittsburg have been doing some figuring.

Milt Lindsley says that he is "chained to business like the other bear." The above being translated means that Milt cannot come East with Mrs. Lindsley to meet his old friends, the manufacture of King's Smokeless keeping him with his nose to the grindstone. His sole recreation is reading FOREST AND STREAM and quarreling with the pet black bear that used to make his home in Hoboken, N. J., so peaceful and romantic.

The tournament committee of the Endeavor Gun Club, of Marion, N. J., has arranged for a two days' shoot the latter part of October. The events will all be merchandise races, the entrance fees being only the price of the targets.

The fall tournament of the Bedford, Ind., Gun Club will be held on Tuesday and Wednesday of next week, Sept. 29-30. Mr. F. T. Sherwood is secretary of the organization and will gladly furnish any further information regarding his club's shoot.

Blackbird shooting has commenced on the Elkwood Park grounds. Blackbirds from traps are somewhat of a novelty to many shooters, and are by no means as easy to hit as one would suppose. They are quick to leave the traps and do a good deal of towering. Their cheapness, as compared with pigeons, is a great thing in their favor.

In our mention last week of the Winston-Gagnon match, which took place at Elkwood Park on Monday, Sept. 14, we omitted to state that Winston allowed Dr. Gagnon two misses as kills. Notwithstanding this handicap, the Austin powder representative won by 2 birds on the 25.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

The handicap on the experts that will be in force at the Pennsylvania State shoot is exactly on all fours with that in use at Buffalo this summer. It is a hard one, but the boys will have to stand it or put up their guns.

The Washington State Sportsmen's Association will hold a tournament Oct. 16-17, at Tacoma, Wash., under the auspices of the Tacoma Rifle, Rod and Gun Club.

There will be target sweeps all the afternoon at Astfalk's new grounds, Elizabeth, N. J., Thursday afternoon, Sept. 24. A special match, three men to a team, has been arranged to be shot about 1 o'clock.

Mr. G. W. Coulston, a member of the New Utrecht Gun Club, of Brooklyn, N. Y., who has been in ill health for some time, is growing convalescent, and will soon be able to be out at the traps again.

The Elizabeth (N. J.) Gun Club announces its eighth bi-monthly tournament for Oct. 27-28. First day, targets; second day, live birds.

SEPT. 22. EDWARD BANKS.

Calumet Heights Gun Club, of Chicago.

CHICAGO, Ill., Sept. 12.—The Calumet Heights Gun Club held its regular weekly trophy shoot to-day. There was a strong wind from the left quarter blowing all the time. In the trophy event Paterson was the winner in Class A, Whitman won in Class B, Black in Class C. The scores were:

Class A.

PATTY.

West Lebanon Gun Club.

WEST LEBANON, N. H., Sept. 11.—The following sweeps were shot today, this being the second annual all-day shoot of the West Lebanon Gun Club. There were no expert shooters present, but good scores would have been expected if the targets had been made of some material other than cast iron. The day was perfect and everything went on finely.

All events were at known traps and angles except Nos. 4 and 10, which were unknown traps and angles, and 6, which was 5 unknown and 10 known traps and angles:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	5	10	10	10	10	15	10	15	Targets:	5	10	10	10	10	15	10	15
Bailey	3	4	8	5	4	4	3	..	Young	0	0	3	3	3	5	..	..
Batchelder	2	5	4	5	5	4	6	5	Wilmot	..	3	7	..	6	..	..	..
Renehan	1	3	4	2	3	4	3	8	Hall	..	4	2	1	4	7	..	..
Briere	1	2	6	4	5	6	7	8	Ober	..	1	..	..	..	..	..	..
Pitman	2	7	4	..	..	..	..	..	Cross	..	1	..	..	..	..	..	..
Clapp	0	4	5	4	..	..	..	..	Johnson	..	2	5	..	3	6	2	..
Hoffman	2	1	4	0	..	..	..	..	Carter	..	6	..	..	..	..	..	..
Carter	3	3	3	2	7	9	7	..									

A miss-and-out resulted in a win for Batchelder on the 5th round, Renehan and Clapp both losing their 5th targets. Briere, Young and Hall dropped out in the 2d round, Bailey, Hoffman and Carter lost their 1st birds.

Event No. 10 was a 5-target sweep, Briere scoring 3, Batchelder 1 and Renehan 0.

NAP. BRIERE, Sec'y-Treas.

Fulton Gun Club, of Atlanta.

ATLANTA, Ga., Sept. 10.—Below are the scores made to-day by members of the Fulton Gun Club, of Atlanta:

The International Meeting in Herzegovina.

THE London *Field* of Sept. 12 has the following short account of the first two days of the international pigeon shoot which commenced at Ilidze, near Sarajevo, on Monday, Sept. 7:

"The international pigeon shooting began at Ilidze, Sarajevo, last Monday, when 2,000 sovs, added to the entry money, with numerous valuable trophies of Bosnian manufacture, were competed for. The grand prize of 1,000 sovs, added to an entry of 6 sovs, at 12 pigeons (5 at 25 meters and 7 at 26 meters, ties at 27 meters), secured a numerous entry. MM. de Lunden and Journu, Signors Marconicini, Pederzoli Mainetto, Gaioli and Guidicini, and Comte Keglevich, alone killed their 5 birds.

"On Tuesday M. de Lunden led off by killing a good bird, but M. Journu, beaten by a clinker, was quickly followed by Signor Pederzoli. In the seventh round Count Keglevich was beaten by a good bird; while in the eighth round M. de Lunden shot under a fast rock from the corner trap, thus leaving four Italians, Signors Mainetto, Gaioli, Marconicini and the veteran Guidicini, with clean scores. In the tenth round Signor Mainetto missed, and Signor Marconicini also failing to kill his eleventh bird, last year's winners, Signors Gaioli and Guidicini, thereupon divided first and second prizes, amounting to 890 sovs, and shot off for the cup, which the first-named, Gaioli, won. At the sixteenth round Signors Mainetto, Pederzoli and Marconicini cut up the third and fourth prizes, amounting to 250 sovs.

"Considerable praise is due to Barons Pereira and Pittner for their excellent organization of the shooting. The birds were all rocks, and were trapped by Roberts from Hurlingham."

Greensburg's Second Annual Tournament.

THE Greensburg (Ind.) Gun Club announces that it will hold its second annual tournament on Oct. 14-15. The club has gotten out a very attractive looking programme, and issues a cordial invitation to all persons interested in trap shooting to be present on the above dates.

Shooters will be classified, and the more expert will be handicapped so as to give the weaker shooters a chance to get in for the money. All purses will be divided under the old system of 4 moneys—35, 30, 20 and 15 per cent.—with the exception of two 20-target events each day, in which the Rose system of dividing purses will be given a trial. The classification and handicap will be as follows: "Shooters will be classified as they enter, and will be shifted only when it is clear that they are out of their class. Class A will shoot from traps pulled in reverse order—1 and 5 known angles, and 2, 3 and 4 unknown angles. Class B will shoot everything known."

Event No. 6 on the second day (Oct. 15) will be the 50-target event for the amateur State badge, emblematic of the amateur championship of the State of Indiana. This event will be shot known traps and angles, and is open to all amateurs of the above State. The Greensburg club presents the badge and also the targets shot at in the event.

Web Woodfill, secretary of the club, will doubtless be glad to furnish all further information that may be desired.

Programme for Pennsylvania State Shoot.

THE programme for the Pennsylvania State shoot at Harrisburg, Sept. 29-Oct. 2, contains a list of both State and open events. The most important feature on the programme is the handicap imposed on experts, the programme stating that—

"All experts must break 19 out of 20, 49 out of 50, 99 out of 100, in order to get in for money if straight scores are made. This rule will be strictly enforced by the manager of this shoot, and whose classification will be final." This is the handicap that was in force at the New York State shoot held at Buffalo in the month of June last. Some of the experts present at that shoot found the game rather too hard, but Sim Glover, who shot away up all the time, managed to come out well ahead.

There will be three sets of empire traps in use at this shoot, Charlie Hebbard being in charge of the same. Targets, except in the trophy events, will be thrown at unknown angles. A good feature of the programme, and one that will bring out the shooters in the morning, is the average money offered. The programme says:

"In all open and State sweepstake events the management will donate ½ cent for each target thrown, which will be given as average money each day: 25 per cent. to the shooter having the highest average, 25 per cent. to the shooter having the second highest average, 25 per cent. to the shooter having the third highest average, and 25 per cent. to the shooter having the lowest average. Average purses will be paid only to those shooting in all State or open events on programme for the day, trophy events not counting for average in State events."

The Harrisburg Shooting Association, under whose auspices the shoot will be held, adds $385 to the purses. On the first day it adds $50 to the State events and $85 to the open events, the latter being five in number: four 20-target events and one 50-target event (Gold Dust powder event). On the second day $50 is added to the purses in the State events, and $75 to the open events; the same amounts are added to the State and open events on the third day. On these two days the open events are five in number: three 20-target events and two 50-target events. On the second day the two 50-target events go to make up one event of 100 targets, the E. C. Powder Company offering a cup to the winner of the event; this race is a handicap ranging from 1 to 20 extra targets to shoot at. On the third day the same two events make up a similar 100-target handicap event, Parker Bros. offering an $80 grade gun as special prize.

Friday, Oct. 2, the last day of the shoot, is live-bird day. On that day the State live-bird trophies will be shot for; $2 miss-and-outs will be shot off on the open set of traps.

The shoot will be managed by Elmer E. Shaner, who will have the grounds ready for practice work by Monday afternoon, Sept. 28. All purses will be divided on the Rose system.

The following paragraphs, taken from the advance sheets mailed us, show that the Pennsylvania State Sportsmen's Association does not intend to make this year's tournament merely a social event; it is to be for business also:

"The annual meeting of the Association will be held on the evening of Sept. 29 at the Commonwealth Hotel, at 8:30 P. M., sharp, and will be devoted exclusively to the work of the Association, namely, the reading and approval of the minutes of 1895, reports of committees, election of new members and officers, and fixing place for next annual meeting and shoot.

"On the evening of Sept. 30, at same place and hour, there will be a meeting of the Association's Legislative Committee, H. M. F. Worden, Harrisburg, Pa., chairman, and all those interested in the better protection of our game and fish are urgently requested to be present. This meeting will be continued from night to night, at same place and hour, until the work of this committee is completed. A list of this committee will be found in this book."

Western Traps.

THE LIMITED GUN CLUB, OF INDIANAPOLIS.

CHICAGO, Ill., Sept. 19.—The programme of the Limited Gun Club, of Indianapolis, Ind., is out for the third semi-annual tournament of that organization, Oct. 6-8. The tournaments of this club have always been of singular interest by reason of their entire independence of scheme and their departure from ordinary tournament methods. It has been the avowed intention of the club to hold shoots for sport and not for business, and no regret has ever been expressed by a management there that the "push" was not on hand or was early in its departure. The present programme is plainly marked "for amateurs only." The Rose system will be shot, and there is a classification handicap, Class A to shoot known angles from traps pulled in reverse order, Class B to shoot known angles from traps pulled in regular order. The shooting will be at targets for two days, with a third day devoted to live birds and to the Indianapolis specialty of sparrow shooting. A new method of trapping will be employed, by which the rapid-fire and unknown trap systems will be employed, thus doing away with much of the slowness of live-bird shooting. If this should mean the leaving of birds unretrieved, thus offering the old spectacle of grounds covered with dead or crippled birds, even sparrows, the method on the face of it may be branded as undesirable and wrong for a tournament of to-day. There must always be time to-day to be humane and considerate of the claims of the sport in general upon good observances. Instantaneous retrieving is the only sort, be it for pigeon or sparrow.

The programme of the Limited Gun Club announces that there will be a meeting called on the evening of Oct. 6 for the purpose of organizing an Indiana Trap-Shooters' League, and each club is asked to send two delegates for that purpose, or to appoint proxies. It is to be hoped that this movement will materialize into a grand union of the clubs of the great State of Indiana. The Limited Gun Club is typical of the enterprise and vigor of the shooting fraternity of the commonwealth.

THE COOK COUNTY LEAGUE, OF CHICAGO.

The seventh and next to the last of the series of eight contests of the Cook County Trap-Shooters' League, Chicago, was held to-day at the grounds of the Eureka Gun Club. The weather was cold and windy, he appearance of autumn being strongly in the air. The last shoot, in October, will see winter near at hand at this point. To-day blue-rocks and the magautrap were used.

Up to to-day, in the race for the Mussey Club emblem, the Eureka Gun Club was well in the lead, the Garden City and Garfield clubs being the next of the eight competing clubs Eddie Steck, F. P. Stannard and G. C. Lanphere were bunched for the first place in the individual race of the League. It is not safe to prophesy anything as to the winner until after the contest which concludes the series.

1206 BOYCE BUILDING. E. HOUGH.

Mr. Winston Explains.

NEW YORK, Sept. 20.—*Editor Forest and Stream:* The charming and kind article in the last issue of *Sportsmen's Review* has just been shown me. As I always like to know who my friends are, and particularly my "gentleman" friends, Mutton will confer a favor upon me if he will let me know his name and address. Most of the statements he makes are false. Just do a little figuring. Had it taken me "at least five minutes to shoot each bird" it would have taken me a fraction over eight hours to have shot my 100 birds alone. Then think of Mr. Duryea's.

As the match commenced at 2 o'clock and was finished in less than two and a half hours, this statement is false. As to "nagging Mr. Duryea," that is false also. The moment I landed in a certain store in Chicago I was told I could get a race for $100 or $1,000, and the gentleman was "looking for me."

I got the race, as all know. Unfortunately I do use tobacco, and as I am growing old and it is a great solace to me, I shall not abstain even to please Mutton. As to my "monkeyisms," I am the most nervous man who ever pulled a trigger. The wiping of the perspiration from my hands, the fixing of my hat, is a little mental philosophy to steady myself, not to annoy my competitor.

Will wind up with Mutton by saying he certainly is not a shooter, as he says "all shooters are gentlemen."

And again when a person repeatedly tells me he is a gentleman I am inclined to think that he doubts it and wants corroboration. Am surprised that such an article should escape the pencil of the editor.

As to the editor: he treated me particularly well while I was in Chicago. He honored me by asking me to meet his wife. I suppose he, like I, would only introduce his wife to a gentleman. Mr. Duryea did offer to return "our stake." I come from a place (Kentucky) where we never "rue back" and I declined it, though appreciating to the full his spirit.

JOHN S. WINSTON.

Tournament at East St. Louis.

EAST ST. LOUIS, Ill., Sept. 14.—*Editor Forest and Stream:* The King's Smokeless Gun Club will give a three days' shoot on Oct. 8-10, at its grounds, Obert's baseball park, East St. Louis, Ill. Twenty-one railroads enter East St. Louis, which makes it easy of access to shooters all over the country. Visiting shooters will be enabled to attend the fall festivities of St. Louis that week. The Veiled Prophets parade Oct. 6; St. Louis fair, Oct. 5-10; the St. Louis Exposition and theatres.

Shoots will be arranged to suit experts and amateurs, and we sincerely hope the attendance of experts will be large, as they have never attended a shoot in or around St. Louis. The grounds are the finest in the State and electric cars run direct to gate. Programmes will be issued this week and mailed to all shooters.

J. M. TRENDLEY, Sec'y.

The Schmelzer Tournament at Kansas City.

KANSAS CITY, Mo., Sept. 18.—This time of the year being the fag end of the target tournament season, one would naturally suppose that the attendance at the tournament given by the Schmelzer Arms Co. in this city would fall off considerably. This being also merely an amateur tournament, with no big added money inducement, the success of it was much doubted by those who thought they knew.

Preparation day too seemed to indicate that no large number of entries was to be looked for, but Tuesday, the first day of the tournament proper, shooters began to flock in, and during the day 80 shooters took part in the programme events. This was considered an excellent showing for the season of the year, yet on the next day the list of entries exceeded this, 90 shooters being present. This speaks well for the success of the tournament, as it rarely occurs that the second day's entries exceed those of the first. On the last day the wretched weather cut down the attendance considerably, but those who were present stayed and saw the conclusion of the tournament. The end did not come until it was too dark to see a target. While the last event was being shot some of the trapper boys were clamoring loudly for lanterns so as to be able to see to load the traps. This was the Schmelzer Arms Co. event, and there were five cash prizes, the first being $20 in gold. Despite the darkness Bartlett managed to crack out a straight.

The tournament was held at Fairmont Park, a beautiful place to hold a shoot, situated on the Air Line Railroad, about ten miles from the city and about thirty minutes' ride. Here there were many things to interest the visitor, and the sportsman who so desired could angle in the lake in the park, the privilege of which cost $1—silver or gold. Part of the lake extended so as to be just in the rear of the score and frequently the squad hustler would have to repair to the lake, where some of the shooters were busily engaged trying to catch some bass. Another thing that proved interesting to the sportsmen were the Mongolian pheasants the park keeper is raising. In addition to quite a number of adult birds, there was a brood of six little ones about the size of a quail.

There were three sets of traps in position—all empires, empire targets being used exclusively. The background was a trying one. To the right was a high bluff bank and some buildings, while to the left stood a large grand stand and in front were a number of trees that worried the shooter not a little, and to these many a miss was attributed. On No. 1 and No. 2 sets of traps the amateur events were shot off. These were set at known angles and threw rather a slow, easy bird and quite high. This game seemed to be especially suited to some of the shooters, and a number of big averages were rolled up here. As a whole the averages ran high, and few shooters were fortunate enough to win any of the prizes without a tie.

The open events were shot on No. 3 set of traps. Here the targets were thrown low and much more swiftly, and all events were shot at unknown angles, with the exception of several extras, which were reversed traps, to give the boys a little practice for the trophy shoot.

The ground arrangements were such as are seen at all large up-to-date tournaments, and ample provision had been made to handle a large crowd. The heavy rain on the last day flooded the grounds and everything was a sea of mud, though this had been guarded against, at the shooters' score a board platform extending along the entire length of it. Otherwise everything was pleasant enough, as several large tents provided shelter for all, and the above-mentioned difficulty could scarcely be overcome.

As stated before, the attendance was large. The trade was represented by the following: Harvey McMurchy, representing the L. C. Smith gun, Fulton, N. Y.; Col. A. G. Courtney, of the Lefever Arms Co., Syracuse, N. Y.; Capt. B. A. Bartlett, representing the Winchester Arms Co., Buffalo, N. Y.; Jack Parker, representing the E. C. Powder Co., Detroit, Mich.; J. S. Fanning, representing the United States Smokeless Powder Co., San Francisco, Cal.; Herman C. Hirschy, representing the Robin Hood Smokeless Powder Co., St. Paul, Minn.; Herbert Taylor, representing the Du Pont Powder Co., St. Louis, Mo. Then there was Charley Budd, of Des Moines, Ia., and the other Charley, C. M. Grimm, of Clear Lake, Ia., and the only "Airy Lou" Hart, Atchison, Kan.; J. W. Sexton, Leavenworth, Kan., two times winner of the Schmelzer trophy; that Simon pure amateur, G. W. Sergeant, of Joplin, Mo., who shoots like a "perfesh;" Chris. S. Gottlieb, another amateur of considerable fame and an able representative of Kansas City.

There were a host of others present, and a glance at the scores will tell who they were and what they accomplished.

The table of each day's scores given below shows all the names of those who shot in more than one event and averaged above 60.90. The money was divided according to the number of entries: when 15 to 25 entries, 3 moneys; 25 to 35 entries, 4 moneys, and over 35 entries, 5 moneys:

GENERAL AVERAGES.

	Shot at.	Broke.	Av.
McMurchy	500	471	94.2
Bartlett	500	469	93.8
Budd	500	467	93.4
Grimm	500	460	92
Fanning	500	453	90.6

WINNERS OF PRIZES.

Trautner won the Colt's rifle in event No. 1. Sergeant won the Forehand gun, and Carmichael the Spencer repeater. Rickmers took the Ithaca gun without a tie on 20 straight. Sexton won the Davenport gun, Norton being successful in the Parker gun contest. Gottlieb won the Smith gun without a tie on 20 straight. Hale won the Winchester repeater, and Scott the hunting suit.

FIRST DAY, SEPT. 15.

This was virtually "preparation day," although there was a regular programme arranged, consisting of 5 open events with $42.50 added to the purses. The weather in the early morning was threatening, but the clouds soon cleared away and the sun shone with a fierceness that made it rather unpleasant for the shooters at the score. Bartlett carried off the honors of the day with the excellent score of 95.6 per cent. Budd, Buker and Miles were next with 93. One of the features of the day was Sergeant's run of 69 straight.

Scores of Sept. 15.

SECOND DAY, SEPT. 16.

The second day of the shoot was bright and clear, but still quite warm. Eighty shooters took part in the programme events. In the open events Charlie Budd led with an average of 96.5, closely followed by McMurchy with 95.6. Taylor Cox, a one-armed shooter, was third with 95.2.

In the amateur events Sergeant and Buker tied for first place with 95 per cent. Events Nos. 3 and 5 were open to all; the scores made in these events are given in the "open events" table as Nos. 6 and 7. The names of all shooters who took part in only one event, or who failed to make an average of 60 per cent. or better, have been omitted from the tables.

Scores of Sept. 16.

THIRD DAY, SEPT. 17.

The third day of the shoot dawned dark and threatening, and the sky remained dark and overcast all day. Though this made the shooting somewhat harder, it also made the other conditions for shooting far pleasanter. The entries ran higher than the day before, over 90 shooters taking part in the various events on the programme. Harvey McMurchy led the band to-day with an average of 96.3, Jack Fanning being close behind him with 94.5. L. C. Smith and W. G. Sergeant were respectively first and second in the amateur class.

Scores of Sept. 17.

FOURTH DAY, SEPT. 18.

Friday, the last day of the tournament, was one of the worst experienced this season at any of the large tournaments. Early in the morning the rain came down in torrents and it looked at one time as if the shoot would have to be declared off. About 9, however, the rain stopped long enough to let the shooters reach the grounds. Then it began again and continued at intervals all day. The light was again very trying, but Bartlett managed to roll up the capital average of 94.3, while Grimm and McMurchy tied on 93.1 for second place. Sexton and L. C. Smith led the amateur class with 93.9 each, scoring 108 out of 115 shot at.

Scores of Sept. 18.

THE CUP CONTEST.

The contest for the Schmelzer Arms Co. trophy was the main feature of the last day of the shoot. Although much interest was manifested in the contest, the entry list did not run high, only fourteen shooters entering the event. Jack Parker, who held the trophy last year, tieing Bartlett for it at Detroit, and winning it on the shoot-off at Rochester, was generally looked upon as the probable winner, as he had shown excellent form in the sweeps shot at this style of shooting—traps pulled in reverse order. On the day of the race he was decidedly off color, and after the first 25 he was never in it. Sexton won on his merits, and had to shoot his last string when it was so dark that it was hard to see a target. He had to break his last 8 targets to win, but he was equal to the occasion. He won the cup just one year ago at the shoot given by the Schmelzer Arms Co. in this city. He uses Du Pont Smokeless in a

In New Jersey.

FORESTER GUN CLUB, OF NEWARK.

Sept. 7.—Below are the scores made to-day at the Labor Day shoot of the Forester Gun Club, of Newark:

CLIMAX GUN CLUB, OF PLAINFIELD.

Sept. 16.—The Climax Gun Club, of Plainfield, held its regular monthly prize shoot this afternoon. The weather was all that could be desired for trap-shooting, but the members failed to turn out in anything like the old numbers. Tom Keller, Louis Schortemeier and J. Goodman were the only ones on deck when the club event was shot. Keller, who says that his old enemy, rheumatism, has now no terrors for him, showed that he could at any rate swing his gun correctly, as he smashed 24 out of his 25 targets in the club race. Schorty only dropped his 2d and 12th targets, finishing with 23 out of 25. Goodman, who was allowed 7 extra targets as a handicap, broke 24 out of the 32 he shot at. The scores were:

T H Keller.....1111111111011111111111111 —24
L H Schortemeier.....1011111111101111111111111 —23
J Goodman.....0111101111001011110110111101111—24

THE ENDEANORS DEFEAT THE EAST SIDE.

Sept. 17.—At the grounds of the Endeavor Gun Club, Marion, N. J., to-day a team race between the East Side Gun Club and the Endeavor Gun Club took place, this being the first of a series of three matches. The conditions were 6 men to a team, each man shooting at 25 blue-rocks. As will be seen by the score, the Endeavor Gun Club won by 27 birds, but the East Side men are good sportsmen, and only said "better luck next time."

After the team race several sweepstakes were shot, the shooting lasting until dark. Scores of all events follow:

Endeavor Gun Club.

C von Lengerke.....1110111111111011111111111—22

OPENING SHOOT AT NATE ASTFALK'S.

Sept. 17.—N. H. Astfalk, who has always been one of the moving spirits in the Elizabeth (N. J.) Gun Club, has opened grounds for target and live-bird shooting within a short distance of the city of Elizabeth. The grounds have been known to New Jersey shooters in the past as Eddie Earle's grounds, many live-bird matches having been shot there during the past few years. Since Mr. Astfalk took the place he has made many improvements and promises to make many more that will put his grounds on an equality with any in the State. To celebrate the opening of the grounds the proprietor announced that he would provide a clambake dinner for shooters, those who were present to choose sides, the losers to pay a modest sum for the entertainment of the winners.

The date set was to-day, Sept. 17, and as luck would have it the morning opened wet and stormy, the rain not clearing away until after 10 A. M., too late to make the shoot a success. The result was a small attendance, Captains Woodruff and Folsom having only ten shooters to choose from. The light was very bad, and the targets hard to locate, scores ruling low. After the shoot was over the scorer announced that Woodruff's side had won by 3 targets, having broken 96 to 93. The score furnished us shows that Joe's score was wrongly footed up, he being credited with 16 breaks whereas the score shows that he broke but 11, a change which gave a different complexion to the totals as announced. Anyhow, Folsom's team paid for the clambake, and Woodruff's team enjoyed a good meal as the guests of their opponents. The scores were:

Woodruff's Team.

Aaron Woodruff.....1111010011101011111111111—20
Edwards.....1111110111111101101111001—20

THE BOILING SPRINGS HANDICAP.

Sept. 19.—The Boiling Springs Fishing and Gun Club, of Rutherford, N. J., announced a few weeks ago that it would hold a 100-target handicap race, $5 entrance, on this date. There is always a good deal of trouble connected with the getting up and running of such events, and there is always a little difficulty in awarding the allowances. It is probable, therefore, that it is on account of the above reasons that such races are comparatively rare in this vicinity, for the entry list of 21 obtained in to-day's race shows that it is a popular affair with shooters.

Although the hour set for commencing the race (1 P. M.) was a late one for the time of year, there would have been plenty of time to finish it had not the traps and battery taken it into their heads to work so badly at the start that it was about two hours later when squad No. 1 was called. Once started, the squads shot their strings of 25 so quickly that, had the elements not taken a hand to defeat the efforts of the management, all might yet have been well. While the second strings were being shot growls of thunder were heard away to the south and west, mighty thunderheads appearing in every part of the sky; but the third string of 25 had been shot by squads 1 and 2 before any real trouble in the storm line commenced. The atmosphere during the whole afternoon had been stifling, the humidity in the air making every one who had to move about decidedly moist and uncomfortable. The change came while squad 3 was shooting its third string.

The squad was made up as follows: Lancom, Hexamer, N. E. Money, Henry, Hegeman and Van Brunt. About half of its third string had been shot at when the wind swept down from the west and played tag most successfully with the targets. Dark clouds quickly massed themselves overhead, the various currents of air being rendered very apparent as clouds moving in opposite directions crossed each other's paths Squad No. 3 had none the best of it, having to finish its third string in such weather. Squad No. 4—Frank, De Wolf and Huck—went out and shot its score in strong gusts of wind and a fast-deepening gloom.

Squad No. 1—Edwards, Apgar, Captain Money, Harrington, Platt Adams and 147—commenced its last string in such weather as none of the six had ever *shot at* a target before. The gale seemed to increase in force, while what light there had been disappeared almost entirely. How Apgar managed to score 22 breaks is a mystery to him and everybody else. Platt Adams never saw several of his targets leave the traps, and it was purely a matter of luck when a shooter got a target that he could see; low-flying targets were almost sure losses. So absurd was it to try and shoot in such weather (while it was apparent that the event could never be finished) that Paul Jeanneret urged that the event be closed and the scores called back at the end of the first 75. "Shoot it out," was the cry that greeted him, so Squad No. 1 went on trying to catch a glimpse of the targets that left the traps when the word "Pull" had been said, and finished its 100.

Squad No. 2—Piercy (captain of the Endeavor Gun Club, who had been shooting very well), Welles, Lenone, Baron, Remsen and Collins—commenced its last string, but the 6th round of the 25 was not completed. It was simply impossible to see a target. The club asked the advice of the shooters as to what should be done with the purse, and it was decided to refund every one his $5 minus the price of the targets he had shot at. The scores made in this memorable event were as given below, the handicaps awarded to the shooters being as follows: Apgar scratch, Edwards 2, "147" 3, Remsen 3, Collins 4, Henry 5, Adams 6, Piercy and Capt. Money 7, Welles, N. E. Money, Huck and Frank 8, Herrington, Lancom and Baron 10, Lenone and Hexamer 12, Hegeman 14, Van Brunt 15, De Wolf 18. Scores in detail:

RECEPTION AND BANQUET TO PRESIDENT JEANNERET.

Eighteen years ago, in 1878, the Boiling Springs Fishing and Gun Club was organized, and its first and last president, in fact its only one, is Edward A. Jeanneret, one of the most popular and most prominent residents in East Rutherford. This summer Mr. Jeanneret made a trip to Europe, returning on a very recent date. In honor of Mr. Jeanneret's return to Rutherford, and to congratulate themselves fittingly on their president's return, the members of the Boiling Springs Fishing and Gun Club tendered Mr. Jeanneret a reception and banquet at Just's Erie Hotel on the night of Sept. 19. The wretched condition of the weather, rain falling in torrents and the wind blowing almost a gale, kept many away who would otherwise have been on hand, and drove many of the shooters home who had previously signified their intention of being present. The banqueting hall of the Erie Hotel was nevertheless well filled as soon as landlord Just announced that everything was ready, and that the tables awaited the guests. Among those present were:

Edward A. Jeanneret, president of the Boiling Springs Fishing and Gun Club, the guest of honor; William McKenzie, mayor of East Rutherford; ex-Mayor Luther Shaffer, counsel for the gun club; C. H. Coe, vice-president of the gun club; William Gramlich, of the N. J. & N. Y. R. R., and president of the council of East Rutherford; Councilmen J. N. Mileham, James P. Edwards and Arthur Van Winkle; W. H. Taylor, clerk of the borough of East Rutherford; John E. Tyler, editor of the Rutherford *American;* Thomas Hoerner, editor of the Rutherford *News;* William Kehoe, O. L. Marvin, George Lancom (the father of one of Rutherford's coming shots), C. Collins, Louis Laue, F. Brockhart, of the Pullman Car Co.; Paul Jeanneret, W. H. Huck, secretary of the gun club; Frank Krebs, Theodore Baron, of Von Lengerke & Detmold's; H. S. Welles, of Spalding's; John L. Winston, of the Austin Powder Co; Jacob Pentz, of *Shooting and Fishing;* the trap editor of FOREST AND STREAM, etc.

By unanimous choice Paul Jeanneret was chosen as toastmaster, and his efforts showed that the choice was not made unadvisedly. He spared nobody and played no favorites, the result being that the flow of oratory and story was unbroken. Editors Hoerner and Tyler, both of them pianists and vocalists of no small ability, assisted very materially in the enjoyment of the evening; while Mr. Collins, who gave a graphic account of ruffed grouse shooting in Pike county, Pa.; Mr. Luther Shaffer and Messrs. Huck and Krebs, who spoke respectively as to grouse shooting at Sparta and a day's sport in Sullivan county, N. Y., all proved that the love of sport was well preserved in the hearts of the citizens of East Rutherford. The evening's programme was carefully thought out and carried to a most thoroughly satisfactory end, and President Jeanneret cannot have failed to realize that his efforts in behalf of the welfare of East Rutherford as its collector, and his work in behalf of the Boiling Springs Fishing and Gun Club as its president for eighteen years, are fully appreciated by his fellow citizens and clubmates. EDWARD BANKS.

On Long Island.

OAK ISLAND GUN CLUB, OF BABYLON,

Sept. 12.—President Magoun, of the Oak Island Clay Pigeon Club, of Babylon, L. I., presented a gold badge to be shot for by members of the club, the shoot to be at 25 targets, the winner to hold the badge until next season. The badge contest took place to-day, and Floyd Tooker was the winner with 17 breaks. George S. Mott was second with 16. S. Van Nostrand 15, G. B. Magoun 13, J. B. Lowerre 8, and J. M. Jordan, Jr., 7, were the other contestants

The final contest for what is known in Babylon as "the championship of Long Island" also took place to-day. This contest is at 50 targets, and George Mott was the winner with 35 breaks; Tooker broke 30 and Magoun 25 Mott having won two previous shoots was accorded the championship title.

NEW UTRECHT GUN CLUB.

Sept. 12.—Owing to the absence of the energetic secretary of the New Utrecht Gun Club, Dr. George E. Pool, who has been away from the city for a few weeks, the recent scores made by members of the New Utrecht Gun Club at the club's grounds, Dyker Meadow, did not reach this office until a late date. Below are the scores made in the three last club shoots, together with the results in the club events and the Hegeman prize shoot:

Aug 22—D. C. Bennett was in great form this afternoon, winning the double event of the club shoot and the Hegeman medal, scoring 25 straight in the first event and 13 out of 15 in the other:

	Club shoot.	Hegeman badge.
D C Bennett (A)	1111111111111111111111111—25	101111111111110—13
P Adams (A)	1110111110111011111111000—19	111111111001110—12
A A Hegeman (A)	0111101011111110011110111—19	101011011011101—10
D Deacon (A)	1110w	011101111101111—12

Sept. 5.—The attendance of members at the Dyker Meadow grounds this afternoon was not large. Those that did attend found a strong wind blowing that made the targets fly very erratically. Platt Adams carried off the double event this afternoon, scoring 23 in the club shoot and 15 straight in the Hegeman prize contest; D C. Bennett, the double winner two weeks ago, was second to Mr. Adams in both events. Scores:

	Club Shoot.	Hegeman Badge.
P Adams (A)	1111111101110111111111101—22	111111111111111 —15
D C Bennett (A)	1011011111100111111111111—21	111101111101111 —13
A A Hegeman (A)	1011110111111011110111100—19	010110011101100 — 8
G E Pool (B)	0110111011001011101111111—18	1010100111111010 —10
H L O'Brien (C)	0000111010001110101110101—13	111111101001110l0—12

Sept. 12.—The attractions to-day at the Dyker Meadow grounds were the club shoot, the Hegeman badge contest and a shoot for the challenge plate, A. A. Hegeman having challenged Capt. Money, the holder. The shoot for the plate is at 30 singles, known angles, and 10 pairs. In order to facilitate matters, and to keep everybody shooting, the shoot for the plate was run in in the club event, the 25 targets fired at in that event counting for the first 25 in the plate contest; of that number Capt. Money broke 24 to Hegeman's 16, the latter being away off in his shooting. Each man then shot at 5 more targets to make up the total of 30, and both lost 2 out of the 5. This gave Capt. Money a lead of 8 targets, and as both broke 13 out of the pairs, the result was unchanged.

The club shoot was, of course, won by Capt. Money with his score of 24 out of 25 mentioned above. The Hegeman badge also went to Capt. Money after the shoot-off of a tie with Platt Adams. Among those present were four guests of the club: A. W. Adams, of Chicago; Dr. J. Adams, of New York; Harold B. Money and F. S. Edwards. The club was represented by Donley Deacon, Dr. G. E. Pool, Capt. Money, Platt Adams, J. E. Jones, A. A. Hegeman and Dr. O'Brien. To-day's scores were:

	Club Shoot.	Hegeman Badge.

Nos. 1, 2, 4, 6, 7 and 8 were at unknown angles, No. 3 at known angles, No. 5 at 5 pairs. Another 15-target sweep was also shot at unknown angles, the scores in this event being as follows: Dr. Adams 14, H. B. Money 13, P. Adams 10, A. W. Adams 10, Capt. Money 9.

BERGEN ROD AND GUN CLUB, OF BROOKLYN.

Sept. 15.—The regular monthly shoot of the Bergen Rod and Gun Club, of Brooklyn, took place on the club's grounds at Flatlands, L. I., this afternoon. The club shoot is at 7 live birds per man, and in that event no less than 4 of the 20 members present scored all their birds. There were 23 shooters in all, 3 being guests of the club. Scores:

Club shoot, 7 live birds per man, handicap rise: Philip H. Myles (28) 7; Robert J. Valentine (30) 7; Thomas L. Murphy (27) 7; Andrea T. Morrey (26) 7; David G. Murray (26) 5; Charles A. Richardson (27) 4; Robert J. Frazer (27) 6; Nelson T. Ellery (26) 5; Frederick G. Hennessey (26) 5; Thomas T. Williamson (26) 4; Richard W. O'Brien (26) 3; Louis G. Jenkins (26) 3; Henry G. Kane (26) 4; Thomas G. Hardy (26) 3; Samuel G. King (26) 4; Paul L. Nelson (26) 2; Richard V. O'Brien (27) 3; Willian H. Gregory (26) 3; Bernard W. Philips (25) 4; James E. Reynolds (26) 5; Thomas F. Freleigh (26) 3; George W. Daniels (26) 3.

EMERALD GUN CLUB, OF NEW YORK.

Sept. 15.—The Emerald Gun Club, of New York, held its regular monthly live-bird shoot at Dexter Park to-day. The weather was not the best for live-bird shooting, but the attendance of members, as usual, was very good, there being thirty contestants in the club event at 10 live birds per man. Of that number four—Louis Schortemeier, E. Dudley, R. Phister and Frank Lawrence—made straight scores. Six others scored 9 each, while six more scored 8. The scores were:

Class A, 29yds., 7 points: Louis H. Schortemeier 10, Richard Phister 10, Frank Lawrence 10. Class A, 28yds., 7 points: Thomas Short 9, Dr. George V. Hudson 8, Marshall Herrington 8. Class A, 28yds., 6½ points: E. Dudley 10, Gus Nowak 9, George E. Loeble 9, William Sands 8. Edward A. Vroome 7, John H. Moore 8, Charles E. Stuetzle 5, Frank W. Place 6. Class A, 28yds., 6 points: Richard Regan 9, Philip Butz 7, Dr. Klein 6, Joseph Banzer 5. Class A, 28yds., 5½ points: William Amend 9, Bernard Amend 7, Henry Thiele 3, M. Adams 7. Class A, 26yds., 5 points: John Woelfel 8. Class B, 26yds., 5½ points: Thomas F. Cody 4. Class B, 25yds., 6 points: Nicholas Maesel 9. Class B, 25yds., 5 points: Dr. Richter 6, Emil Weiss 5, J. K. Breit 3, G. H. Hillis 6. Class B, 25yds., 4½ points: Charles Maesel 8, Nixon (guest) 6, Dr. McMaster (guest) 6.

ERIE ROD AND GUN CLUB.

Sept. 16.—The Erie Rod and Gun Club, of Brooklyn, held its monthly shoot at Woodlawn Park, L. I., this afternoon. In the club shoot at 7 live birds per man Henry Dohrmann and Harry Blakely both made clean scores. The results in that event were as follows:

Henry Dohrmann (AA, 28) 7, Harry Blakely (A, 27) 7, John F. Schmadeke (AA, 28) 5, H. Janowski (AA, 28) 5, Chas. Dettleffson (A, 28) 4, M. Elcessor (B, 27) 4, Frederick Graef (B, 27) 4, M. Lynch (C, 25) 4, J. H. Roberts (C, 27) 3.

NEW YORK GERMAN GUN CLUB.

Sept 16.—The New York German Gun Club held its monthly live-bird shoot to-day at Dexter Park. The club shoot at 7 live birds per man had 13 entries, and of that number only two—Dr. G. V. Hudson and Henry Thamforde—made straight scores. On the shoot-off for the badge Dr. Hudson outshot his opponent. In the sweeps shot during the afternoon some good scores were made, J. S. S. Remsen, although only a beginner at live birds, holding his own very well with the more experienced shoots. The scores in the club event were:

Dr. George V. Hudson 7, Henry Thamforde 7, Eugene Doenick 6, J. H. Boessennecker 6, John Wellbrock 6, Henry Nobel 6, August Schmitt 5, Peter Garms, Jr., 5, Michael Bonden 5, Frederick Sauter 4, Henry Oehl 4, Henry Leopold 4, Edward Radle 2.

BEHRENS DEFEATS M'TAMMANY.

Sept 17.—Dr. John H. Behrens and H. L. McTammany, both members of the Enterprise Rod and Gun Club, of New York, shot a race to-day at 25 live birds per man on the grounds of the Bushwick Rod and Gun Club near Flushing, L. I. The conditions of the race were 25 live birds per man, McTammany conceding Behrens 2yds. handicap, $50 a side, loser to pay for the birds, modified Hurlingham rules to govern. Although McTammany led early in the race, the doctor caught him in the last 10 and finally won by the score of 18 to 16.

The attendance of interested shooters was quite large and a fair number of entries was obtained in some miss-and-out events shot during the afternoon. The first event of this kind, $2 entrance, birds extra, resulted as follows:

No. 1, handicap rise: Philip H. Myles (30) 3, Robert J. Valentine (30) 4, Dr. John H. Behrens (28) 2, Samuel R. Porter (26) 4, Henry L. McTammany (29) 1, John G. Burnett (26) 3, Thomas S. Foster (26) 0, James E. Bennett (28) 0, George W. Selover (26) 1, Andrew J. Schaeffer (26) 5, Henry P. Schleuter (27) 2, George W. Coates (25) 1, James S. French (26) 2, Henry T. Elliott (26) 1, Dr. Emil Schraeder (29) 4, George W. Williamson (26) 1.

No. 2, same conditions, except all at 28yds.: Dr. Schraeder 2, McTammany, Bennett, Behrens and Myles 1, Valentine 0.

No. 3, same: Williamson 3, Valentine, Coates, Schraeder and Elliott 2, Behrens, French, Schleuter and Schaeffer 1, Myles and Selover 0.

No. 4, same: Valentine 5, Myles and Porter 4, Behrens, Williamson and Selover 3, Foster 2, Schleuter 1.

EXCELSIOR ROD AND GUN CLUB.

Sept. 17.—The Excelsior Rod and Gun Club commenced its series of prize shoots to-day at Bay Side, L. I. The winner of the first of the series was George W. Orton, who took the club badge after shooting off a tie with three others, who like himself had scored 6 out of 7 in the club event. The names of the three above mentioned were: Dr. H. K. Heimberger, Thos. E. Richards and Samuel R. Williams. The shoot-off, miss-and-out, resulted as follows: Orton 5, Williams 4, Heimberger 3, Richards 1. The scores in the club badge shoot were:

George W. Orton (28) 6, Dr. Henry K. Heimberger (28) 6, Thomas E. Richards (27) 16, Samuel R. Williams (28) 6, David J. Kingsland (26) 5, Richard E. Deegan (26) 4, Benjamin G. Williams (26) 4, Andrew T. Seegul (26) 3, William H. Archer (27) 5, Thomas L. Henderson (27) 3, James W. O'Dell (28) 2, David G. Nelson (27) 4, Louis G. Wilson (28) 2, Henry K. Jackson (26) 1.

FOUNTAIN ROD AND GUN CLUB, OF BROOKLYN.

Sept. 17.—The turnout at the regular monthly shoot of the Fountain Rod and Gun Club, of Brooklyn, held to-day at Dexter Park, was only small, four members taking part in the club shoot for the Brixey cup. Louis Duryea won the cup by scoring his 10 birds straight. During the afternoon he shot at 40 birds, scoring 37 of them; he also shot at 5, using only one hand, and scored all 5. The scores for the Brixey cup were:

Louis T. Duryea (30) 10, Wm Lair (30) 9, Dr. A. Eddy (29) 9, Wm. R Allen (28) 8.

Fitchburg Gun Club.

FITCHBURG, MASS., Sept. 7.—Members of the Fitchburg Gun Club and their guests did some shooting at targets to-day. Each man shot at 5 strings of 10 targets, unknown angles. The best scores made were as follows:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
S W Putnam, Jr.	6	10	9	10	8—43	M K Smith	7	7	8	7	8—37

E F Lewis	8	7	7	7	9—38						

Holland Defeats Grand Rapids.

GRAND RAPIDS, Mich., Sept. 12.—The tie made two weeks ago by the teams of the Holland Gun Club and the Valley City Gun Club, of this place, was shot off to-day, resulting in favor of the visitors by 7 targets. Neither club had any occasion to feel pride in the scores, the winning team getting one less target than they tied on at the first shoot and the home team 7 less. It had been raining most of the day, and was a windy, chilly time to shoot; but a number of spectators were out and much interest manifested. Some of the visitors telephoned the result to Holland, and the citizens arranged to meet the winners with a band on their return.

A good deal of time and more breath were wasted by conflicting ideas in applying shooting rules to repeating shotguns used in doubles. If there is a rule that governs in cases where a repeater fails to eject the first shell or the second one sticks in the chamber, no one knew it, and there were a dozen different constructions placed on the rule governing double-barreled guns as applied to repeaters. We would like FOREST AND STREAM's opinion on the case. A. B. is to shoot at a pair, misses his first target, and shell sticks in the gun so he cannot fire at the second. Is he to have another pair? If so, and he breaks both, is it one lost and one broken or do both count?

There was the utmost good feeling throughout the afternoon, and the Holland men at once announced that they would not stand on technicalities, but were ready to accept a challenge at our earliest convenience. Scores:

Holland Gun Club.

C. F. ROOD.

Parker Gun Club.

MERIDEN, Conn., Sept. 18.—Below find records of our second annual Labor Day tournament, which proved a grand success in every particular. No. 7 event was an optional sweep, with some very nice merchandise prizes added, which made it very attractive. The club added $10 cash to the purse in No. 9, which made it a very handsome sum. We had a good number of shooters from New Haven, Willimantic, Holyoke, Mass.; Springfield, Mass.; Windsor Locks, Bristol, New Britain, etc. Another year we hope to hold our third annual and make it more interesting than this one.

PARKER GUN CLUB.

Two Big Shooting Events.

CHICAGO, Ill., Sept. 12.—The Cook County League of Trap-Shooters, composed of the leading clubs of target smashers in Cook county, although organized but this year, has proved a huge success, and the interest taken in the monthly contests will no doubt warrant the hopes of the organizers of eventually forming a league composed of clubs in all the cities within 200 or 300 miles of Chicago.

Each club in the League having held a shoot on its grounds, the two final shoots to decide the winners of the many prizes will be given under the combined management of all clubs in the League. The first of these two final shoots will be given on the Eureka Gun Club's grounds at Seventy-ninth street and Vincennes avenue, next Saturday, Sept. 19, commencing at 9 A. M. sharp. The League contests commence at 2 P. M. The second of these final shoots will be held on the grounds of the Garfield Gun Club, West Madison street and West Fiftieth street, Saturday, Oct. 3. These two shoots will prove of special interest to all target shooters, as the new invention in traps, the magautrap, will for the first time be seen here. This trap is worked like a bicycle, feeds and traps automatically, and the one trap and one trapper will do the work that it now requires five traps and five trappers to do. Furthermore, it will throw single targets, pairs or whole coveys of bluerocks. The trap will be on exhibition the coming week at Von Lengerke & Antoine, 277 Wabash avenue.

There will be two sets of traps in operation besides the magautrap, and sweepstakes will be shot all day and open to all shooters, whether members of the League or not.

The Eureka Club are so far in advance in class A that they are practically the winners. In class B the hottest kind of competition is in progress, with the Garfield Club in the lead, closely pressed by both the Eureka, Garden City, Douglass and Calumet Heights teams.

A. C. PATERSON.

Limited Gun Club's Programme.

THE third semi-annual tournament of the Limited Gun Club, of Indianapolis, will be held Oct. 6-8. The tournament is for amateurs only, and the programme contains, for the further safe-guarding of the interests of the weaker shots, a handicap for expert amateurs. This handicap is as follows: Class A will shoot known angles from traps pulled in reverse order; Class B, everything known from traps pulled in regular order. Shooters will be classified when they enter, and will be re-classified only when it is clear that they are out of their class.

The Rose system of dividing purses will be used. In all 10-bird events there will be three moneys; four moneys in 15 bird events; 20 birds or more, five moneys.

The first two days' programme contains a list of events at empire targets; the last day there will be a long list of events at sparrows and pigeons. Targets will be trapped at 2 cents each, sparrows at 10 cents and pigeons at 20 cents. Shells (and the programme advises shooters to bring their sparrow and pigeon loads with them) should be shipped in care of Gus Habich, 62 West Market street, Indianapolis, Ind.

The programme concludes with a call for a meeting to organize a league of trap-shooters in the State. It is worded as follows: "Complying with many urgent requests that we take the lead in organizing an Indiana Trap-Shooters' League, we hereby call a meeting for that purpose at Indianapolis on the evening of Oct. 6. Clubs are requested to each send two delegates. Such clubs as may not have delegates present may be represented by proxies."

Trap-Shooting at Brome Corner, P. Q.

SUTTON JUNCTION, Sept. 9.—The trap-shooting tournament given by the Sutton Junction Gun Club at Brome Corner to-day, the last day of Brome county's annual exhibition, was a success in more ways than one. Trap-shooting is a clean and gentlemanly sport that is rapidly gaining favor in the eastern townships, as will be seen by the fact that no less than eight different clubs were represented at this meeting, none of which could trace their inception to an earlier date than September of 1895, and a glance at the accompanying scores will show that they have made no mean progress in the art. The birds were not what are commonly known as skyrockets, but were thrown at an elevation of about 10ft. and fully 50yds., from expert traps. In most of the events the purses were divided by the Rose system, which is becoming very popular in this section—another mark of progress, and more honor to FOREST AND STREAM.

Among the well-known shots from a distance may be mentioned Messrs. T. M. Craig, J. G. Walton, N. G. Bray, J. F. Morkell, J. Kirkpatrick and N. N. Walley, of Sherbrooke; J. B. Goodhue and J. Raymond, of Rack Island; W. Tagget, of Magog; Mr. Meyres, of Granby; and Dr. Martin, R. F. Shaw, Rev. J. I. Strong, C. A. Nutting, Henry Allen, C. F. Hall, Dan'l Ashton, S. Mathewson and John Macfarland, of Waterloo. The day was fine, the traps worked to perfection and things generally went off without a hitch, under the able management of Dr. F. Page, who handled the squads; Messrs. Longeway and Westover, who worked the books and cash, and Charley Fowler and Capt. Billings, who acted as referees and looked after the traps.

The principal event of the day was the team race for a silver trophy emblematic of the championship of the eastern townships. It was won by Sherbrooke, with Waterloo, Sutton Junction and Sutton following in the order named.

The highest score in this event was made by Mr. J. G. Walton, of Sherbrooke, with T. M. Craig a close second. A certain amount of money was to be divided among high aggregates in events Nos. 4, 5, 6, 7 and 9; it was won in the following order: A. W. Westover, first; T. M. Craig, second; J. G. Walton, third; S. Mathewson, fourth; Dr. Martin and J. Kirkpatrick dividing fifth. In the merchandise match, in which there were eighty entries, the prizes were awarded as follows:

A. W. Westover, first; H. E. Hibbard, second; Henry Allen, third; J. G. Walton, fourth; N. G. Bray, fifth; J. Macfarland, sixth; T. M. Craig, seventh; Dr. Martin, eighth; S. Mathewson, ninth, and R. Smith, tenth.

There was a good attendance of spectators, including many ladies, most of whom had never before had the good fortone to witness a contest of this kind, at least that was the way they expressed it.

No. 9 was a 15-target event, with 7 entries: T. M. Craig 14, A. W. Westover 11, J. T. Walton 10, Kirkpatrick 10, Dr. Martin 10, S. Mathewson 8, N. G. Bray 6.

A. W. WESTOVER.

Fargo Gun Club.

FARGO, N. D., Aug. 29.—Our club finished its target-shooting season yesterday. The following item, taken from the Fargo *Forum and Republican* of this date, shows the records of the members for this season:

"The Fargo Gun Club finished target shooting for the season yesterday afternoon, and since Feb. 22 the programme has been shot twenty-three times.

"During these competitions the Hagen gold badge has been won by:

Guptill (8 times)	19 17 21 23 19 22 22 21
Robbins (5 times)	21 24 23 20 23
Lyons (4 times)	22 22 21 21
Smith (4 times)	20 18 21 20
Carpenter (1 time)	24
Redmon (1 time)	14

"The extra targets allowed are not included in the above scores.

"The August handicap for this event is Guptill and Robbins 25 each, Smith 27, Lyons 28, and all other members 30 each. The targets are thrown from known traps, unknown angles.

"The average standing of the members for the entire season is: Robbins .780 per cent., Guptil .778, Smith .694, Carpenter .691, Lyon .689, Roberts .650, Magill .540, Heinbaugh .520, Hector .510, Redmon .485.

"The best scores made above 85 per cent. during the season are: Robbins, 88, 88, 88, 94, 90, 88, 94; Guptil, 90, 88, 88, 88; Carpenter, 94; Lyon, 90.

"The system of handicapping arranged by the secretary has been used the entire season, and proved satisfactory to all the members.

"Yesterday's scores were:

Guptill	7	9	21	Lyon	5	7	20
Robbins	8	12	21	Redmon	4	8	17
Smith	7	11	22	Hector	3	7	17

"Smith won the badge."

WILL CAVE.

The Kansas State Championship.

WEIR CITY, Kans., Sept 16.—W. W. McIlhany, of this city, defeated B C. Best, of Columbus, Kans., to-day in the fourth contest for the State championship diamond badge in a 50 bird race at live birds. The weather was good, and the birds were a fine lot, only two refusing to start immediately.

Best started out in good form, but fell off badly as the match progressed. McIlhany shot a strong race throughout. McIlhany used a Parker gun and Schultze powder, while Best shot a Lefever gun and same ammunition. McIlhany has won the trophy three times out of four contests, and is now particularly anxious to shoot with E. W. Hoffman, of Galena, or J. W. Sexton, of Leavenworth. Score of to-day's race follows:

PATTY.

A Tournament at Baltimore.

MR. JAMES R. MALONE, captain of the Baltimore Shooting Association, announces that his club will hold a two days' shoot at live birds on Oct. 6-7. The shoot will commence each day promptly at 10. The programme for Oct. 6 is as follows:

No. 1, 5 birds, $5 entrance, three high guns; No. 2, 7 birds, $7 entrance, three high guns; No. 3, 10 birds, $10 entrance, three moneys, class shooting; No. 4, 15 birds, $15 entrance, four moneys, class shooting.

The programme for the second day is:

No. 1, 7 birds, $7 entrance, three high guns; No. 2, 10 birds, $10 entrance, four high guns; No. 3, 15 birds, $15 entrance, four high guns; Nos. 4 and 5 are $5 miss-and-outs.

In addition to the above programme, the Claridge-Malone match for the Du Pont trophy, 50 live birds per man, will be shot on Oct. 6. Two sets of King's expert traps will be used, and as there will be plenty of good birds on hand, Mr. Malone states that everybody may look for a good shoot.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., Sept. 6.—The scores made at the regular weekly shoot of the Audubon Gun Club were as below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
CBurkhar't	18	8	11	10	11	8	15	19	A Coombs	14	..	..	..	..	..	..	..
Norris	20	8	13	12	13	6	15	..	Hines	21	..	..	11	11	5	13	..
EBurkhar't	20	9	12	11	12	7	18	19	Cuban	9	..	..	7	..	3	17	13

T. E. HUBBY.

Answers to Correspondents.

No notice taken of anonymous communications

H. P. P., Newark, N. J.—Send me address of a reliable man from who I can buy a harrier hound broken. Ans. We have no knowledge of whom such hounds can be purchased.

C. F. M., Geneva, N. Y.—Ans. Dogs vary so much in size at the age of six months and all other ages that it is impossible to give an opinion of value based on measurements alone.

C. H., Baltimore.—Ans. Jessie Turner is by Druid, 95 (Prince—Dora), out of Ruby, 506 (Rake—Fanny). Prince by Dash II., out of Moll III. Dora by Duke, out of Rhœbe. Rake by Dan, out of Ruby. Fanny by Leicester, out of Dart.

C. N. K., New York.—Will some of the readers of your paper kindly tell me through its columns where fair shooting may be had at such game as ruffed grouse, quail and squirrels and within an hour to one and one-half hours of New York city. Ans. See note of Connecticut resort in our gun columns.

M. J. F. C., Manchester, N. H.—Will you kindly give me the best remedy for killing fleas in a short-haired dog? Also could you recommend some good soap I might use in washing my dog? He is getting very poor lately and I am at a loss to know the cause. Mention some diet that might fatten him and improve his condition. He is a bull dog. What is the best remedy for stoppage? Ans. Small doses of castor oil, given every three hours till the bowels act; also give frequent enema of warm water. Any of the soaps advertised in our columns; allow the lather to remain on. Treat for worms. Meat, milk, bread, dog cakes, liver, cod liver oil, etc.

A. F. T., Lykens, Pa.—My pointer pup, about six months old, has been indisposed nearly all his life. On the lower part of body, behind his front legs, a few inches back on each side, just at the lower part of front ribs, he has enlargements which are hard. They appear and then almost disappear every few days. He vomits occasionally, which is very offensive in appearance and smell. He is weak and emaciated, eats fairly well for a short time, then again little or nothing for a day or two; he is high and long, but very thin and weak. Ans. Treat for worms. Give three times a day five grains of bismuth, three grains of charcoal and two grains of salol; also give five grains of albuminate of iron three times a day.

G., New York.—My English setter has had the mange for the past two years. In winter he is well and his coat is good, but as soon as spring comes on he breaks out. The reason I ask you is: if your experience tells you the disease is incurable I want to put the dog out of misery; if you think he can be cured I should be thankful for any suggestions. Ans. From your description the dog is suffering from eczema. This is a constitutional disease, and is most troublesome and persistent. It is very apt to recur at spring and autumn. The dog should undergo a course of internal and external treatment, and should the disease appear at any time treatment should commence as soon as the first symptoms show. This would probably control the attack and prevent it becoming very bad.

D. J., Pittsfield, Mass.—My pointer bitch, three and a half years old, since she was in heat last, about two months ago, has had some trouble about urinating. She continually squats and tries, and a little which is of a bloody color will come, and sometimes small clots of blood will pass her. She is active and healthy otherwise. She has been bred only once when she was one and one-half or two years old. Ans. It is probable that the blood comes from the uterus and not the bladder. However, try the following pills:

Ergotin	grs. xii.
Acid gallia	grs. xxiv.
Ex. bellad	grs.
Ex. hyocyan	aa grs. ix.

Mix and make twelve pills. Give one three times a day. In addition to these pills give a 5gr. tablet of benzoate of soda.

PUBLISHERS' DEPARTMENT.

Tours to the South via Pennsylvania Railroad.

Two very attractive early autumn tours are offered by the Pennsylvania R. R., leaving New York and Philadelphia Sept. 29 and Oct. 13.

After the experience of the past few years it is hardly necessary to say that these outings are planned with the utmost care. Suffice it to say that all arrangements are so adjusted as to afford the best possible means of visiting each place to the best advantage.

The tours each cover a period of ten days, and include the battlefield of Gettysburg, picturesque Blue Mountain, Luray Caverns, Basic City, the Natural Bridge, Grottoes of the Shenandoah, the cities of Richmond and Washington, and Mt. Vernon.

The round-trip rate, including all necessary expenses, is $55 from New York, $53 from Philadelphia, and proportionate rates from other points.

Each tour will be in charge of one of the company's tourist agents. He will be assisted by an experienced chaperon, whose especial charge will be ladies unaccompanied by male escort.

Special trains of parlor cars are provided for the exclusive use of each party, in which the entire round trip from New York is made.

For detailed itinerary apply to Ticket Agents or Tourist Agent, 1196 Broadway, New York, or Room 411, Broad Street Station, Philadelphia.—*Adv.*

All about Texas.

If you wish to receive a 200-page handsomely illustrated book telling all about Texas and her advantages, send 7 cents postage to D. C. Price, A. G. P. A., I. & G. N. R. R., Palestine, Texas, and the book will be sent to you by return mail. Texas is now attracting a great number of settlers by reason of her cheap lands and mild climate. You will not regret the amount. When writing mention this paper.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 3, 1896.

VOL. XLVII.—No. 14. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

EGG DESTRUCTION ON THE FARALLONS.

THE account of the destruction of the eggs of sea birds on the Farallon Islands which we give in another column is very suggestive. Mr. Loomis tells us that on certain portions of the island where a dozen years ago a large bird population flourished no birds are now to be seen, while on the other hand, on a single isolated rock, where the birds are allowed to breed undisturbed, they are crowded together so closely that a bird coming in from the sea to alight can hardly do so without jostling those already standing on the ground. Mr. Emerson, an observer who visited the Farallon Islands a dozen years ago, told Mr. Loomis that in the summer of 1884 300,000 eggs were gathered. Of these a great number were wasted because the market was glutted, and there was no sale for the eggs.

It is certainly worth while to inquire whether such wholesale destruction of sea birds should not be put an end to. It is true that at present we do not know much about the economic value of the various birds whose eggs are destroyed, but it may be regarded as certain that they have a value of some sort. In Great Britain, where along its northern coast sea birds breed in great numbers on rocks and islets, it has been thought worth while to protect their eggs and the birds themselves from destruction, and by stringent laws. Similar action ought to be taken all along the coast of the United States.

It is to be noted that those who gather these eggs are the lighthouse keeper and his helpers. These men are hired and paid for their work by the United States Government, and the gathering and selling of these eggs is an outside business carried on in connection with their lighthouse work. We know of no good reason why they should be permitted to carry on this work of destruction. The islands, we believe, constitute a Government reservation, and no persons except Government employees have the right to visit them and remain there. If any others do so, they do it only by the courtesy of the light keeper, and he should be able to control their actions while there. If the birds on the Farallon Islands were protected as they ought to be it would not be long before they would be found there in their old-time numbers.

An example of what protection can do for birds almost exterminated in their breeding homes is to be seen at Gull Island, on the eastern end of Long Island. Through the destruction of their eggs the birds visiting this island to breed had been greatly reduced in numbers, when, the matter having come to the attention of Mr. William Dutcher and others, efforts were made to protect them. Through the influence of the Lighthouse Board and the State authorities the light keeper was appointed a game warden, with instructions to prevent the robbing of the nests of the birds. This he succeeded in doing, with the result that the birds have so greatly increased that they have filled up Gull Island, and have overflowed so that there is now quite a colony on a nearby piece of land. We understand that the terns of Muskeget Island, which have been protected in a similar way, largely through the efforts of Mr. William Brewster, of Cambridge, have greatly increased.

One useful purpose which these terns, and perhaps in some degree the sea birds inhabiting the Farallon Islands, serve is to act as a natural fog bell. When the islands and the adjacent rocks are hidden by mists, the cries of the gulls and scent of the guano are to be noticed at a considerable distance, and in this way warning of the neighborhood of the islands is often given to mariners who are approaching them. The terns of our Atlantic coast are well known often to serve this purpose for the islands which they inhabit.

This subject is one which is well worthy of the attention of all who are interested in birds. It would seem as if the simplest and most natural way to act in the matter would be for the Lighthouse Board to issue instructions to its subordinates all over the country to protect rather than to destroy the birds which may breed or have their homes near the lights kept by the various light keepers.

While, as has been said, we do not know what useful purpose these birds may serve, it is to be remembered that it is but a short time since a study of the economic side of bird life began. Ten or a dozen years ago the hawks and owls were supposed to be harmful, and all birds of prey were grouped under the single adjective "noxious." Investigation has proved that instead of being harmful these are among the most useful of our birds, and it is by no means impossible that before long we may learn that sea birds perform some important work in the economy of the ocean. Whether or not the birds themselves be protected, their nests and eggs ought to be.

THE WHOLE BOUNDLESS CONTINENT IS YOURS.

No pent-up Utica contracts your powers,
But the whole boundless continent is yours.

WHEN Sewall wrote his patriotic lines he did not have reference to sportsmen, although there were sportsmen then, and true sportsmen too, among their number a personage no less distinguished than the Commander-in-Chief of the American Army. But that was the winter at Valley Forge; and American poets and American generals, even one who was as devoted a sportsman as Washington himself, had something else to think about than the advantages of the American continent for the devotees of rod and gun and horse and hound. Sewall's noble couplet was addressed to Americans in their new country. It was not more a buoyant declaration of the limitless opportunities opening before them than a prescient prophecy of how gloriously those opportunities should be fullfilled. You may see the spirit of the poem and the spirit of the people of whom it was written portrayed in Leutze's painting, "Westward Ho!" in the Capitol at Washington. The scene is laid in the Rocky Mountains, and the picture is of an emigrant train filing through the passes to a fair country opening beyond. True, the continent itself is no longer to be accounted boundless as Sewall sang of it, for its every bound has been attained, from the Atlantic to the Pacific, and has become populous with the growth of the expanding nation; yet is the Republic limitless in what it is to do for the human race, as we all believe and have faith still to believe even in these campaign times, when the orators tell us that the country is going to perdition and going fast.

But it is not to demean Sewall's verse if we make application of his lines in these days to the opportunities America affords in a number of directions, among others that of the sports of rod and gun. The sportsman has the whole boundless continent for his own. And what a field it is, with its noble game of shore and marsh, upland, prairie, knoll and woodland; in variety, in supply, in game qualities, the richest and the best of all those of the continents of the earth. With its rainbow-tinted fishes of the dashing mountain stream, the silver-sheened denizens of the rivers, the bronze-backed warriors of the lakes, and the inexhaustible variety and supply of the gulfs and the oceans on either continental shore. With its variations of season and climate; its diversity of scenery—mountains, plains and cañons—the restful repose of its landscapes, and its revelations of nature's sublimity unfolded in panoramas that quicken the pulse-beat and make the breath come quick. Truly the boundless continent open to the American sportsman and appropriated by him for his enjoyment were a theme worthy the poet's pen.

In these days of annihilation of distance by modern methods of transportation the sportsman my literally have the boundless continent for his own. And in practice he does have it. The sportsman tourist goes everywhere. He pushes beyond the beaten paths of trade and the roads of business enterprise. The wilderness lures him to its remotest confines. His tiny bark adventures mysterious waters which other craft have never explored. He threads mighty forests which but for him know not the foot of man. He looks out from toil-won heights and stupendous summits upon expanses at whose view no soul has been uplifted save his own. For him alone does the unnamed lake reflect in its depths the stars at night. He beholds the sun flooding with the glory of the dawn mountain peaks which other eyes have never seen. Thus with peculiar significance does he make the boundless continent his own.

This is not all, nor the best of all. The sportsman tourist wins much more than his knowledge of nature and the wilderness; he comes also to know men, the people of other sections than his own. He broadens his horizon, expands his sympathies, outgrows his sectionalism, and puts away the narrow, mean and unworthy prejudice, distrust, envy and unreasonableness which are bred of sectionalism. You will never hear one of the North declaim against the South, who has shared the hospitality a Southern host gives a Northern sportsman; nor one of the East berate those of the West, who has hunted in the West. The traveled sportsman has no part in nor sympathy with nor tolerance for the wicked talk of those who would array one section against another as divided in interest or purpose. If the whole boundless continent is the sportsman's own for the exercise of his favorite field pursuits, it is his too for his citizenship, fellowship and patriotic pride.

If you would know something of the wealth of the resources of the continent for the sportsmen, learn the proportions of this sportsmanship, and make some measure of the friendly intercourse and fraternal mingling of the men of the North and the South, the East and the West, turn the pages of the twenty odd years of FOREST AND STREAM, wherein are chronicled the goings and comings of a host of sportsmen tourists tens of thousands strong. And if you, good sir, would have some estimate of what influence has been wrought thereby, multiply by a hundred thousand fold what it has done in the one particular case which is best known to you, for it is your own.

What a showing it is. The pages which follow in this present number give a new weekly installment of the story, and admirably illustrate, in so far as one number may, the sportsman's resources of the continent. The whole may not be told in any one number, nor in any one year, nor in a decade. It is a serial; at the end of each new chapter is ever to be written the legend *To be continued.* Those who are writing the chapters now are not those who contributed the chronicles of twenty years ago. Countless other hands will add new chapters in the years to come. The pleasing story will go on. For not to the sportsmen of our day only, but to many successive generations, let us trust, belongs the promise,

—the whole boundless continent is yours.

Pennsylvania sportsmen will renew this winter an active effort to cut off the market killing of ruffed grouse. A bill to that effect was adopted by the last Legislature, but the Governor withheld his approval of it on the strength, it is said, of a suggestion that if such a law should go into effect the Governor himself could not have game on his table for his own invited guests. This may have appeared to the executive a good enough reason for defeating the will of the people, as expressed by their representatives at Harrisburg; but the popular sentiment is that the preservation of game is of more moment than the menu of a governor's banquet. The Platform Plank is sound; we shall yet see its principle prevail in Pennsylvania.

Our suggestion of a Maine guides' association, modeled after that of the Adirondacks, has commended itself to those who know the situation in Maine; and there is printed today a letter urging the project as one likely to achieve decided good. We would be glad to have the subject discussed; its possibilities are great.

J. C. Wedstad, Superintendent of the Government Station at Port Clarence, Alaska, now on his way to Washington, reports that the reindeer herds are flourishing and now number 1,200 animals. Mr. Wedstad will present to the authorities a plan of establishing reindeer relay stations in a line to bring into communication the extreme northern country as far as Point Barrow.

THE BOUNDLESS CONTINENT IS YOURS.

Camp Life in Maine Woods. In the Adirondack Wilderness.
Ducks on the Gulf Coast. Minnesota Chicken Prairies.
Elk Mid Olympic Peaks. Deer in Canadian Wilds.

TYROS IN THE MAINE WOODS.

There comes a month in every year,
A month of leisure and peaceful rest,
When the ripe leaves fall and the air is clear:
October, the brown, the crisp, the blest.
—*Nessmuk.*

In that bright autumn morning our train, with its affable conductor, accommodating brakeman and one passenger besides ourselves, at last came to a standstill. The road went no further, and our wonder was that it ever extended so far. Alighting, we had our first glance at the dejected-looking village of Limonite. Its blast furnaces, which once clouded the sky with columns of smoke, as thousands of tons of molten ore poured from their cupolas, were now wrapped in the dreary silence of abandonment. The entrances were closed, the charcoal bins were empty, the windows broken, the refuse ore overrun with vines and wild asters, while hundreds of tons of iron in the pig, ready for shipment and awaiting a market, rose out of the tall grasses in huge piles. The touch of decay rested on all the works of man, and nature was stoutly asserting itself and reclaiming its own.

The narrow bridge which spanned the clear stream that rippled over its bed of oxidized stones and boulders was sadly worn, meekly wearing the desolate looks of its surroundings. The little hotel gave out the only signs of activity in the place. Nearly every person arriving for business, hunting, fishing or other pastime, passes through the hands of "mine host." He controls the township, with its one farm, few gardens and established camps. A shrewd Yankee is he, who proposes to secure his share of the two or three millions of dollars left in the Pine Tree State yearly by the lovers of outdoor life.

West and north of Limonite a view of rare beauty and graudeur appears. Mountain elevations arise, glowing in the sunshine, brilliant in color and impressive beyond description, while in the valley below nestles one of the loveliest sheets of water that ever adorned a landscape. What matter if one small bay of the lake holds 2,000,000ft. of logs stripped from the neighboring mountain side, or that the waters on one side dash over the huge rafts and on the other wash the crumbling foundations of the deserted, dismantled old saw mill which should have been converting these same logs into lumber? Certainly the scene was in picturesque harmony with all the environments. Beyond the beautiful sky line of hills lies Moosehead Lake, and old White Cap through the mists that rest upon its summit peers over the unbroken forest that intervenes to the more remote Katahdin which rises in grand and lofty sublimity in its primeval solitude in the north.

It is little wonder that people go to this quiet place for rest and recreation. The waters abound in trout, deer are fairly plentiful in the forest around, and caribou and moose not uncommon, while

"The whispering air
Sends inspiration from the mountain height."

At the hotel were a few guests long familiar with Limonite and its principal attractions, and to one gentleman and his estimable wife in particular our party was indebted for valuable information and advice which greatly promoted the success of our outing.

Our camp on Pine Mountain was reached by a three-mile ride from the hotel into the wilderness on a two-horse buckboard and a four-mile climb beyond on foot up the flank of the mountain, our luggage and supplies being taken in on a jumper or rude sled made of poles and drawn by a pair of stout horses. One of our party, by reason of a late accident, made the latter part of the journey in the saddle, but with no great pleasure or comfort. We soon came to respect the intelligence and caution of these backwoods horses, as they made their way around boulders, over fallen tree trunks, through swampy spots which seemed to have no bottom, along narrow paths where compression was essential to safety, and across turbulent water courses on corduroy coverings which slipped and rolled under their feet in a perilous way. Had one of the animals been caught attempting to climb a tree it would have been cause for little astonishment. One slope of Pine Mountain paused halfway down its descent on its southerly exposure, and stretched out into a level plateau in which reposed two miniature lakes, the overflow from which found its way down the mountain to the beautiful body of water at Limonite. Near these twin tarns our camp was situated.

It had been long established, and was originally erected as a resort for the few anglers who knew of and valued the trout fishing in the nearby waters. Now the camp is mostly used by hunters in the autumn, the trout having become so depleted in numbers as to afford less attraction than formerly.

The cabin was of good size—15×24ft. perhaps—built of logs, with puncheon floor and pitch roof covered with tarred paper. Two small windows gave light to the interior and a thick plank door protected the entrance, over which a horseshoe was fastened on the inside and the antlers of a caribou on the outside. A cook stove and four double berths were permanent fixtures, but nearly everything else that might be required visiting parties supplied for themselves. In this small home, amid the spruce and birch trees, we took up our abode for a two weeks' sojourn, our vacation being timed to give a few days' fishing before the close of the season.

A small rill trickled down a diminutive ravine within 25ft. of the cabin door and supplied all the water we required. From the highest of three shallow wells we took what was needed for drinking and cooking purposes, the next lower basin served as our wash bowl, while in the lowest our trout were cleaned. The year previous another party, with the same guide, had used the little stream for a similar purpose, and one night after the evening pipes were lighted and the evening talk was well under way there came up from the gully a cry so startling, frightful and unearthly as to render them speechless and nearly paralyzed. One of the company, however, stealthily opened the door and discharged his rifle in the direction of the noise. As the sheet of flame streamed into the ravine the tawny form of a panther, with the wrath and snarling of a hundred devils, dashed up the slight bank toward the cabin. The door was hastily closed and fastened, none too soon, and the infuriated beast dashed past and took refuge in a spruce tree not 12ft. from the building. In its mad fury the animal sent out its demoniac cries, all the while tearing and scattering the bark and branches of the tree in every direction.

It was some hours before the brute's anger subsided, and it took its departure sending back threatening yells of defiance as it made its way up the mountain side out of the hearing of the excited listeners. "I don't know how the other fellows felt, but I tell you I was skeered," remarked our guide as he told of the incident. Fortunately for us our party experienced no similar adventure, although some individuals had exciting ones. Mostly ours was a quiet, delightful life, not devoid of its humorous side.

The red squirrels scolded us from nearby stumps and the Canada jay or moose bird was our unfrightened door yard scavenger. Ruffed grouse were numerous and quietly waited the hunter's convenience to remove their heads with a rifle bullet. In one day eleven were thus decapitated and brought in. Two owls flitted past at twilight and later in the night hooted at or for us, and by the tracks discovered in the morning we know that just above the line of light shining through our little window deer had stood to view the fascinating spectacle. A few trout were taken in the small lakes and their outflowing stream, but the greatest success was found at Wildwood Pond, near the topmost peak of Pine Mountain. The pond is so secluded and difficult of access as to be little known or frequented. Its waters literally swarm with trout. A short time only was needed to take a supply that grew very heavy before the cabin was in sight once more.

We had but one guide, as most of us preferred to hunt alone in a lazy sort of way. The trend of the country around our camp was such that danger of becoming lost in the wilderness was small, and a guide was needed more for his general knowledge of the locality and for camp duties and advice than for a hunting companion.

There are guides who charge high wages for which they give little service in return; there are guides who like to do most of the shooting and little of the camp work; there are guides who go into the woods just before taking a party in and skin off the cream of the hunting for themselves, and there are guides who are thoroughly honorable and do their best for their patrons. Such men as the last are worth all they ask or receive for their services. Good Dame Fortune sent Theron to us. He was familiar with all the vast wilderness lying east and south of Moosehead Lake. His canoes were carefully placed on ponds and streams for quick handling if the hunt required. His the feet which had stood on almost every mountain top and traversed well nigh every water course in this wild region. His the knowledge that had been utilized to locate and construct the lumber roads and camps throughout these primeval forests, and his the rifle at whose voice many a moose and startled buck had responded with its last convulsive struggle.

When we went into camp the heavy Marlin rifle, which was Theron's favorite arm, was in the hands of a gunsmith, and for use until its return his partner in woodcraft, dwelling over the mountain, had loaned him a much lighter weapon of small caliber. Late one afternoon, while awaiting the return of the scattered hunters, Theron sauntered out for a short walk, taking his way across the slight ridge that separated the twin lakelets, a rifle shot or two from camp.

The magazine of his little gun held all the cartridges he possessed—four in number. Beyond a point of land extending into the pond he came suddenly upon a bull moose standing leg deep in the water. O, for a moment's use of the heavy Marlin! But the little rifle did its best, and sent its quartette of messengers in rapid succession into the huge body with all its propelling force. It was not enough. Crippled and faint, the animal staggered and tried to keep his footing. Theron dashed into the water, trusting to his strength and skill to overcome the brute; but was forced to return, as the moose made a mad, blind rush toward him. To keep the animal in the water until he fell was Theron's aim. If the beast had not been in such sore distress, faint and sinking, the hunter would never have dared to risk what he did. He quickly discovered that his knife had been left in the cabin and that he had nothing except his hands with which to fight the battle. Slowly the great head with its splendid antlers sank until the quivering nostrils met the water; the bracing limbs trembled under the weight of the great body, and the victory seemed almost won. Theron, seizing a large stone, made his way to the side of the swaying form and dealt it a telling blow just back of one ear. Down into the water went the king of the woods. Clutching the superb horns, Theron held the head submerged until he thought the prize was surely his. As he released his grasp, however, and stepped back a little, the brute staggered to its feet once more, and, making a zigzag rush, drove Theron from the pond again. The moose seemed to be gaining in strength. He was rallying from the shock caused by the light-weight bullets. They had bewildered him, suspending, but not overcoming his great vitality. Evidently that was returning in some degree.

It was growing dark, and it would be madness to continue to struggle longer under such conditions. Powerless to prevent, Theron, with a sinking heart, saw the animal totter up the bank and enter the swampy woods, where it became lost in the gloomy shadows.

The next morning we found where the moose had lain during the night, not 100ft. from the water's edge, but its morning start was earlier than ours, and we never saw it again.

This incident, if it did not yield us much hilarity, gave us something to talk about.

There were five of us, besides Theron, to enjoy the free woods life, the eldest being Norgum, then Corporal, Chilly, Millions and Fryer. This was a well-balanced party, the stronger members of which willingly assumed the harder labor of camp life, a course which the less favored ones gracefully commended and approved.

Norgum's somewhat gray hair and beard belied his years and youthful spirits. An excellent shot with pistol and rifle, he caused, no doubt, many a deer to go tumbling up the mountain as fast as fright could take its flying feet, by shooting not at them, but at some inanimate mark. In this pastime he took great delight, almost as much as he did in gathering spruce gum. Others might tell at night, as the events of the day were talked over, of deer seen bounding over windfalls or tree tops, of great tracks of caribou and moose found in the soft earth; but Norgum told of great globules of transparent gum beyond his reach, high up on the spruce trees. He loved the light and shade that came and went along the cloud-shadowed mountains, and keenly enjoyed the splendor of the morning sun glorifying the great forests of spruce, pine and birch, high above the little boat from which he so patiently and persistently angled for trout that he seldom caught. That, however, did not trouble him. He cared more for the inspiration of the scene than for fish. The ripple of the water was like gentle music to his ears, the crisp morning air was giving him new vigor and bringing fresh color to his cheeks, and the worry of business cares was far away. With his camera he tried to save some of the fleeting pictures of forest, lake and hill, and if he did make two exposures on one plate, or if an especially fine view was lost because of failure to draw the slide before "pressing the button," it neither annoyed nor vexed him.

Corporal, the scribe of this screed, had little to commend him to his associates save that bond which bound all together, the love of outdoor life. From boyhood he had been a devotee of the woods, and many happy hours therein blended in his memory like dissolving views. Around his early country home no path through the woodlands existed that his feet had not trod, no stream which had not reflected on its undulating surface his alder rod in all its crookedness, no hill-top prospect, no stretch of landscape horizon that was unfamiliar to his eyes.

The first gun with which he struggled was the old flintlock "Queen's Arm," stocked to the muzzle and griped its entire length with iron bands. Woe to the wild pigeon, gray squirrel or "partridge" that came within range of its four-finger load (boy fingers) of powder, shot, slugs, gravel stones or dried peas. Then came the small percussion cap gun, with its short 20-gauge barrel, costing five very long days' labor in the harvest field and thought cheap by the juvenile purchaser at that. Possibly the owner, as he observed the small boy loitering at his work and dreaming of the woods, may have been of the same opinion.

A great drawback in the enjoyment of this little pigeon gun was a mother's anxious face that accompanied it wherever her boy carried it over the New Hampshire hills. Only when it passed into the possession of a lame, fat tailor in exchange for a drab waistcoat with little gold dust buttons, a garment of scant pattern that never fitted half as well as did the gun, was relief found from that worried look. No other gun of the after days received his loyalty as did this one.

Now he was somewhat indolently enjoying the autumn ripeness of the woods, fishing through the remaining days of the open season and later gathering in a few grouse for the camp larder.

Chilly was no novice in what is required to make camp life pleasant. The woods of Maine were not new to him, his axe had rung out sharply on many a winter's morning while the frosty air echoed the crash and fall of forest trees. His busy city existence was, for a time, ignored and the full relaxation of his vacation in the woods thoroughly enjoyed. He was a diligent hunter and courageously lifted his 180lbs. weight over the hills, determined to keep well to the front. If he lagged a trifle at the morning start it was possibly because, like "Br'er Rabbit, he lay low," for he was always in good trim later and came in with the foremost at night, and could be depended upon uniformly at meal times. His excessive charges of buckshot fired from his heavy 10-gauge gun carried destruction and sometimes annihilation to small game, while the deer at 50yds. lifted its white flag at the explosion and bounded away unharmed.

The beautiful fawn that fled past his hiding place so gracefully never realized, as it disappeared uninjured, that the man's trigger finger was held in check by his heart's kindly promptings. Chilly was an admirable camp-mate and his reminiscent mood was at its best when the evening meal was over and the pipes lighted. The cry of loon, the whir of black ducks' wings and the rushing music of trout streams came back from more youthful days as he told of

"The feats on pond and river done,
The prodigies of rod and gun,"

and complacently sent the smoke wreaths from his much used pipe floating around Corporal's head.

The success and pleasure of our outing depend largely upon the care and thoughtfulness of Millions. He it was who, all through the summer, made elaborate plans for the fall vacation, to be entirely changed, however, at the last moment. The rest of the party gave little concern to this, and emphatically approved of the final arrangements.

We might joke him about his amateur cooking, and even scold him for shouting so loudly in camp, but we all acknowledged the benefit of his judgment and experience. He was a capital shot, few better, and upon this he prided himself with modesty. A leader among the target shooters at home, yet the Maine woods afforded

him valuable knowledge, and taught him the difference between shooting large game and making holes through paper screens. Accident had disabled him to such an extent that he was really unfitted for long tramps, but the charms of the forest lured him into extended walks, the soft, mossy carpet of the woods gently yielding to his stricken ankle.

He loved a good horse, and never tired of telling of the fine ones he had owned and trained. The log walls of our little shanty broadened out through the tobacco smoke into magnificent trotting parks as night after night Millions and Chilly told of the marvelous speed they had extracted from quite ordinary appearing horses, all of which was entertaining, for ours was a loyal crowd, and whatever the tale it was absorbed without the wink of an eyelid. No allusion even was made to their 2:40 horses which could not be made to trot in six minutes, and the stories of the six-minute ones that were easily sent in 2:40 were thoroughly enjoyed.

Millions was a firm advocate of early rising. Springing from the fir bed of his upper berth at the first dawn of day, he would give forth a yell which not only aroused the camp, but caused the deer that had sought the lake-side for a cool morning draft to withdraw silently into the woods again. A little later Millions, wrapped in his long ulster, would quietly paddle across to the well-trodden pathway and patiently await the coming of the buck which had heard his morning salutation and departed half an hour before.

Millions was a persistent hunter, and lameness, fatigue and pain were lost sight of in his determination to succeed. Some of the deer on the mountain came to know him well and how to elude him. As he followed their tracks up the old abandoned lumber roads, whither they had retired after their morning visit to the lake, they seemed to be perfectly aware of his movements, and upon too near approach they would steal off to one side and watch him as he passed on. Then they would go leaping down the mountain at wonderful speed, and the only satisfaction Millions had as he retraced his way was to gaze at the deep hoof prints the deer had left behind. After this had occurred two or three times Millions aroused himself and evolved the plan that was to insure their capture. Norgum and Chilly were to follow up the tracks as he had done, while he and Corporal were to be stationed on lower levels, with rifles ready to receive the returning deer as they came dashing down.

A rifle shot was to be the signal that the game was afoot.

Corporal, with his customary laziness, took his station well down the path and prepared a comfortable seat where he might rest at ease and watch the advent of a new day as it came glimmering through the forest, and incidentally to have his best ear (he had but one good one) turned toward the mountain side. Millions, higher up the ascent, was impatiently waiting the fruition of his hopes and plans.

Half an hour passed and then, far up among the spruce trees, there rang out the sharp crack of Norgum's rifle. With strained eyes and ears and with weapons ready stood Millions and Corporal. but no sound broke the stillness save the chatter of the red squirrels and the beat of the woodpecker's bill as he sought his early breakfast, or the quiet flight of the moose bird as he uneasily flitted from tree to tree.

A moment later and down the hillside came the crack of the rifle once more, and then another, and still another. Alas! for the scheme of Millions! An hour later and down came Norgum, whose propensity for shooting at a knot or chip had overcome his devotion to the hunt. Triumphantly he and Chilly exhibited the shattered bits of wood as trophies of their skill. Millions walked back to camp a little lamer, seemingly, than ever, and he said little, but that little was vigorously expressed. Not until Norgum, as a peace offering, had given him the choicest node of spruce gum in his whole collection did our leader's customary good nature return.

But the greatest disappointment that came to Millions, and one in which we all shared, was his failure to secure his caribou.

He was the only one of the party to have a good, clear shot at a buck caribou, and he failed to stop it.

The animal, one of a pair that crossed the path in his front, had given him an excellent shot, and, after once coming to the ground, had broken away into the forest and was lost. The rifle that Millions used could have been purchased at a very low figure just then. In fact, it came near being thrown into the woods after the caribou.

The charm which his .44 40 had woven about his target practice at home was broken forever.

He was full of suppressed excitement upon his return to camp, and placed the gun in a corner of the cabin with great emphasis.

Theron and Corporal returned with him to the spot, a mile or so distant, but without success save to find a few hairs and view the wounded animal's tracks, which soon became lost on the leaf-covered ground.

Fryer was the youngest member of the party and one who could not well be spared. He was full of life, muscular and willing to assume almost any risk. It was a pleasure to hear his ringing laugh, listen to his good-natured raillery and see him cut firewood, drink strong coffee and eat with an appetite that made his beard grow. Of this woods-grown beard he became very proud and was determined to preserve it for exhibition to his young wife and child at home. No amount of jocose teasing influenced him to sacrifice it. Even the wonderfully improved appearance of Chilly after his painful experience with the amateur barber at Limonite on our return from camp did not cause him to waver. Only when his wife closed the door in his face and refused to own or recognize him did Fryer yield and give up his Pine Mountain ornament. He was out for a good time, and no tramp through the forest was too long or too hard to dismay him. Familiar with rifle and canoe from boyhood, he proved a valuable lieutenant to Theron, whom we thought he sometimes surpassed in endurance. While some of us might creep carefully on through the woods, Fryer crushed the twigs beneath his feet, and with eyes alert strode along, with little care seemingly whether the ridge beyond concealed a buck or not. The grouse, hedge-hog or owl that came his way had a sorry time of it. For the moment deer, caribou and moose were forgotten and the report of his rifle went echoing through the woods. And yet no one of us had so many shots at large game as he or secured so many deer. An ideal guide was ruined when Fryer turned to mechanical business.

The exigencies of the hunt called for excursions into new domains, and the three most vigorous members of the party, Theron, Chilly and Fryer, left the three more flimsy ones to care for the camp and hunt in its immediate neighborhood, while they, with supplies strapped upon their backs, strolled away to the eastward twenty miles or so through the pathless forest for a few days' sport in undisturbed territory, from whence they returned in due season, weary, but quite successful.

The bright October days followed each other all too rapidly, the rainy periods coming almost wholly in the night time. It was rather droll to see Millions and Corporal in their upper berth trying to protect themselves from the rain that dripped through the cracked and warped roof above their heads. Rubber blankets were of little protection, and served chiefly to direct the water to one or the other of the recumbent occupants, or conduct it in small runlets down upon Norgum in the berth below. When this became intolerable recourse was had to the large dish-pan, which Millions held on his chest to catch the great drops as they beat down in rythmic modulation into the tin receptacle. Then the tired hunter, lulled by the patter on roof and in basin, would drop into light slumber, and the gentle (?) snore that accompanied his caribou hunting therein added a delightful bass to the concord of wet harmony. Occasionally a severe struggle in the forests of dreamland would cause the pan to tilt over a little, and Corporal, penned in as he was at the back side of the bed, would be irrigated with the water so carefully collected. The glorious mornings, however, drove away all of the slight annoyances of such nights, and the resplendent autumn days, full of sunlight and cloud shadows, came—

"* * * like the benediction
That follows after prayer."

During the absence of our able-bodied trio the camp received a short visit from Theron's quiet, keen-eyed, low-spoken partner from beyond the mountains, where, miles away from human companions, he lives for the most part alone amid these impressive surroundings.

Unlike Theron, he does not guide, and hunts by himself; gathers gum from the mountain spruces; and prepares, for other fortunate hunters, specimens, heads and antlers for the finishing touches of the taxidermist. What to such men are the push and jar of life outside with which they come in such slight contact? Their wants are few and are easily supplied by occasional visits to the settlements, whither their wandering steps return when the brumal weather sets in. The late autumn storms may beat around their shanty and cover it with the white wrappings of approaching winter, but they pile on the fuel and keep warm in their rude bunks enveloped in their woolen blankets, while they listen to the tempest surging through the woods and along the desolate mountains. Possibly, some day, a strange wanderer may push the cabin door aside only to find a silent figure resting in eternal quiet.

The truth of Theron's remark, "I tell ye what, boys, you are a pretty hearty set of fellows," became evident enough, for our generous stock of provisions, even to our improvised "pie" of raspberry jam and crackers, was exhausted before the time set for our departure. The last night in camp was wet and disagreeable, but the morning came bright and invigorating. The steaming horses came up over the rough, rocky trail, our luggage and large game—four deer and one moose, or what remained of them—fastened to the jumpers, the door of the cabin closed, not locked, and we reluctantly began our march toward Limonite and the troubles of conventional civilization.

Halfway down to the valley Norgum, who was leading the way, fired the farewell shot of the expedition and neatly decollated a grouse, which Corporal tucked into his hunting coat for future use. Then we turned our backs in earnest on Pine Mountain and its sun-lighted forests of yellow, crimson and green, its glistening ponds and streams, and all the ariose music of its woods and waters.

CORPORAL.

NORTH CHELMSFORD, Mass.

DUCKS ON THE GULF COAST.

I HAD always wanted to enjoy some real duck shooting, such as we read about from the pens of the more favored devotees of the sport who have leisure and money enough to indulge the taste, but I am poor. Still, the glowing accounts of the fun to be had in the South, from Brother Hough and others, made the attractions of the New England coast seem poor indeed, where we count ourselves lucky if we get a dozen coot—almost worthless when we get them—or three or four snipe, or a partridge or two, and I determined to have a go at Southern birds for once, at any rate. So late in November I took a ticket on a steamer plying between New York and a Gulf port, not knowing a soul there or where I should find any birds. Upon my arrival there the first sight that greeted my eyes was a nice string of bluebills—dosgris they call them there—which a couple of boys were carrying through the streets on a pole. They said there were 133 of them, and they had killed them all between Saturday night and Monday morning within a few miles of the city. That looked encouraging, and I at once decided to let well enough alone and not search further for fabulous game fields I had heard of.

The next thing was to find out which way to go, and it was surprising how little people could or would tell me. "Oh, most anywhere," was the nearest to information I could get. Some said: "Better get a hunting boat to take you out." I didn't know what they meant by a hunting boat, but upon further inquiry I found that all the hunters brought in their ducks in catboats from the hunting grounds, and all the boats came in at one dock, and the people came down and bought the game of them right off the boats. So I hied me to the dock, and sure enough, there were a score or more of catboats from 20 to 30ft. in length, built with a small cabin and a large forehold covered with hatches. Some were oystermen, some brought charcoal, some vegetables, some fish; but three or four were game boats, as evidenced generally by a brant or goose hanging ignominiously by the neck in the rigging for a sign, sometimes run up to the masthead that he might be the more conspicuous.

In a circumspect way I began to ask questions. I didn't know one duck from another, or whether they shot over decoys or on passes or in the marshes. I soon found that my Northern accent was no great recommendation in my favor, and the hunters were rather inclined to regard me with suspicion, not to say disfavor. However, the sight of the birds made me very hungry for a hunt, and I bargained with one man to take me out with him on his next trip, give me a little hunt and bring me back, the price he charged me for the extra trouble I should put him to being $10. We had rather a pleasant time, the whole experience being new to me. Many pelicans and other strange birds flew around us, oysters in quanities were to be seen on the bottom, covered only by 4 or 5ft. of water, and the air was as mild as ours in June, though the North was covered with snow. At the end of our voyage my guide procured a somewhat rickety single buggy and ancient horse from an Acadian, and taking along a camping outfit headed for where he expected to find ducks. The Creole was a somewhat noted local snipe shot, and became enthusiastic when I told him I was in quest of the like. I noticed that instead of "bécassine," as the Canadians call the jack snipe, this man said "cache-cache," which is certainly a name well merited.

I found we were making for some shallow pools of fresh water, surrounded by sea cane and tall grass, and we reached them after a drive of a dozen miles along the Gulf beach. All the way we passed shore birds, our friends from the North in their winter home, where they are seldom molested. Ducks are so plenty that nobody troubles yellow-legs or plover. We had brought no decoys, but simply walked up to a pond, scaring the ducks out as we appeared, and sat down in the high grass and waited. Presently a few green-winged teal pitched back into their favorite pond and we gathered them in; then a spoonbill (shoveler) came blundering around and met the same fate, and then my guide hunted up some bits of twigs, and running them down into the mud thrust the upper ends into the mouths of the ducks, letting their bodies float on the water, and lo! we had decoys. This was wrinkle number one. A few more teal and shovelers decoyed to these dead ducks and joined their number (and some decoyed to them, but didn't), but there seemed not to be many birds flying that day, and I wearied of lying still and started to tramp the marshes, leaving the native asleep. He was not much of a gunner, as shown by his habit of firing at a bird no matter whether it was in range or not. I remarked on this, but he said he had a lot of old shells he wanted to use.

The ground looked snipy, so I loaded one barrel of my good old Fox with some 8s I happened to have along and the other with a duck load of 5s.

No snipe were to be found, though I tramped far and wide in what seemed the most likely ground. Presently I spied a beautiful pair of mallards sitting in a little water hole just a nice gun shot off. probably 35yds. Well, game seemed to be so scarce and I wanted one of them so much that I was guilty of taking the shot the instant I saw them. I shot the load of 5s at the old greenhead as he sat there, but seemed to make no impression on him, for both sprang into the air, making quite a racket at being disturbed. As they rose I tried the load of 8s and just then the two ducks very obligingly got in line as they rose and the charge covered both and down they came. Better luck than I deserved! I stuck them in the capacious pocket of my hunting coat and proceeded. I jumped a black duck (summer mallard they are called there) out of some sea cane and got him all right, but couldn't find a snipe. People had told me great tales about snipe shooting hereabouts and I was disappointed. Upon returning to my friend he thought best to move camp to another point and see if we should not find more game. We toasted some of the teal on sticks and made a fine meal; spread our blankets and slept under the Southern sky almost as soundly as I used to under the sky of Montana, which State was my home for six years in the good old days.

In the morning we moved, and although the duck shooting was nothing to brag of, I found where some of the snipe were. On a little patch that had burned over and grown up green a nice little bunch of snipe had pitched down. There may have been twenty of them. I managed to get twelve, I think, and I certainly shot three shells to the bird or more; I couldn't seem to hit them. I found too that walking was tiring work in that soft air, coming as I did from the bracing air of the North. My guide seemed to think he had given me $10 of amusement, and I was tired enough to join him in the buggy and we let it go at that. We put into the ice box of the boat when we reached it again what game the hunters of the neighborhood had gathered up and sailed back to the city. Everyone apologized for the lack of game and laid it to the drought, which was probably right. The region we visited is a noted one for both ducks and snipe.

Next I heard of a better place and decided to take my trunk and all my duffle aboard the sail boat that carried the mail to that neighborhood, and stay right there for a while. I took along this time a case of No. 6 shells, 500 rounds, and both canvas and wooden decoys and a skiff. My fellow-passenger on the mail boat was a German woman who said that right on her farm the shooting was good, and that I might board at her house and hunt all I liked. I accepted the proposition and found that she had spoken truly. We got there after dark and in the silence of the night the waterfowl could be heard very plainly not 200yds. from the house. I walked down to the shore and listened to the cries, most of them strange to me, of the myriads of birds roosting on the surface of the bay. It certainly seemed that at last I had reached the promised land. I could hardly wait for daylight, and when it came I got right to work. I found the natives hunted there a good deal out of boat blinds, just a line of brush stuck around in the shallow water the shape of a skiff's outline, the decoys being set directly to windward and the gunner sitting in the boat within the blind. The blind being left there all the time, the birds become used to it and decoy very well when the day is not too still. Here I got mostly sprigs, bald-pates (widgeon), teal, shovelers, mallards, a few redheads and canvasbacks, and sometimes a bufflehead, bluebill or sawbill (hooded merganser). Much to my surprise the bluebill is not prized very highly here, nor often shot. When we get one at Annisquam or Great South Bay we call him a pretty good bird, but when he gets to Southern waters he becomes more fishy and less desirable. It was not so with the other birds; they were as fine as silk and often so fat they would burst upon striking the shallow water or flats when killed at a considerable height in the air.

One very foggy day I was sitting in my blind, when I heard some one splashing toward me through the water (we waded around anywhere, the water was so shoal),

The visitor introduced himself as a hunter living in a large catboat anchored out in the channel. He said he was hunting for the market and needed a partner, and would like to have me join him, share and share alike, paying half the boat rent and expenses and dividing the profits as well. I took him right up, and then and there became a wicked market hunter without any compunction. I put my box of shells and my roll of blankets in the cabin of his boat, and bid my German friends good-by for a time.

I found my new acquaintance was an expert, having put in his life hunting ducks in the winter and alligators in summer. He showed me more about rigging out for ducks than I should ever have learned in any other way. That afternoon, it being a poor day for birds, he helped me build a little brush blind in a good place, just big enough to conceal a man stooping over. He said the birds would come to such a little blind better than to a boat blind. We built the blind and left it. He had killed a fine lot of game, including seven big geese that had come to his duck decoys, and we sailed away for town with his birds, where the game dealer jumped at them. Then we put in a supply of grub and ice and water, and some charcoal to cook with, and cleared for the ducking grounds again. We struck favorable weather conditions the first thing. No sooner had we anchored under the lee of some islands than one of the terrible "northers" of the country came on. It blew great guns all night. "We won't do a thing to 'em to-morrow," said my new chum.

Daylight found us in our little blinds with fifty decoys apiece set out, and sure enough the birds worked to the queen's taste. The gale seemed to have blown the wits out of their heads, and flock after flock would sight our outfits and swing in, leaving some of their number behind when they went. Oftener pairs and singles would come to us. When they seemed in doubt we would give them a call, which usually fetched them. I kept fetching ducks in and hanging them in strings to the crotched stick of my blind till I could hardly get in myself. I could see ducks dropping pretty regularly to my partner's fire a quarter of a mile away, and sure enough this was our busy day.

About 2 o'clock we began to get fearfully hungry, and first he took up and then I, and got our boats and loaded our ducks in and rowed out to the big boat to cook a bite to eat. I hadn't counted my birds, but I thought I had enough. When I drew near the boat I spied a big heap of ducks on her deck, and sang out to know how many my chum had. "Forty-four," said he. "Looks like you'd been killin' ducks too!" The bow of my skiff did look pretty full, and I commenced to count them out on deck. I found I had just fifty birds, and was rather tickled to have beaten the lad at his own trade.

We hunted together for more than a month, sailing wherever we chose, where game was thickest. It was the pleasantest winter I ever put in, and I gained just 25lbs. in weight. I was much surprised when the scales indicated just 200lbs. in the spring. I may be a sordid market hunter, but I am going to repeat the experience as closely as may be the coming winter, and if some decent fellow wants to join me, let him write me at the FOREST AND STREAM office and find out the particulars.

Mine host Gould, of Chatham, Mass., has spoken about going with me; but he wants to get his mind made up pretty quick, for these frosty nights make my feet itch about this time of the year. IPSARRAKA.

AN ELK HUNT THE OLYMPICS.

"HOOP-E-E! Won't nobody come out and fight me? I'm a wild and dusty ranger from the Tuscaroras. Hoop-e-e! Won't nobody come out and fight me?"

This, lustily yelled out at daybreak on a fine, clear September morning, roused us from our slumbers, and tumbling out we saw long-limbed, long-whiskered Doc standing on a big rock drying himself after a plunge into the icy mountain stream that roared and tumbled past our bivouac.

We were encamped on a hogback or spur of one of the ranges of the Olympic Mountains, on the main divide between the waters running westerly to the Pacific and those running in the opposite direction to Puget Sound, or more truly Hood Canal, a long, narrow branch of the Sound. For two days with pack ponies, or cayuses, as they are locally termed, we had been plodding upward, and now, at an elevation of between 6,000 and 7,000ft., we looked down the narrow valley of the Skokomish River—our path on the upward journey—and across at the great glacier in which the main fork of the river takes its source. There were four of us, all told, and we were after elk, or wapiti, primarily, and secondarily after all the fun we could get in exploring the vast and gigantic primeval forests of the Pacific slope and climbing the rugged, rocky fastnesses of our most northwestern range.

Doc, whose vociferous pleasantry had aroused us from the land of dreams, was an old sportsman who had in his time slain all the big game of the States with the exception of the elk, and when we took steamer at Seattle—the initial point of our journey—he had said: "Boys, just give me one decent shot at one of the big fellows, and I will come back happy." This was to be our first day actually in pursuit of game, and of course we were all anxious to be off. Tommy and the writer had each had the good fortune on previous expeditions to bag the noble game, and therefore it was understood that Doc or Sport was to have the shot if possible. We wanted an elk, but we did not want more than one, as we could not find use for more.

Sport was a big, fat, jolly fellow from Illinois, a famous chicken shot, but a man who had never before seen a hill any higher than Chicago and vicinity produces. He amused us greatly on the upward trip, and really had a pretty tough time of it, for, of course, he was forced to use muscles that had practically become extinct from lack of use. He was the owner at home of many fine horses and greeted the disreputable-looking cayuses, which the genial proprietor of the Cushman House at Lake Cushman had furnished us, with grunts of disgust. These mountain-bred ponies are not beasts of beauty, but in disposition they are angels compared to the broncho of the plains, and it is marvelous where the little wiry chaps will go with a pack of from 150 to 200lbs. I well remember Sport's surprise and comical ejaculations at the first sight he obtained of the climbing powers of our faithful beasts. He was in the van, gun on shoulder, ready to shoot the first game that appeared, but as the rest of us, who having been several years in the Puget Sound country were considered "moss backs," very well knew that he would not meet anything more formidable than a yellow jacket's nest in the heavy timber, we did not grudge him the post of honor. The trail, after winding along the river bank, suddenly broke abruptly to the left and went straight up a rocky butte that projected into the stream. Sport came to the foot of this and stopped. Tommy, who came next, behind two of the cayuses, shouted: "Go ahead! What's the matter?"

"Where do we go now?" queried Sport. Being answered silently by the sight of Tommy's finger pointing straight up the butte, he said: "That's all right, but where do the horses go?" Tom still continued to point up the precipitous ascent. "What there?" quoth Sport in great scorn, "you must take me for a blamed fool, sir!"

"Get out of the way," answered Tommy, "and I'll show you who is the fool."

Sport stood aside to let our little cavalcade pass, and gazed with open-mouthed astonishment at our sure-footed little beasts as they clambered and struggled up the steep defile. He took out his red bandanna, wiped the perspiration from his brow, gave an ejaculation of abject wonder and sat down on a rock. All the rest of that day he walked behind one of the mares, a spotted beast who rejoiced in the name of Calico, and to our great amusement we could hear him mumbling to himself: "Wonderful! sublime! That mare would be worth a fortune in Chicago." But we could never find out in what way Sport could make a fortune out of her in the Eastern city, for he thought that we were guying him and shut up like a clam when interrogated.

Doc's challenge had banished all sleep from our eyes, and in a short time three of the party were off in as many different directions, hunting for signs of game. Having badly chafed feet, I remained in camp to get things in order and gather a supply of wood, not a particularly easy task, as we were close to timber line, which is very low in these latitudes. By sundown all had returned empty handed, but wildly enthusiastic over the superb country and the quantity of sign they had seen. Tommy got a glimpse of a couple of brown bears scrambling up a rock slide some 400 or 500yds. away, but could not get close enough to them to risk a shot.

Poor Sport was pretty nearly dead, for, not being accustomed to such rough travel, he had spent a large portion of the day picking himself up off the ground. Doc brought in a whistling marmot, a Western specimen of the woodchuck family that lives on our high ridges. This animal reaches a weight of 50lbs., combines the woodchuck and prairie dog in his appearance and habits, and whistles like a steam calliope at all times of the day and upon all occasions. They are often a perfect nuisance in that they warn game which the hunter is endeavoring to stalk. When properly cooked, the marmot is really very good eating, if one can only get the woodchuck idea out of his head. Upon my suggesting a marmot stew friend Sport gave a snort of disgust; but I made up my mind that he would eat and enjoy the very dish at which he scouted before our trip was ended.

As we lay in front of our cheerful camp-fire, reclining on couches of redolent fir boughs—but why go over to the same old story. Those who have "been there" will fully understand the bliss of a pipe after a long day's tramp, and the joys of a camp-fire reverie; and to those poor unfortunates who have not as yet tasted the joys of woods life I can only say that they have missed more than they dream of.

Before sunrise the next morning we were off, Tommy and Sport, Doc and I. We followed a long ridge to the eastward, covered with luxuriant grass and dotted with wild flowers, while in every hollow and cavity lay a great bank of snow. Within a mile of camp we came upon the fresh sign of a big bull elk, evidently feeding. We knew it was fresh because the footprints were plainly marked on the dew that had fallen in the early morning, and we knew it was a bull because the imprint was a large one and the toe marks were much blunter and more rounded than a cow elk's hoof would have made.

We followed the sign down into the timber, breathless in expectation—each one undoubtedly thinking the other a clumsy brute who made more noise than a barrel of monkeys. Luckily for us the elk was working up wind, and so we knew that he could not scent us. Down he went through the timber below the mountain prairie, where it was difficult to track him, as no dew had fallen, and even his great weight left but a poor trail behind him. Hour after hour we crept along, now across a big rock slide, where we would lose the sign altogether for a half hour at a time; then into some marshy glade, where our quarry had evidently stopped to browse on the swamp grass; then along a plateau, where he had torn great strips of bark off a cedar with his antlers; and finally long after noon we came to the foot of a bluff, almost a precipice, where apparently the elk had vanished.

"Great Scott! Scribe," quoth the Doctor, "do you think he went up there?"

"I guess he must have," said I, utterly at a loss for any other explanation. "Wait till I see."

Clambering up the rocks, I found his tracks on a little ledge some 7ft. above the foot of the bluff, so calling to the Doctor, he handed me the rifles and then scrambled up after me.

We followed that elk up places where it seemed utterly impossible that a cloven-footed animal of such size could go. He went up, jumping from ledge to ledge, often clearing 6 or 7ft. in perpendicular distance. As Doc expressed it, "If any one had told me this morning that an elk or anything else without wings could go up that I'd—well, they could have won all of my money."

Finally, breathless, we reached the top, and crawling behind a bunch of mountain alder, looked at a great Alpine prairie covered with flowers, and there, lying on a snow field, not 100yds. from us, were three big bull elk, while one a little to one side was standing up. How grandly they looked there in their native wilds, the foreground of luxuriant grass and wild flowers, the great snow field on which they lay, and beyond the rocky crags and snow peaks and the blue sky of the heavens.

Old hunter as he was, Doc gave a gasp—he was white as a sheet, but cool as a cucumber. There they were, monarchs of all they surveyed, until man with his infernal repeater had come into their solitudes—and they were totally unconscious of our presence or of danger.

After a few moments in the which to get breath after his climb, Doc raised his old rifle, held it steady for a moment, and then the flame burst forth and the echo of the report reverberated again and again among the surrounding peaks.

The standing elk, the one at which he had shot, lifted its stumpy tail, but otherwise, so far as we could see, did not move; the other three arose, looked around in the greatest astonishment, and soon perceiving the smoke slowly drifting away from the shrubs behind which we were hidden, fixed their gaze in our direction. None of the animals evinced any fear, they simply seemed astonished.

"Why, Doc," I whispered, "you must have missed it."

"By George, it looks like it," he ruefully replied. "But how a man could miss a barn door at 90yds. I don't see. Look! Look at that elk by the one I shot at."

I looked, and there I saw what I believe must have been the king of the range, a hoary monarch, fully two hands taller than any of the others and with a set of antlers that I would have given much to have called my own.

"Shoot him, Doc," I exclaimed in excitement. "Hit him in the fore shoulder, pretty well down."

Doc rested his gun on his knee, took a steady, careful aim, and was just about to pull the trigger, when happening to glance at the first elk shot at, I shouted, "Stop, you got the first one."

True enough, a dark ruby stream was welling down the poor brute's foreleg, his legs were spread to keep his balance, and the death mist must have been forming before his eyes, for he was tottering. He took a few steps and then plunged forward on the snow. Tried once to rise, but failed, and then with a groan gave up the fight and rolled over dead. "Hoop-ee!" yelled Doc, "won't nobody come out and fight me?" as with a Comanche war-whoop he ran toward his noble game. The other three elk looked at him a moment and then trotted off with a slow, swinging stride. Oh, what a temptation it was; there we had the chance to get the finest set of antlers that ever come out of the Olympics; but we already had a thousand pounds of meat for four to eat, and thank goodness, our sportsmanship prevailed over our greed and we fired but the one shot. The elk the Doctor got was a beauty, with a large and perfect head. We straightened him out as well as we could, bled and cleaned him, put the liver into our packsacks, and with happy hearts hastened campward as the evening shadows were already lengthening out in an alarming degree.

We were the first to reach our tent, and at once I proceeded to put into effect my fell scheme to make Sport eat some marmot. Posting Doc, we made a hearty meal from the elk liver and "choke-dog." (For the benefit of the uninitiated I will explain that "choke-dog" is baking-powder bread.) Then hiding the rest of the liver, I proceeded to make a stew of marmot flesh, with rice, potatoes, onions and "dough boys."

Tommy and Sport shortly turned up. They had seen plenty of fresh sign, and Sport swore by all that was holy that he had shot a bear which had fallen over a cliff where he could not get it. Perhaps he did. We reported much the same luck, except that I said that I had shot a yearling doe; that the Doctor and I had dined, but that there was some coffee and a steaming stew waiting for them. They fell to with a will, and to my intense delight Sport looked up and, talking with his mouth full, mumbled, "That is the best deer I ever ate. The blacktail must be better eating than the red deer of Michigan."

I waited until they had completed a good meal, and then said: "Well, gentlemen, if you have now finished your *entrée* of marmot, allow me to present you with the dish of the evening—elk liver and onions."

Sport and Tommy were both much chagrined; but their joy at our success overbalanced all other feelings. They looked from one to the other of us, and then, seeing Doc's complacent smile, Tommy rushed over to him with "Give me your paw," etc., etc., both in their boisterous camp way showing plainly that they were as happy in his success as he himself could be. We were a very merry party that night, and told and retold the story of the hunt. The next day, after much labor in cutting a trail, we managed to get the cayuses to the elk and packed out his head, the hide and all of the meat, so that none was wasted.

We spent another week in the glorious mountains. Tommy and the writer each got a bear—the latter a particularly nice one—and many more elk were seen, but we let them be. Poor Sport lost some 25lbs. in weight, which he could easily afford; but beyond grouse did not get any game. Regretfully we finally repacked our ponies, which had grown fat as butter on the luxuriant forage, started on our homeward journey, and the next day were warmly greeted by proprietor Putnam, of the Cushman House, who is a prince of good fellows. We were able to give his guests all the elk meat they could eat and to take several fine roasts to our friends in Seattle. Doc has had the head mounted and it is now in his office, while the great yellow hide, as a rug, covers his lounge. This year we hope to be together again in the wilds, and if we have as much fun and as good success will indeed be lucky.

WAPITI.

CHICKEN SHOOTING PAST AND PRESENT.

In the Old Days.

CHICAGO, Sept. 12.—In the old days, when prairie chickens were abundant in Iowa, Illinois, Minnesota and Dakota, we used to go after them in somewhat different fashion from that which is customary to-day. I remember when I was a boy, about the time the muzzleloader was becoming antique, although still there were some men who thought a muzzleloader would "shoot harder" than a breechloader, there were any number of these birds close about the little town in central Iowa where I then lived. Very often my father would go and kill a few dozen of them within two or three miles of the town, and I recall that sometimes I would take the old gun and go out after school and get a few birds within walking distance. Then I remember also how it gradually became necessary to go further and further away from home to get any shooting. By the time I was a young man home from college it was our custom to go further north for our hunting, into the wilder counties of Marshall, Webster, Hamilton or Wright, which then were just settling up and contained great bodies of unbroken prairie land, where the chickens had their hatching grounds. When we found occasion to go on a chicken hunt—and I am not sure that we ever thought whether or not there could be such a thing as a game law to regulate our goings—we would get together a camp outfit, a wagon and a team, and start for a drive of sixty to eighty miles to the north,

This, as I recall it, must usually have been in August. We rarely were without chickens enough to eat even on the first day out, and when in the unbroken open country we always got all we wanted, though even in those untutored times I had guidance which taught me that it was unsportsmanlike to kill more birds than could easily be used, and that it was ungentlemanly to think of selling a game bird.

In those days, when we started out for such a trip, we never took but one dog along, nor do I remember ever to have heard of anybody in those days who ever took more than one. This dog was sure to be one of the old-time chicken dogs, staunch, of good nose and so well conversant with the habits of his game that he needed little care beyond keeping him in sight while he was at work. We never thought of taking a dog into the wagon to ride, unless it was very late or very muddy. It seemed to us obvious that a dog, being of four legs, could get along twice as well as a man, who had two, and a man was good for an all-day's walk, if need be. The dog seemed to coincide with this belief cheerfully, and being ignorant was happy. Our old dogs never clung to the wagon or to the heel. When we were on the road it was their business to cover the fields on both sides of the road and find any birds which might be within a quarter mile, say, of us on either side. I do not recall that the dog objected to doing this, but, to the contrary, he seemed to like it. He usually traveled at a long lope, steadily and methodically, and not with quarter horse speed, though fast enough to be well up with the wagon. How far he would travel in a day I have no idea, but I should guess sixty to eighty miles, at least it would seem that he must have done three times the distance the team would travel each day. Very often as we rode along over the country we would see the old dog whirl around into a point, and we knew he would "hold them" until we could get out and get to him. Sometimes the point would be a grand high-headed stop, then a slow walk, perhaps over 200yds. to the place where the covey was lying. I do not think chicken dogs to-day point birds so far as they used to, for I do not believe the birds are abundant enough anywhere to give a dog the subtle education of the nose which the old-timers had. A flush was a disgrace, and when the guns got to work among the birds a miss was almost as much a disgrace. We had fewer of the graces and amenities of sportsmanship in those days, but everybody was used to the sight and sound of chickens, everybody shot cylinder bore guns and the birds were not wild, but lay lower than they do nowadays. When we were done shooting the same old dog went in and retrieved our birds for us, and this was the best part of the fun for the dog and for us. To-day it is heinous for a chicken dog to retrieve.

After we had retrieved our birds we followed on after the covey if we liked, or more likely went after another. The birds did not often fly very far. There were no stubble fields of any vast extent, and very often few cornfields. The flight was usually from stubble to grass, and not so far but that we could easily mark the birds down. To be able to mark down closely a dead bird or a flying covey was one of the accomplishments of a good chicken hunter, for the surface of the country was much alike and had few landmarks. A tall rosin weed, a clump of bright prairie flowers, a darker colored bit of cover in a slough—such were our marks. There were not many hay stacks or straw piles on the horizon then.

In those days the habits of the prairie grouse were as regular as a clock, and we had a regular system of hunting them. On the stubble in the morning, well toward the knolls and centers of the fields, then toward the edges of the stubbles as the morning progressed. At 10 o'clock in the edge of the grass near the stubble, then further and further into the grass toward noon. In the high grass and sloughs in the middle of the day if it was hot, and then back up to the stubbles for the evening feeding, in inverse order to the above. A cloudy day meant more time spent by the birds on the stubble. A very warm day meant that they would be late in coming out of the grass. In the evening we hunted about the heads of little shallow draws that made up from the grass into the stubble, because the birds nearly always walked on to the stubble out of such little sloughs. In all this formula of the chicken our old chicken dogs were as well posted as we, and I would far rather have trusted to their judgment where to make the cast on a given field at a given hour than to leave it to a hunter not skilled in the ways of the bird. Time and again I have seen our old dog stand with his front feet up on a fence, taking survey of a field before going to work in it, and frequently have seen him go apparently as straight to the birds as though they had been pointed out to him. He wasted no time and no running, but hunted the likely places first, and took his own advantage of the wind. No one thought of a dog's quartering or that sort of thing, and dropping to command, backing and all that we never heard of. There was nothing to back, for no one hunted but one dog, and as for independence in range, I should be pleased to see anything more independent than our old dog was. Powerful, stubborn, hard-headed, dreadful "sot in his ways," he knew his business and was sure of it, and asked only to be let alone. We let him alone mostly. For this he found us birds and pointed them like a gentleman for us, and was a lot more careful than we were about what he was doing when he got up to the covey. In return for this we cheerfully lammed the old fellow a-plenty—never enough to make him whimper—and fed him at our own table, and let him sleep in the tent at night, and loved him like a brother. Any insult to the old dog was an insult to the party. At night the old fellow ate about as much as a den of lions, curled up and went to sleep on our feet in the tent. In the morning he ate as much more—not dog biscuit or any well-considered dog diet, but just anything he could get his hands on—and then he was ready to go out and do it all over again. It never occurred to us that any dog needed any rest or that it could ever wear out. We never changed dogs, and one dog did us all through the hunt, no matter whether it was two weeks or three. The dog would hunt as long any day as any of us wanted to hunt, and he would repeat this as often as we wanted to. Moreover, he was always glad to have a neighbor come and borrow him for a chicken hunt just for a change. Anything like a dog's giving out in the field we never heard of, and I think if a dog had quit and come to heel we would first have held a council over the problem of what ailed him, and would then have killed the dog. We were awfully ignorant and very happy, and if I knew where I could buy to-day a dog like our old fellow, I would have him if I had to mortgage my gun and had to keep him in my office desk of nights.

I remember that in those days the work of market hunting was going on in Iowa, and shall never forget the indignation with which my father always spoke of it. Sometimes on our shooting trips we would hear of parties who were shipping birds from some little station. They went always to Chicago—a far-away, unknown, mysterious city, certainly very large and powerful. Once I remember that we saw riding out across the country a party of darky market shooters with new guns and blue neckties. My father was very wrathful over this. The market shooters shot chickens just as we did, only more so. They began work along in July, when the weather was very hot. They hired a wagon to follow along after them as they shot, and in this wagon they caried not blocks of ice, but barrels of ice water with plenty of ice in the water. After cleaning up a covey they would come to the wagon and throw the birds into the casks of ice water. The birds were so easily killed at that age that the market hunter rarely shot any shot larger than 9s, and some argued that No. 10 was better. At our time of shooting we usually shot 8s. We rarely went after chickens in the late fall, and although I killed a great many chickens in those days and must have been a good enough chicken shot, I do not remember of ever killing a bird with shot larger than No. 8 up to Sept. 1, at which time I always had to begin going to school, much to my regret.

In the last of our chicken trips up into the northern part of Iowa we saw the beginning of the end of the old chicken days. After that the extermination of the bird became very rapid. We never valued the great, beautiful fowl at half its worth. It was so easy, so abundant, that it seemed to us it must always be possible to get as many as we liked with the least of trouble. Yet I can remember that I was still a very young man when on a visit home I saw our old dog, thirteen years of age, and then lame and worn out, and my father mournfully said that there was no longer any need for the old dog, since the chickens were all gone.

That was the history of Iowa, and then the history of Minnesota, and then very suddenly the history of Dakota and Nebraska. The old chicken days are gone, no doubt, forever. The bird survives, but in numbers much restricted and with habits materially changed.

Chicken Shooting of To-day.

For years I had not had a chicken hunt until last fall, when I noted the change in birds and methods, but got enough of the old fever to want to go again. This fall, being at St. Paul on opening day of the Minnesota season, and having the kind invitation of Messrs. Fred F. and Dick Merrill to join them for a shoot at a point not very far away in Minnesota, I ran out to them to see something more about chicken shooting as it is practiced to-day. It may be interesting to see the points of difference existing between our old fashioned chicken hunt and one of the modern kind.

To begin with, I had traveled, not by wagon, but by rail, a distance not of a few dozen miles, but over 550 miles. Many men travel over 1,000 miles nowadays and still do not get many chickens. But my friends had done much more than this. They had had their trainer out in the West with their dogs for many weeks ahead of the season, looking for good country where there were birds enough to promise sport. They had, at I do not know how great an expenditure of time and money, determined upon their location, and here for two months their trainer and his assistants had been at work with the dogs, young and old, the entire kennel numbering over 20, of which half a dozen were ready for use on chickens. It is probable that no better dogs than these are to be found in the country now. Of pointers there were Lady Peg II., Daisy Rip Rap, Stridemore and Noble; of setters, Rudge Gladstone, Neva, Nora, Topsy and Pauline Bo, besides a lot of puppies of both breeds not yet old enough to work. These setters are very fashionably bred, running back to Paul Bo and Paul Gladstone. (Paul Gladstone, by the way, died of sheer old age at the kennels of his owner, Richard Merrill, of Milwaukee, July 23, this year, a fact which none of the kennel editors of the country have ever "got on to.") One of them, a grand young dog, Rudge Gladstone, is the handsomest dog I have seen for a long, long time; and I am disposed to prophesy for him a victory in the bench shows if he is ever shown. He is almost faultless except for a tail a trifle long, and has that most desirable quality for a field dog—good common sense. This, unless I recollect wrongly, is the last puppy of the old dog Paul Gladstone, and his mother was Lady Lucy; she descended of Druid, Jr., and Lady Patch. The last named I had seen perform on quail over in Canada, and so took great interest in the dog Rudge. I am sure he would make a chicken dog up to the old requirements, if there were birds enough now for him to work upon, and if his owners would use him roughly enough to teach him the stick and stay which comes of long conditioning in man or dog. All these dogs I observed to be not of the old type, but of the type which is modern and approved. They were very much smaller than our old dogs, much more nervous and wiry, much less stolid and quiet in action. Almost without exception they were very fast, I think much faster than our dogs of the old sort, and with a quicker, choppier style of going. Their owners do not find it necessary to run a brace of dogs—they were usually put down in pairs—for over an hour, and we were in a way all the time seeking to train the young dogs and give each a chance at the birds; so it was never possible to call a dog run to a finish by any means, though I think my friends would not care to ask as much of their rolling stock as we did of ours in the old days. Poor dogs! they were willing and eager enough, and able and good enough; but there was one great drawback, and that was the scarcity of birds, which made the work discouraging at times. It is an easy guess that, with such abundance of birds as we had in the past and with hunting as steady, the dogs of to-day would be as good as those of the past. The older pointers, Noble and Stride, had had more experience than the others, but Daisy also did fine work for us; and it was most amusing to see some of the young setters, which had never had a bird killed over them (their training all having been in the close season), enter into the last stages of a chicken dog's joy. In the first requisite of an enjoyable chicken hunt, that of good dogs, we were certainly well supplied. The cost of this was a dozen times that which would have been considered necessary a dozen years ago.

The care of these dogs required the services of an able trainer (Tom Richards, and a good trainer too), together with an assistant, who had lived at this little country town for two or three months, and worked the dogs daily on birds before the law allowed of shooting. The owners of the dogs and myself lived in the village hotel, several rooms of which we filled up with our trunks, guns and modern sporting paraphernalia, a dozen times as much as we should have thought necessary a dozen years ago. When we went afield we had a light wagon to carry the trainer and assistant, and a big crate containing half a dozen dogs (in the old days we never heard of a dog crate). One of the owners of the dogs, Mr. Fred Merrill, rode with this wagon. Dick and I had a buggy, in which we rode immediately behind. When we got into action we made quite a cavalcade. Our method of work was something similar to that which I have described as belonging to the old days, but in this case we never trusted everything to the dogs. When we came to a likely bit of ground we got out—or at least some one always did—and walked with the dogs, the trainer always taking care of the dogs. This modern feature I am willing to call a blessing, for even in the good old days chicken dogs were not bought ready trained. The trainer carried a whistle and a whip, the latter very rarely used, and never at all upon a timid puppy. In the old days we depended upon the whistle which Providence gave to each man without artificial aid, and for a whip we were accustomed to use the hickory ramrod upon occasion—a most excellent device, albeit risky, for I have seen a chicken hunt stopped untimely in the muzzleloading days by a too enthusiastic chastisement of a husky chicken dog.

As in the old days, we hunted the stubbles in the morning and evening, but the rest of the time we never did know where to hunt, for the birds might be in the corn, in the sloughs or in the next State, we could never tell where. I think probably they were in the next State. The dogs would go down in braces and hunt faithfully under these most trying circumstances, very often not getting a sniff of a bird. Then another pair would be put down, or yet another. The older dogs, Noble and Stride, knew more what to do, but even Stride had bad fortune for two days and hardly got to taste the luxury of a point all by himself. We rarely got up over half a dozen coveys a day. Indeed, I think we never got so many as that. Even then it was likely that we would find but half a dozen birds left to the covey, though it was actually the first week of the season. Such conditions are hard for training chicken dogs, though they were the best conditions my friends had been able to discover in three States after patient effort. It was no wonder that Dick Merrill said he was almost of a mind never to attempt any further to train dogs on chickens. It seemed impossible to find a locality with birds sufficient for the proper breaking of the dogs.

But by this I do not wish to do more than draw a distinction between the plenty of the past and the lack of the present. It should not be supposed that we had poor sport, for indeed we had fine sport. I am ready to say that I never enjoyed a chicken hunt in the old days so much, for then the sport was too easy to have an equal interest. On this modern chicken hunt when we got a chicken we valued it. We made much of it and smoothed down its feathers and declared it was a lovely bird, whereas in the old days we would have ripped off his skin and thrown him on the ice without smoothing a single feather. We had plenty more like it in those days. Of the sport in the old times both my friends had had wide experience. Dick told me that one day when he was a boy he killed fifty-six chickens to his own gun. On our hunt the three guns killed on the best day only twenty-four birds, and hardly a bird got away from the firing line. Once a covey of four got up all together in front of Fred and Dick and they picked up three, losing a fourth dead in the wild rice of the adjoining swamp. Once a covey of five rose in front of the three of us, and we killed all five. Once a covey of six got up and four were killed, two unshot at. Once four were killed out of four that rose. Indeed, I recall only four shots missed by the Merrill boys in the four days' shooting, and those were long and hard ones. I have never seen so regular and fine shooting in the field, for this was at birds very much harder than those of the old days, and under conditions which demanded a high grade of skill. I found that September of to-day is very different from September of the old days. Instead of birds at easy range, flapping up out of the grass, we had wild, long rises at 30 and 40yds., and often on old and strong birds. Dick shot 7s and 6s. Fred shot the unheard-of load of No. 4 shot, and after seeing what was asked of the guns, even on the first three days of the season, I was willing to say there was reason in his selection of a load. I do not think a dozen birds were killed close up to the guns, as we used to see in the old days. The entire nature of the birds seemed to have changed. They were wilder and more wary in every way. When put up they flew to four times the distance we used to see in the past. Often they went to the corn, where the dogs could not be used, and where the only way to do was to form a line of beaters and go through abreast—a not uninteresting sort of shooting, however, for the birds went out strong and wild and needed good, quick work.

Instead of the old unfenced prairies of the past we had to deal with fenced fields and country roads, and often with hostile farmers. When we saw one of the latter approaching we had to call in the dogs lest he should in his anger shoot them. As we could, we drove over the country in the fashion of the past, but often we could not get to the wagon for some miles. Instead of the wide prairies we hunted narrow sloughs and strips of grass left by the plows, and the edges of the great cornfields. Instead of a few stubble fields of small area, which would be sure to hold several coveys in the old days, we had before us thousands of acres of wheat and rye and oat stubble, among which, in a ratio all too small compared to that of the past, the birds were indifferently scattered about, no one knew where. Tom Richards had a number of coveys located before the season opened, and a few of these we found, but others we never did find. We thought the birds had already dropped their local habits and begun to travel for the season of "packing up." Only on one day did we find anything like the old system of chicken hunting possible, and then we blundered on a long strip of unplowed prairie where we really got into our birds and worked them in the old way, hour for hour.

Here we put up two coveys, and to show the helplessness of the pinnated grouse even in these days of education, I will state that we put up the first rise wild, only one, Dick, being in, who got two down. Then we went on, and after nearly a mile of travel Daisy pointed, and we were lucky enough to kill four. Then we went on again on our route, and over half a mile further on one of the party walked into two birds and killed one of them. Looking back over the country, we saw that all this had happened on the same line, and we thought that, although the birds had flown too far for us to mark them, we had actually had three rises out of the remnants of this covey and killed all but two of the entire lot, these two not having been shot at. It is no wonder the prairie chicken is disappearing. Yet all these birds were big and full feathered, and sprang wild ahead of us.

A curious evidence of the change in environments of chicken hunting might have been found in my own preparations for this hunt. Last fall, at Sept. 22, I had found a close shooting gun useful, but this time it was only Sept. 1, and it seemed sure to me that the shooting would be like that of the past, when it was a disgrace to miss a prairie chicken. Accordingly I took out for my first day a wide open scatter gun and No. 8 shot, figuring that I would kill about all my birds, of course. The sequel was amusing. Early on the first day we got a point on a bit of grass between two stubble fields, and went up to the dogs. I confess that the sensation of being behind the chicken dogs again was so novel to me as to key me up to a great state of interest. The birds went up easily ahead of us, about 20yds. or so, but with a whir of wing which told of a vigor I had not planned upon. I snapped at one rising bird and undershot it, but struck it rankly with a few edge pellets. Annoyed, I fired again at it, superciliously, and supposing, of course, it would come down. It struggled on, hit hard in the back, but not dropping worth a cent. Dick Merrill cut down his first bird nicely, waiting to give it time enough for his choke bore, and then calmly killed my bird for me. I felt myself actually blush at this, but got so used to it later that I didn't blush any more. Then we got another point, and actually I missed that bird right and left with a cylinder bore gun at about 9yds., and Fred calmly killed it about 50yds. away. Fred had also meantime killed another crossing wild at about the same distance. My friends were very polite, which made it much worse. I missed another bird which I believe was a bit far, and yet another which was only slobbered (and which Fred calmly and politely killed for me, explaining that he was "hard hit"); then I realized that I was being all kinds of a fool and took a tumble to the situation. It was simply an attack of too much prairie chicken after long abstinence. I think I killed the few remaining shots straight then, my two friends always giving me the shot, however. They knew very well that if I didn't kill they would, though it is due to them to say that they were considerate and courteous to the last degree in the field. On the next day I shot a close gun that didn't fit me by a mile, and did some very bad and some very good work, and then I settled down upon an old friend of a gun which was just right and had the satisfaction of shooting somewhere near what any man who can shoot at all ought to do all the time on prairie chickens. My companions shot the same all the time.

These differences in the chicken hunting of the past and the chicken hunting of to-day occur to me all the more vividly because I had not had a chicken hunt, before 1895, for over twelve years. It may be seen how changed are all the conditions of the sport. Of course the old days are gone, never to return, but as to the sport, I believe I would call it improved in quality. On our little hunt we had very few birds which were shot at close range. For another hunt at the same date in that country I would certainly shoot nothing smaller than No. 6 shot, and I am not sure I would not have a few of Fred Merrill's loads of 4s, with which one can rip the back of an old cock up most pleasantly at 50yds. or so, with a cheerful sound, as of a hired man eating cabbage, or a carpenter taking off shingles from the wood shed. Sometimes we would get a buch of these strong-flying birds scattered and marked, thanks to the good eyes of our assistant driver, the boy Albert, and then we had fun. Once, I remember, we had six or eight marked down along a ditch for a distance of several hundred yards. They went up one at a time, never closer than 30 to 35yds. from us, and with a great burst that was good to hear and see. These birds were noble game birds, and their killing was something of a feat and much of a satisfaction. Out of all these hard shots not one bird got away except one of my own. But that was shooting far and away above any I remember ever to have had in the old days of young birds and scatter guns. It was sport beyond that attributed in the contemptuous estimate of early days, when to miss was a disgrace, and when it was said, "Anybody can kill chickens." It is not the case that just anybody can kill chickens such as some of those we shot at, and though the Merrill boys missed nothing, I do not expect to see their field shooting on these birds equaled again very soon. I have forsaken the sport of chicken shooting all these years because I have had a sort of contempt for it, but if it can be had under such conditions as we found on our hunt this month at big strong birds, that fly wild and far, and know perfectly how to make a hunter work and shoot, I am not sure but that my waning interest will revive, to say nothing of my anxiety to try to wipe Fred and Dick Merrill's eyes some day in return of their compliments, although that, I fear, is a long and uphill task.

In our hunt we killed on one day eleven birds, on another seventeen, on another only three birds, and once the high bag of twenty-four. On the opening day Fred and Dick together killed eighteen. We did not work very hard any of the time, for it was the intention only to give the dogs a little training and to kill enough of birds to eat for ourselves and friends about the town. We bagged eighty-four birds during the week, an average of less than six birds to the gun daily, and that with as skillful shooting as I ever saw; for, counting in a few birds which were killed, but not found, I do not think a half dozen birds got away that were shot at.

In the old days our outfit for a chicken hunt, outside of the cost of the wagon and team, would not have run up into very many hundred dollars. Our single dog would have been thought high-priced at $50, though we would not have sold him for any price whatever. Our guns were good, but not costly, and we had no knowledge of many things which within ten years have grown to be necessities. In those days the universal price of a chicken dog pup was $5, $10 for one that was a little older and had the favorite orange and white markings, which we most prized in that day, since that was the color of our best specimens of the chicken dog in our country. On this little modern hunt we had hardly a dog which its owner would like to sell for a dozen times that price. Our outfit, aside from the wagon and team, as it crossed the stubble fields represented somewhere between $1,000 and $2,000 of actual outlay or actual value, to say nothing of the time and money expended in looking up chicken country. This not in the least in the way of display, but only for things thought necessary to-day, and in the pursuit of sport under quiet and gentlemanly surroundings. What a difference and what a commentary!

My friends intend to spend the month of September in the chicken country, and very enviable is their experience these glorious days of autumn, when the birds are big and strong and the air is a stimulus and a medicine with every breath. They will go to North Dakota later after ducks and geese. They apologized to me because they could not offer me a seat in their new hunting wagon, which they are expecting daily from the factory. This wagon was made upon their own design, and must be a great affair. It is a long buckboard, with wide seats far apart. All the seats are covered with corduroy, and have no iron about them to scratch a gun or a leg. Behind the first seat is an upright gun rack with places for four guns, the steps for the guns felt-lined at the bottom of the rack. Behind the seats is the big dog crate. This is the perfect chicken wagon, devised by two shooters who have spent many years at chicken hunting. I presume there is not anywhere in the West to-day a chicken outfit more admirably equipped in the way of dogs, guns, vehicle and general outfit as theirs. We should have wondered at it in the old days.

The prairie chicken has improved in value as a game bird with the passage of the years. It is still a heritage of the American sportsman, and in view of the unexpected increase in its numbers this year—consequent, it is confidently said, upon a better observance of the game laws than was ever known before—it is not too much to hope that it will for a long time afford sport adjusted to the changed conditions of the day.

It is a singular fact that in all the reports I have had this fall from many chicken hunters who have been out in Illinois, Minnesota, Iowa and North Dakota, I have as yet not heard of any one gun killing over a dozen birds on any day. The highest is about three dozen birds to three guns, a few of about two dozen to two guns and so forth. In the past I have often known of over sixty to one gun. I once saw my father kill thirty-seven without a miss one afternoon at a house party on a big farm in Iowa. I have known of eight, ten or even more birds being killed by a shooter who never moved from his tracks, and that with a muzzleloading gun. Those days are gone, and if they have taught their lesson it is well that they are gone.

E. Hough.

FIRST HUNT OF THE ANTLERS.

Buffalo, N. Y., Sept. 17.—The Antlers Club, composed of men living in New York, Rochester, Buffalo and Johnstown, will start for its third annual hunt in the North Woods on the evening of Sept. 30. This club has had, in the three seasons of its existence, about as much fun as it is possible for an organization to get out of deer hunting in the Adirondacks. The first year that the club went into the woods it had the most extraordinary luck, killing in ten days fifteen deer before the hounds. The second year, which was last year, the luck was not so good, only five deer having been killed. This year they expect to equal the great record made upon their first visit to the woods.

The headquarters of the club is in Rochester, where the president, Charles H. McChesney, and the secretary, Charles L. Hoyt, live. Messrs. Hoyt and McChesney have, as a rule, had charge of the arrangements for the annual hunts, and so carefully have they planned all the details that the other members of the club are inclined to let them go on and do the managing for years to come. Each year they visit the woods before the time of starting and select a place to hunt and engage guides, so that all the rest of us have to do is to pack our trunks, buy our railroad tickets and start for the camp. We know that everything will be ready for us when we get there.

The other members of the club are: S. B. Williams, J. L. Willard, F. F. Shepard, W. H. Learned, D. Wilson and W. C. Fredericks, Rochester; James Nolan, Buffalo; Frank Seaman, E. N. Wilson, George R. McChesney and D. W. Pardee, New York; W. C. Hutchins, Johnstown. E. H. Danford, who was with us the first year, died this summer after a short illness. He was a Rochester man and an enthusiastic sportsman, and a most agreeable companion in the camp and in the woods. His death is the first one that has occurred in the club membership since it was organized, and during the coming meeting in the woods appropriate action will be taken upon this sad event.

On the evening of Dec. 15, 1894, the Antlers had a banquet in Rochester to celebrate the success of their first hunt in the woods. At this banquet I read an account of our adventures in the woods, as I had been appointed historian for that hunt at a meeting held just before we broke camp. This sketch was as follows:

"On the eve of his departure for Spring Cove, Franklin county, N. Y., to enjoy the first hunt of the Antlers Association, the Rochester newspaper man told his wife just how he was going to kill the buck. He would do just what the guide told him to do, sit still on his runway and when the buck, flying from the dogs, broke cover on the river bank and paused for a moment to locate the baying hounds, the newspaper man would raise his rifle, take a careful aim and send a bullet through the shoulders of the buck and drop him dead in his tracks. This seemed a very simple thing to the Rochester editor as he sat by his hearthstone and pictured it out to his wife, but somehow when he got into the woods and the buck shot out of the timber and went capering across the rapids of the river, dodging bullets from a repeating rifle at every caper, the editor realized that in his fireside calculation he had overlooked an important factor, namely, that some of the old bucks that inhabit Franklin county do not always pause on the edge of the river bank to listen to the music of the dogs. The bucks that came the editor's way dusted by him and plunged across the river and into the shade of the heavy timber as though they had business in an adjacent county that must be attended to that very day.

"With this little explanation of the editor's failure to carry out his plans as unfolded to his wife, I will, with your kind permission, attempt to carry out the orders of our secretary to recall some of the scenes and incidents from the diary that I kept. You all doubtless recollect that each evening I scribbled upon scraps of paper such as I could find about the cabin a brief account of the adventures of the day. Before I got home my diary was scattered pretty well. Some of it was in my trunk and some of it was in my pockets on the backs of envelopes and letter-heads. I gathered all the scraps and sealed them in an envelope, and this afternoon I spent three hours trying to put the record together in some connected form.

"This hunting trip on the St. Regis had been eagerly looked forward to by the Rochester Antlers, whose hunting blood had been thrilled by the narrative of that great buck killer, Charles H. McChesney, in which he described how he killed his first buck on the St. Regis River the year before. McChesney said that he had been on the runway but a few minutes when the buck swam around a point twenty rods away, and McChesney just drew a bead on the buck with his old Maynard and in the language of an old North Woods guide 'just unhitched and let 'er bile.' The rifle 'biled' all right and there was a dead buck in the river.

"This story had been told in the headquarters of the Columbia Rifle and Pistol Club, of Rochester, over and over again, and some of the Antlers who had had the privilege of hearing it concluded that deer killing was one of the simplest things in the world, and so it is if the deer only comes your way, at least this is what Frank Shepard says, and Shepard knows, for he has sat on the runways in sunshine and in storm and cussed under his breath the bucks that crossed the river on the other fellow's runway.

"The main body of the Rochester division of the Antlers left Rochester for the St. Regis country on Sunday evening, Sept. 30, 1894. We met at the station of the Rome, Watertown & Ogdensburg Railroad at 7:30 o'clock. S. B. Williams, city treasurer of Rochester, and Charles L. Hoyt, who were not able to go that evening, were at the station to see us off. Hoyt was detained by a case in court in which he was a witness and Mr. Williams had to remain in the city to attend a meeting of the Common Council. Williams and Hoyt shed tears because they could not go on with us, but there was no way out of it for them, and after we had promised to leave a couple of bucks in the woods for them they bade us good-by and we were soon whirling over the Genesee River and on toward Lake Ontario. We reached Oswego at 11 P. M. just a bit hungry, and after a deal of skirmishing we found a hole under the sidewalk into which we crawled and had some lunch. Then we put up at a hotel. We left Oswego on empty stomachs and the R., W. & O. at 6 A. M., and at Richland Junction obtained a first-class breakfast. We had dinner at Moira, and while we were waiting for the afternoon train for Spring Cove, on the Northern Adirondack Railroad, we unpacked our rifles and went down the railroad track to target our guns. It seemed a long time waiting for the train, but it started at last with us on board. William C. Hutchins, of Johnstown, joined us at Moira. Two miles out of Moira the engine became disabled and we were delayed, and it was 8 o'clock when we dragged our trunks and gun cases out of the cars and dumped them upon the station platform at Spring Cove.

"We were met at the station by our guides, cooks, masters of the hounds and general utility men. They conducted us along the wagon road to the cabin that had been secured for us and which was within forty rods of the railroad station. When we reached the cabin President McChesney introduced us to the guides and cooks, who were: G. Fred Kimball, head guide; Norman Peck, assistant guide and cook; Warren Peck, his brother, chief cook; Fred Farmer, guide; and Kinzie Goodrow, a resident of Spring Cove and a hunter himself. We were surprised to find the cabin to be a pretty comfortable sort of a shack with two sleeping rooms up-stairs; a store room, pantry and dining room down-stairs. There was in addition an outside storehouse and a small barn for the dogs. There was a big cook stove in the dining room and a big table around which twenty men could be placed. While we were getting our trunks stowed away the boys prepared supper, and in half an hour we were gathered about the table, a happy band of prospective deer hunters. Everyone had a word of praise for President McChesney, who had conducted us to Spring Cove and who had secured the services of such pleasant guides and cooks as those we found in charge of the cabin.

"I have no record of the hour at which we turned in that first night in the cabin or what we did after supper, but I know that the evening was pleasantly passed with pipes and cards and hunting yarns, and that regrets were expressed more than once that Hoyt and Williams and the New York men were not with us. We left instructions for an early call and an early breakfast, for all were eager to be out upon the trail of the deer. We had breakfast at 7 A. M., and at 8 o'clock on the morning of Tuesday, Oct. 2, the whole party, with guns on shoulders and cartridge bags and pockets full of shells, left the cabin for the runways along the river. It took about half an hour for the guides to place us on the runways, and at 8:30 A. M. the line of battle as officially reported was as follows: President McChesney was stationed at the Wheelock runway, the place where he killed the deer the year before; Hutchins was a bit further up the river, Chapin was at the Wing Dam, W. H. Lewis at the Eddy, Willard at Slide Rock, David Wilson at the Big Rock, Nolan at the Big Pine, Danford at Stony Point, Shepard at Trout Elbow, Goodrow at the Cut-off, and Kimball, the head guide, at the Tea Field. The names given to these runways are names by which they are designated by the guides and hunters of the locality.

"The morning was a beautiful one. The sun by the time we had reached the runways had come out from behind the forest-covered hills to the east, and was shining brightly down into the valley of the St. Regis. The foliage on the mountain sides had just begun to show the golden tints of October, and it was a picture that one could view with satisfaction as he waited for the sound of the baying of the hounds, the dogs having been taken back along the mountain sides by two of the guides, Norman Peck and Fred Farmer. The dogs began to give tongue

on the east side of the river at about 9:30 o'clock, and the tenderfeet in the party out for deer for the first time began to cock their rifles, not understanding that it might be two hours before a deer would come their way. Before 10 o'clock the crack of the rifles had been heard at different runways along the river, and those who had not yet had a shot were beginning to show signs of feverish anxiety.

"I will now speak of my own experience at the Big Pine runway. Guide Kimball left me at this runway, which was in a broad valley right where the river made a turn at right angles. Kimball said, as he gave me his parting instructions, that it was not the best runway on the river, but then deer had been known to come in there, and he did not like to leave the spot unguarded. I made myself comfortable on a log and waited. At 10:40 o'clock I heard a deer jumping in the timber on the east side of the river. A second after I heard the first jump, a fine doe came into view in the bushes on the edge of the east bank of the river. As the doe skipped through the bushes on her way to the water I left my seat upon the log, faced toward the point at which she would enter the water, gripped my gun firmly and tried to think of the rules for avoiding an attack of buck fever. It did not take long for the doe to reach the water. I heard her go down the muddy bank just beyond a fallen tree top which shut out my view of her as she reached the water, but I heard the gentle splash as she gracefully glided into the dark-colored stream, and then in a moment the little wavelets of the disturbed water broke across the surface of the river, and I raised my Marlin repeater and with finger resting lightly against the trigger waited for the doe's head to come from behind the shadow of the dead branches of the fallen tree.

"The doe was not long in reaching the middle of the stream, which at the point selected for her crossing was not over 30ft. wide. She was swimming rapidly for the west bank, and as she reached the middle of the stream I fired my first shot at a deer. The bullet sent the water flying around her head, but it disturbed her not, and as she pressed toward the bank I fired again. This shot struck her in the under jaw and she stopped still in the water, then raised herself until her shoulders showed clear above the waterline, and I fired again before she sank back, floundering and threshing the water into a foam. As the animal floundered about, the blood gushing in a stream from the wound in the jaw, my repeater rang out again and again, the powder smoke filled the air, and the men along the river above and below me thought that there must be serious business on about my runway. I thought I had the doe sure, and after the fifth shot I stopped to watch what I thought were to be her death struggles. But suddenly she changed her tactics, and before I realized what she was doing she was slipping swiftly toward the west bank as though nothing had happened. I began to work the lever of my Marlin again, and fired two rapid shots at her before she reached the bank and another just as the bushes of the swamp on the west side of the river swallowed her graceful form. Then I hurried down to the point where she left the river and entered the dense thickets of the swamp. There were splashes of blood all over the leaves and grass, which I followed through the swamp until the swamp merged into the heavily timbered forest twenty rods west of the river. While I was trying to continue the trail of the doe by the blood spots, old Jeff, the hound, came down the trail, crossed the river and swept past me with howls that became more energetic as the faithful dog caught the strong odor of the fresh blood. Old Jeff soon was lost to sight and hearing on the trail, and that was the end of my deer hunting for that day.

"After Old Jeff's tongue could be heard no more I returned to my seat on the log much cast down at having missed my first deer, and for the rest of the day nothing occurred to disturb my painful reflections on my runway. I stayed there until the guides came along with the members of the party who had been posted above me, and we reached the cabin at about 3 o'clock very hungry, but not so hungry that we cared to postpone counting the dead deer and listening to the stories of the men who had been successful. When all were in from the runways there were three deer in front of the cabin, a very good showing for the opening day. One fell before Willard's gun, it was his first deer too. McChesney, who always kills one on the first day of the hunt, was again lucky, and the third deer was killed by the two guides, Kimball and Goodrow. Both shot at it, and both hit it. McChesney shot three times at his deer, a big doe, and each bullet hit her. One went through the head, another through the heart and the third through the neck. He killed her on the same runway he killed the one on the year before, and at nearly the same spot in the water. She was swimming when he shot her.

"Willard killed his deer, also a doe, with one shot, the bullet going through the shoulder. She ran a few rods into the woods after being hit and fell dead. Willard and McChesney used the Maynard single breechloading rifle, and they agreed that for deer there was no other gun like it. There was a lot of Maynard talk in the cabin that evening, and it tended to make those of us who used repeaters a bit nervous. And so the first day ended with arguments about guns and talk of what might be in store for us on the morrow.

"*Second Day, Wednesday, Oct. 2.*—The day opened with a pouring rain. We did not care to go on the runways in such a storm, and while some sat about the cabin and smoked others took their shotguns and went looking for grouse near the cabin. Danford and I went for grouse, and we started two on a ridge. Danford shot one, making a pretty shot as the bird was on the wing. While we were after the grouse the sun came out, and we hurried back to the cabin, expecting that the party would be getting ready to go on the runways. In our absence there had been arrivals at the camp, the new men being S. B. Williams and Charles L. Hoyt, of Rochester, and E. N. Wilson, of the Sherman Square Hotel, and G. R. McChesney, of the Mutual Reserve Fund, New York. As soon as the new arrivals had donned their shooting clothes all started for the runways. President McChesney decided that he would take a poor runway this day, as he had killed a deer on the day before, and the plan worked well, for no deer came his way, and the rest of the party fared no better. In the evening the table was full, there being thirteen hungry men gathered about it. Sam Williams was happy, for he believes there is luck in the number thirteen.

"*Third Day, Thursday, Oct. 3.*—We did not get an early start this morning, for Mr. Chapin made us wait while he took a photograph of the camp and the party. On the way up the river we found two red hounds working on the trail of a deer near the cabin. We found the tracks of the deer where it had entered the water. It had succeeded in throwing the dogs off the trail and they did not succeed in recovering it. I was placed on my old runway at the Big Pine, and at 10:30 o'clock I heard a deer jumping in the woods across the river. I saw her for a second as she shot past an opening in the woods on her way down the east bank of the river. The wind was blowing from the southeast, and as she passed to the north of where I was standing she scented me, turned, ran south and then came down into the little meadow to the south and across the river. She ran out into the meadow a few rods and stopped in a bunch of grass that hid all of her body excepting her head. Her head was in plain view and she was about fifteen rods from me. I was afraid to shoot at so small a mark as her head, and while I was trying to determine the position of her body in the grass she turned and started for the woods to the east again. She ran broadside toward me in a gentle lope, and I took a hurried shot at her side. After the shot I did not see the deer again, but I heard a great crash over in the edge of the woods. I could not cross the river to see if I had killed her, and I waited there for three hours until Fred Farmer came along with two of the dogs. He forded the river, turned the dogs loose, and they found the deer dead in the woods near the edge of the meadow. The bullet had struck her on the side about over the last rib, had ranged forward and had come out at the point of the right shoulder. On its way it passed through the heart. The destruction wrought by the bullet was evidence that the Marlin repeater is in the front rank of deer guns. I used the Marlin .38-55, take-down model. This was the only deer that was killed to-day.

"*Fourth Day, Friday, Oct. 4.*—It rained this morning, but the Antlers did not mind that, and they started for their posts along the river at 7 A. M. E. N. Wilson, Nolan, Danford and Shepard, who went along ahead, got off the trail, and wandered around for an hour before they reached the painful conclusion that they were lost. Danford said he knew he could reach the river, and off he started, despite the protests of the others. His bump of location was large, and he reached the river and was soon on his old runway. The others floundered around until they were overtaken by one of the guides who had followed their trail, suspecting that they had strayed away. They were escorted back to the river and were soon upon the runways again. There was some shooting along the river during the day. W. H. Lewis had two shots at a deer, but the deer did not stop. Shepard had a bit of experience that served as a joke for the rest of the stay in camp. Shepard had heard McChesney and Hoyt talking about killing bears, and as he sat on his lonely runway waiting for the deer that seemed to be a long time coming, he had opportunity to think of bears. So to-day Shepard thought he would walk back into the woods and look for bear tracks. He was gone half an hour. He saw no bear tracks. But when he returned to his runway the first thing he saw was the fresh tracks of a deer in the soft ground at the edge of the river. While he was looking for bear tracks a deer had passed on his runway. It was an awful blow to Shepard, but he was frank enough to confess his error in leaving the runway. The boys tried joking him about it, but he took the chaffing in such a meek, yet cheerful, spirit that there was no fun in that, and as he made some great dishes of apple sauce for the next few days the boys let up on him, and everyone heartily wished that he would have some luck before we broke camp. Mr. Enright, of Moira, who joined us in the morning for a day's hunt, shot a small deer to-day, and Mr. David Wilson saw one, but did not get a shot at it. No one else saw any deer during the day. In the afternoon Hutchins and Danford went out for woodcock, and Hutchins shot one in the river bottom, near the cabin. Frank Seaman and D. W. Pardee, the latter of the Lake Shore Railroad Co., arrived to-day and were duly installed in camp. During the evening, as we sat about the cabin smoking and chatting, Mr. Seaman, who had hunted in the Rocky Mountains, was asked to tell something of the ways of the grizzly bear when he is cornered or when he corners the hunter, whichever it is. Mr. Seaman told of an occasion when he and his guide, an old and experienced hunter, unexpectedly came upon a grizzly bear. The bear was nosing around in the bushes, and he did not see the hunters. And over that fact they shed no tears, for that was not their day for grizzlies. They just tiptoed as softly out of that part of the country as they could. They were not looking for fun that day. Mr. Seaman's guide had killed grizzlies before, but he had quit the business, having decided that too much fun is a bad thing for a man's health. All this talk about the ability of the grizzly bear to hold up his own in a little by play with a man had no effect upon the bold Antlers, and McChesney and Hoyt and Danford declared they would never be happy until they had a meeting with a grizzly bear. As a friend of theirs, I hope the day of this meeting will be long deferred.

"*Fifth Day, Saturday, Oct. 5.*—The morning broke cool and cloudy. We started for the runways at 7 A. M. G. R. McChesney was placed over on Spring Pond, a small body of water within a quarter of a mile of the cabin and on the west side of the river. Mr. McChesney had not been on the pond more than an hour when the rest of us from our positions along the river above him heard a great cannonading over in his neighborhood, and we concluded that he was having some fun with himself over in the dense woods that surrounded the pond. We did not get particulars until we turned in at the cabin in the afternoon, and then we heard that a yearling buck had entered the pond near where McChesney was stationed, and that Mr. McChesney immediately started to convert him into a lead mine. Mr. McChesney was a bit excited and in his haste to load and fire he got .38-56 shell into the magazine of his .38-55 Marlin, and had to take the gun apart before he could get it in working order again, and all the time he was tinkering with his gun the buck was swimming across the narrow pond. But Mr. McChesney managed to get his gun in order and killed the buck. One of McChesney's bullets went near the cabin, and Norman Peck, the guide, who happened to be out of the cabin, heard the bullet sing over his head, and he immediately retired behind the cabin until the fusillade over on the pond had stopped. C. H. McChesney spent this morning at Twin Ponds, where the deer were not expected, but Mac's good luck followed him and he bagged a doe, making a superb shot at 200yds. The deer was on the run when McChesney saw it, and he fired two shots to get the range of his gun, and then a third shot for business. The ball struck the deer in the neck and she dropped in her tracks. George Kimball killed a yearling buck at the Tea Field. Sam Williams went home this evening, but he did not take his baggage with him, which was a sign that he was to return. E. N. Wilson went to bed early with a sprained ankle, which G. R. McChesney skillfully bandaged. The rest of the boys held a general meeting around the table in the dining room and decided to return next year. They named the club the Antlers Club and elected C. H. McChesney president, and Charles L. Hoyt secretary and treasurer.

"*Sixth Day, Sunday, Oct 6.*—This was Sunday and guns were left in the cabin and the dogs were allowed to rest. Most of the Antlers walked through the woods to the Blue Mountain House, where they had a fine dinner, with Mr. Seaman as the host. They returned in the afternoon in time to see the New York men start for home. They went in a special train which had been sent up for them. They were not anxious to leave, and we were sorry to part with them. They had proved themselves true sportsmen, and the Rochester Antlers will never meet to talk of those days in the St. Regis country without paying tribute to the manly qualities of the New York gentlemen with whom they were so fortunate as to be associated.

"*Seventh Day, Monday, Oct. 7.*—I shot my second deer to-day. It was also a doe and a fine one. She came into the river very near my runway, and I missed her with the first shot, but killed her dead on the second, the ball passing through her neck.

"*Eighth Day, Tuesday, Oct. 8.*—Danford and Hutchins left for their homes to-day. Hoyt shot a young buck on a runway near the cabin.

"*Ninth Day, Wednesday, Oct. 9.*—Sam Williams returned to camp this morning bringing a big rainstorm with him. It was dreary work on the runways this morning, but many of us went out. David Wilson, who was to start for home in the afternoon, killed a fine buck just as he was preparing to leave his runway and return to the cabin. He was, I think, the happiest man I ever saw. Our hunting practically closed to-day and we all began to prepare to leave for our homes. Shepard and Williams decided to remain until Saturday and shoot birds.

"This antlered head above our table tells of the rare luck that Shepard had after we left him, but I will not spoil the details of a good buck story by trying to tell it myself, but will call on Mr. Shepard to entertain us with his experience in running to the death the finest deer that fell before the guns of the Antlers in 1894.

"This closed my history and in response to my suggestion Mr. Shepard told his story. It seems that after we left the cabin he amused himself hunting partridges. On one of his tours he started the buck a short distance from the cabin. He returned to the cabin, got his rifle and returned to the trail of the buck. After several hours' patient work he got a shot at the buck as it was crossing a clearing and the bullet entered the animal's neck, but did not stop him. He left blood in his trail and it was evident that he had received his death wound. Shepard did not follow him, but returned to the cabin and on the following morning started out with one of the dogs on the bloody trail. The dog found the buck lying on the edge of a small stream. The buck was so exhausted that he could not rise to his feet, and he was speedily put out of his misery. The buck was a magnificent animal, one of the finest that had been killed in that region in years. Shepard bore him in triumph to Rochester."

JAMES NOLAN.

PARRY SOUND DEER.

AS SOME of your readers may be interested in deer hunting in Ontario, I shall give you my experiences of last November in the Parry Sound district.

I Set out on Oct. 28 as one of a party of six, all but one being deer hunters of more or less experience. We brought with us a large tent and camping outfit, including a sheet iron stove, a liberal supply of provisions and six dogs—three foxhounds and an equal number of beagles. We traveled per Grand Trunk Railway to Burk's Falls, where we remained over night, and next morning we boarded a steamer for Alunic Harbor, where we hired a team and driver, and putting up until next morning at a very cosy tourists' hotel we started for the woods.

None of us had ever hunted in the neighborhood to which we were going. We had intended to pitch our tent at a lumber camp about ten miles from Alunic Harbor, which had been deserted for several years, and near which we had been informed deer were plentiful; but we found that it was again occupied by a lumbering outfit, and that we would have to seek some other location. Having little faith in the average hired guide, and some in our own judgment, we hired no guide and determined to drive into the brush until we struck a locality which suited us, and then unload and pitch our tent. We traveled seventeen miles before we did this, and on account of the roughness of the road made very slow progress, and had to foot it nearly all the way. It was dark by the time we got our tent up, and too late to prepare hemlock brush beds as usual, but having cooked and eaten our supper, we rolled into our blankets and made ourselves as comfortable as possible.

The next day was spent in getting things into shape in our camp, which was situated near two small lakes, and by the following morning, Nov. 1, the opening of the hunting season, we were ready for business.

After hunting three days and killing only one deer, a doe, among us, we made up our minds that we had made a mistake for once. There were plenty of deer in our neighborhood, but the bush was too thick and rough and there appeared to be no feeding grounds near us, so we spent our fourth day in prospecting for a more favorable location.

We found it four miles away at a deserted lumber camp on a very good "cadge" road, and the next day, having hired a settler and his team for the purpose, we moved. Finding that the "office" of the lumber camp was in good repair and would afford us comfortable and commodious quarters, we established ourselves in it, left our tent in its bag and tied the dogs up in a root house.

The character of the country was the usual one in Parry Sound and Muskoka, alternate hogback ridges of Laurentian granite and gullies. About a mile to the north was a large creek or small river, and between us and it was green bush out of which the best of the pine had

been cut, and which was intersected by numerous log roads. There was a bridge across the river on the Government road by which we had traveled in, and beyond it was a large burnt district over which the fire had run several years ago. The high ridges were burnt bare to the rocks, but in an occasional gully was green bush, and there numerous deer made their headquarters.

We hunted the north and south sides of the river alternately, and the sport could hardly have been better. The deer were so numerous that we speedily made up our minds that we could easily get the two each allowed us by our game laws without killing any fawns; so we let the small deer go and killed only large ones.

Though, like nearly all Ontario hunters, we always bring dogs into the bush, we had in former years killed most of our deer by still-hunting, and that generally without snow for tracking; but in this case that was out of the question. We had more or less snow nearly all the time, but it was generally more or less crusted; so that we couldn't move noiselessly, and we had to depend on our dogs. In six and a half days' hunting we killed eleven deer, including seven bucks, six of which averaged 180lbs., and four large does, which, with the doe we had killed previously, gave us our limit—two deer each. Four of the bucks had ten-point heads, and three eight points.

I killed a buck and a doe. The first I got one morning just after two of our dogs had been put out. I was standing where three runways came together and crossed a small brook at the end of an alder swamp. I had not heard the dogs and was rather surprised when the buck, a grand fellow with a ten-point head, appeared. He was running with his nose close to the ground and his flag down, and though it afterward appeared that the dogs were on his track, they were so far off that perhaps he did not know it. I stopped him with a ball through his neck from my .45-90 Winchester and he hardly kicked. The dogs came up while I was bleeding him, and one of my comrades coming to my assistance we got the insides out of the buck and proceeded to hang him up. This was quite a contract, as there was no sapling near suitable for a spring pole. We put the gambrel stick across a pole, the ends of which we placed against two trees about 6ft. apart. We raised each end of the pole alternately by lifting on crotches which we cut, and hadn't got the buck's head clear of the ground when the dogs, which had meandered off, began to give tongue again, and we made for runways. Within five minutes my comrade shot a fine doe, which we dragged to where we had the buck, and having completed the job of hanging them both up we struck for camp, well satisfied with our morning's work.

My other deer, the doe, I shot in the green bush in a gully in the "burn." I got her by still-hunting. I saw her start about 100yds. away, and got off two shots, one of which entered near her kidneys and ranged forward, coming out through her lungs. I followed her bloody track about 200yds., when I saw her standing about 50yds. away. She looked pretty shaky, but to make sure of her I let fly at her head. The ball went in at one ear and came out at the other. This was the only deer shot in our party by still-hunting.

Two of the other deer, both large bucks, were shot under rather peculiar circumstances one morning after a night's hard frost which had frozen the river over. Both were killed while trying to cross the river by smashing through the ice. The first was seen by one of our party who was crossing the bridge about 200yds. away, and struck the buck's head with three out of ten shots from a .40-82 Winchester. The second was heard smashing the ice by another member of our party who was in the woods some distance away, and who made for the river and made two hits out of four shots at 100yds.

Both bucks were killed in places where the river had widened out into small lakes, and to get them out was something of a problem; but there was an old punt near the bridge, where it had apparently been left in the summer by some one who had been fishing for the pickerel and black bass with which the river swarms. We utilized the punt, one man paddling and another kneeling in the bow and breaking a passage through the ice with a green pole. This was slow work, but both deer were finally towed down to the bridge and hung up on the ridge above close to the road.

Having killed all the deer the law allowed us, we hired two teams to take them and our camp outfit to Alunic Harbor, and two heavy loads they made for the roads over which we had to travel. We started shortly after noon on the 14th, got to a hotel eight miles from camp that evening, remained over night, got up at 4 o'clock next morning, reached Alunic Harbor about 11, and boarded the steamer for Burk's Falls at 1. W. P.

Natural History.

RANGE OF THE ANTELOPE.

With Provisional Map Showing Distribution in 1896.

We all know in a general way about what ranges were occupied by the larger North American mammals when this country was first settled by the whites. And we all know in a general way that the ranges of these mammals have been greatly circumscribed by the settling up of the country, the ravages of hunters and the clearing away of forests and swamps. From most of the States east of the Missouri River the larger mammals have practically been exterminated, though in many States Virginia deer and black bears are still to be found. It is now probably too late to trace the method of this contraction of the range of the different species, or to learn when each one became exterminated over any given area. Since, however, we know that the work of extermination is still being carried on, that the free range of these larger animals is becoming more and more circumscribed, it is worth while now to make a beginning and to try to define from year to year the range of the different species.

Some years ago I endeavored to learn just what was the range of the white goat at that time, and I published in Forest and Stream a map which indicated the limits beyond which this species was not found. It seems to me desirable to do this for other species, and with this letter I offer a map which shows the range of the pronghorned antelope (*Antilocopra americana*) for the year 1896, so

PROVISIONAL MAP SHOWING DISTRIBUTION OF THE ANTELOPE IN 1896.
The range is indicated by the black dots.

far as I know it or have been able up to the present time to learn about it.

The books tell us little that is definite about the eastward extension of the range of the pronghorned antelope. Caton tells us that it is found only west of the Mississippi River, and that it extended as far east as that stream only in the northern portion of its range. All the other authorities have followed him in this. We know certainly that this antelope loves open country and was formerly most abundant on the plains.

I have an impression that it formerly existed in western Iowa, where in the year 1870 I saw a captive specimen which was said to have been taken as a little kid at some point in the neighborhood. My notes on this individual unfortunately are lost. My friend Mr. Frank M. Chapman kindly reminds me that Herrick (Mammals Minnesota, Bull. Minn. Geological Survey, 1892) speaks of it as formerly occurring in southwestern Minnesota, but gives no particulars. Roughly, the Mississippi River was the eastern limit of the range of this species and the Saskatchewan and Red Deer rivers its northern boundary. South it extended well down over the plains of northern Mexico, while west at many points it reached the shores of the Pacific. Of course, within this vast territory there were many considerable areas where antelope were never found. Such are the heavily wooded mountain areas of Washington, Oregon and parts of Montana and Idaho, but over all the great plains, and over all the naked sage brush plateaus of the arid central region, these animals were extremely abundant. As has been elsewhere stated:

"It is not so many years since the antelope was the most abundant game animal of the plains and the Western mountains. This was immediately after the extinction of the buffalo, and it is perhaps true to-day. The reduction in numbers of the species has come more from the contraction of its range than from actual destruction of individuals. The time was—and men whose hair is not yet gray can remember it—when the antelope ranged in vast numbers over both the Dakotas, Nebraska, Kansas, Indian Territory, Texas, and to the west to and beyond the Rocky Mountains and to the Pacific coast, and their numbers were so great that it may even be questioned whether the buffalo greatly exceeded them for multitude. As the traveler rode along, the prairie as far as he could see was dotted with the white patches of the feeding animals, and only those immediately in his way moved off to some nearby rise of ground and stamped and whistled at him as he passed.

"Over all the summer range the species was very abundant and very evenly distributed. If the buffalo covered the face of the plain, antelope were to be seen mingled with them, feeding among the great beasts; if there were no buffalo in the country, the antelope were still there in the same numbers. Hundreds and thousands of them might be seen in a day, not bunched up together, but sometimes singly or in loose herds of from three to fifty. If frightened and started to running, these herds would mingle for a while; but after the alarm was over they would separate again into smaller groups.

"At the approach of winter the antelope changed their ground, migrating in loose, straggling columns from summer to winter range. They traveled by established routes, crossing rivers at certain well-known points and using the same passes between mountain ranges year after year. At such special points they were killed in great numbers by hunters. On the winter range, after the cold set in, the antelope congregated in herds of thousands, and these herds kept together until the approach of spring. Hunters used to kill many of them in winter by shooting into the close mass of fleeing beasts so long as they were within range. Of course they wounded as many as they killed. At that season the antelope often perished from cold. If a cold winter rain came on, gradually changing to sleet and then to snow with bitter cold, the animals sometimes became coated with ice and either perished from cold or were so chilled that they fell an easy prey to the hunter on two legs or four."

I am not sure how far south into Mexico the range of the antelope extended, but it ought not be difficult to learn this. Swainson and Richardson in their "Fauna Boreali Americana" say that this species occurs as far north as 53°. It was formerly extremely abundant in many unwooded portions of California.

Two or three statements made by earlier writers on this species are incorrect, but will probably be repeated by compilers for many years. One of these is that the antelope is unable to jump over even a comparatively small obstruction. It is true that the antelope, living as it usually does on the open prairie or where it only has to run straight ahead, is not accustomed to finding obstacles in its way nor to jumping them, and seldom or never does jump high; yet I have seen a tame antelope jump a 4ft. fence for the purpose of getting out of the dooryard in which it was confined, and later, when the animal was chased back by the village dogs, I have seen him sail over the same fence with all the ease of motion that a white-tail deer would show.

It is also commonly stated that the antelope never goes into the timber. This is not true. While essentially an animal of the open country, preferring above all things a region where he can use his eyes, the antelope nevertheless frequently ventures into cover. As long ago as 1877 I saw antelope feeding among the timber in the mountains of Wyoming, and later, in 1879, I often found them in the mountains of northwestern Colorado, feeding either in heavy willow brush in the river bottoms or among the pine timber, near little open parks in the high mountains. Mr. Attix recently wrote me reporting five or six bunches of antelope in the heavy green and dead timber of the Continental Divide, near the Wyoming and Colorado line. These herds have been driven from their former feeding ground by the immense bands of sheep now being grazed there. A favorite summer range, especially for old male antelope, is high up on the bald hills and hogbacks of the main range, where they were often found in very considerable numbers, and often associating with the mountain sheep.

Of course the investigations of a single individual for a few weeks can cover but a very small area, and my personal observations on this map are confined to the small portion of Wyoming lying in the bend of the North Platte River, and two small sections of western Montana lying just east of the Rocky Mountains—one near the boundary line, and one along the Yellowstone River, both north and south of it. The remaining information comes from gentlemen with whom I have communicated by letter, and who have been kind enough to tell me of the regions with which they are familiar.

This map is provisional and is known to be extremely imperfect, but is published now in the hope that it may reach the eye of many readers of this journal who may be able to supply its omissions. It will be observed that the localities for antelope are chiefly on the plains, and only pass just over the Continental Divide. No doubt there are antelope in Idaho, and in western Oregon, Utah, Nevada

and possibly in California. I should be extremely obliged to any one who knows of the occurrence of this species at any point not dotted in the map, if he would cut out this map from the paper, would mark on it with a pencil dot the locality where he observed antelope in 1896, and return it to me with as exact a statement of the circumstances as he is willing to write.

The details of any information furnished to me will not be published. It is merely asked for in order to secure material for a complete history of the distribution of the pronghorned antelope in 1896, but it is very important that the location of the bunch and the watershed on which they range should be given as exactly as possible, in order that the map may be complete. When all the information possible has been secured, a revised map will be published.

I hope to be able to prepare similar provisional maps showing the range of other species of large game, and in this work I am anxious to enlist the interest and to have the assistance of my fellow sportsmen. These maps may at some time be of value to the man who shall write a history of North American big game.

Besides the country shown on the map I have some information concerning the region north of the United States. Mr. John Fannin tells me that in 1896 antelope were abundant near Medicine Hat and Calgary in the Northwest Territories, along the line of the Canadian Pacific Railroad, and Wm. Jackson tells me that they are still found along Old Man's River.

The men to whom I am indebted for information with regard to the range of the pronghorn are: Mr. J. B. Monroe, Montana; James H. Crawford, Colorado; Mr. Elmer T. Judd, North Dakota; Hon. Theodore Roosevelt, New York; W. J. Dixon, Kansas; D. F. Carlin, South Dakota; Charles S. Attix, Colorado; W. B. Devereux, Colorado.

GEORGE BIRD GRINNELL.

EGGING ON THE FARALLON ISLAND.

IN volume VI. of the Proceedings of the California Academy of Science, now in course of publication, Mr. Leverett M. Loomis, Curator of the Department of Ornithology, gives an extremely interesting account of a trip made last July to South Farallon Island and the birds observed there. His stay on the island lasted only from July 8 to 16, and the field notes taken at that time are the basis of this paper.

Mr. Loomis noted ten species of sea birds on the island, and at the time of his visit most of these were being systematically robbed of their eggs, which were shipped in large quantities to San Francisco, where they sold at varying prices per dozen, the lowest price being 12½ cents.

One of the most numerous birds on the island was the tufted puffin or "sea parrot," which in the daytime were outnumbered only by the California murres. The eggs of the "sea parrot" are not marketable, and as the birds have no enemies among their kind there is no special reason for their decrease. These birds are very courageous when nesting, and fight readily, seizing whatever is within reach of their bills and holding on to it tenaciously. Occasionally they fight together, and Mr. Loomis was told that two which were fighting rolled down a declivity of more than 100ft. without relinquishing their grip on each other. They are quite fearless, and Mr. Loomis speaks of having photographed a group of five when less than 10ft. distant from them.

Cassin's auklet was undoubtedly much more numerous than it appeared to be. Usually they were scarcely to be seen, but the afternoon of July 13 was warm and cloudless, and just after sundown several large flocks of these birds were seen flying about high in the air above the island, recalling to the observer chimney swifts in the East on a summer's day. "At 2 o'clock the following morning I was awakened and informed that the bird population was in an uproar. It was pitch dark, but the whole island seemed alive with birds. Their voices, suggestive of those of whippoorwills, filled the air. I was told this nocturnal concert was given by Cassin's auklets. From this incident some real conception was formed of the abundance of this species on the island." Mr. Loomis found both eggs and young of this species, and in one instance an auklet was discovered sharing its underground apartment with two rabbits.

The pigeon guillemot was common on the eastern part of the island, but none were seen on the west end. These birds were timid, and left their nests whenever the crevices containing the eggs were closely approached.

The most abundant bird on the island was the California murre, and the cliffs and outlying islets fairly swarmed with these birds. Many of them lay their eggs on ledges in the sides of the caves opening above the sea, and when the cave is entered most of the birds immediately seek to escape. They stream out of the exit in such numbers that the intruder has to be on his guard lest some of the stream of frightened birds should strike his face. Others crowd together on the floor at the back of the cave, and may readily be caught as they endeavor to escape. The eggers systematically go over the rookeries daily, being thus certain of getting good fresh eggs. One small rock only is reserved as a breeding place, and is thus free from intrusion by man, and here the birds are so closely crowded that those coming in from fishing cannot alight without disturbing others. The lighthouse-keeper informed Mr. Loomis that 7,645 dozen eggs were shipped to San Francisco this year. In 1884, according to Mr. Emerson, as many as 300,000 eggs were gathered. The market became glutted and one cargo was dumped into San Francisco Bay, while another was abandoned on the island. At present the eggs are shipped in small wooden boxes, but at that time they were merely piled into the holds of the boats. According to the late Dr. W. O. Ayres more than 500,000 eggs were sold in less than two months in 1854—all collected on a portion of South Farallon Island; and Dr. Heerrmann, writing early in the fifties of these birds here, says: "The traffic in their eggs from this place to San Francisco and inland reaches the value annually of between $100,000 and $200,000." Up to this year this species of birds have not been greatly disturbed on the North Farallon Islands, but this year a schooner was occupied in taking eggs off weekly, provided a landing could be effected.

The western gull is abundant here, and lives largely by robbing the murre at every opportunity. When the eggers start out to collect, the gulls congregate and soon a flock is formed, circling about overhead eagerly awaiting the flight of the murres from their nests, when they pitch down and destroy their eggs. Sometimes the gulls are said to endeavor to drive the murres from their nests. The eggers destroy the eggs of the gulls, which they regard as their rival in business.

Two species of petrel, Leach's and the ashy petrel, are found on the island. Both of them breed in stone piles, stone walls, or under driftwood, and become active after dark. The flight of the ashy petrel recalls that of the goatsucker.

Three species of cormorants, the Farallon, Brandt's and Baird's, were found here, but in less numbers than Mr. Loomis had expected. The eggs of these birds are destroyed by the gulls, from whose depredations they are said to suffer greatly. Mr. Loomis visited a rookery of Brandt's cormorants in Sugar Loaf Island and found no more than two eggs in any one nest.

Only two land birds are known of as breeders on South Farallon Iisland, the rock wren and the raven. The former is abundant, but the latter is only a straggler. Besides these a number of birds stop at the island on their migrations. More than eighty species have been noted by Mr. W. O. Emerson.

Game Bag and Gun.

Our readers are invited to send us for these columns notes of the game supply, shooting resorts, and their experience in the field.

CHICAGO AND THE WEST.

Snipe and Potatoes.

CHICAGO, Ill., Sept. 26.—Mr. Fred. Gilbert writes me from Spirit Lake, Ia., the following interesting letter about shooting matters. Mr. Gilbert's experience with the snipe is a new one so far as I ever heard, though of course all old snipe shooters know that these birds do not always stick to the wet marsh. Very often they are found in thickets in rough weather, and in the spring a high cornfield is often a good place to look for them. No doubt these birds were simply sunning and dusting themselves. Sometimes in the middle of the day they are put up out of the grass on dry ridges, far from any sort of marsh or wet ground. If these snipe know when they are well off they will stay away from that potato patch:

"I must drop you a few lines to let you know that I am still on earth and able to destroy mud pies at a fair rate and knock the feathers from a live pigeon now and then. Was at Marshalltown, Ia., last week and shot three days, making an average of 97 per cent. for three days; first day broke 108 out of 110 and last day 122 out of 125, also 49 live birds out of 50. But that is not what I started to tell you of. This morning I started to walk to a friend's house that is three blocks from my home and less than five blocks from the court house square, and as I walked along I saw a small bunch of snipe, perhaps fifteen of them, drop in a potato patch, and as they acted like jacksnipe and were nearly in my path I went down to see about it. I walked up very carefully, and there saw a jacksnipe sitting on the sunny side of a potato hill. If it had not been Sunday and church hour, I think I should have got after them with my little 20-gauge, but as it was had to satisfy myself by walking through the patch and throwing potatoes at them. I flushed twenty-three in less than five minutes and could stand it no longer, so walked away. I do not know as they will ever be there again, but will promise you if they are they will not all get away.

From Dakota.

Snow fell in North Dakota along the line of the Great Northern R. R. on Sept. 18, and ice formed ¾in. thick, but warmer weather has followed. The water all over Northern Dakota is very much more abundant than it was last year. Ducks are plentiful in the sloughs, and it is expected that goose shooting will be good, though it is still too early to tell definitely. Prairie chickens are scarce in localities where little shooting has been going on, and it is thought they have been killed off very largely by eating of the poisoned grain put out in the spring by farmers to kill the gophers. A moose has been seen this fall in upper Dakota, toward the Turtle Mountain country.

A friend writing me from Dakota tells me an incident or two of Western life. He states that he had just seen a would-be broncho buster who had been thrown by a wild bucking horse. The man landed on the ground with his foot in his mouth, and lost eight teeth, besides suffering great disfigurement about the face, which was so torn that he could not speak. Recently, in the same town, there was a case of amputation that came under the practice of the village physician. The latter had no crosscut saw, but went across the street and borrowed a meat saw from a butcher and finished his amputation triumphantly. The patient is doing as well as any man could who had his leg removed by more modern methods.

Wisconsin Fishing.

Fishing near State Line, Wis., is very good just now, especially for bass. Mr. I. N. Harding, of Chicago, fishing in Tenderfoot, McCullough and Morton lakes near that point, has been taking forty or fifty bass about every time he cared to go out for the last few weeks. The season record for muscallonge this year is not a very large one, and one is regretfully forced to the belief that the fish is to become more and more rare very rapidly, and the specimens taken of a size averaging much less than was the case ten years ago.

Jacqueminots.

The Jacqueminot snipe are in all over this country now, from lower Wisconsin to the Kankakee River in Indiana. They come a little high, but they are nice. A number of pretty bags have been made along the sloughs just west of Chicago, notably one by Eddie Bingham, who has a pocket marked down.

Teal shooting has begun in earnest in such places in Wisconsin as offer any birds this fall, but not very big bags are reported. In the Kankakee country there have been fits and starts of duck shooting, mostly at wood ducks and teal. The weather has been mild above here so far, and the Northern flight has not yet appeared. Within a week we are apt to have many more birds in this region. Of course, a dozen ducks on any of the open waters of this immediate vicinity is a big bag these days. Golden plover made a poor flight.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

MASSACHUSETTS AND MAINE.

BOSTON, Sept. 22.—Partridge shooting in the covers near Boston is really pretty good for this State. On the sixth day of the season Mr. Al Thompkins was out in the vicinity of Wayland and took five handsome birds. Mr. E. M. Gillam had his new pointer out in the woods of Reading.

Mr. C. H. Cook and Mr. H. F. Soule, with their families, have been summering on Martha's Vineyard. On Friday they took a team and invited their wives to a lunch and picnic down on the south shore of the island. They took their shotguns along, as they usually do when there are possible chances for shooting. They had over forty yellow-legs for their bag. They consider that they had remarkable success. Much pleased with the south shore of Martha's Vineyard for bird shooting, they will take the first opportunity to be there again. Almost the whole south shore of that island is controlled by sportsmen, however, and one not an owner will find that the shore is all posted and carefully watched. Big prices have been paid for short distances of shore land that is good for nothing but scrub oaks.

Partridge shooting has been good in the vicinity of Byfield and Georgetown. Among the local gunners may be mentioned Oscar L. Noyes, who is a real sportsman, a good shot, a good deal of a naturalist and lover of birds. C. O. Bailey and C. H. Tarbox are also among the best shots in that section. Mr. Noyes has given some time to gunning, and the other day rather surprised the others with a nice, plump partridge when they had none. It has leaked out, though Noyes does not know it, that a young fellow has a hen yard in that vicinity, running well back into the woods, made of wire netting. The day of the Colonel's success the hen man found a partridge hung in this fence with her neck broken by the force with which she had flown against it. The Colonel bought this bird of the young man. Later the other gunners propose to get him to explain as to how there were no shot marks on his partridge.

Hunting parties are already starting for Maine, proposing to get well located and get a little trout fishing before the end of the open season, and to be ready for the open season on big game. Oct. 1, C. A. Howe, Geo. B. Smith and E. F. Leland will be off for Grindstone, on the Aroostook Railroad. They are to meet their guides at that point, and go by canoes to the hunting camp. Deer, moose and caribou are the objects in view, but the hunters admit that they may have to be satisfied with a few partridges. They are going into a good big game country, however.

N. G. Manson, with his brother and perhaps a friend or two, will go down to Mr. Manson's camp, Camp Leatherstocking, Richardson Lake, next week for a few days' shooting.

Sept. 28.—Wm. H. Coggin and S. Matherson, Jr., left Boston for a couple of weeks' shooting last evening. They go to Bangor and thence to Norcross, on the Aroostook Railway. They have guides engaged to take them to some unfrequented waters in the Millinocket region. Big game is the object of this trip, as both have taken deer on previous occasions in Maine. A moose is more than likely to come down. They also expect to find excellent duck and partridge shooting. It is a pleasure to meet and talk over such trips with such hunters, both before and after. One deer is all either would shoot. This is an inexorable rule with them.

SPECIAL.

A MAINE GUIDE ASSOCIATION.

Editor Forest and Stream:

In your issue of Sept. 19 are a few paragraphs calling attention to a proposition now under discussion in the State of Maine to license guides, and remarking that "a practicable and expeditious solution of the guide problem may be found in a voluntary combination of the guides themselves."

This seems to me a very pertinent suggestion at this time, and one which might under proper management result in much good. An organization such as you refer to would have many valuable features, both from the point of view of true sportsmen and of the guides themselves. We who resort to the woods from a love of nature; we who desire not so much to take fish and kill game as to find delight in the freedom of the open-air life and renewed vigor in pitting our knowledge, judgment and skill against the instinct and watchfulness of the wild denizens of wood and water; we whose pride is not in killing, and most surely not in numbers slain, but in the outgeneraling and capture, of which the killing is only an incident, of the wily trout or the solitary and alert moose; we who love the woods as God's own ground, and respect their inhabitants as his own handiwork, to be used for our benefit, but not to be wastefully killed—slaughtered in cold blood for the mere sake of killing; we mourn the presence in those blessed woods of butchers—men who kill and leave their game to rot—who can use one and kill two; and we would welcome any adequate protection.

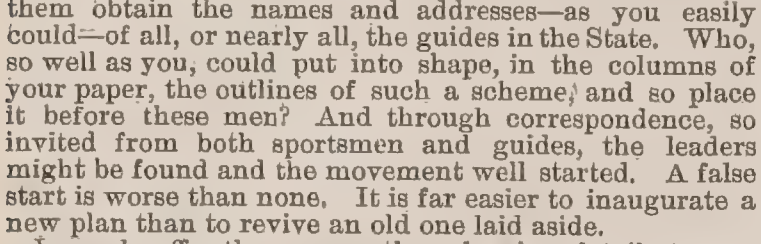
An association of the guides would undoubtedly go a long way toward affording the very protection needed, and needed urgently. And it would besides, if properly organized, be a large measure of guarantee, to a sportsman who engages one of its members, of honesty and reliability as to behavior and skill. For the right of membership might, in some considerable degree, be made contingent upon the proper requisites of a good guide, and with careful management it would come to be recognized that "an association guide" was the best guide. Thus the game would be preserved, the laws observed, the association become a power for good, the guides be benefited, both because the game supply would be better and a larger number of sportsmen attracted, and because of the increased certainty of employment, and sportsmen would more surely and easily obtain good men.

To bring about a movement like this, however, is no easy matter. If it is to be effective the management of such an association must be in good hands, and its membership must include a large majority of all the reliable men in the State engaged in guiding. Moreover the laws under which it acts, and which bind all its members, must be few and simple, and of a character which shall be recognized by all as good. And above all it must avoid any of the objectionable features of a "union."

If these things could be accomplished I am sanguine that great benefit would result. But the guides are a

relatively small number of men, scattered over a large territory. Their acquaintance with one another is necessarily limited, and the inauguration of such a movement demands leaders. How shall it be done? Who shall start it? How shall leaders be found?

FOREST AND STREAM has done many a service to sportsmen and guides; why should it not do this? If you, with your experience and knowledge, would take hold of this thing there would seem good ground for believing that it might be made a success. Fight and hard work would undoubtedly be called for, but you can give that as well as any one. My own experience is limited to two points in the State, covers a period of nine years, and includes an acquaintance with only a dozen or so of the guides, but among these are some incomparable men, and from that experience I believe the plan is feasible.



Suppose you enlist your subscribers and friends who are interested in game preservation in Maine, and from them obtain the names and addresses—as you easily could—of all, or nearly all, the guides in the State. Who, so well as you, could put into shape, in the columns of your paper, the outlines of such a scheme, and so place it before these men? And through correspondence, so invited from both sportsmen and guides, the leaders might be found and the movement well started. A false start is worse than none. It is far easier to inaugurate a new plan than to revive an old one laid aside.

I merely offer these suggestions, leaving details to you and to the development of further discussion, and ask you to give them your careful consideration, and if in your judgment an effort can be made with reasonable hope of success, act with vigor, and I think you will find plenty to help you. A SPORTSMAN.

A Bullet's Flight.

ELIZABETH CITY, N. C., Sept. 16.—*Editor Forest and Stream:* I send you below the remarkable and peculiar deflection of a ball which occurred recently at Buffalo City, Dare county, N. C. The circumstances are as follows:

A gentleman who was desirous of doing some bear hunting had gotten a mold to cast lead balls for his No. 12 breech-loading shotgun. After he had molded the bullets he was rather timid in firing the gun charged with this large lead ball, fearing it would burst, so he got a native to try the experiment. I believe there was 3½drs. of powder used, the lead ball was round and about the size of an ounce ball. The man firing stood at A and

fired at a large black gum tree at a small board nailed on the tree, and which was about 12ft. up the tree. Immediately after the shot a man opened the door at D and angrily asked who was shooting at his house. About six persons were present and all said that the shot had been fired away from the house and were surprised at his saying his house was hit. A short while afterward myself and two other gentlemen began a search to see if the man had any cause for his remarks, as he still insisted as well as his wife that their house had been struck, and to the surprise of all the ball was found and very little out of shape. The diagram below shows the marks of objects struck, and the panel of the door was indented halfway through. The ball rebounded to E and was found lying on the ground. I measured the distances by tape line.

Office, store and house all on a line about.

The cypress tree at C was struck 6ft from the ground, and the lower panel of the door was struck about in the center. H. P. GREENLEAF.

Spaniel and Partridge in Vermont.

Editor Forest and Stream:

Several years ago we had a law prohibiting the use of dogs in hunting partridges. Its purpose was to prevent the murderous practice of treeing partridges with spaniels, but in effect pointers and setters were under the ban as completely as spaniels. So sportsmen and pot-hunters clamored alike against the law until it was repealed. Now the State is populous with spaniels. It is safe to say that there are fifty to each pointer and setter, and they make the killing of partridges a simple matter of sharp eyes and dead aim at a stationary object, in which no skill or woodcraft is requisite. The woods are full of market-shooters, men and boys, who want partridges to eat, no matter how got, and sportsmen ambitious to make big bags on the same terms, and each and all have their yelping spaniels, which not only do duty in the open season, but run at large during the spring and summer, at liberty to gobble up every nest of eggs and brood of unfledged young ones they come across. The inevitable consequence is that partridges are scarce, and so will continue to be as long as this evil exists. How is it to be abated? AWAHSOOSE.

Michigan Game.

LANSING, Mich., Sept. 26.—Prairie chickens in Michigan are very scarce, but early in September Mr. Launt Thompson, Howard Sweet, Jay Pearsall, J. P. Lee and C. P. Downey shot several in the lowlands north of Jackson, and a little later Mr. Charles Clippinger, Mr. Holmes and some other gentlemen shot two about twenty miles southeast of Lansing. Woodcock are very scarce. Ducks have not come to our section to any extent. Squirrels are plenty. Several parties are being made up for deer hunting, and they will leave for northern Michigan as soon after they vote as the train can carry them. JULIAN.

Off for the Adirondacks.

NEW YORK, Sept. 24.—*Editor Forest and Stream:* This year the Adirondack hounding season, which for all intents and purposes is the hunting season, opened Oct. 1, the same day that the Maine big game season begins.

Deer are reported to be very abundant, and naturally the Adirondacks offer a powerful counter attraction to Maine for New York sportsmen.

On Monday a party consisting of Fred Sauter, Sr., Fred Sauter, Jr., F. Siegler, Wm. Meisenholder and J. Wellbrock, of New York; F. B. Ketcham, of East Northport, L. I.; Valentine Schmit, of Brooklyn, and W. L. Coggswell, of Nutley, N. J., left for Schroon Lake.

Their hunting grounds will be on the upper Schroon River and back to Elk Lake. They will be in one of the best partridge sections in the Adirondacks, and convenient to first-class deer grounds.

Mr. Ketcham, who is a well-known Long Island hunter, reports that the deer on the Island have profited by the two years' close season, and that on a recent trip to the grounds he noted large numbers of small tracks, proving that they had bred prolifically. He thinks that the Long Island hunting this fall will certainly be up to the standard of previous years. J. B. B.

Reed Birds in their Nests.

PHILADELPHIA, Sept. 26.—*Editor Forest and Stream:* Pardon me if I venture to criticise your article on reed birds in the issue of Sept. 26. The meadows between Cape May and Atlantic City are covered with a growth of short salt grass; no reed birds ever use them or build "warm nests" in them; certainly not in the month of September. If you will substitute mud hens for reed birds you will shoot a good deal nearer the mark. Mr. Chapman will only be misled by the article as published. GUNNING SKIFF.

[Didymus wrote in jocular vein, and an attempt was made to carry out his spirit and to convey in a humorous way the fact that the newspaper reporter, who mixed up reed birds and rail and mud hens, and talked of reed birds being routed from their nests in the marsh, was at sea in his ornithology and sportsmanship. It was not deemed necessary to label the note as a joke, but the event shows that jocularity is not permissible outside of the Camp-Fire Flickerings corner.]

The Dead River Region of Maine.

DEAD RIVER, Me., Sept. 21.—Mr. C. C. Brooks, of East Wilton, who is at the Ledge House for a six or eight weeks' stay, occupying Camp Little Bigelow, has opened the shooting season in a way that will bother some of our crack shots to beat. It was the shooting of two foxes. Standing just in front of his camp with his .32-40 rifle, a three-barreled hammerless gun of his own make and design, he shot, off-hand, one of the foxes at 303yds.; the second was shot near his camp with a .22cal. rifle of his make, off-hand, at 150yds.

Both big and small game of all kinds is far more plentiful than ever before, and sportsmen are already coming in good numbers, and I think that this section of Maine will this season lead all other places in the big lists of game. A DEAD RIVER GUIDE.

The Northern Migration.

NEW YORK, Sept. 28.—*Editor Forest and Stream:* Sept. 25 a party of Brooklyn sportsmen, including Dr. Ashley A. Webber, R. S. Layton, who is in the express business, and a druggist whose name has escaped me, left for Joe Francis's camps via Norcross. Mr. Maximilian Foster, of the *World*, also goes in by way of Norcross. He has corresponded with Luther Gerrish regarding a trip to Caucomyomoc Lake, well up the west branch. Mr. James P. Murray, of the U. S. National Bank, has tried the fishing in the Ashland region. Mr. W. A. Hoisington, the park expert of the Page Woven Wire Fence Co., has designs on the moose and big game of Aroostook county, which will materialize when the snow flies. J.

Game in Chenango County, N. Y.

GREENE, Chenango County, N. Y., Sept. 24.—We are having very fair success with the rod catching pickerel, perch and bass. Our sportsmen are having good sport with the gun this fall, bringing in fine bags of birds. Partridges have not been so plenty in years as they are this fall. One can scarcely go in any woods without stirring up more or less of them. Squirrels are very plenty, and as soon as the law is off (which will be Oct. 15) we anticipate good sport.

Any information as to game and guides will be gladly given by addressing L. C. SILVERNAIL.

Louisiana Quail.

OPELOUSAS, La.—*Editor Forest and Stream:* The quail crop this season is a heavy one owing to the long dry summer, which has been advantageous to the breeding of the young birds. I have seen several very large bevies and they all appear to be full grown, and fly as well as the old birds.

North Carolina Wild Turkeys.

BOWMAN'S BLUFF, N. C., Sept. 24.—This locality is in the mountains, 2,500ft. high. The season has been unusually good for wild turkeys, which are nearly full grown and are plentiful (for this generally poor game country). A CONSTANT READER.

Freak squirrels promise to be plenty again this year. Yesterday Mr. Scholes shot a black squirrel, which is a delicate drab color throughout. Mr. Wm. Ward has sent to Mr. Munro, to be set up, a chestnut colored black squirrel which has a remarkably fine tail of rather lighter color than the body, and a red squirrel with a white tail.—*Belleville Intelligencer, Sept. 19.*

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XIV.—George Raynor.

THOSE who have followed these bits of personal history will not be surprised that a boy who has never shown a taste for anything but shooting, fishing and fun of most any kind that is to be found should exhibit a decided dislike to be confined by the iron-clad and steel-pivoted rules and regulations of business. Such boys usually take to the woods and remain there, preferring the simple life of the woodsman, with its independence, to all the luxuries of more civilized life, if the latter are only to be had by the stern and inexorable demands of a business. They often develop into men whom we are glad to know and to respect for their knowledge of the woods and its inhabitants, as well as for certain honest ways that come to a man removed from the world of deceit and suspicion of his kind that is engendered by a business life.

The time came when school was left and business began. The happy days were in the past. No more Saturday holiday, and the grind of recording shipping marks, weighing goods and signing receipts, when ducks were flying down the river and car loads of venison were coming in, was getting too much to bear. In that vast and vague country called the West there was freedom—and game. Finding opposition useless, father sent to Michigan for his rifle, the one that William and Joe Brockway had used for years, and gave it to me when I left.

Said he, "You may have this rifle, if you are bound to go, and the only thing I ask of you is never to join any expedition that goes out to murder poor Indians."

That was an easy thing to promise because there had never been such a thought or desire. I was twenty-one and bound for the great West, with no definite idea what part of it would be best to go to or just what was to be done when the journey ended. Pete Loeser, the German boy mentioned in the last history, wanted to go to some relatives in Wisconsin, and he went along. At Chicago we could decide what would be best to do, and there we stuck.

One day while fishing in the lake off the breakwater an old gentleman of eighty years named George Raynor, who had frequently fished with us, told me this story: "At the massacre of Wyoming, in 1778, my old parents were killed and I, a boy of about four years old, was taken by the Seneca Indians and then sent to Canada by a British officer, where I lived with a farmer until I ran away and shipped on a vessel that went to England. There I worked in a cutler's shop and learned the trade. How many years passed I don't know, but the desire to get back to America grew strong, and I went to Liverpool and shipped for New York. By this time I was a young man, and I worked at my trade until I saved money enough to try to seek my relatives, if I had any. I remembered a sister Susan and a brother John, both older than I, and I longed to see them. I had forgotten the name of the place where the massacre occurred and did not know in what State it happened. There was an indistinct recollection of an alarm at night, a hurrying to arms, and the burning of buildings and killing of people. I had kept a little picture book with my name in it. One day a lady came in the New York shop and bought some cutlery to be shipped to some point in Luzerne county, Pa. The name of the place seemed familiar, and I talked with her. She knew of my people, and the result was that I went there and afterward married her daughter— That's what we call an eel-pout that Pete's got. The fish is not eatable. Excuse me, where was I? O, yes, we prospered and all went well until our eldest boy was killed in the Mexican war and our daughter was burned to death in a fire that destroyed my business a year later, and with my wife and only boy I left New York for this place in 1848. In a railroad accident my wife was killed and injuries about my head hurt my eyes, so that it was uphill work to make a living until my boy William helped out by singing in the church choir. Now that I am nearly blind he is my sole support. You've heard his wonderful tenor voice in Warner's Hall, on Randolph street, where he now sings with 'Northrup's Metropolitan Minstrels.'"

During this tale the fish had taken my bait unnoticed, although Pete had attended to business and taken several fish. The story as told by the old man had made me wish he would stop, for there was no fun in the way he told it, and it had started a leak in my eyes. But down the breakwater, an old one not in existence now, came the sprightly young tenor, who put his arms around the old man's neck and kissed him, saying: "Well, father, what luck to-day?"

"Billy," said the old man, "I fear I have not fish enough for breakfast; I have been telling your friend the family history because he seemed to take interest in it, and I forgot to put my line out. Here is the hook and the bait by my side now. My old eyes do not see well enough to tell if a hook is baited or not, and certainly cannot see if the line is in the water or is coiled up at my feet. Now, Fred, don't you honestly think that an old man who has lived his life and can't see—"

"Here, father, stop that. You must meet the infirmities of age and accident in a philosophical manner. I can and will care for you while I have life and strength, and I don't want to hear any more of that talk."

The young man baited his father's line and we fished on. This eel-pout, as he called it, was a new fish to me then, and its long, flattened head and eel-like fins made it an object to be remembered. This specimen was 20in. long. Pete said: "Py chimminy! he's cot a whisker on his chin, so like a pullhead on'y de pullhead he cot fife oder six." And this was a wonder to us, for there were no fish with barbels where we had fished except the bullhead or catfish. We found the fish quite common in the lake. In other parts it is called "lawyer," "ling," and has several names besides that of *Lota*, which the scientists have taught us to believe is its true name. Twirling the sinkers vertically, and letting go at the proper time, we cast our bait as far as possible from the breakwater and hauled in hand under hand, and a good-sized pike perch or a big eel-pout made quite a fight at the end of a long line. Even the common yellow perch ran larger than we were accustomed to see them, and we green Eastern boys voted it the finest fishing we ever had.

Mr. Raynor told me that there was very good fishing in the South Branch of the Chicago River near where he

lived on Van Beuren street. To those who only know the Chicago River as it is now this statement may be doubted, for in its black and ill-smelling water a self-respecting mud turtle would decline to live. Yet I ask to be believed when I say that many good fish were taken from the docks in the South Branch by myself and others forty-two years ago. As a rule the fish were not as large as those taken in the lake, and just what kinds they were is partly forgotten, but yellow perch were plenty, and so were small dogfish, *Amia*. These latter even the omnivorous Pete could not eat, although he pronounced the eel-pout "Pooty goot."

The old gentleman was greatly pleased when I called at his house for him to go and fish. He said: "It is very good of you to come for me; very few care to bother with a man when he is no longer young and is nearly blind. I often think I've stayed here too long, and only for Billy—"

I interrupted with: "Yes, Billy is a good boy, one in a thousand, and you may be proud of such a devoted son." Then he was led from that depressing line of thought by a story of a deer hunt in northern New York and of jolly times in camp with Port Tyler until he forgot his infirmities and told stories of fishing in salt water and of shooting bay birds on Long Island, all of which were unknown sports to me. He became enthusiastic and finally said: "I'll sing you a hunting song which I learned in England," and after crooning for the key sang in a rich baritone, a little shaky with age, the following, which I never heard before nor since:

Some love to roam over the dark sea's foam,
Where the shrill wind whistles free.
But a chosen band, in a mountain land,
Oh, a life in the woods for me.

The deer we mark thro' the forest dark,
And the prowling wolf we track,
Our right good cheer is the wild boar, here;
Then why should the hunter lack?

Billy Raynor, the exquisite tenor, came honestly by his voice, that was certain, and I induced the old gentleman to sing it until both words and tune are as familiar to-day as then. A tolerably musical ear told me long ago that if I ever attempted to sing the police would pull the house on the suspicion that there was a dog fight in the back room, and therefore whenever asked if I can sing I quote the Hon. Bardwell Slote and reply: "Those who have heard me say I can't." But in my house is a young lady and a piano, and on the wall of my den hangs a banjo of the vintage of 1860, and its strings seem to have treasured up the air of that hunting song so that the piano sympathizes with it and the young lady sings the words occasionally to the accompaniment of the aforesaid implement of torture. There was a sort of "yo, ho" chorus which is forgotten, as is also the latter part of the verse beginning:

When the morning gleams o'er the mountain streams
Then merrily forth we go,
To follow the stag o'er the slippery crag
And chase the bounding doe.

The little we know of it serves to bring up the memory of the dear old singer who sang it amid the unpoetic surroundings of the Chicago River one day when his poor heart was lighter than usual.

One day he said: "Billy is going to have a week off, the hall is to be renovated, and he will spend his vacation down at Kankakee shooting ducks, and last night he said that he would like to have you go with him if you could get off. Poor boy! he needs a week off if anyone does; working in the office of the grain warehouse all day and singing at the minstrels six nights and in the church choir twice on Sundays keeps him so busy that he never has an hour to himself. Only for me he would not have to work so hard, and I sometimes think—"

"Now see here, Mr. Raynor, this is only an idle fancy of yours. Billy is a busy boy, to be sure, but he likes it, and his main delight is to see you happy. You are not a burden to him, but it is his pleasure to see you made comfortable. He has no bad nor expensive habits, and I know that his first thought is for you. Drop this idea that he would be better off without you. I believe that I know him better than you do."

"It seems good to hear you say so," said he, "and it is no doubt true; but my mind has outlived my body, and at times I feel morbid, blue, or whatever you may call it. If you will go down there with Billy I will know that you and he will look out for each other. I will take a vacation if I know that you two boys are together taking one. Will you go?"

"I will find out. Like Billy, I must consult others. To-morrow night you will know, but it might be well to have the invitation from Billy. Surely, he cannot expect me to go with him without a direct invitation; I was with him last night and he did not mention it."

"Not to you, but he first consulted me as one whose approval of a companion for a week seemed to him to be necessary. No matter how much Billy might think of you he would want his father to know the kind of company he was in and have my approval. His business associates are not always his social ones, and like the wise boy that he is he separates them. He doesn't care to ask your companion, Pete, to go because he overheard him say something about his kissing me. Billy was brought up that way, and doesn't like any comment on his kissing his father. We are all there is left of the family, and our customs are our own."

A 10-gauge gun was hired, and we went down some fifty miles south of Chicago to the great ducking grounds of the Kankakee, of which I had heard so much. Even the preparation for the start was a revelation to one whose idea of duck shooting about Albany had been that it was a large day if he got ten shots and four ducks. Then 1lb. of powder and 4lbs. of shot was a great allowance, and more than half of it was lugged home at night unless it was expended on blackbirds, rail or other small game. Therefore, when we talked over the trip and came to the detail of ammunition I was astounded when Billy said: "Let's see, six days; well, say twelve pounds of powder, fifty pounds of shot—ounce and a quarter to each load—that's fifteen ounces of shot for a dozen charges, say a pound for a dozen loads and a hundred shots per day; yes, fifty pounds will do to start with, and we can get more down there if we need it, but these things can be bought cheaper here."

There was a belief which I cherished that I had done some shooting, and had on one occasion loaded up with 2lbs. of powder and 8lbs. of shot for a week's sport, but Billy's figures staggered me—metaphorically speaking, "they took my breath away." As soon as I could come up to the surface I ventured to ask: "Have you ever shot down there at Kankakee?"

"Oh, yes, I go down there in spring and fall; the ducks are plenty, I assure you. Did you think that I didn't know anything about the place?"

"No, I only asked for information because the amount of ammunition seemed somewhat larger than I have been accustomed to use, but if you think it is what we will need it's all right; you know best."

"You'll need it all. Have everything packed for the 11 P. M. train Sunday night, and I'll meet you at the station and we'll have a good time for a week."

Such flights of ducks! Such flocks of ducks! The sky, the lower air and the water was full of them. As Billy rowed our little boat along the marshes in a small stream it seemed to me that he was wasting time and missing shots, but when he pulled up on a dry point of land and we hauled the boat ashore and propped it on edge, the reeds and rushes with which we covered it made a splendid blind to shoot from. No decoys were necessary, the ducks were uneducated in the matter of artificial blinds and came past ours without a thought of danger. We too were not up to the modern plan of having several guns, or the slaughter might have been greater. Where I had shot, along the Popscheny, a half dozen ducks was a large day's shooting and one was not considered bad. Day after day no duck was bagged, and a few rail and blackbirds were accepted as better than nothing—with the hope of better luck next time. On those trips mud hens and hell-divers, or even a sheldrake, was counted as a duck, and it was a new sensation to be told: "Don't shoot, they're only sawbills."

Accustomed to taking in everything which came within range, this was something new. The fact that a gunner could sit down in cold blood and select the kind of waterfowl on which to expend ammunition was a novelty. Instead of wishing for any sort of duck to come within shooting range here, we were refusing shots to all except a favored (?) few.

It was cruel shooting—cruel because it was wasteful. We shifted our blind so that we shot against the wind as it changed, and the dead ducks drifted to us. A cripple that escaped the first fire could not be chased, for we had only one boat, and if not killed before it got out of range it crept into the marsh to be eaten by mink, gulls or hawks. A philosopher might ask what difference all this made to the duck: whether the mink or the birds got him, or whether his carcass passed into the hands of a hotel *chef* and was served to a convivial party, with the accompaniment of celery and the juice of the vine. Men whose minds conceive such questions are not worth bothering with. They think up all kinds of problems to pester the unphilosophical man, and seem to delight in investigating the minds of ducks and other animals. In the year of a presidential election they are the cranks who go through a railroad car taking "straw votes," and would ask a duck whether he would prefer to be eaten by a mink in a swamp, or to be served with celery and champagne at Bill Monico's. If these pestilent cranks would only invent a flying machine which would actually fly, and then rush in before our blinds, back wind with their wings, and let their legs down to 'light, how happy we would be to give them 1¼oz. of swan shot.

We shot only at mallards, pintails, widgeon and teal, letting all other fowl pass. At night we counted out 153 ducks of these species—the number is remembered because it was the most wonderful duck shooting for two guns that I had ever dreamed of—and we could have taken in a number of butterballs, whistlers and other ducks if we had wished to kill them, but Billy said they were not worth wasting powder on.

As we rowed back to our stopping place there was time to review the events of the day and ponder on the new ducks, which were examined curiously while Billy rowed the boat. The only ones that I had known were wood ducks, mallards, black ducks and the blue-winged teal. The green-wing, pintail and widgeon were new, while such ducks as butterball, whistler and bluebill were names only. Heretofore there had never been more game than could be taken care of and consumed at home or given to friends, and the presence of about 350lbs. of ducks in the boat and the prospect of five days' more shooting presented a problem. What could we do with this mass of game? We could not eat much of it and we had but few local friends. In the excitement of shooting these questions had not obtruded themselves as they did now. Pondering on these things, I asked: "Billy, what will we do with all the ducks?"

"They are all right; there'll be a man at the landing to meet us who will take care of them; there he stands now waiting for us. He will send them to market every day and on Saturday we will keep out what we want to take home."

The man took the game and put it in his wagon and drove off to the railway station, and after supper he came in and settled up, paying us $15.30 for our ducks, or about what it had cost for the expenses for ammunition and travel. This was certainly paying expenses, and just what I had hoped for in going West, but somehow it was not satisfactory. It brought into the transaction a mercenary spirit which had never before been connected with my sport. At first the feeling of dissatisfaction was vague and without shape. We divided the money and talked it over. The expedition was more than successful from a financial point, but there was something in my manner which caused my companion to say:

"You don't seem as enthusiastic as you did. What's the matter, don't you like the table they set here or did something happen down in the marsh which displeased you? Be frank with me, and spit it out if anything has gone wrong; don't sulk, fire it out."

Up to this point I really did not know the cause of a change of demeanor which had been noticed. There was only a dim consciousness of something unpleasant.

"Billy," said I, "if I have appeared to be depressed it is because our ducks were carted off by an unknown man to be sold to unknown consumers in the market. Every duck, pigeon or rabbit that I ever killed before to-day was either eaten by my own family or given to a friend. Part of the triumph of the hunt lay in the bringing of the game to the table, and as my friends enjoyed the treat I also enjoyed being the treater. If I was at the feast every mouthful eaten by each individual was enjoyed by me as a contributor, whose hard work on shore or upland was rewarded by the knowledge that others were enjoying the fruits of my skill and—"

"That you are a blooming egotist whose personality enters into every duck or other game. Is that what you mean?"

"Billy, you have put it into words which are strictly true, but were in a nebulous condition in my brain. You have summed up the case in a masterly way. Never before did I measure the value of game of any kind in money, although I have had a desire to turn my love of field sports into a way of making a living. This desire was in a crude form before this, but now that the man has carted off my game to be eaten by men who do not thank me for it, do not know me, and may be drunk when they eat it, I wish I had my ducks and he had his money—"

"Well, you'll go out in the morning and shoot some more, won't you?"

"Yes, but I'll build a blind and use the boat to chase cripples. I don't like to see a wounded duck go off into the marsh to die or to be eaten by minks or gulls. It isn't right."

"All right," said he, "anything to keep peace in the family, but down here ducks are too plenty to go chasing cripples. The gunners here will think you are crazy to waste your time in that way and scare off a flock to get a cripple. Go ahead, though, I don't care."

I tried it, but it did keep flocks from coming our way. Some gunners 100yds. below protested, and the chasing of cripples was stopped.

We shot six days. The first day more than paid all expenses of the trip, and there was a good balance in our favor as well as thirty ducks among our plunder on our return Saturday night. The ducks we gave to friends, and when Pete Loeser received a pair and heard the story he said: "Py shimminy, de air must pe so full mit ducks dere vos no room for shot to co between dem ven dey fly. I never dinks dere vos so many."

I had an invitation to dine with Mr. Raynor and his son next day, and the old gentleman was very jolly and sang the hunter's song and that sweetest of old English ballads, "Sally in Our Alley;" while the son, who, like all professional singers, usually decline to sing on social occasions, at the earnest request of the ladies gave us "Mary of Argyle" and several other songs. When the others had retired Mr. Raynor beat me at two games of chess, the clock struck midnight and the vacation week ended.

The winter closed in and before spring I could now and then checkmate my elderly friend, and when that happened he would explain how it could not have been done if he had not made a certain move some ten moves back of the finish. He was a delightful old man when his mind was off his physical troubles, and he and his son were devoted to each other. As soon as the ice was out of the river he sent me word to come up and fish with him the first moment possible. His bodily infirmities had increased and he had now but one eye that was of service and that was very poor. I baited his hooks and threw out his line, and when he pulled in a fish saw that the hooks did not enter his hands. He was quite despondent one day; said he: "Freddy, my boy, I wonder that the good Lord doesn't take me. Many a time I've asked Him to call me, but for some reason He does not do it. I am only a burden on Billy, and the pains in my head from that railroad accident are more than I can bear. Billy has a severe cold and has been laid off several days. If anything should happen to him I—".

Things were getting uncomfortable and to turn the tide I ventured to say: "Don't worry about Billy, we all have colds and get over them; of course, he couldn't sing in his present state, but he'll be all right next week. There! That fish is off and your bait is all right again."

Billy's cold did not get better and I was called to sit up with him. Pneumonia developed and the old man had to be removed from his room. Pete had gone to Wisconsin, and the minstrel boys and the church choir sent watchers in such numbers that they could not be used.

It was my duty to superintend the watchers and comfort the father, but the end came in a few days. Relatives from Boston came to the funeral, but Mr. Raynor clung to me and insisted on my being with him at the last sad rites.

The next day, while walking up Market street, I heard a little girl say: "They've found a drowned man in the river; come on, Maggie, let's go down and see him." I followed along in idle curiosity and saw the man. It was the body of an old man and I gave his name to the coroner.

FRED MATHER.

Moosehead Fishing.

KINEO, Me., Sept. 23.—Just a word in regard to the fine fishing we guests of the Mt. Kineo House are enjoying. Mr. Frank Payson, Portland, Me., two fine landlocked salmon, 9lbs. in weight, also fifteen trout; Mr. Z. T. Hollingsworth, Boston, Mass., three trout, 10lbs. in weight; Mr. A. S. Jerome, Louisville, Ky., two trout, 8lbs. in weight; Mr. A. H. Jackson, New York, one salmon 4lbs. and one trout 3½lbs.; Mr. J. W. Kirkham, Springfield, Mass., eight trout, 8½lbs. in weight.

These trout and salmon were taken with fly, and only a short distance from the hotel. These are only a few of the many catches brought in daily.

The prospect of hunting for moose, caribou and deer was never better; large numbers are seen daily by some of the guests, and a great many sportsmen are preparing for the woods, so as to have their share when the law is off, which will be Oct. 1. The weather is fine, and there are over a hundred guests here at the Kineo House to enjoy it. The large house will remain open until Oct. 15.

A KINEO SPORTSMAN.

How Calcutta Bamboos are Mottled.

AT every joint the bamboo has a silicious sheath which enfolds it close to the joint, opening between the two joints. It would take time to strip this by hand, moreover this thin tissue cuts like a knife. To remove it the bamboos are cut and allowed to dry a week or so in the sun. A large wood fire is then made and allowed to burn until there is only a mass of glowing coal. The bamboos are then drawn singly or in twos or threes across the fire; the sheath burns like tinder, tinting the bamboo deepest at the joint, where the sheath has most substance. This process heats the sap also, and an instant suffices to straighten the bamboos, which are generally curved and sometimes crooked.

C. F. AMERY.

THE ST. LAWRENCE RIVER PARK.

Editor Forest and Stream:

The members of the Fisheries, Game and Forest Commission of New York State have just made their long-talked-of visit to the St. Lawrence River for the purpose of looking over the territory included in the International Park, and obtaining information upon which to base a report to the Legislature. Last winter a law was passed establishing as a State reservation all that part of the St. Lawrence River lying and being within the State of New York, with the islands therein. The law also provides that it shall be the duty of the Board of Fisheries, Game and Forests to report to the next Legislature of this State what laws, in their opinion, should be enacted for the government and control of said State reservation, so as to make the same the most useful to the people of the State as a part of an international park on the St. Lawrence River.

The members of the Commission are: President, Barnet H. Davis, Palmyra; William R. Weed, Potsdam; Hendrick S. Hadden, Syracuse; Charles H. Babcock, Rochester; Edward Thompson, Northport. And they were accompanied by A. B. Strough, representing Charles A. Taylor, assistant secretary; Major J. W. Pond, chief game protector; Deputy State Comptroller W. J. Morgan, Buffalo; Superintendent of Public Instruction Charles R. Skinner, Albany, and Assemblyman C. J. Clark of Carthage.

The Anglers' Association of the St. Lawrence River at its annual meeting, held last month, talked over the proposed visit of the Commissioners and appointed a reception committee for the occasion, consisting of George C. Boldt and W. C. Browning, New York; G. H. Strough, R. P. Grant, Dr. J. E. Liddy, G. M. Skinner, Clayton; W. H. Thompson and A. C. Cornwall, Alexandria Bay; Henry R. Heath, Brooklyn.

The Commissioners and other members of their party arrived in Clayton last Friday, where they were met by the reception committee and others from the Anglers' Association, who handsomely entertained the visitors during their stay in the island region. The steamer New Island Wanderer, which was in waiting at the dock in Clayton, took the entire party up the river on a tour of inspection, the first stop made being at Cape Vincent. At that point C. M. Clark, president of the Lake Ontario Fish Company; H. D. Dean, superintendent of the Cape Vincent Station of the United States Fish Commission, and Maj. J. H. Durham, a prominent member of the Anglers' Association, joined the party. The steamer then proceeded across the foot of Lake Ontario and into Chaumont Bay. It is said that there are nearly 100 square miles of unprotected water in that vicinity, free to net fishing and containing the best spawning beds for black bass to be found in that region. The Anglers' Association is anxious to have this water closed to netting and the Commissioners were shown the necessity of it. Subsequently the party visited Kingston, Gananoque and Clayton, and then went to Alexandria Bay, where they spent the night.

On Saturday the lower end of the State reservation was visited. The party first went to Brockville and thence to Ogdensburg, where they were entertained at dinner by the Board of Trade of that city. Senator George R. Malby, ex-Mayor E. A. Newell and other prominent citizens of Ogdensburg accompanied the Commissioners and their party in the afternoon on a trip down the river to Lotus Isle, nine miles distant, the excursion being made on the steamer Oclamena. Returning to Ogdensburg later in the day, the Commissioners and members of the Anglers' Association bade adieu to their hospitable friends in the Maple City, and again embarking on the New Island Wanderer, proceeded up the river to Clayton, where Sunday was spent.

The Canadian Government has set an example in the work of establishing an international park on the St. Lawrence River which it is earnestly hoped that New York State will follow. Eleven islands on the Canadian side of the river have already been set apart for park purposes, and the Anglers' Association and others interested in the river would like to have similar action taken on the American side. The Canadian islands reserved are: Aubrey, Mermaid, Beau Rivage, Camelot, Endymion, Gordon, Ninette, Georgiana, Constance, St. Katherine and Adelaide.

The Commissioners appeared well pleased with their visit to the St. Lawrence River, and it is believed they will recommend an appropriation to purchase a number of islands for park uses. Under the present condition of things it is difficult to find a spot where a party can go for a day's outing on an island without taking a chance of being molested or accused of trespass. Most people dislike to take the risk of being thus unpleasantly disturbed while out for a quiet day, and would hail with delight a measure providing camping sites free to all, and suitable spots where parties can enjoy a private picnic without fear of being disturbed or ordered off the premises by the owner or his subordinates.

The Commissioners remained on the river until yesterday, and before leaving were royally entertained at dinner by George C. Boldt, proprietor of the Hotel Waldorf, New York, at his palatial summer residence on Heart Island, near Alexandria Bay.

The Anglers' Association of the St. Lawrence River, which has a membership of between 300 and 400, including many prominent and influential men from different parts of the State, has accomplished a great deal toward advancing the interests of the Thousand Islands region since its organization in 1883. Its work has been manifested in the enactment of salutary laws for the protection of game fish, in ridding the river of nets, and in stocking the waters with young fish. It is still continuing its labors along these lines with unabated energy, and in addition thereto is zealously advocating all measures calculated to prove beneficial in connection with the International Park. The Association is entitled to great credit for what it has done and is doing for the river, and every one who is in any way interested in the Thousand Islands should accord it cordial support. PORTSA.

UTICA, N. Y., Sept. 22.

Oneida Lake Muskalonge.

THE long-disputed question as to whether the so-called pickerel from Oneida Lake, which are so plentiful in the Syracuse market in the spring, are really pickerel or muskalonge, has been definitely decided by the courts, assisted by an array of experts on fishculture whose authority cannot be doubted. Fishermen throughout this section will be glad to learn that this fish, game by nature, is game by law, and that it will enjoy the full benefit of the law prohibiting capture by netting.

On April 26 Game Protector Spencer Hawn and three assistants detected Joseph Epstein in the act of carrying a load of fish which had been caught in a net over the Bridgeport road in a wagon. He had between 500 and 600lbs. of fish, in the number being a large percentage of the peculiar variety known as Chautauqua muskalonge. The case was reported to the State game authorities and proceedings were commenced at North Syracuse before a judge and jury to compel Epstein to pay a fine of $25 imposed by the law for the offense, and $10 apiece for four muskalonge, this number being taken to make a fair test case. At the trial on June 30 so much evidence was taken from encyclopedias and other books of science that the minds of the jurymen were in a terrible jumble when the time came for rendering a verdict, and they came to no agreement.

The case was tried a second time before Justice Reese. This time the people were prepared with more convincing evidence. The case was ably conducted by Frederick Kuntzsch, of this city, and he had present as expert witnesses Jonathan Mason and Frederick Redbank, of the State fish hatcheries at Chautauqua, and Game Protector Potter from Chautauqua. These men swore that the fish in Oneida Lake, a specimen of which was in court, were muskalonge. Harrison Hawn, ex-Game Protector, a brother of the present Protector, swore, on the other hand, that they were pickerel, as did also John J. Berry and other fish dealers of this city. But the people made their coup when the culturists produced a fish in court and the opposition witnesses were asked to name it. It was a genuine Chautauqua muskalonge brought fresh from Chautauqua Lake. Mr. Berry and the other people who called the Oneida Lake fish pickerel unhesitatingly called this muskalonge a pickerel. This convinced the jury and they brought in a verdict in accordance with which Epstein will pay a fine of $65. He says he will appeal the case.

It developed during the trial that 150,000 muskalonge fry from the Chautauqua hatcheries were placed in Oneida Lake during 1892 and 1893. This accounts readily for the appearance of this fish in these waters.—*Syracuse (N. Y.) Standard.*

A DISASTROUS OUTING.

From the Morning Oregonian.

H. E. STILLWELL and James Ingram, members of a party of four who left Des Moines, Ia., something over a month ago for a hunting and fishing trip in the North west, arrived here yesterday morning and left last night to visit friends near Harrisburg, from which point they will proceed to California. The other two members of the party met with peculiar misadventures, and are now on their way home in care of relatives. One of them is T. A. Roberts, who is perfectly helpless and paralyzed from stings of hornets, and the other is William Davidson, with a pistol bullet buried somewhere under his left shoulder blade, where the doctor has not yet been able to find it.

The party, soon after crossing the Oregon line, fell in with an old trapper and hunter named Jake Boyd, whom they engaged to take them into the most inaccessible part of the Blue Mountains, to hunt elk and mule deer. They camped on small streams emptying into Desolation Lake, and for a week enjoyed the finest hunting imaginable and splendid fishing in the lake and its tributaries.

On the 2d inst. the party, with their guide, started out to have a final hunt at the head of the lake, as the elk and deer were beginning to move off down to the plains and the weather was getting uncomfortably cool at night. Roberts took along his fishing tackle, and on the way up the lake decided to be put out on a small jam of driftwood which had collected around a huge old snag, the bleached roots of which rose above the water about half a mile from the south shore of the lake, and around which he had noticed a great many trout rising as he had passed up and down the lake.

It was just after sunrise when he was landed on the snag, where he proposed to stay till the return of the hunters. The balance of the party proceeded to the head of the lake, where they got on the trail of an elk, which, after stalking for three hours, they killed near the point they started from.

While they were eating their lunch, a flock of wood ducks came around a bend of the shore and each of the party seized his revolver to take a shot at them. Davidson and Boyd, the guide, ran toward the shore to get a better shot at the ducks, and as Boyd took aim Davidson stumbled in front of him and the bullet entered Davidson's back, ranging across and remaining buried in the muscles on the shoulder blade, near the shoulder joint. Davidson was placed in the boat, the flow of blood stopped as well as possible, and the party returned to camp.

When they arrived at the snag, where they left Roberts, they were astonished to find him in the water up to his chin, holding on to a root, while thousands of vicious, big, black hornets were circling about his head. When the boat approached the snag, the inmates were attacked by the hornets and quickly forced to retire, despite agonizing moans and cries of Roberts, who seemed almost unconscious.

After considering what was best to do, the party rowed to the nearest shore and secured a long pole, on the butt end of which a hook was made by cutting off a limb. A lot of dry brush and moss was gathered and fastened to the end of another long pole, and the party returned to the snag, taking the precaution to button up their coats, tie handkerchiefs over their faces, and pull their hats well down over their ears. When they neared the snag the brush and moss was set on fire and pushed out ahead on the drift. This drew the attack of the hornets, which rushed into the smoke and flame in scores, and while this was going on Stillwell managed to fasten the hook into the clothing of Roberts, and the men at the oars soon pulled them all away to a safe distance, when Roberts was dragged on board, more dead than alive, and the boat was headed for camp.

Roberts was able to explain that he began fishing soon after he was put ashore and caught a number of fine trout, but as soon as the sun was up about an hour and it began to get warm hornets by thousands began to issue from a cavity among the roots of the snag and at once assailed him with great fury. He had slid into the water, but, of course, could not keep his head under, and he had been stung all over his head and face till he was nearly dead and his head swelled to twice the natural size. The stings on the back of the neck, at the base of the skull, seemed to have affected his spinal cord and the nerve centers, and rendered him completely helpless and paralyzed.

As soon as camp was reached, the guide was sent out with telegraph dispatches to the relatives of the injured man and to procure a doctor. On the way out he found Dr. Brand, of Boise, in a mining camp, where he had been called, and sent him to the lake, where he did all in his power for the two sufferers. Boyd proceeded to the railroad, sent the dispatches, and received replies stating that a brother of Roberts and one of Davidson's family would start West next morning, and then hastened back to the lake, where litters were constructed from poles and blankets, and Stillwell, Ingram, the guide and Dr. Brand started to pack the injured men out.

It took them five days to make thirty miles through a country where there were no trails, and then they were met by the men's brothers, with a physician and everything necessary. They reached the railroad Tuesday evening, and, after seeing their unfortunate friends off for the East, Messrs. Stillwell and Ingram came on here. The physician said that Davidson would probably recover, but his arm would be useless, while he was inclined to think that Roberts would remain a helpless paralytic during the remainder of his life, and would probably not survive long.

Delaware River Salmon.

RECORDS of illegal salmon catching in the East and West Branch of the Delaware, at Lakin's Eddy and near Walton, were given in the New York *Times* Sept. 4. Writing from Middletown, N. Y., Sept. 25, Edward Canfield, General Superintendent of the Ontario & Western Railway Company, says:

"Another salmon has been taken from the Beaverkill. This one on Saturday last—from an eel rack or weir—about a mile above Trout Brook. The salmon was 37in. long and weighed 14lbs. This water is inhabited by trout, and the eel weir is clearly a violation of Section 143 of game and trout laws. We might have some fine fishing in a year or two if the Fish Commissioners gave the salmon a fair show in these waters, and without going to Canada."—*New York Times, Sept. 27.*

Trout of Frost Pond, Me.

YOU ask for reports of rod luck. On Aug. 6 at Frost Pond, two miles from Ripogenus Lake, Me., we caught with one rod in a little over four hours twenty-one trout ranging from ¼ to 2lbs. We went there again from our camp on Ripogenus and had almost as good luck. It is by far the best pond we have ever seen.

R. K. THORNDIKE,
J. C. GREW.

A Large Channel Bass.

NEW YORK, Sept. 28.—*Editor Forest and Stream:* Fred Sauter has mounted a large channel bass, or red drum, caught by Dr. Denhart, of New York, Sept. 22, off Bay Shore, L. I. This fish weighed 43lbs. when received by Mr. Sauter, and measures 4ft. in length by 2ft. 7in. in girth just back of the pectoral fins. When opened a number of menhaden and a large skate were found in its stomach. J. B. B.

Game and Fish Protection.

A Rhode Island Snarer Taken In.

PROVIDENCE, R. I., Sept. 26.—*Editor Forest and Stream:* Inclosed find the *Journal's* report of the arrest of a man who has been one of the worst men in the business. The Association has spent over $100 in looking after snaring during the month of September. J. F. RUSSELL,
Treasurer Rhode Island Association for the Protection of Game and Fish.

One of the worst violators of the game laws in the State is said to have at last been captured by the persistent and patient efforts of President Thomas W. Penney, of the Rhode Island Game Protective Association, assisted by Game Warden W. L. Plaisted and Special Officer L. F. Doane, of Johnston.

Allen Stone is the man whom the officers have been so anxious to capture. He lives in Foster, and is a big man physically. It has been openly declared that Mr. Penney would not dare to molest Stone, and it has even been hinted that the officials connived with Stone to permit him to do a big business.

Many complaints having been made, last Saturday night Game Warden Plaisted and Special Officer Doane were sent to Foster to go into the woods, find some of the snares and stay in the woods watching them until they could get the offender in the act of collecting. Ever since, through the storms of Saturday and Sunday and the cold wave which followed, these men have been in the woods.

Two snares were found close together, and these were watched continuously, day and night. No one approached the snares Sunday or Monday and the officers reported to Mr. Penney. He directed them to search the woods and find the hiding place where the game was kept. They found a box in the woods. There were no birds in it, but there were feathers, which indicated that the box was used.

They sent word of this to Penney, and he made a midnight drive to Foster, armed with warrants prepared to arrest Stone for having game in his possession in the closed season, starting at 10 o'clock Wednesday night and arriving there at 3 o'clock in the morning.

Plaisted and Doane watched the box in turns. At 11:15 o'clock Wednesday morning, they say, they saw Stone visit the box and deposit a number of birds. The warrants had not arrived then and as this was Stone's land they decided to wait for further orders from Penney. That night they saw Stone's son, fourteen years old, visit the box and deposit four birds in the box. Thursday morning, when Penney and Russell arrived, they all took turns watching for the appearance of Stone.

He was seen to pass through the woods with a dog and gun, and at noon return. He went directly to the box, dropped to his knees, and opening the box proceeded to pull a partridge out of the pocket of his hunting coat and put it with the rest in the storage box.

The moment for which the watchers had been waiting had arrived. Penney, he says, proceeded to work his way stealthily to Stone's side. Stone's dog espied him and began to growl. Stone turned quickly, but Penney called the others, and at the same moment sprang forward and seized Stone with a partridge still in his hand.

Stone manifested an inclination to resist at first, but the officers placed twisters on his wrists, and he was convinced that it would be futile to fight, although he vigorously protested that because he was on his own land he had a right to do as he pleased.

When Stone's wife found that he had been arrested there was a scene. She protested that he should be allowed to go to his house and change his clothes. The officers would not permit him to get such a chance to slip away from them, they said, and said that if he changed his clothes it should be done in their presence, and it was done.

The nineteen birds, the man and the box, were all taken to Olneyville, where Stone was arraigned in the Eighth District Court. Each bird was numbered, and warrants were issued for each numbered bird.

Stone pleaded not guilty and was required to furnish bonds in the sum of $1,900 for his appearance on Friday, next week, for trial. He was released on bail provided by a neighbor.

The penalty for having a partridge in one's possession in the closed season is $20 and costs in each case, and as there are nineteen cases the fines and costs will amount to about $525, as near as it can be estimated.

Wilkins vs. Campbell.

BEING a game warden's deputy is not all "beer and skittles," as some of Fish and Game Protector McGuire's appointees in various parts of the State have good reason to know. Just why they cannot shoot game when and where they want, regardless of season, is something a great many persons in the rural parts cannot understand, and when they are raked over the judicial coals for some such violation of the spirit and the letter of the game laws they sometimes try to make things unpleasant for the deputy who was instrumental in their prosecution.

A case of this kind which has just come to Mr. McGuire's notice occurred quite recently in Lane county. M. O. Wilkins, an attorney of Eugene, who is acting as Mr. McGuire's deputy, because of his desire to preserve game in that section, recently prosecuted one George Campbell for shooting Chinese pheasants during the close season. Mr. Campbell admitted his guilt, and, with an excusable lack of cheerfulness, his father, Robert Campbell, paid a fine of $50 and $8 costs. Then Mr. Campbell, Sr., tried to make things uncomfortable for Deputy Game Protector Wilkins, finally causing the following notice to be published in a Lane county paper:

NOTICE.—*To the Lane County Game Warden:* If the Chinese pheasants on my farm belong to the State of Oregon, it is hereby notified to remove them at once, or else I will kill them.

ROBERT CAMPBELL.

Deputy Game Protector Wilkins was very much amused when he read this notice, and at first was inclined to let the matter drop. But, on thinking it over, he concluded to reply to it, and accordingly had the following answer published:

To Robert Campbell, Springfield, Ore.—Sir: The State of Oregon owns no birds of any kind upon your farm. The State of Oregon has, however, provided an act for the protection of game, fish, songbirds and other wildfowls, and also for the appointment of a fish and game warden, whose duty, as well as the duty of every sheriff, constable and district attorney, it is made to enforce said act. It is unlawful to kill grouse, quail, pheasants or partridges between Dec. 1 and Sept. 1 following. It is likewise unlawful to sell any of said birds between Nov. 15 and Oct. 15 following, or kill more than twenty birds in any one day. Penalty for killing during close season, $50 to $100; for selling birds out of season, $25 to $200. (Session laws 1895, pages 92 to 100.)

Association of a people in a government implies that the whole should protect all its parts, and that every part should pay obedience to the will of the whole; or, in other words, that the community should guard the rights of each individual member, and that in return for this protection each individual should submit to the laws of the State, without which submission it would be impossible to extend protection to any.—BLACKSTONE.

If you can remove the said birds from your farm without a violation of the game laws of Oregon, no crime will be committed against the State of Oregon; but if you violate the game laws you are liable to prosecution by its sworn officers. M. O. WILKINS,

Deputy State Game and Fish Protector for Lane County.

Dated Sept. 11, 1896.

In conclusion, Mr. McGuire said yesterday: "Mr. Wilkins is not having the Chinese pheasants removed from Mr. Campbell's farm, neither is Mr. Campbell likely to kill any of them during the close season."—*Portland Oregonian.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Oct. 6 to 8.—Danbury Agricultural Society's show, Danbuy, Conn. G. M. Rundle, Sec'y.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detriot, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y, Roxbury, Mass.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 2.—Carlisle, Ind.—Union Field Trial Club's inaugural trials. P. T. Madison, Sec'y, Indianapolis, Ind

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Waynesburg, Greene County, Pa.—Central Beagle Club's trials. L. O. Seidle, Sec'y.

1897.

Jan. —.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

THE MEAT DOG.

WHILE at Kennedy, Minn., recently, in attendance on the field trials which there afforded competition to pointers and setters, giving therein the unprejudiced exhibition of what chicken dogs should be, and more yet what they should not be, it was my good fortune to have a couple of days' chicken shooting with Prof. Edm. H. Osthaus and Mr. A. P. Draper, both of Toledo, O., both excellent shots in the field, and better yet, each considering his sport as being incomplete unless fully shared with his companions.

To recount the long shots, the difficult shots and rare misses, and the *bon mots* of those merry men in their diligent quest of the heavy flying bird, prairie chicken; the grave discussions on powders, loads, shells, etc., and the vain-glorious boastings of Jack, the driver, were above the ordinary in interest—but that is another story, not the one herein intended, for this is to commemorate the worth and doings of a dog whose excellence made chicken shooting possible to us in a section where birds were few; where extraordinary ability on the part of the dog was necessary to insure any shooting, and the manner in which our dog did it is deserving of all praise, barring the single fault of willfully flushing at times, though in this there was no malice nor intention to do wrong. It was the only way in which he had been accustomed to deal with the birds, and therefore it was the way he thought to be right, yet he constantly improved.

His name is Mac, this being taken out of the middle of his real name for the sake of brevity, which name was too long and cumbersome in familiar addresses to the dog, and, as may now be surmised, Mac is an Irish setter. He is owned by Mr. Ryan, of the Hotel Ryan, St. Paul. Could the admirers of the beautiful Irish setter have had the happiness of seeing Mac at work, they would be cheered on to greater effort in the cause of Irish setter breeding; energetic effort backed by such supreme faith that there would be no uncertainty as to successful results, instead of the half-hearted support now accorded him by the most ardent of his admirers and the apathy of the others.

Mac bears all the characteristics of the well-bred Irish setter in type, color and instincts, with all the better field capabilities of all breeds, setters and pointers. He is about 50lbs. in weight, coat good, but somewhat faded from his open-air life, and there is a poise and confidence in his deportment which comes from a clear and healthy brain, one free from nervous imaginings and narrow reasonings, in so far as dogs do reason, and to his clear understanding was added a most benignant and amiable disposition. His eyes were light in color, but intelligent and mildly watchful of all that was going on. While riding in the wagon there were no nervous whinings nor fussy actions, impatient betokenings to begin work, and once cast off there was no returning to the wagon with beseeching looks or prayers that work be ended and a ride be offered. He was cool, level-headed and enduring.

At first Mac showed a mild distrust of his new friends when they went afield together, as was becoming toward people with whom he was unacquainted; but kindness and common interest in the sport soon won his friendship, and he worked with an industry and cheerful good will which was without limit.

His manner of going is distinctly different from that of most field trial dogs. He was all distinctly useful. He had a steady, swinging gallop, smooth in its action and thus free from the choppy or jerky stride so often seen in dogs running in haste, and he carried his tail and head rather low, the former without any action, as is commonly the case with dogs which are seriously intent on business and not disporting themselves in physical frolic. He thus was in his style not so pleasing to the eye, though it may be said that there is a great difference between the dog which goes with a merry air and little merit in material performance and the one which goes with a business air and useful purpose. Style without other merit is useless.

He swept the country in magnificent casts, keeping his eye on the course of the wagon and governing his doings by it, and when the nature of the ground required he ranged closer. Hour after hour he would maintain his swinging gallop, perhaps trotting for a few moments by way of rest, then resuming his tireless seeking.

Taken into the same section on a second day, on a flat prairie, where there was but little to aid the memory as to location, and where most of men would be unable to distinguish one place from another, though they had seen it before, he would remember the haunts of the birds and seek for them again, and it was rare that he missed them. His success as a finder was extraordinary, and it is safe to say that he was almost certain to find any birds in the scope of his fling. His nose was of the best, and once on the trail he would go to the birds with most pleasing quickness and accuracy, be they far away or near. But from bad previous handling he was not properly stanch. He would point awhile, then sometimes—not always—press closer and flush, though never riotous and never inclined to chase. From observation on his own part and kind treatment on ours he was constantly working with more finish to the gun, and had we had him a few days longer he would have been perfectly stanch. At the end of the day he would be still galloping in his easy stride, seeking chickens with the calm earnestness with which he began, and at the end of the last day he was still going in the same manner. Of course he was taken into the wagon betimes and rested a few minutes, not because he showed any signs of distress at all, but to betoken our appreciation of the Irish dog which could do what many others of far more pretension could not do, and to be kind to one which served us so well. We had two pointers—kindly loaned us by friends—of whose performance much might be said, though it were better left apart from what is said of Mac, and better said in the ill moments when one has sad thoughts.

Could Irish setter breeders and admirers know the excellence of this dog, they would take new heart and feel that though but one such dog could be bred in a decade, it would be glory enough for the time. Could Brother Hough have seen Mac, he would have accepted him as great without putting him to the test of being run over by a $5 lumber wagon, crawling under a sixteen-rail fence, and eating a quarter of boardinghouse beef all in one day. He was a meat dog of the best, yet the shooter of such fine sensibilities that he will denounce the really useful dog afield must also denounce the man with a gun as being a meat man.

In the cold morning hours when the ground was wet with dew, in the distressing heat of midday hours when the ground was dry and effort doubly difficult, and whether the birds were plenty or scarce, Mac kept diligently and calmly on in his wide casts, finding chickens if there were any to find, and ever searching till he found them. In the heat of the day his nose never dulled, and at no time was it necessary to plead for him that he had run himself off his nose, that he did not have the wind right, that the judges ran him too long, and he did his work without prompting by hand or whistle, or the disgusting bawling of orders so commonly heard at field trials—but then Mac, I am sure, is not a field trial dog, though there is no reason why he and others like him should not be such if his like can be found, and if a field dog may be a field trial dog too. B. WATERS.

BIOPHILISM.

ROSSVILLE, N. Y.—*Editor Forest and Stream:* Several, A Posteriori among the rest, in FOREST AND STREAM and elsewhere, have called my attention to the fact that the dog often corrects or corroborates a perception through the eyes by one through the nose; as though in that fact (which I incidentally brought forward in my first letter to FOREST AND STREAM on "The Dog and the Picture") there were something militant against my notion of the lower animal's essential oneness with man.

The truth is that man is constantly correcting perceptions through one sense by those through others. This truth was brought to my mind very forcibly within a day or so. Among the peach trees upon the rectory grounds is one which bears a very large, luscious fruit. I showed the fruit and the tree to a caller—a gentleman somewhat up in fruits. When I had shaken the tree and a peach had fallen to the ground, the gentleman picked it up and said, "It looks like a Morris White." Then he dented it with his thumb, broke the skin with his thumb nail, held the peach near his nose, and said, "Yes, it is a Morris White." In so doing this highly developed gentleman (for such he is) did just what the dog does when he makes sure through his nose that the perception through his eyes is correct.

Material things reach the consciousness of the lower animal just as they reach the consciousness of man, through the five senses—sight, hearing, touch, taste and smell. When it is necessary to a more perfect cognition, or recognition, one sense supplements another. The activity of one, or two, or three, or all of them may be necessary to a perfect cognition, or recognition. That is clearly all there is of the matter in hand—in the case of man, butterfly, elephant or dog.

I would hardly say that those who give the matter sufficient attention agree with me in every particular in biophilism; but I am free to say that I have never yet met a man or woman who would, without prejudice, give me a hearing who did not see my reasons for holding as I do in psychology—that what man is largely, in every particular, that the lower animal is—to some degree. This came to me with great force but yesterday. A lady who is very much prejudiced against biophilism attended a symposium which I gave at the rectory here on Wednesday evening, Sept. 9—the opening symposium of my this season's work in biophilism. She did not say much to me, but she remarked to a mutual friend: "Why, I had no idea before that the lower animal is so wise. Mr. Adams is right!"

This remark I do not quote in self-laudation, but in the mighty desire that I may be harkened to by those who sneer without knowing. Some time ago a man of great wealth said to me: "You had better be doing something for hungry humanity, and let the dogs hustle for themselves." I made what may not be considered a very clerical remark: "I'll bet you $50 that, in proportion to my income, I give fifty times more to the poor people about me yearly than you do!"

He would not put up; so he shut up. The great truth is that the gospel of biophilism is the gospel of universal generosity. The one who is kind to his horse or his dog, on principle, because he knows what is in the animal, is kind, on principle, to his fellow man; woman or child, because he knows what is in him. The intelligence of biophilism comes by comparison—is based upon knowledge of humanity.

I will go anywhere to lecture or hold symposia in biophilism. I am anxious for the sake of both the lower animal and man that biophilism should spread—that people should come to know what it stands for.

CHARLES JOSIAH ADAMS.

Fitchburg Dog Show.

FITCHBURG, Mass.—*Editor Forest and Stream:* The kennel exhibition held in connection with the Worcester North Fair was a very decided success. It even compared very favorably with the bench shows of the larger cities and was decidedly the feature of the fair. Supt. H. A. Morse, of Leominster, can be congratulated, as the dogs were benched in excellent shape, and the stalls and surroundings were kept wonderfully clean. The judge of the show was H. W. Lacy, editor of the *American Stock-Keeper*, and his awards were very justly made, and his decisions were very complimentary to the show.

Among the well-known dogs noticed were: St. Bernards—Governor Russell and Dictator, of the Waban Kennels. Pointers—King of Lynn and the Wanoosnoc Kennels' splendid exhibit of Gordon setters, among them being: Champion Ranger in the challenge class, Wanoosnoc Prince, Count Leo, Grouse and others in the open class. In all there were upward of 100 entries, and the first dog show held in Fitchburg was one to be proud of.

E. W.

U. S. F. T. C. Derby Entries.

TRENTON, Tenn.—*Editor Forest and Stream:* I send you list of entries for the United States Field Trial Club's winter Derby, to be run at West Point, Miss., beginning Jan. 18, 1897. They number fifty-three—twenty-eight English setters and twenty-five pointers, all whelped after Jan. 1, 1895. No Gordon or Irish setters were entered in this Derby.

POINTERS.

SAHIB—Charlottesville Field Trial Kennels' liv. and w. dog (Delhi—Selah).

RUPEE—Charlottesville Field Trial Kennels' liv. and w. bitch (Delhi—Selah).

DECCAN—Charlottesville Field Trial Kennels' b. and w. dog (Rip Ray—Dolly D.).

RIPSTONE—Geo. Eubanks's b. and w. dog (Rip Rap—Pearl's Dot).

RIP RAP, JR.—Chas. Pineo's b. and w. dog (Rip Rap—Pearl's Dot).

FAIRY KENT—Ed. Fay's l. and w. bitch (Lad of Beaufort—Daisy Kent).

TICK'S KID—Del Monte Kennels' b. and w. dog (Tick Boy—Lulu K.).

TONY WORKS—Del Monte Kennels' liv. and w. dog (Tick Boy—Lulu K.).

RIPPLE—H. S. Smith's liv. and w. bitch (Rip Rap—Pearl's Dot).

AL MORAN—W. M. Hundley's liv. and w. dog (Ightfield Upton—Ightfield Blythe).

ELGENE—T. T. Ashford's liv. and w. bitch (Kent Elgin Julia Paine).

BALSORA—T. T. Ashford's b. and w. bitch (Rip Rap, Jr.—Prairie Belle).

ALOYSIA—C. S. Schoop's l. and w. bitch (Rip Rap—Dolly D.).

DYMPNA—C. S. Schoop's b. and w. bitch (Rip Rap—Pearl's Dot).

FIRE FLY—J. S. Crane's liv. and w. bitch (Rip Rap—Clipaway II.).

LA ROSA ELGIN—W. B. Townsend's b. and w. bitch (Kent Elgin—Julia Paine).

LA DOLLE—W. I. Love's l. and w. bitch (Love's Kent—Fritz's Fay).

ALMEDA—H. K. Milner's liv. and w. bitch (Rip Rap, Jr.—Prairie Belle).

MOERLEIN—T. W. O'Bryne's b. and w. dog (Rip Rap—Belle of Ossian).

REDSKIN—T. W. O'Bryne's l. and w. dog (Love's Kent—Fritz's Fay).

ALABAMA GIRL—H. H. Mayberry's liv. and w. bitch (Von Arrow—Lady Mull).

MAIDA—G. A. Castleman's liv. and w. bitch (Rex—Nell).

DIANA—George H. Smith's liv. and w. bitch (Count Graphic's Pat—Bessie Croxteth).

TORY MAID—F. R. Hitchcock's liv. and w. bitch (King of Kent—Queen Grace).

HEMPSTEAD DRUID—S. D. Ripley's liv. and w. dog (Sandford Druid—Hempstead Jilt).

SETTERS.

PIN MONEY—Charlottesville Field Trial Kennels' b. b. bitch (Count Gladstone—Daisy Croft).

SHADOW—Charlottesville Field Trial Kennels' l. and w. bitch (Count Gladstone IV.—Daisy Croft).

RODSTONE—George Eubanks's b., w. and t. dog (Cinch—Rod's Flounce).

SARSFIELD—J. P. Greene's b., w. and t. dog (Rodfield—Opal).

ROBERT EMMET—J. P. Greene's b., w. and t. dog (Sam Gross—Bess R.)

WALTER GLADSTONE—H. B. Ledbetter's b., w. and t. dog (Gladstone's Boy—Nat's Queen).

SARAGOSA BELLE—P. M. Essig's b., w. and t. bitch (Gleam's Pink—Maud E.).

TARTAR—S. L. James's b., w. and t. dog (Count Gladstone IV.—Rod's Sylph).

COUNT GLEAM—S. L. James's b., w. and t. dog (Gleam II.—Laundress).

MINNIE P.—A. C. Peterson's o. and w. bitch (Antonio—Hunter's Nelly Bly).

BILLY T.—W. R. Halliday's b. and w. dog (Revenue—Daisy Bondhue).

ALBERT LANG—Theo. Goodman's b., w. and t. dog (Count Gladstone IV.—Dan's Lady).

DAVE EARL—Theo. Goodman's b., w. and t. dog (Count Gladstone IV.—Dan's Lady).

POTOMAC—Fox & Blythe's b., w. and t. dog (Antonio—Countess Rush).

CAROLINA—Fox & Blythe's b., w. and t. bitch (Antonio—Countess Rush).

COUNT ODUM—J. J. Odum's o. and w. dog (Count Gladstone IV.—Topsy Avent).

ROD'S PELL—H. R. Edwards's b., w. and t. bitch (Rodfield—Opal).

GUENN—H. Ames's b., w. and t bitch (Blue Ridge Mark—Lou R.).

CHRISTINA—H. Ames's b., w. and t. bitch (Blue Ridge Mark—Lou R.).

HURSTBOURNE ZIP—S. P. Jones's b., w. and t. dog (Tony Boy—Dimple).

TORY RUSTIC—F. R. Hitchcock's b., w. and t. dog (Count Gladstone IV.—Rhoda Rod).

PALADIN—Avent & Thayer's b., w. and t. dog (Count Gladstone IV.—Hester Prynne).

PECONIC—Avent & Thayer's b., w. and t. dog (Count Gladstone IV.—Hester Prynne).

ORESTER—Avent & Thayer's b., w. and t. dog (Orlando—Dollie Wilson).

ORINDA—Avent & Thayer's b., w. and t. bitch (Orlando—Dollie Wilson).

NEY—John White's (agt.) b., w. and t. dog (Rio d'Or—Tory Let).

LAMAS—John White's (agt.) b., w. and t. dog (Rio d'Or—Tory Let).

ALMA—John White's (agt.) b., w. and t. bitch (Rio d'Or—Tory Let).

W. B. STAFFORD, Sec'y.

Bull Terrier Club Meeting.

NEW HAVEN, Conn., Sept. 24.—*Editor Forest and Stream:* A general meeting of the Bull Terrier Club of America will be held at the office of the American Kennel Club, No. 55 Liberty street, New York, on Monday, Oct. 12, 1896, at 3 P. M. FRANK F. DOLE, President.

POINTS AND FLUSHES.

Prince Fullerton, brindle greyhound, while being exercised at Woodhaven for the purpose of conditioning him for the Mineola show, was stolen. A reward has been offered for his return to L. C. Whiton, Times Building, New York.

The entry blanks and premium list of the seventh annual field trials of the National Beagle Club of America can be obtained of Mr. Geo. W. Rogers, 250 West Twenty-second street, New York.

In our business columns this week the Muckross Kennels, Springfield, Vt., offer Boston terriers and beagles; C. F. Waterhouse, Atkinson, N. H., offers pointer; B. V. Covert, Lockport, N. Y., offers pointer; F. Schmidt, New York, offers greyhounds; W. A. Sutherland, Cabin Hill, N. Y., offers cockers; Fred McGough, Richardson, Ill., offers beagles; Geo. S. Mott, Superintendent W. K. C., Babylon, L. I., wants a pigeon retriever.

Mr. G. G. Williamson, Muncie, Ind., writes us of the loss of his valuable English setter as follows: "My English setter brood bitch, Ruby's Girl, died Sept. 10. She was the greatest brood bitch living at the time of her death. She was the dam, by Count Noble, of Eugene T., Ollie T. and champ. Count Gladstone IV. By Antonio she was the dam of Lady Mildred and Domino, and bred to Gath's Mark she produced Allene. Ruby's Girl was whelped April 22, 1887, and was by champ. Gladstone—Ruby II., she by Druid—Ruby.

Dr. Geo. W. Massimore, secretary of the Baltimore Kennel Association, writes us that the latter will hold an open show next year, at least for the leading recognized breeds.

In settlement of the affairs of Hilton, Hughes & Co., by order of the assignee, the famous dogs of Col. Albert B. Hilton were sold at auction in New York on Saturday last, bringing prices ridiculously low. The bull dog King Orry, the hero of many contests and many victories, was bought by E. W. Roby for $160. Grosvenor Lass, bull bitch, was bought by G. W. H. Ritchie for $35. Iolanthe, bull bitch, bought by H. D. Watson for $50. Hatfield Don, collie, bought by W. T. Ford, Cohoes, N. Y., for $65. Ormskirk Susie, bought by John Bryan, $40. Hempstead Dorothy, a noted collie winner, brought $55; Richard Tracy, purchaser. Sallie, collie bitch, was bought for $27.50 by H. Bryan, Jr. Dewe, Welsh terrier dog, $5; purchaser, M. L. Loughman.

Mr. Geo. W. Rogers, secretary of the National Beagle Club, writes us that the following additional special prizes have been offered at the club's forthcoming trials, as follows: Geo. F. Reed offers service of Harker to the owner of beagle whose dog marks game best at hole by giving tongue. Mr. J. W. Appleton offers a special prize of $10 to the winner of class H. Mr. D. F. Summers offers a well-bred beagle pup to the winner of class H. Mr. G. B. Post offers a special prize of $10 to the winner of class G. Mr. Rogers has sent out about 700 premium lists and entry blanks, and if anyone has been overlooked he may secure all information concerning the trials by applying to Mr. Rogers for it.

From the Canadian *Kennel Gazette* we note the following concerning the case of F. T. Miller vs. the Canadian Express Company:

"We regret that on appeal this famous case has gone against Mr. Miller, the plaintiff in the suit. The following clipping gives the decision: 'Four lifeless dogs were the subject of a successful appeal in the Divisional Court to-day. The Canadian Express Company were the appellants and were relieved of a judgment of $125 with costs, which Frederick Miller, of Trenton, recently obtained against the company as damages for the death of the dogs. The court held that there was no actionable negligence on the part of the company, as the plaintiff had put his prize winners in an ill-constructed box.' We have not heard if Mr. Miller intends to carry the case further."

Wheeling.

A BICYCLE IN THE WOODS.

NORTHWOOD, N. Y.—*Editor Forest and Stream:* For five weeks or thereabouts I have been trying my bicycle as a packhorse in the woods of northern Herkimer county, and now that wheel is about as disreputable an appearing machine as one often sees. Twenty-three hundred miles over city pavements and cobbles had worn the tires—single tubes—down to a pretty thin condition when I started for the woods.

I live at Northwood, and I rode every road thereabouts pretty thoroughly. Sand, hills and rocks were pretty tough wheeling at first; dished my front wheel and broke the wood rim in two places the day after I got there, and I was out of twelve days' riding, but when I had the wheel again away I went once more. Morehouseville is eighteen and one-half miles away, cyclometer measure, with several hills. I went up there the first time in two hours and a half, carrying a .45-90 9½lb. '86 Winchester and a 6lb. bundle of duffle. I waded the West Canada Creek at Noblesborough with the wheel on my shoulder, and after changing my stockings rode on about fifteen rods, when I climbed a hill afoot.

Leaving my wheel at a friend's, I went hunting over among the lakes beyond the ridge, and judged the bicycle rig—gray shirt, corduroy knickerbockers, golf stockings of a mild hue, and bicycle shoes and cap—about as fine a costume as I ever wore in the woods for comfort and stillness. It rained hard the morning we came out, but I was comfortable about my wool-clad calves, where with the flap-flap of mud-clotted long trousers I would have been most miserable. (Most of my woods friends now wear knickerbockers when riff fishing.)

I didn't get my deer. I didn't even see him, but I had lots of fun. That night I went up the road above Morehouseville, seeing some friends thereabouts till about 11 o'clock, when I started down again on my wheel with a good lamp on the steer head. I didn't enjoy that ride so much as another night ride I made. It had been raining, and though the mud was not deep it would fly around after the wheel and I got a lot along my coat back, which brushed off when it was dry. Next day on the down grade I made the eighteen miles in two hours, that usually takes a horse team four or three if they go briskly. This with my rifle strapped along the frame in its case as S. Pokes carries his guns.

That night after supper I started at 6 o'clock with my brother Elgie. I had my rifle, he had a .38-40 repeater, both on the frames of our wheels in cases. I carried also an elm-splint pack basket in which was a double woollen blanket and some things to eat—say 25lbs. An hour and a half later, after walking all told less than a mile, we arrived at a camp beside an old log trail seven miles away, having waded a creek and adjusted my brother's rifle several times. Next day we rode on to a splash dam reservoir, hunted till 2 o'clock, and later I got one shot at a doe and started for home, picking up my pack on the way past the camp, where we lunched. Of the seven miles through the woods over a trail as rough as most trails in the Adirondacks my brother's wheel was all right, but mine had had its tires blistered in two or three places by sliding off rough rocks. Of the seven miles we walked at the very outside two miles and a half, but we made it in less than half the time that we could have made it had we walked. The two bicycle lamps were admirable about camp. We could have seen to read, and everything was as plainly seen two rods or three away as one could wish.

That night I stayed at home and next day rode seventy-five miles straightaway, past Remsen, through Booneville, into Lowville, clear to Philadelphia, N. Y., riding and walking eight hours about, and took an hour and a half for dinner at Lowville.

I saw snakes, birds, woodchucks, a dead skunk. I traveled through waves of sand beyond Carthage—waded them, in fact—and though I had many times been that way on the cars I did not see anything that I had seen before.

I rode around Philadelphia and over trails I'd never seen before, and on the evening of Aug. 29 took the cars for Prospect. That night I rode seven and a half miles from the station to my home with one slight mishap. There is a hill on one side of the road between Prospect and Hinckly, and a 6ft. bank on the other, with a low fence to keep the cattle in the pasture beyond. I didn't have my lamp, just a cheap flickerer that made shadows where there ought not to have been any. I went down the bank and landed on my back. My wheel I threw to save myself. It went a rod. Elgie found the lamp next day 33ft. from the fence and 50ft. back toward Prospect from where I went over the fence. I wasn't hurt, not even bruised.

Next day, Sunday, I rode to Morehouseville and four miles beyond—twenty-two miles in all. It took two hours and three-quarters. I left at just 11 o'clock that night, with my lamp burning brightly. The roads were fair, the sandy places were damp with dew. For about six miles of the way the road was through woods. In a five-mile stretch of woods I came suddenly upon a porcupine in the middle of the road, which there was fine. I missed the beast by about 6in. My first impulse was to kill it with my .38-40 revolver, but thinking better of it, I did not dismount, but kept on.

There is a rock somewhere in these woods. It has a sloping face toward Morehouseville that rises to a height of say 6 or 8in., then drops abruptly. Now that I think of it, I am sorry I didn't measure how far I jumped, but I guess four paces wouldn't be too much, because for half a mile before the wheeling had been enticingly fine.

When I waded the creek at Noblesborough I could see fish in the water. As before, I changed my stockings on the far side and then rode on.

I have nearly run over partridges on two occasions—missed by less than 4ft. that is—and once had a chipmunk running for fear before me in the road. Crows allow me to pass close by them. Woodchucks are curiosity-struck. I wish somebody would try a wheel on antelope.

As I said before, my wheel looks disreputable. The rifle wore the enamel, a rock bent a pedal, 6in. of tire tape circles the tires; but next year, if nothing happens to prevent, I'm going to take my wheel over a foot trail to the very depths of the woods. I hope before that time to see a camp outfit—skillet and pail and luggage carrier—that will save the small of my back when riding in the woods from the pack basket. The luggage should, I believe, be all on the wheel, and the man be as light as possible, for he has to jump mighty suddenly sometimes.

RAYMOND S. SPEARS.

The Mather Wheelmen.

NEW YORK, Sept. 25.—*Editor Forest and Stream:* Ever since the FOREST AND STREAM has commenced to publish Mr. Mather's "Men I Have Fished With," I have been more impatient to get the paper each week than I am to get my wages when I am "broke." His stories are the greatest treat the FOREST AND STREAM has ever given us. How I would like to shake hands with this grand old sportsman (I hope Mr. Mather does not mind the "old") and tell him how much I admire him. As I said before, to read his stories is a great treat, but what a pleasure it would be to hear them from his own lips.

I am about to start a bicycle club and it shall be called the "Mather Wheelmen," if Mr. Mather has no objection. A number of friends join me in wishing Mr. Mather continued health and happiness. A MATHERITE.

NOTES.

Mr. George E. Jantzer, the well-known revolver shooter and at one time holder of the amateur championship, has joined the ranks of the wheelmen. He writes: "I read of the squirrel shooting trips in FOREST AND STREAM a few weeks ago. I was never in love with a bike, but that sort of gave me the fever. So I bought one, took a few lessons, and last Thursday I packed a little Stevens, went to Jamaica on the railroad, then took the old Merrick road to Islip. I must say I have you to thank for the most enjoyable day I think I ever had."

Mr. Raymond S. Spears would like to hear of the use of the bicycle in hunting antelope. On the sun-baked plains of the West the bicycle would no doubt run easily, especially where the grade was right and loose sand or stones not too much in evidence. The rider would have to beware of the cactus that is found over much of the antelope country to-day, for the spines would play the mischief with his tires, and a single plant might give him

as many punctures as the porcupine which Mr. Spear just missed running over.

Incidentally we believe that the bicycle can be put to good use hunting caribou, and when the Northern lakes and streams are frozen we hope to have some notes on the subject. Caribou love the reindeer moss that grows on the bogs beside the dead water streams as well as the lichens that grow on the trees overhanging the frozen waterways, and in winter most of their time is spent in the bogs or on the ice.

It is next to useless to track caribou, they travel so fast, and the hunter relies on chance meetings. One of the most successful methods of hunting in the early winter is on skates, and here the bicycle would come in. One can ride a bicycle wherever he can skate, and over such a smooth roadway he can cover many times the distance in a day that a skater can. The chance of success in this method of hunting is proportionate to the distance traveled, so the bicycle rider should have a cinch.

Yachting.

Speed of Racing Yachts.

Editor Forest and Stream:

After struggling with one-sided and ignorant comments in various papers—not all Canadian by any means—it was a real pleasure to read your fair and pointed remarks regarding the Canada-Vencedor match in your issue of Sept 12. It is quite true that the lake yachtsmen are not all millionaires, and they have not yet reached that degree of perfection in racing where they are willing to systematically—or unsystematically—build a new yacht each year whether they need it or not. While our method may have its disadvantages from the standpoint of the designer and builder, it occasionally gives opportunity for close comparisons between two such craft as the five-year old Zelma and the up-to-date Canada. The trial racing between these two showed Canada to be the better boat, to be sure, but by such a small margin that one may well ask what the leading designers have been doing in the last five years. Of course I am aware that comparisons must be made with the utmost caution, especially in view of the fact that such necessary data as absolute size and speed cannot always be set forth. But here were two boats of practically the same waterline, sail area and corrected length, built for the same conditions by the same designer, each well prepared and handled; surely the results ought to show whether we are really gaining any more of that elusive quality—speed. Moreover, as you pointed out, Zelma is a staunch, strongly built craft, with good cruising accommodation, while Canada is of lighter construction and with less room below, although by no means a racing machine "quite useless for any other purpose," as some American papers have stated.

I am beginning to think that yachtsmen have, during the last few years, suffered many things of many designers, and are none the better as regards speed, but rather the worse as regards cost and accommodation.

In Great Britia too, the results are such as to justify the belief that the ablest designers are producing craft which are different from rather than faster or better than previous efforts. Look how Britannia has held her place, not for one, but for three or four seasons, and still makes things very lively for Meteor. If her owner had followed the fashions he should have retired her and ordered a new creation at least two years ago. Notice also how Ailsa, at first a failure, has come to the front duriug the season just closed. What business have owners to be knocking about in old tubs like these when by the trifling expenditure of £25,000 or so they might be replaced by brand new, up-to-date, unknown quantities? Probably they hold the opinion that designers cannot be continually making improvements in speed even by running all sorts of risks of construction; and consequently prefer to tune up and develop a craft that has got over the troubles of infancy and offers a certain foundation—a known quantity—to work on.

Coupled with all this comes the news of the "complete collapse of the new rating rule in England"—so a prominent designer describes the existing state of affairs. This is the rule that was to prevent fin-keels and has not done it, and was also to give more displacement and cabin room, and they are yet lacking. There is precious little encouragement to monkey with girth or displacement rules on Lake Ontario so long as a comfortable old cruising machine like Selma can make good racing with fin-keels and such. To put it briefly: Where are we at?

Wm. Q. Phillips.

Clinton, Ont., Sept. 16.

Lake Minnetonka.

The racing of open yachts has flourished for some years on Lake Minnetonka, the fleet of fast craft including Onawa, Kite, Alpha and a number of Dyer boats. The class is a comparatively expensive one, especially as it is necessary to keep together a trained crew of half a dozen. At the present time the question of establishing a smaller class is under discussion, and with a good prospect of its adoption for next season. The Minneapolis *Journal* says:

A meeting was held on Sept. 18 of Minnetonka Y. C. members interested in the establishment of a new class of racing boats at the lake, to be known as the one-rater class. The proposed departure in building was talked over at some length, and the advantages of such a boat as the one-rater seemed to be recognized by the majority of the gentlemen present.

There seems very little doubt that this new type is destined to destroy a great part of the popularity heretofore enjoyed by the big sloops. There are many things in favor of the smaller craft, chief of which is the fact that it costs a great deal less to build and can be handled without such large crews as are necessary on the big sloops. Many yachtsmen owning large boats complain of the difficulty encountered in keeping crews together that are able to do the boats justice, and the one-rater is expected to do away with this trouble. It became apparent in the meeting that orders would be given for at least six of the one-rating sloops as soon as the rules for next season had been decided on. It was mentioned as desirable to have uniform rules for this class of boat both on Minnetonka and White Bear Lake, and a committee was appointed to act with the St. Paul committee in drafting rules that shall be satisfactory to both clubs. The committee is composed of F. B. Long, Fred Hopkins and Henry Moreton.

Mr. Moreton informed the *Journal* this morning that in his opinion the popularity of the one-rater was already assured. He was not yet certain that he would build one, but no man is expected to be certain about a matter of that kind for publication, and from other sources it is learned that he will have one of the first one-raters on the lake in case present plans come to a head. Mr. Long is already engaged on the drawings for his boat and it may be stated as a certainty that Mr. Hopkins will have one on the stocks shortly.

There is an opinion among some members of the club that the latest craze will not seriously affect the first class sloops. It has been whispered about that E. J. Phelps intended to put up a new racing machine next season, and that he has now decided to build a one-rater, but that is the only case known of, and Mr. Phelps himself does not admit that he has considered building any sort of boat in 1897.

As to the immediate prospects for next season, the *Journal* says:

The boat builders at Lake Minnetonka have already begun their annual system of looking wise and hinting mysterious things. Peterson, the Excelsior man, since Tartar turned out to be a success, has taken to walking with his hands clasped behind his back and his head dropped forward, like the first mate of a pirate, and one almost regrets that the old chap hasn't a black beard and fierce moustachios that the *ensemble* might better fulfill this nautical ideal. All Peterson has to say nowadays even when he meets his best friend is "Howdy," which is a lot when you consider that even this monosyllabic form of greeting might disturb certain abstruse calculations destined perhaps to set the yachting world by the ears in 1897. I have it from Peterson himself that there are already several orders on the books in that little brindle-colored boat house at Excelsior, but there won't be anything done on these boats until the committee on rules gets itself together and decides what, if any, innovations are to be inaugurated with the next yachting season. As soon as the question of rules has been settled, Peterson will begin work on a first class sloop for White Bear. Whether or not the old man is going to include the divided skirt idea in his new season productions is something that remains to be discovered. That is one turn of the road where this Norwegian builder cocks his weather eye and looks as inscrutable as the sphinx. He hints vaguely—very vaguely—that there will be several new if not startling ideas involved in the *fin de siecle* craft to represent the Peterson yard in a struggle for sloop honors next year. Nobody knows exactly what the ancient mariner is thinking about, but there is an able-bodied rumor to the effect that one Minnetonka enthusiast has intrusted Pete with the construction of an aluminum boat to enter the sloop ranks next summer. On this point, too, the designer of Tartar is as mum as an oyster. It appears that to put up a hull with more perfect lines than those of Tartar will be a different matter, but it will perhaps be possible to construct a lighter craft of the same dimensions, and one which shall still be as strong.

Over at Deephaven Dyer is making ready for a killing. Already there are several orders booked and not the least important is that of the Chamber of Commerce syndicate for a new sloop to take the place of Marie. It is no use trying at present to find out what new plans will be involved in this craft, but it is certain that she too will be built of the lightest possible material, and in the lightest possible manner consistent with strength. Dyer is also waiting for the committee on rules to do its work, and after that there will be activity everywhere.

Moore, the Wayzata man, has a couple of catboats ordered for 1897 delivery. That is about all that is known of the matter, the names of the prospective owners remaining secret for the present.

The most interesting matter in connection with boat building at present, though, is the practical certainty that a new class will be altogether the most popular next year. A number of gentlemen who have owned in the past, and who still own expensive boats of the larger type, have decided that it is a rather too expensive form of amusement when a sloop of the first class may cost as high as $2,000, and, after having been defeated, is hardly worth keeping in trim, at least for racing purposes. It is not likely that the first class sloops will be swept off the lake by this new departure, but anyhow Messrs. Phelps, Long, Moreton and others are going in for one-raters. The one-rater is going to be popular in the East next year. They have determined down there that the half-rater is too small a boat, and the one-rater is expected to fill the bill. In order to make it plain what a one-rater is, the rule for determining rating is as follows:

"The load waterline length multiplied by square feet in sail area and divided by 6,000."

"After a good deal of experience on Lake Minnetonka," said a well-known yachtsman, "I have decided that the greatest pleasure of sailing either racing or for mere cruising is not to be got out of the first class sloop. A man has to come down on all his neighbors for assistance in making up a crew, and, more than that, he is compelled at all times to look after his boat, which, in times like these, is rather more than a good many of us can afford. For that reason I am going in for a one-rater next year, and my understanding is that several other gentlemen will do the same. In fact, I know of half a dozen boats of this type to be built this winter. In case the one-rater turns out a failure, it will not bankrupt a man of ordinary means to build another, and for this reason alone I believe the type will be popular. It is proposed to sail these boats without a time limit, to limit them to 500lbs. of live ballast, and they must in no case exceed the rating which limits the load waterline length from 15 to 17ft.

"That there will be big sloops built for next season has already been indicated, and the promise of a new class to take the place of the apparently defunct catboat is a matter for rejoicing. Capt. Pete will of course stand by Tartar, and indeed it is hard to see how he could better his position. It is characteristic of the Walkers that they will have a new boat on the stocks within the next few weeks.

Racing at Chicago.

The racing season will finish at Chicago with several match races, challenges having been issued by the owners of Vencedor, Genevieve and Miltona. The first is as follows, addressed to the owner of Siren:

Sept. 14.—*Robert Hayes, Esq.*—Dear Sir: We would like to race for a series of three matches, best two to win, between Siren and Vencedor, to take place Friday, Saturday and Monday, Sept. 18, 19 and 21, 1896, starting at 2 P. M. The start to be one gun. The first race five miles to northward or leeward and return, twice around, first leg to windward if possible. Second race from buoy outside Van Buren street gap to 4-mile crib, to Lake View crib and return, first leg to windward if possible. Third race same as first. Measurement and rules to be those of the Lincoln Park Yacht Club. Judges to be chosen one by each side, they to choose the third. Joseph Ruff to be official timekeeper. Measurements to be made by the official measurers of the Columbia and Lincoln Park yacht clubs, and in case of a disagreement by them the decision of the third judge to be final. Time limit on windward and leeward races, four and a half hours. Time on the triangular race, three hours. The prize to be sailed for is the Lincoln Park pennant, now held by the Siren.

If this should meet with your approval, would be pleased to meet you and your representatives to conclude arrangements.

Mr. Hayes replied as follows:

Sept. 15.—*Messrs. M. W. and E. C. Berriman.*—Gentlemen: Your kind favor of yesterday was handed to me about 4:30 P. M., too late to reply at that time. This morning I placed your communication in the hands of a committee consisting of Douglas Dyrenforth, Monadnock Building; Hon. L. C. Collins, Title and Trust Building; and Mr. Thomas Boyle, No. 185 Dearborn street, with instructions to act in the matter as speedily as possible. Those gentlemen have full authority to make any and all arrangements necessary in the premises. Trusting that the contemplated races will tend to even more closely cement the bond of good fellowship which prevails between us at this time, I beg leave to subscribe myself your friend.

Sept. 15.—*Messrs. M. W. Berriman and E. C. Berriman, City.*—Gentlemen: We are in receipt of a communication from Robert Hayes addressed to you, inclosing a challenge from you as the owners of the Vencedor to Mr. Hayes as representing the yacht Siren. Mr. Hayes in his letter requests us to represent him in this matter. We reply as follows:

That we will be glad to sail three races between the Vencedor and the Siren on Saturday, Monday and Wednesday next, Sept. 19, 21 and 23, under the rules of the Lake Michigan Yachting Association.

We also accept your proposition as to the manner of selecting judges, and the selection of Mr. Joseph Ruff as time-keeper. The races to be the best two in three. The course to be the longer Lincoln Park Y. C. course, and in case each boat wins one race of the first two races, the third race to be sailed on a course to be announced by the judges on the day of the last race.

As to sailing for the pennant now held by the Siren, we would say that by reason of a change in the ownership of the Siren we understand under the rules of the Lincoln Park Y. C. we are no longer entitled to hold the pennant, and it should therefore be returned to the Lincoln Park Y. C., to make such disposition of it as it may see fit.

We therefore suggest that we sail for a trophy of a minimum price, to be agreed upon between the respective parties, for which the loser shall wholly pay.

As to the triangular courses, we accept your time limit of three hours, and as to the course to be determined by the judges, we leave the time limit to be fixed by them. We are, yours very truly,

Douglas Dyrenforth,
Thomas Boyle,
L. C. Collins, Jr.

Genevieve, owned by Geo. R. Peare and J. MacConnell, is an old-time sloop, of 52ft. l.w.l. and 36ft. over all. In consequence of these private matches, the open regatta of the Lincoln Park Y. C. on Sept. 19 was abandoned.

The difference over the rules was a most absurd one, as it proved; the result being that a compromise was reached, each yacht being measured by both rules and the mean of the two measurements taken, Siren allowing 10s. in 15 miles. The Lake Michigan Y. A. still clings to the measurement of over all as well as waterline length, but in this case Siren actually measured more by this measurement than by the ordinary waterline measurement of the Lincoln Park Y. C. The first race was sailed on Saturday, Sept. 19, in a strong north wind and a bad sea on the lake; the course being a 15-mile triangle marked by the Four Mile Crib and the Lake View Crib, starting from the Van Buren Street Gap. It was intended to anchor a stakeboat 1,000ft. off the gap, but on account of the sea the idea was abandoned and the start was made through the gap. The preparatory gun was fired at 1:50, with the starting signal at 2:00; Vencedor, steered by Capt. Barber, was but 15s. after the gun, with Siren 25s. after her. Each carried a double reef in the mainsail and a forestaysail, but Siren soon shook out one reef, though it was blowing very hard. They sailed very evenly on a reach for the first mark, both heeling heavily and jumping in the sea. When within a mile of the mark one of the lower shroud turnbuckles on Siren parted, and she at once gave up and returned to the harbor. Vencedor continued, turning the first mark, beating out against the seas to the Lake View Crib and running home under spinaker and balloon jib. She covered the course in 2:37:30. Riggers were set to work at once on Siren to remove all the turnbuckles and splice in deadeyes, and reeve off lanyards for the second race on Monday.

Amorita and Quissetta.

The last event of the racing season about New York is the series of three matches between the schooners Amorita and Quissetta, for a prize offered by the Larchmont Y. C., under whose management the races are sailed. The dates originally fixed were Sept. 21, 22, 23, but as the two were not ready these were changed to the three following days. The first meeting was on Sept. 24, in a moderate S.W. wind. The start was given at 11:35, Amorita crossing at 11:37:50 after some lively work for the weather berth, with Quissetta, at 11:38:58, on her weather quarter. They reached across to the Hempstead mark, where they were timed:

Amorita.....11 55 21 Quissetta.....11 55 37

The next leg was down wind, but the pair started in for a luffing match which took them far off their course; after about fifteen minutes they squared away and set spinakers, rounding the outer mark at:

Amorita.....12 36 50 Quissetta.....12 37 03

Standing for a short time on port tack, the two then came about and made a long hitch across toward Matinnicock Point, still very close together. Amorita, to windward, bore down on Quissetta several times, but the smaller boat finally got through her lee and ahead. When Quissetta tacked, near Matinnicock, Amorita went about close to her, and her mainsheet fouled the bowsprit of Quissetta, carrying it away. Both set protest flags, Amorita continued the course, while Quissetta took a tow for City Island to repair for next day.

The regatta committee, after a long session, decided the counter protests as follows, to the general satisfaction of yachtsmen:

Regatta Committee, Larchmont.—*Capt. Henry W. Harris, owner yacht Quissetta, Larchmont, N. Y.:* Dear Sir—Your protest of even date protesting Amorita for infringing rule 24, section 10, of the racing rules of the Larchmont Y. C. is hereby sustained, based on the evidence submitted, and from the fact that the committee were directly in the wake of the yachts while on the starboard tack, and saw Amorita bear away and Quissetta keep off very sharp, when she was immediately followed by Amorita, and then within two minutes both yachts haul up a point to a point and a half. As Quissetta did not sail over the course, and Amorita being disqualified, the committee order the first race of the series to be resailed on Friday, Sept. 25, 1896. Respectfully,

John F. Lovejoy,
G. A. Cormack,
W. C. Hall.

Sept. 24, 1896.—*Capt. W. G. Brokaw, owner yacht Amorita:* Dear Sir—Inclosed find copy of the decision of the committee on the protest of Capt. Henry W. Harris, owner of the yacht Quissetta, which explains itself. Therefore no action can be taken on the protest made by yourself, as Amorita was disqualified at the time of the infringement of rule 24, section 10.

Amorita being disqualified, and as Quissetta did not complete the course, the committee order the first race of the series to be resailed on Friday, Sept. 25, 1896. Respectfully,

John F. Lovejoy,
G. A. Cormack,
W. C. Hall.

Quissetta was ready again next day, and the two came to the line with a light easterly wind blowing. The course was sailed the reverse way this time, to the east mark first, and the start was made at 11:35, the times being:

Quissetta.....11 36 27 Amorita.....11 37 15

Quissetta gained from the start in the light air, and had several minutes to the good when a little before 1 o'clock the wind shifted to S.W., reaching Amorita first and setting her up toward the leader. They turned the mark at:

Quissetta.....1 11 15 Amorita.....1 12 25

With the wind now ahead, Quissetta stood off on port tack toward the Connecticut shore, while Amorita left her and started toward Matinnicock. Quissetta soon followed and both held in to the shore and then tacked out, she still leading. At 1:29 Amorita's bobstay parted, her bowsprit snapped, and she was out of the race. Quissetta was ordered to continue the course, while the judges' boat took Amorita in tow for City Island, but Mr. Harris very pluckily declined to accept the race and withdrew his yacht.

The first real race was made on Saturday, again in a S.W. wind, the start being postponed to 12:36 in order to accommodate Amorita, whose repairs were barely completed in time. The yachts were sent off for the east mark first, making a beat on the second leg to Hempstead mark; after some sharp maneuvering, in which Amorita tried to blanket Quissetta, the latter got away to leeward with a few seconds lead, the times being:

Quissetta.....12 35 35 Amorita.....12 35 38

They sailed the first leg in close company, luffing out and jockeying, the times at the first turn being:

	Mark.	Elapsed.
Quissetta	1 14 17	0 38 42
Amorita	1 16 01	0 40 23

The beat across to the Hempstead mark showed a further gain for Quissetta:

	Mark.	Elapsed.
Quissetta	2 04 00	0 49 43
Amorita	2 07 33	0 51 32

The last leg was a reach of 3 miles, quickly covered, with a further gain for Quissetta:

	Mark.	Elapsed.	Entire Round.
Quissetta	2 22 45	0 18 45	1 47 10
Amorita	2 26 45	0 19 12	1 51 07

The first leg of the second round was a free reach, the times at the mark being:

	Mark.	Elapsed.
Quissetta	2 54 35	0 31 50
Amorita	2 57 40	0 30 55

They started the windward leg with a hitch in to the Long Island shore; then Quissetta managed to fetch the Hempstead mark on the next tack, while Amorita had to make an extra tack, the times being:

	Mark.	Elapsed.
Quissetta	3 41 05	0 46 30
Amorita	3 45 03	0 47 23

The last leg was covered by Quissetta in 18m. 35s.; Amorita, 19m. 3s.; the final times being:

	Start.	Finish.	Elapsed.	Corrected.
Quissetta	12 35 35	3 59 40	3 24 05	3 20 49
Amorita	12 35 38	4 04 33	3 28 55	3 28 55

Quissetta received 3m. 16s. allowance from Amorita. In explanation of the latter's defeat, it is urged that the gear on her new bowsprit was stretching all through the race, but the same must apply to Quissetta in the two races, as she was carrying a new spar.

The deciding race was sailed on Monday in a light wind, about E.N.E. Further repairs had been made to Amorita's headgear and Quissetta's sails. The start was made at 12:05, the yachts going first to the east mark, a beat, then before the wind to the Hempstead mark, with a final reach to the line. Quissetta made the better start, to windward and ahead:

Quissetta.....12 05 20 Amorita.....12 06 05

The windward work in the light breeze showed very little difference.

	Mark.	Elapsed.
Quissetta	1 14 45	1 09 25
Amorita	1 15 54	1 09 49

They ran across to the Hempstead mark under spinakers and balooners, being timed:

	Mark.	Elapsed.
Quissetta	2 01 58	0 47 13
Amorita	2 04 51	0 48 57

The end of the round, after a 3-mile reach, was timed:

	Mark.	Elapsed.	Whole Round Elapsed.	Gain.
Quissetta	2 22 50	0 20 52	2 17 30	0 02 57
Amorita	2 26 32	0 21 51	2 20 27	

The windward leg, still in a light breeze, showed a further gain for Quissetta, the times being:

	Mark.	Elapsed.
Quissetta	3 39 10	1 16 20
Amorita	3 44 21	1 17 49

With the wind more nearly east than before spinakers were not set, but the two reached across under balloon jibtopsails and balloon maintopmast staysails, being timed:

	Mark.	Elapsed.
Quissetta	4 17 43	0 38 33
Amorita	4 24 00	0 39 39

Quissetta continued to gain over the last leg, the finish being timed:

	Start.	Finish.	Elapsed.	Corrected.
Quissetta	12 05 20	4 36 30	4 31 10	4 27 54
Amorita	12 06 05	4 43 00	4 36 55	4 36 55

The races were managed by J. F. Lovejoy, of the regatta committee, assisted by Geo. A. Cormack and W. H. Hall.

Hull Y. C.

HULL—BOSTON HARBOR.

Saturday, Sept. 26.

The Hull Y. C. sailed its final race on Sept. 26, the times being:

THIRD CLASS.

	Length.	Start.	Elapsed.	Corrected.
Gleaner, S. R. Wellington	24.03	3 00 00	2 22 10	1 45 57
Beatrice, J. Cavanagh	30.11	3 00 00	2 22 37	2 03 30
Cleopatra, Henry Faxon	21.09	3 00 00	2 28 00	1 49 26

KNOCKABOUT CLASS.

	Start.	Elapsed.
Torpedo, J. Souther	3 15 00	1 30 15
Bo Peep, M. Clark	3 15 00	1 29 00
Nike, C. A. Coolidge	3 15 00	1 39 30
Jack Tar, T. Jubert	3 15 00	1 29 55
Tautog, Wm. Clark	3 15 00	1 29 10

W. G. Sherry was the judge.

Tautog protests Bo Peep, Jack Tar protests Tautog and Bo Peep protests Nike.

ETHELWYNN.

Through the courtesy of the Spalding-St. Lawrence Boat Co., builders of the yacht and owners of the design, we publish herewith the plans of the 15-footer Ethelwynn, the first defender of the Seawanhaka Corinthian Y. C. international challenge cup in the initial series of races with Spruce IIII. last year. Ethelwynn was designed by W. P. Stephens, Yachting and Canoeing editor of the Forest and Stream, for competition in the trial races arranged for the selection of a defender for the Seawanhaka cup, and was one of the first yachts in the new 15ft. class created by the visit of Spruce IIII. to America. The design was made and the yacht built for C. J. Field, of the Indian Harbor Y. C. The order for the design was given on June 26, just two months before the date of the first trial race. As the many midsummer regattas about the Sound were then on, the drawing of the lines was not begun until July 8, the original design being enlarged to the full size and shipped in that form on July 12 to the shops of the Spalding-St. Lawrence Co., then at Clayton, N. Y., on the St. Lawrence River. The hull was shipped from the shops on Aug. 3, reaching Greenwich, Conn., two days later, where the centerboard, rudder, spars, etc., were fitted and the sails bent, the yacht being launched on Aug. 8.

Ethelwynn's first race was on Aug. 10, in the annual regatta of the American Y. C., sailed in a very light air; she beat the new fin-keel 15 footer Trilby, also sailing her first race, by 14m., Question giving up. The first suit of sails was very unsatisfactory; the jib, as planned, of 50sq. ft., with a club on the foot, could only be used in a very light air, being much too large; while the mainsail did not fit the spars, and after being recut was replaced by a new one. The yacht did not race again until the Horseshoe Harbor Y. C. regatta of Aug. 24, when, with a strange hand at the tiller, she started against Question in a strong wind and a rough sea that brought several yachts to grief, a large catboat losing her mast and another capsizing. Ethelwynn capsized while her crew was taking in the balloon jib on a reach; though her hatches were off, no water reached the compartments, and she floated high on her bilge until righted. Question completed the course in very fast time compared with the larger catboats and sloops.

The trial races began on Aug. 26 at Oyster Bay with seven competitors, and continued on Aug. 27–28. On the three days the wind was light to moderate, the yachts at times drifting without wind; on several occasions there was a moderate whole-sail breeze, but at no time was there more than the little yachts could easily carry. The result of the trial races may be briefly summarized as follows:

		Owner.	*Designer.*	*Builder.*	*Helmsman.*	*Crew.*
Ethelwynn	c. b.	C. J. Field	W. P. Stephens	St. Lawrence Co.	B. C. Ball	C. J. Field.
Olita	c. b.	H. C. Rouse	N. G. Herreshoff	Herreshoff Mfg. Co.	C. B. Vaux	R. B. Burchard.
Question	c. b.	L. B. Huntington, Jr.	L. P. Huntington, Jr.	L. P. Huntington, Jr.	L. B. Huntington	Philip Howard.
Trilby	fin	G. Tyson	C. Olmstead	Wood & Son	C. Olmstead	C. J. Pierce.
Trust Me	fin.	C. M. Clark	N. G. Herreshoff	Herreshoff Mfg. Co.	C. M. Clark	K. Whiting.
F. & R.	c. b.	F. & R. Wyckoff	F. & R. Wyckoff	F. & R. Wyckoff	F. Wyckoff	R. Wyckoff.
L'Indienne	c. b.	R. Outwater	T. F. Newell	Newell & McAleece	R. Outwater	F. B. Jones.

	1st Race.	2d Race.	3d Race.
Ethelwynn	3 16 15	4 08 03	5 58 12
Olita	3 18 09	4 12 48	6 03 43
Question	3 26 07	4 11 25	6 04 33
Trilby	3 26 37	4 15 03	6 11 27
Trust Me	3 40 10	Not timed.	6 19 20
F. & R.	3 52 37	Did not start.	
L'Indienne	Withdrew.	Did not start.	

On this showing Ethelwynn was selected by the race committee of the club as the defender of the cup.

On Aug. 29 she started with Question, Trilby and L'Indienne in a light breeze, the finish being timed:

Ethelwynn	5 10 28	Trilby	5 29 32
Question	5 28 30	L'Indienne	Withdrew.

In the Larchmont fall regatta on Sept. 2 Ethelwynn, Question, Trilby and Trust Me started in a drifting match. Ethelwynn and Trilby gave up, being unable to find the turning points, marked by very small flags; Trust Me winning.

The cup races with Spruce IIII. lasted from Sept. 21 to 28, five races being sailed, Ethelwynn winning three, while on two days the yachts failed to finish within the required time. On the first day, Saturday, Sept. 21, both yachts gave up after a long battle with the tide in a calm, having failed to cover the first round in four hours of drifting. On Monday there was a light to moderate breeze all day and a very good race was sailed, Ethelwynn gaining 5m. 48s. on the first round and winning by 7m. 41s. Tuesday was another light day, with a fluky wind. Ethelwynn led for the first round, but a shift of wind at the buoy gave Spruce a long lead; the race was stopped at 6 o'clock with both far from the finish and Spruce ahead.

On Wednesday there was more wind, but very light and fluky; Ethelwynn finished the first round with a lead of 3m. 58s., but lost it all in a calm spot near the Center Island Buoy, as on the preceding day, being but 10s. ahead of Spruce at the next mark; they sailed the round out in a variable and fluky wind, Spruce winning by 23s.

On Thursday, for the first time, there was a good wholesail breeze, with quite a sea on the Sound. Spruce started with one reef in her mainsail, while Ethelwynn had two. She was sailed very badly from the start, as it afterward appeared, through the unwillingness of her crew to race, in spite of the protests of her helmsman; at the end of the first round she was 9m. astern of Spruce, having been in irons at the lee mark, where she shook out one reef to go to windward, after carrying a double-reefed mainsail down wind. When the round was finished her owner refused to continue the race, and sailed into the harbor.

Friday was another blowy day, with a good breeze and a lively sea; the two started out with a new forward hand aboard Ethelwynn, she carrying her whole mainsail, while Spruce was reefed. This time the yacht was sailed well from the start, and after a fine race came in with a lead of 1m. 10s. The final race was sailed on Saturday, Sept. 28, in a moderate breeze and a light sea. Sailed by the same crew as on Friday, Ethelwynn again beat Spruce by 10m. 41s., and scored the three races necessary to the holding of the cup.

Ethelwynn cost to build about $600, and shortly after the races she was sold to Messrs. Crosby and Fox Leonard for $550. Under their ownership she was at once stored at Manning's Basin in South Brooklyn, where she remained until a few weeks ago, when she was fitted out and anchored off Bath Beach. In the squall of Sept. 19 she capsized at her moorings in Gravesend Bay, but was not damaged. During her brief career she has twice been in the hands of the U. S. Marshal, being advertised for sale last spring on account of a claim made by an associate of Messrs. Leonard; within the past month she has been libeled for storage charges and will be sold at marshal's sale this week.

The dimensions of Ethelwynn are as follows:

Length over all	23ft. 4in.
l.w.l.	15ft.
Overhang, forward	3ft. 10in.
aft	4ft. 6in.
Beam, extreme	6ft.
l.w.l.	4ft. 9⅛in.
Draft	8in.
Freeboard	10in.
Sheer, bow	7in.
stern	1½in.
Displacement, lbs	1,022
Area midship section, sq. ft	1.92
C. B. from fore end l.w.l.	8.00
Midship section from end l.w.l.	8 25

These dimensions are all on the basis of 15ft l.w.l., but, as we shall show next week, the design for a waterline of about 14ft. 6in., with 7in. draft and the appropriate sail of 240sq. ft. We shall give in the following issue the arrangement and construction plan, with offsets and details of construction.

ALL ON A SUMMER DAY.

What will go down on the records as a most memorable race took place over the course of the New York C C. for half-raters on the afternoon of Sept. 19, 1896.

Four of this class shot over the starting line just off the house at 3:30 P. M., going down the wind with spinakers set for the stake mark off the Marine and Field Club grounds. The wind was blowing light and fair from the southward. Up in the north were tokens only of a summer squall. Gravesend Bay usually affords ample time and warning of such blows, so nothing daunted merrily sped the pretty craft over the sunlit waters, little fearing or fancying what was in store for them.

Round the stake buoy in quick succession, and with sheets close hauled they stood for the outer buoy, a mile away and directly opposite the club house. When about three-quarters over this leg the wind fell flat. Out of the north came the first gentle puffs of the gathering squall. One glance over toward the Staten Island shore showed that the blow was going to be quick and sharp. The smoke from the funnel of an incoming steamer, which had been lazily ascending in an almost perpendicular line, suddenly bent at a right angle from its course and spread over the bay with wide, gaping mouth, swooping down toward us. Mainsails were quickly stowed, and with only the little handkerchief-like jibs spread to the coming blast the four tiny raters ran for home.

Down came the rain in huge drops, dotting the smooth sea with countless globes of crystal and instantly soaking us all to the skin. Then began the blow. Ye gods, how it blew! In less than five minutes from the first puffs the waters were lashed into wicked, white-capped billows, and the darkness of utter night shut down upon the scene. Away scudded the frail boats under bare poles, for the tiny jibs had either blown out like ribbons or wrapped themselves in a furl around the jib stays Over one sea, down into another, on top again, we flew, and the gale increasing every second.

Now came the hail—pelting hailstones, the size of walnuts—and with them came the rush and roar of a tempest. Up into the air went our bows; down, down into the hollow they dove under, and the brutal gale striking the exposed surface astern sent three of us over like a flash.

Fortunately the hurricane was blowing in the direction of home; more lucky still, the boats were unballasted and floated, giving us a chance to cling for our lives and keep heads above water.

When the force of this phenomenal blow had spent itself (and it was all over in half an hour) there we were, nearly over our moorings in front of the club house, where had gathered an anxious band of friends and members on the lookout for us. Boats were soon manned and we all were safely landed. No great damage was done the ½-raters.

Had that small blizzard come out offshore there would have been a different story to tell by other pen than mine.

A word of praise and admiration for these little boats. They stood the brunt bravely. The only wonder was, not that they finally capsized, but that they kept right side up as long as they did. As a matter of record, one of the four came through the blow without a capsize. To be sure, she was much further inshore than the rest of us when the squall struck, and was lucky enough to run alongside of and hold on to a stake until her anchor was thrown out. Still the fact remains, she kept on even keel, no doubt largely due to skillful management. Many larger vessels were overturned while riding at their anchors.

The writer has experienced a few blows in his twenty years as an amateur sailor, but never encountered one which in a brief space of time kicked up such an ugly, wicked sea, or blew such great guns with large hailstone accompaniment, as that of Sept. 19, 1896, in Gravesend Bay.

F. S. G., N. Y. C. C.

Squantum Y. C.

QUINCY—BOSTON HARBOR.

Saturday, Sept. 26.

On Sept. 26 the Squantum Y. C. sailed the third race of the second series for the Burkhardt cups, the wind being fresh S.W. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Payomet, H. Flood	21.04	1 31 43	1 06 09
Magnolia, E. Hardy	20.03	1 33 20	1 06 42
Clara Lou, W. J. Coombs	21.00	Disabled.	
SECOND CLASS.			
Burgess, F. Burgess	19.05	1 36 20	1 08 50
Locia, E. A. Merrill	18.05	Did not finish.	

Payomet, Magnolia and Clara Lou have each one leg in first class, and Burgess, Locia and Velma in second class.

Beverly Y. C.

The 245th race, championship sail off in fourth class sloops, was sailed off the club house, Saturday, Sept. 12, in a double reef southwester; course 8½ miles.

As was to be expected in a strong breeze and with a three men limit, Grilse was not in it and Heiress won. Championships are sailed without allowance. Times were:

Heiress, Geo. G. Amory....1 57 05 Grilse, W. E. C. Eustis.....2 04 06

Judge—F. L. Dabney.

The 999-Raccoon protest in the race of Sept. 5 has been decided in favor of 999, who takes first prize, Waskite taking second.

El Heirie.

The crack 15-footer El Heirie has reached her new home in Mobile, not New Orleans, as at first reported, and has met with a most enthusiastic welcome from Southern yachtsmen. Her purchase will do much toward building up the new class about New Orleans and Mobile. The following account of her arrival at New Orleans is from the *Times-Democrat* of Sept. 13:

The Cromwell Line steamer Hudson arrived at her wharf on time early Saturday morning from New York, having aboard the champion American half-rater yacht El Heirie, the boat selected from twenty-seven contestants to defend the Seawanhaka Corinthian Y. C. international challenge cup against the Canadian challenger, Glencairn.

The half-rater races are not yet two months old, and this celebrated little vessel, the embodiment of the very highest design and development in yacht construction, is here. It is a fortunate thing for the sport of yacht racing in this section, as the yachtsmen here are about to establish a class, and the boats will necessarily have to be first class to cope with this Northern importation.

El Heirie was purchased by Mr. T. Y. Bush, a young cotton factor of Mobile, a member of the Mobile Y. C., which club has the honor of enrolling in its fleet the first half-rater in the South. The boat was carried from the Hudson by six negroes at about 8 o'clock yesterday morning, and placed on a flat car for transportation to Mobile in the afternoon. The boat was not covered, and was merely resting on her bottom, with three small mattresses beneath her.

Her construction and finish were at once seen to be of the very finest type of the joiner's art, fully equal to the most costly racing shell; in fact she was a revelation to yachtsmen here, who have never seen a yacht built on the modern light-construction plan. No expense was spared on this craft, as her mahogany construction, Tobin bronze centerboard and rudder, aluminum blocks, hollow spars and silk sails well show.

All the prominent yachtsmen of the city were at the dock to inspect the boat, among them Com. Larry O'Donnell and Sec'y L. D. Sampsell, of the Southern Y. C.; Com. George Moorman, of the Mandeville Y. C.; Com. Tom Richardson, of the Bay-Waveland Y. C., and Capt. E. L. Cope, N. E. Baumgarden, Billy Boone, Holmes Harrison, Harry Lanphier, W. A. Brunet, Frank Claussen, Jack Campbell, Garrett Brown and many others. The boat's beauty and her extreme lightness, her weight being about 250lbs., were the chief subjects of remark. Two gentlemen, Messrs. Sampsell and Harrison, one at the bow and the other at the stern, lifted her clear without much trouble. Her patent aluminum skeleton blocks are the first of the kind seen in the South, and they claimed the enthusiast's eye at once. The largest, her main sheet block, only weighs 4oz., much less than an ordinary watch. Her standing rigging is of very fine phosphor bronze wire, and the running rigging, sheets and halyards of braided canoe cord, a size smaller in diameter than window sash cord.

El Heirie was designed by Clinton H. Crane, an amateur, and was built by the celebrated firm of Lawley & Son, of South Boston, the same people who built the sloop Nepenthe, of this city. The boat was built last June.

Mr. Bush had never seen El Heirie until she was unloaded, and he, as well as all the yachtsmen who saw her, was well pleased with the looks of the boat. Mr. Bush says there is a great deal of interest being taken in the half-rater class at Mobile, and that there will be a fleet of half a dozen of them built. There will be a fine cup put up and many other prizes given to the class, and he hopes that boats from this city will be on hand to contest for them. He was assured the craze for the half-raters or 15ft. sailing length class had taken a firm hold on New Orleans yachtsmen, and it was expected that fifteen or twenty of them would be built, so there would be many chances for interclub racing before long. In the opinion of many yachtsmen this will be the means of building up the sport in the South.

The Southern and the Mobile yacht clubs will offer special prizes for the class next year, and in the event of the Seawanhaka C. Y. C. challenge being made in this class an effort will be made to send a fast boat to the trial races at Oyster Bay. Mr. L. D. Sampsell, one of the most active of New Orleans yachtsmen, has lately formed a partnership with Holmes Harrison in the new Southern Yacht Building Works, in New Orleans; they will design and build yachts, making a specialty of the smaller craft.

New York Yacht Racing Association.

The final results of the annual Labor Day regatta of the New York Y. R. A. are announced officially by the secretary of the regatta committee, E. Langerfield:

Gael, Class F, reported as not finished, finished at 1:30 A. M., and was awarded pennant for Class F.

The corrected time of Baby was reported 2.48.09 on judges' report. This was an error of one hour in figuring. Her corrected time is 1.48.09, making her winner in Class 9.

The finish of Maggie P. was erroneously recorded as 3:38:43. It was 3:33:43, making her corrected time 1.48.58, instead of 1.53.58, as previously reported, and making her winner in Class 10.

Classes 2 and 3 were reported together under heading of Class 2. The following is correct separation:

CLASS 2—27ft. and over 23ft.				
Henry Dauer	12 34 08	4 55 38	4 21 30	3 12 58
W. H. Gill	12 35 48	5 00 42	4 24 54	3 14 22
Viola	12 36 44	Did not finish.		
CLASS 3—23ft. and under.				
Zetes	12 32 16	3 51 10	3 18 54	2 28 51
Sybilla	12 33 15	3 56 06	3 22 51	2 31 32
Iroquois	12 33 50	3 51 19	3 17 29	2 29 21

Rifle Range and Gallery.

Cincinnati Rifle Association.

Cincinnati, O., Sept. 20.—The following scores were made to-day by members of the Cincinnati Rifle Association. Conditions: 200yds., off-hand, standard target, 7-ring black:

Gindele.																				
10	10	7	10	10	6	9	9	10	8—89		8	9	8	10	8	9	8	8	8	8—84

Calumet Heights Rifle Club.

Chicago, Ill., Sept. 19.—The members of Class A and Class B shot their scores to-day. Dr. Davis won the medal in Class A, Miss Ervin winning on the shoot-off in Class B. The scores were:

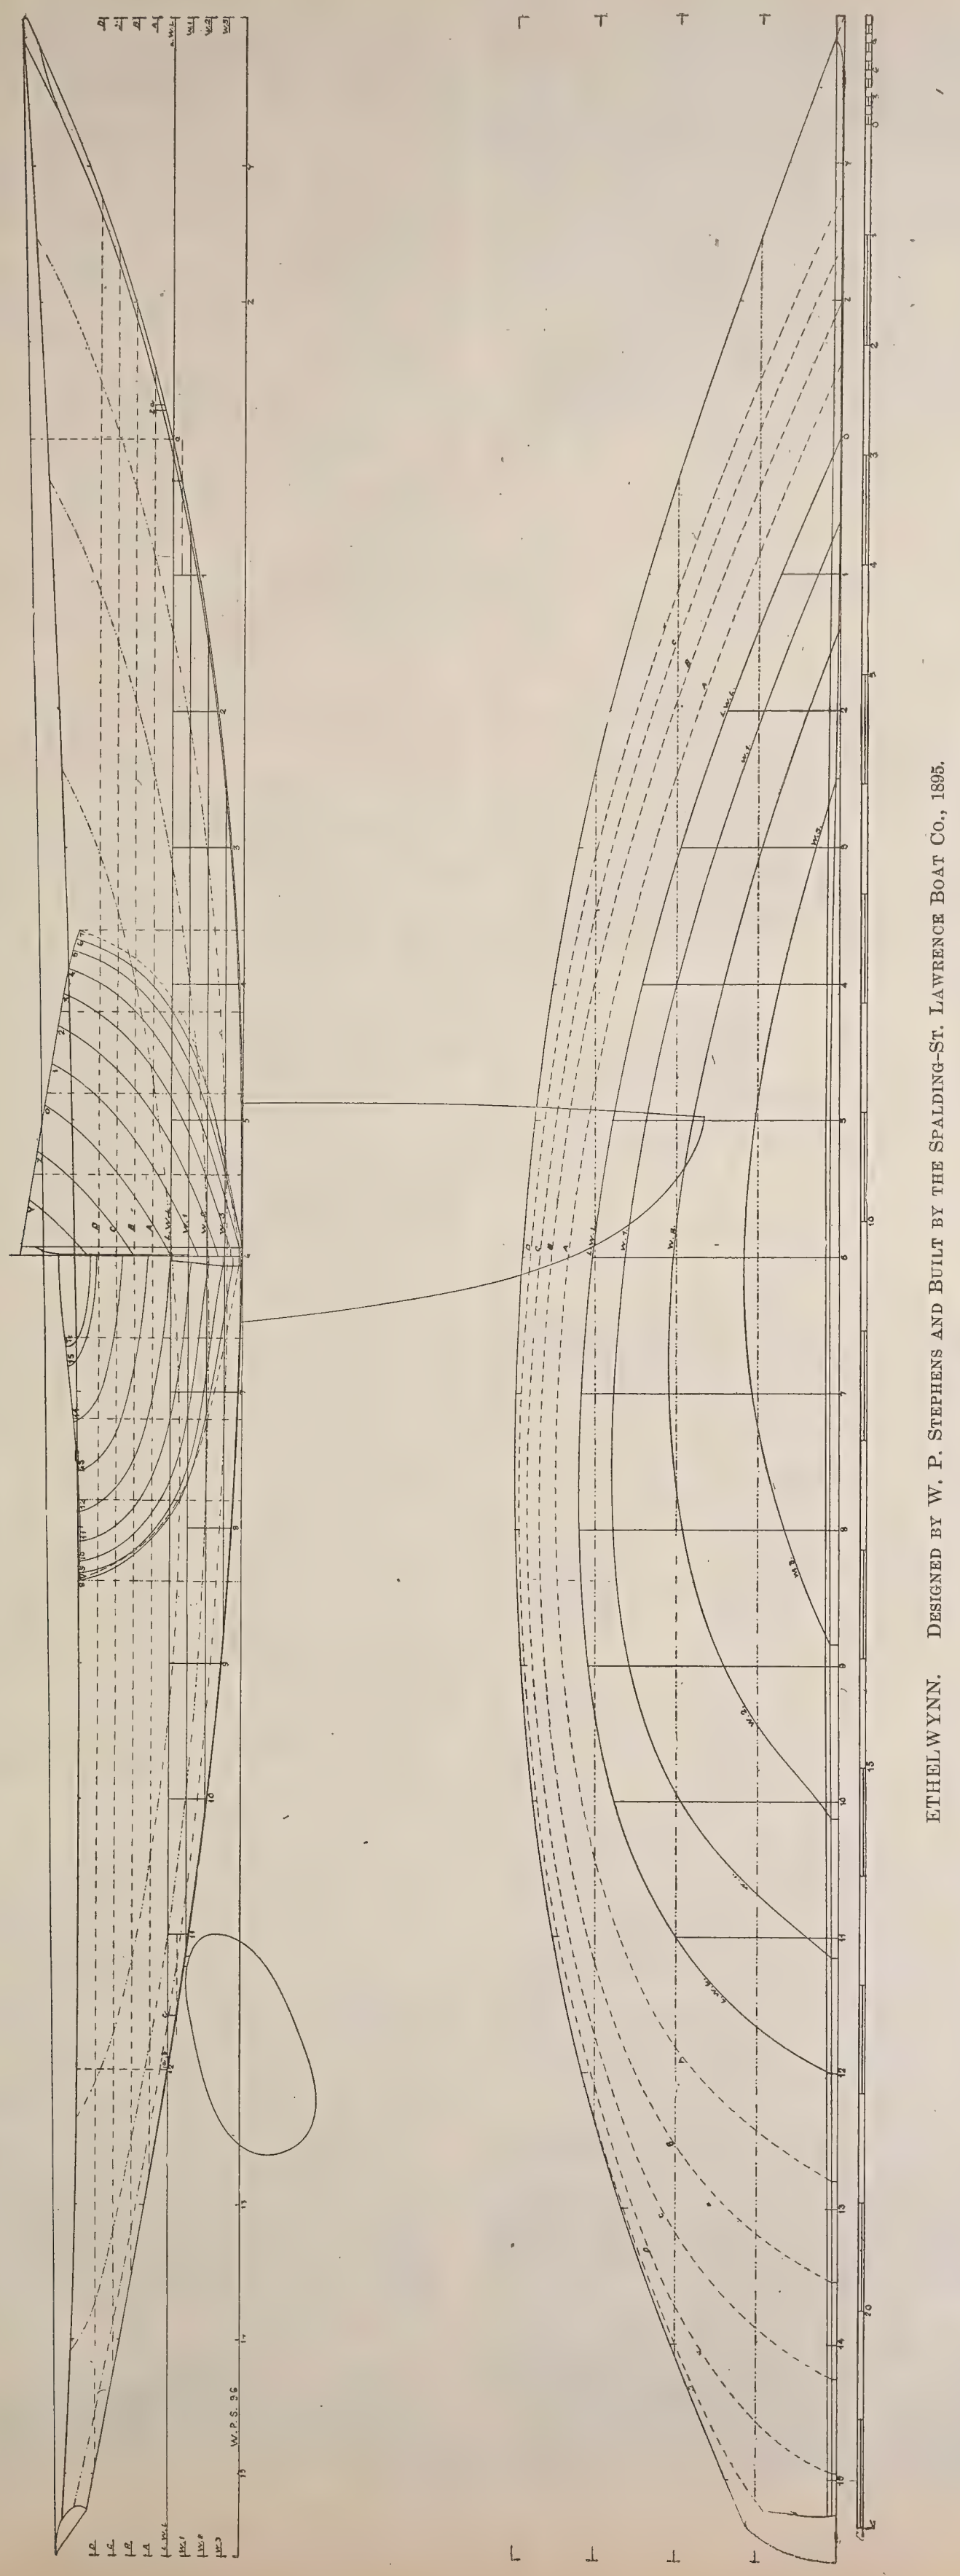
Class A, for gentlemen, 200yds., off-hand, standard target:

Dr Davis	4544433335—37	Spalding	3443223204—27
Harlan	3245334454—37	Patty	5024002002—15
Dr Shaw	3443333343—33		

Class B, for ladies, 100yds., reduced Creedmoor target, .22-cal. rifle, rest:

Miss Ervin	4444444444—40	Miss Harlan	2444322323—29
Mrs Lamphere	4444544443—40	Mrs Carson	4443550004—29
Mrs Chamberlin	3334354444—37	Mrs R B Carson	0300022000— 7

An invitation will be issued to all members of clubs in the vicinity of Chicago that shoot a rifle, to be the guests of this club on the day of Halloween eve, and to participate in an all-day rifle contest. Patty.



Revolver Shooting in England.

London, England, Sept. 10.—The result of the recent revolver club contests are given below:

At the North London Rifle Club on Sept. 9 the following scores were made at the 50yds. stationary target: Holmes 34, T. Knapp 33, Capt. T. W. Heath 30, Joslin 26, Lieut. Clemence 26, Andrews 26, Brading 25, Britton 25, Capt. W. Evans 25, Lieut. Richardson 25, Denyer 23, C. S. Webb 21, Chicken 22, J. Eley 15.

South London Rifle Club, Sept. 8.

ETHEL WYNN. DESIGNED BY W. P. STEPHENS AND BUILT BY THE SPALDING-ST. LAWRENCE BOAT CO., 1895.

Presque Isle Rifle Club.

ERIE, Pa., Sept. 26.—At the commencement of the season the Presque Isle Rifle Club put up three medals to be shot for as season prizes, the first part of the season's work to be taken as basis for a handicap. The prizes will be won by the members making the best averages with handicaps added. To-day closed the season, and the winners will be announced shortly. Below are to-day's scores:

Two hundred yards, standard target, off-hand, 7-ring black:

J G Germann	10	8	6	10	10	7	7	8	6	9—81
	5	9	6	10	9	7	9	9	6	9—79
	9	8	8	7	7	9	6	9—9		7—79
John Stidham	10	4	8	5	9	7	9	7	9	9—77

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Oct. 6-7.—BALTIMORE, Md.—Tournament of the Baltimore Shooting Association. Live birds only. James R. Malone, Captain.

Oct. 6-8.—INDIANAPOLIS, Ind.—Autumn tournament of the Limited Gun Club. Open to amateurs only. Two days, targets; one day, pigeons and sparrows. Royal Robinson, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds added money announced later.

Oct. 8-10.—EAST ST. LOUIS, Ill.—Tournament of the King's Smokeless Gun Club.

Oct. 10.—HACKENSACK, N. J.—Team race, Maplewood Gun Club versus Bergen County Gun Club.

Oct. 14-15.—GREENSBURG, Ind.—Second annual tournament of the Greensburg Gun Club. Targets only. Web. Woodfill, Sec'y.

Oct. 16-17.—TACOMA, Wash.—Tournament of the Washington State Sportsmen's Association, under the auspices of the Tacoma Rifle, Rod and Gun Club. G. H. Garrison, Sec'y.

Oct. 17.—HACKENSACK, N. J.—Fifth monthly shoot of the New Jersey Amateur Trap-Shooters' League, under the auspices of the Oritani Field Club.

Oct. 21-22.—IRONTON, O.—Third annual tournament of the Iron City Gun Club. Targets.

Oct. 27-28.—ELIZABETH, N. J.—Eighth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

Nov. 7.—HACKENSACK, N. J.—Cup contest, under the auspices of the Bergen County Gun Club. C. O. Gardiner, Sec'y.

Dec. 1-3.—TRENTON, N. J.—Proposed contest for live-bird championship; 100 live birds per man, $100 entry. Under the management of Charles Zwirlein.

1897.

Jan. 4-5.—PRESCOTT, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

January.—SAN ANTONIO, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—NEW YORK CITY.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the first annual tournament of the King's Smokeless Gun Club, of East St. Louis, Ill., has one or two points that call for special mention. The tournament itself will be held on Oct. 8-9, at Obert's Park, electric cars running direct to the grounds. Shells and guns shipped in advance should be sent in care of J. M. Trendley, who will see that the same are delivered at the grounds. On the first two days of the shoot targets will be thrown at 2 cents each On the third day 3 cents will be charged for targets, the extra 1 cent for each target thrown being made a fund that will be added to the purse in the last event on the programme, a 25-target event, known angles, $2 entrance. This fund will be eligible only to shooters who have taken part in at least seven out of the thirteen preceding events shot on that day. One note in the programme says that "black powder will be shot in separate squads." The programme for the first day calls for 245 targets, for the second day 230, and for the third day 210.

The following item, special to the Philadelphia, Pa., *Record*, dated Lancaster, Sept. 21. will be of interest: "W. R. Brinton, Esq., attorney for Philip Betz, has filed a bill in equity against C. Evans, F. Clark and W. P. Cummings, constituting the Lancaster Gun Club. The plaintiff alleges that he owns property in East Lampeter township, adjoining the grounds of the gun club. The club holds frequent matches on its grounds, and owing to the low fence surrounding the range the shot frequently comes over on his property. It is alleged that Betz and his workmen have been wounded a number of times by the shot and that people coming to his sand hole to transact business are in danger. He therefore wants an injunction granted restraining all further shooting on the club's grounds. The preliminary injunction was granted and will remain in force until the bill in equity is argued and decided."

Dr. George V. Hudson, one of the best live-bird shots in either the Emerald or the New York German Gun clubs, has a sorrowful tale to tell of the prospects for quail down in that part of North Carolina (Eden) where he hunts every fall. The Doctor says that the wholesale netting of bevies of quail for the market for the sake of the few dollars they bring has about killed the goose that laid the golden eggs. Last year he found only three bevies on the whole of 1,200 acres of land, whereas in former years that same territory was good for close on to thirty bevies. He says that netting did it, not shooting, as he has the sole right of gunning on that 1,200 acres.

Jack Winston, the Austin Powder representative, has not been with us long, but he says he likes the East and would like to settle here. He speaks highly of the class of birds he has seen trapped down here, and adds that so far he has found them plenty fast enough to please him. As a matter of fact it does not look as if Winston was not acclimated yet; he is not shooting as well as he has done, nor as well as we think he can shoot when fit and well. He lost both matches at Zwirlein's grounds at Yardville last week. On Tuesday Zwirlein won by 23 to 21; on Thursday Cubberly beat him by 45 to 41.

Mr. Irby Bennett, who has so long been the Southwestern traveling agent of the Winchester Repeating Arms Co., with headquarters at Memphis, Tenn., has taken a more responsible position in the home office at New Haven, and will thenceforth make that city his home. Mr. Bennett has such a wide circle of warm friends in the South that his removal must mean the severing of many close ties.

With the Pennsylvania State shoot at Harrisburg this week the season may be said to have closed in the East, so far as large gatherings of sportsmen are concerned. The opening of the hunting season, together with the snap there is in the morning air as one goes to business, puts a different complexion on things in general. The "woods fever" is prevalent at this season of the year, and the only sure cure for it that we know of is to get the dog, gun and shells (a few shells will do now) and be off to the woods, where one runs the chance of hearing the whir of grouse's wings.

In another portion of these columns will be found something on "handicaps and highest possibles." In that article we have embodied our views on the matter, and have suggested a scheme that we think will add to the popularity of handicap events at targets. The idea was first advocated by FOREST AND STREAM, in our issue of June 20 It was tried at the Interstate shoot at Burlington, Vt., and worked well. It does away with all chance of imposing upon scratch or short allowance men a task that might be an impossibility for them to perform, and which, therefore, it would be an injustice to impose upon them.

One of the most striking advertisements we have seen lately, and one which especially appeals to a man who loves a gun, is that which appears on an envelope now used by the firm of Von Lengerke & Detmold. The envelope is a large one and is made of an excellent paper, just the sort of paper to properly reproduce the half-tone made from a photograph of one of the firm's high-grade Francotte guns. So perfect is the cut that every portion of the engraving on the gun is easily traced, while the gun itself is "broken" so that the method of bolting it is plainly seen.

The following from the Ironton (O.) Gun Club, dated Sept. 26, explains itself: "We see in the issue of Sept. 26 that the Ironton Gun Club would give a shoot on Oct. 21-22. We will say that you are wrong; it is the Iron City Club that will give the shoot. The Ironton Gun Club has not authorized anyone to announce a shoot under our management. We will do what we can to help the other club to have a good time, and there is no doubt it will. Please correct the mistake and oblige," etc.

Capt. G. H. Piercy, of the Endeavor Gun Club, Jersey City, N. J., has arranged a series of three races, twelve men to a team, with the Bergen County Gun Club, of Hackensack, N. J. President Bell, of the Bergen County Gun Club, won the toss for choice of grounds for the first match, and of course names his own club's grounds. The first match will probably be shot on Oct. 31.

The fifth monthly shoot of the New Jersey Trap-Shooters' League will be held Oct. 17 on the grounds of the Oritani Field Club at Hackensack, N. J. A commodious shooting-house for the accommodation of the trap-shooting members of the Oritani Field Club and their guests is now in course of erection, and will be completed in plenty of time for the above-mentioned shoot.

The regular handicap shoot for the Club Cup of the Oritani Field Club, of Hackensack, N. J., will be held on Saturday, Oct. 10, at 2 P. M. The conditions of this race are 50 targets, $1 entrance (price of the targets). The six high guns in this event will be chosen to represent the club at the League shoot on Oct. 17.

On October 10 the Maplewood, N. J., Gun Club will shoot a race with the Bergen County Gun Club, the match to take place on the grounds of the latter club at Hackensack, N. J. The teams are to consist of twelve men on each side. This match is the first of a series of three arranged to be shot between the two clubs.

Fred Quimby returned to the city on Friday with his dog and a few ruffed grouse. We saw the dog and heard of the grouse, but not from Fred, as he was holding his head too high that day to speak to even his intimate friends. Of course a man who can get away and secure a few grouse is entitled to some privileges.

On Sept. 17, at East Aurora, N. Y., Alexander Forrester, captain of the Audubon Gun Club, of Buffalo, and W. B. Moore, of East Aurora, shot a race at 50 live birds per team with G. O. Miller, of the Audubon Gun Club, and F. D. Kelsey, of East Aurora. The match ended in a tie, both teams scoring 45 out of 50.

In the sweepstakes shot at Elkwood Park, N. J., on Sept. 23, Edgar Murphy did some fine shooting, scoring 34 birds straight in miss-and-outs. He divided every event, 5 in number. Among those present were: J. L. Winston, A. L. Ivins, Applegate, Price, Dr. Gagnon, Churchill, etc.

The Belair Rod and Gun Club, of Brooklyn, N. Y., is an organization that was incorporated on Sept. 23. The trustees are John P. Steppe, Charles Wagner, John P. Hunt, Thomas Costello, Ernest Steiner, Philip A. Coons and George J. Berlenbeck.

The Elizabeth (N. J.) Gun Club will hold its eighth bi-monthly tournament at its grounds on Oct. 27-28. The first day's programme will be made up of target events; the second day live birds will be on hand.

The third annual tournament of the Massachusetts State Shooting Association will be held at Worcester, Mass., on the grounds of the Worcester Sportsmen's Club. All shooters are cordially invited to attend these gatherings.

The Cuckoo Gun and Social Club, of New York city, will hold its annual meeting at Rockaway Park on Saturday, Oct. 10, and will open its trap-shooting season on that date.

Count (Langdon) and Winston will shoot a return match at live birds at Zwirlein's grounds, Yardville, N. J., Friday of this week, Oct. 2.

SEPT. 28. EDWARD BANKS.

Handicaps and Highest Possibles.

IN our issue of June 20 we had something to say upon the subject of highest possibles as related to handicap events. The matter then discussed had long been on our mind, and the result of a handicap event at the New York State shoot at Buffalo made us still more positive in our opinion that in every handicap event at targets nobody should be allowed to score more than a highest possible. At Buffalo a valuable prize was won in a 50-target event, handicap allowance of extra targets to shoot at, by a score of 61, just 11 more targets than a scratch man could have scored had he broken every one he had to shoot at. We can call to mind other instances where, in a 100-target race, nothing less than 100 straight by the scratch man would have gotten him part of first money, and no doubt many of our readers can recall similar instances.

Handicaps are popular events, but you want to get the scratch men and the men with small allowances into those events to make them a success in point of numbers. They are the men that make a shoot, handicap or no handicap. The duties of a handicap committee are thankless to a degree, while the weight of responsibility that attaches to that position can only be realized by one who has officiated on such a committee. The tendency of handicappers is to underhandicap a man rather than to impose what might appear to be a light handicap if the shooter should strike a streak. There are a lot of shooters whom the handicapper labels dangerous; in his opinion such men are liable to break anywhere between 23 and 16 out of each 25, and you never can tell whether it's going to be the 16 or the 23. Such men under the system at present in vogue for running handicaps are much more likely to have too few targets given them to shoot at than too many. In that way the present system does an injustice to men who are not up in the first flight. Again, if a shooter receives a large allowance of extra targets and happens to strike that streak that is the bane of a handicapper's existence, he may break so many targets that no straight score on the part of a scratch or short allowance man can catch him. In that way the present system does an injustice to those men. To do away with that injustice we recommend the following to the notice of trap-shooters and ask that the suggestion be given a fair trial before being condemned:

In all handicap events fix a highest possible score, making allowance for the loss of a few targets on the part of the scratch man or men in all events where the number of targets to be shot at reaches 50 or 100 (say 48 as highest possible in a 50-target handicap or 94 in a 100-target race). The number chosen for the highest possible cannot be exceeded unless some shooter shall break more than that number out of his first 50 or first 100, as the case may be, that is, without his allowance. In the event of any shooter exceeding the highest possible as above, that shooter's score shall be the highest possible, and all shooters tieing that score, with or without their allowance, shall be entitled to a portion of first money.

Under the above conditions it will be absolutely necessary to use the Rose system for dividing the purse, otherwise we would have the old anomaly cropping up again—a man in second place receiving more money than one who had broken more targets than he had. At Burlington, Vt., on the last day of the Interstate Association's tournament, Aug. 27, there was a 25-target event, handicap allowance of extra targets to shoot at, $2.50 entrance, $25 added by the club. There were twenty entries in this event, making a purse, with the $25 added, less the amount out for targets at 3 cents each, of about $65 The Rose system was used at this tournament and this event showed up the excellence of its methods. No man was allowed to score more than 25, no matter what he broke. Barrett, of Montpelier, a scratch man, broke 25 straight and tied with three others for first place; Tucker broke 24 and was second; Fanning and Barrows tied for third on 23, while the club's president, E. A. Worthen, and W. S. Phelps, its treasurer, ended in fourth place. Under the Rose system the four first men each received $10 for their $2.50 entrance; second place paid $6; third place $4, and fourth place $2.

Once shooters become familiarized with our scheme, we believe that highest possibles and the Rose system will make handicap events more popular than ever. Give the combination a trial and send us the result.

North Texas Gun Club League.

LITTLE ROCK, Ark, Sept. 25.—The fourth tournament of the North Texas Gun Club League was held at McKinney, and while not as well attended as its predecessor, which was held at Greenville a month previous, was quite a successful affair, shooters being present from Greenville, Farmersville, Waxahatchie, Bonham, Dallas and other points, though not near so many entered teams in the League contest as at the previous shoots.

On the first day the best work was done by Faurote, of Dallas, who shot through the entire programme. Norman and Kerr also showed good form, while Moore was also in it, so to speak, though scarcely shooting the gait he is capable of. The team contest for the McKinney gold medal was won by the home team by a score of 67 out of 100. Events Nos. 1, 3, 5, 7 and 10 were merchandise shoots, the tenth being consolation shoot; event No. 8 was a live-bird sweep, 7 birds, $5 entance; the other events were sweepstakes.

Kimball....	6	..	5	..	7	..	4	..									

The scores in the team shoot were as below:

McKinney No. 1: McDowell 18, Sims 15, Matthews 14, Oates 11, Benge 9—67.

Dallas No. 1: Faurote 17, Allen 14, Worden 14, Stewart 13, Hughes 7—65.

McKinney No. 2: H. White 13, J. L. White 11, Harrison 7, Wilcox 6, Abernethy 3—40.

Dallas No. 2: Conlist 11, Spicer 11, Haggard 8, Russell 6, Gaston 4—40.

The programme on the second day was similar to that on the previous day; Conlist, McDowell, Moore and Faurote all doing work and carrying off the honors of the day. The Dallas team won the E. C. cup, scoring 75 out of 100, beating the local club just one bird. Event No. 6 was a live-bird sweep, 10 birds, $7.50 entrance. Faurote won the special prize for the best average in all target events of both days.

The scores in the team shoot for the E. C. cup were as follows:

Dallas No. 1: Faurote 19, Stewart 17, Worden 16, Hughes 12, Allen 11—75.

McKinney No. 1: McDowell 17, Sims 16, Benge 14, Matthews 14, Oate 13—74.

Dallas No. 2: Conlist 14, Spicer 13, Gaston 12, Haggard 11, Russell 10—60.

Farmersville: Moore 11, Hope 9, Hale 8, Horn 7, Hamilton 3—38.

McKinney No. 2: Wilcox 9, H. White 8, J. L. White 7, Harrison 7, Abernethy 2—33. PAUL R. LITZKE.

Kansas City Gun Club.

KANSAS CITY, Mo., Sept. 19.—The Kansas City Gun Club held its regular monthly shoot to-day. The day was an excellent one for pigeon shooting, being bright and clear, and with a wind that blew a gale from the west, having an invigorating effect on the pigeons as well as the shooters. The local shooters turned out in force, and a number of those who had been in attendance at the Schmelzer tournament stayed over to take a shy at the live birds.

In the club contest F. J. Smith won Class A medal, Fletcher won Class B medal, and the Class C medal was also captured on a clean score by Williams.

After the conclusion of the regular club shoot a 10-bird sweep was shot, $5 entrance and three moneys. In this event those who scored 10 and those who scored 9 received exactly the same amount—$7.

Club shoot:

The Newburgh, N. Y., Programme.

THE programme of the tournament of the West Newburgh Gun and Rifle Association, Oct. 7-9, has come to hand rather late in the day. There is matter in it, too, that it would have been better to give to the public at as early a date as possible. We refer to the clause that states that "professionals are barred." Professionals, however, are only barred from the programme events on the target days, but on those days there will be an extra set of traps for professionals; at least that is what we gather from the programme. The live bird events on the third day are open to all.

The programme for each of the first two days is precisely the same: Ten 20-target events, $2 entrance. The Rose system will be used for dividing the purses. Twelve entries and under, 3 moneys; under 12 entries, 4 moneys. The club will give $50 for average money; this will be divided into 6 moneys—$13, $11, $8, $7, $6 and $5—to the shooters making the best averages on both days at targets. Empire targets will be thrown, two sets of traps being used.

The Baltimore Tournament.

THE Malone-Claridge match for the Du Pont trophy will take place on Tuesday, Oct. 6, as announced, despite all rumors to the contrary.

In addition to the programme published in our last issue there will be a race at 25 live birds, $25, handicap rise, five high guns. This will be shot on Thursday, Oct. 8 Handicaps will range from 26 to 32yds.

Although the notice of this shoot given to the public has been short, there is no question but what the tournament of the Baltimore Shooting Association will be a success. It will be managed by Mr. James R. Malone, captain of the Association.

Pennsylvania State Shoot.

HARRISBURG, Pa., Sept. 29.—[*Special to Forest and Stream.*] The Pennsylvania State shoot, which comes off to-day, does not have very good weather for opening. The sky is dull and drizzling rain has fallen. Shooters are quite numerous, enough to give promise of a good shoot. Among those here are Rolla Heikes, Bartlett, Billy Wolstencroft, Landis, Thurman, Justus von Lengerke, Jack Winston, Dr. Gagnon, Captain Money, Smith, of Buffalo; Kniskern, Leonard and Leaming, of Philadelphia; Remsen, of Brooklyn; John Denny and a host of others. It looks as if next year's shoot would go to Wilkesbarre. EDWARD BANKS.

Old Hoss.

EVERY trap-shooting reader of FOREST AND STREAM knows Old Hoss, by reputation at least. Pennsylvania never produced a more popular shooter than C. M. Hostetter, of Pittsburg, a man with a history, a memory and everything else. Old Hoss was the natural corruption of a surname into a pet name, and by that name he has been known for years, always shooting under that *nom de fusil*.

His excellent memory and a passion for figures, formulas, initial velocities, etc., has earned for him another title that threatens to dim the luster of that which was won by deeds of skill before the traps and in the field. Mr. Hostetter can speak for hours upon every scientific point connected with powders, nitro or black, and can quote figures up to the nth decimal point to prove the correctness of his assertions. He is Old Hoss out of doors, but he is Old Statistics when it comes to talking shoot indoors, particularly in the "Flicker's Nest." The Pittsburg *Daily News* of Sept. 21 ran an excellent likeness of Mr. Hostetter, and gave the following interesting account of his thirty years of life in Pittsburg:

"Who has not heard of Old Hoss (C. M. Hostetter), whose portrait is presented? His first experience at shooting was in 1858. At that time wild pigeons were abundant, and continued so for many years. He brought many of them down with his old Long Tom of a single muzzle-loader. He came to Pittsburg in 1866, and engaged in the drug business with Dr. J. H. Dickson, with whom he remained for twenty-three years.

"He was the father of and first member of the Pittsburg Gun Club, which through his energy was organized in 1878. Trap-shooting, which he has followed for twenty years, was his favorite sport. Mr. Hostetter is one of the oldest members of the Sportsmen's Association of Western Pennsylvania. In the days when this organization held front rank he won many prizes at its shooting events, the grand total being 7 gold medals, 1 silver medal, 3 silver cups, bronze card stand, and other prizes. One of the gold medals was valued at $150. It took a good shot to win in those days, and that is what Hoss was.

"He has hunted and fished in most of the counties in western Pennsylvania, West Virginia and eastern Ohio. His companions generally were Dr. Joe L. Duncan, D. N. McDonald, Dr. James McCann, Dr. Joe N. Dickson and Dr. W. R. Hamilton, all of whom are dead but Dr. Hamilton. At his home is a fine library of works on shooting and fishing, and all pertaining thereto. He has read every number of FOREST AND STREAM that has been published. He is one of the best posted men on shotgun ballistics in the country, also on guns, etc. His opinion is often asked for. The Flickers Nest, as Old Hoss calls his room, is filled with old relics in the way of old pistols, revolvers and shooting apparatus."

Sparrows for Trap-Shooting.

MR. BERT HAMPTON, of Chicago, who makes a business of supplying English sparrows for trap-shooting, sends us these notes:

"Your interesting editorial regarding the European or English sparrow attracted my attention. In studying the habits of this little pest I find him forsaking the densely populated and business parts of the cities, and he is found in great numbers in the suburbs, where he can find grain to eat. Another place is about large elevators and railroad yards, where the constant switching of cars spills more or less grain. I notice that the English sparrow will eat any grain excepting flaxseed, eating oats, corn, wheat, rye and grass seeds. He is one of the shrewdest birds known. I have some I have had in captivity for four months; they show no sign of becoming reconciled, but are always on the lookout for a hole by which to escape. He is a plucky little fellow, and will fight with his whole strength, biting hard enough to make it unpleasant in handling him. I have seen him bite hard enough to break an old grain of corn in two, or to pinch a blister on my hand. When used in trap-shooting he shows his only good quality and there only have I ever known him to have any friend, and that is because the shooter knows his bird will fly when he says "Pull." His flight at the trap is usually quite straight and rapid the first 25 or 30ft. and afterward a little wavy. Out of 500 used at one match not one refused to fly, the whole number trying to get away on the instant the trap opened. Now a suggestion regarding the general use of the sparrow as a bird for the trap. While inanimate targets are inexpensive and satisfactory for rapid shooting, it never has and never will equal live birds, for the nearer it imitates field shooting so much more interest does the participant take. Everyone knows there are many true sportsmen whose pocketbooks are not equal in size to their love of the gun. Now that man should not be barred (if it be possible to have him along) on account of his financial condition and because he cannot afford to pay 25 cents apiece for pigeons. Ten shots to that kind of a man make about all he can lose in one afternoon's shoot. Let the boys get some sparrows and shoot them off at 10 cents apiece It leaves more for sweeps, and the scores of the expert and amateur will be a little more equal; makes the little fellow feel good and don't do the big one any harm. To a gun club that has never tried them I would say try them as a novelty, and next time you will try them because you like them."

The Endeavor Gun Club's Merchandise Shoot.

THE Endeavor Gun Club, of Marion, N. J., announces that it will hold a "grand merchandise shoot" at its grounds, Oct. 23-24. The main event on each day will be a 100 target handicap race, entrance the price of the targets only, $2. Two handsome cups and several other valuable prizes have been secured and will, with others that will be added to the list later, be competed for on the above dates. In addition to the big event each day, smaller events for suitable prizes will be shot each day. The entries for the 100-target events close on Oct. 22. All who intend entering should send their names and $2 "to cover the cost of the targets," that is, as a forfeit, to A. R. Strader, 371 New York avenue, Jersey City, N. J., or to Carl von Lengerke, 8 Murray street, New York city.

A merchandise shoot of this character and proportions is something new to shooters in this section, and few men can realize what an amount of work the actual getting up of such an affair entails on the moving spirits. There are a great number of new shots coming up, while there are also a number of older and more experienced shooters who are fond of a day at the traps; many of these two classes cannot afford to go to a shoot and pay either high or low entrance fees, and shoot on a par with the expert class of their own clubs. To such men a shoot of the kind proposed means a cheap day's amusement with the chance of winning something to carry home with them.

The Endeavor Gun Club, too, has done a great deal for trap shooting in the vicinity of New York, and under its present roll of officers, especially its president, Mr. A. R. Strader, and its captain, Mr. George H. Piercy, not to mention Carl von Lengerke, it is a decidedly lively organization in local trap-shooting circles. As such it should merit and receive the generous support of the local trap-shooters. It is from that class, of course, that the majority of the shooters at its coming tournament will be drawn. But the Endeavor Gun Club draws no lines; it simply says that "All are welcome," and that "Every shooter will be handicapped on his merits."

We may add that the Endeavor Gun Club means what it says, and will carry out all that it proposes to do.

An Invitation to the Champions.

CHARLIE ZWIRLEIN, of Yardville, N. J., is issuing the following invitation to all the best known live-bird shooters in the United States:

"I wish to place before you the following proposition: The Cast Iron championship trophy seems to have gone out of sight, and the claims to the title of 'champion live-bird shooter of the United States' are many in number. For the purpose of deciding this vexed question I propose a contest on the following lines:

"One hundred live birds per man, $100 entrance fee, 30yds. rise, 50yds. boundary, Hurlingham rules (or American Association rules), all birds to be shot from one set of traps. The shoot to take place Dec. 1-3, 1896, on the grounds of the Interstate Fair at Trenton, N. J. The first day will be for sweepstake shooting open to the world. Then 50 birds will be shot at by each contestant for the championship on Wednesday and Thursday. I want to get the ten or twelve best live-bird shots in the United States to take part in this event, and as an additional inducement I will provide all the live birds required for this match free of all charge to the shooters.

"You will appreciate by this that I want to bring off this shoot, and I would like you to be one of the shooters in this event. I will have all first-class birds, the best I can get in the country. Think this matter over and let me know what you think of this shoot. Also let me have your ideas as to how the stake money of $1,000 or $1,200 should be divided, as this matter will be settled by a majority vote of the contestants. All entries should be made accompanied by a forfeit of $25 in cash or a certified check to FOREST AND STREAM PUBLISHING COMPANY, *Shooting and Fishing Publishing Company*, or to the New York office of the *American Field*, and all entries must be made on or before Nov. 15.

"You will greatly oblige me and facilitate arrangements if you will favor me with your opinion on all the above points, as requested, at your earliest convenience."

Mr. H. S. Peed, of Norfolk, Va., accompanied by Mrs. Peed, has been making a visit to the North, taking in New York, Niagara Falls, etc While in New York he tried his hand at a little target shooting to see what it was like. Neaf Apgar, who had met Mr. Peed in Norfolk, acted as his chaperon. Like all good shots in the field, Mr. Peed found targets not so easy "as they looked." Watching Neaf shoot is bound to make one think they're easy, and so they are—to him.

In New Jersey.

TRENTON DEFEATS THE DAYTON TEAM.

Sept. 17.—The team race between the Dayton and Trenton teams, which took place to-day on the grounds of the Trenton Gun Club, resulted in a win for the home team by 15 targets. The next race comes off at the Monmouth Junction grounds of the Dayton club on Oct. 3. The conditions of the race are 30 singles per man, 12 men to a team. Socres of to-day's race:

Trenton.

THE ZWIRLEIN-WINSTON MATCH AT YARDVILLE.

Sept. 22.—J. L. Winston had not to wait long after his arrival in New York before he got a number of matches offered him. Three in one week is enough for almost anybody, even if the matches are not for any considerable amount of money. The three matches Winston had on hand this morning were: one with Zwirlein, 25 birds, $25; one with George Cubberly, 50 birds, $50; one with Mr. Langen, of New York, a gentleman whose *nom de fusil* (as the boys say) is "Count," for $147, each man to shoot at 100 birds. The Zwirlein and the Cubberly matches were booked for Zwirlein's grounds at Yardville, N. J.; the match with Langen for Phil Daly, Jr.'s, grounds at Elkwood Park. The dates set were to-day (Sept. 22), Sept. 24 and 25 respectively.

To-day's match with Zwirlein resulted in a defeat for Winston by 2 birds, the scores standing 23 to 21. Winston says that the birds trapped by Zwirlein to-day were as good as any he ever saw in his life, and adds that so far he has seen nothing but fast birds in New Jersey. In the 5 bird sweeps and in the miss-and-outs shot after the race both Zwirlein and Winston did good work. Ben was also well to the fore, while George Cubberly ran 24 before he missed, scoring 21 out of the 24 with his first barrel. The scores in the match were as follows:

C Zwirlein	120122122221022112121221222—23
J L Winston	122222222222001211201?12●?—21

The scores in the sweeps were as below:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No 6

PLAINFIELD VS. DUNELLEN.

Sept. 24.—The Independent Gun Club, of Plainfield, shot a team race to-day with the local club at Dunellen. The match took place on the Dunellen Gun Club's grounds, and resulted in a win for the visitors by 8 breaks. The conditions were: 6 men to a team, 25 targets per man, unknown angles:

Independent Gun Club.

AT THE OAKWOOD INN TRAPS.

Sept. 24.—A full day's sport was the result of the invitation issued by N. H. Astfalk, proprietor of the Oakwood Inn, Rahway road, Elizabeth, for the above date. The notice given was comparatively short, but that was inevitable, as the reason for holding the shoot on this date only came into being one week from to-day. At the opening shoot of the season, held at these traps on Sept. 17, a little banter resulted in a team race for dinners being arranged between the following teams: Capt. Money and N. E. Money, of the American E. C. Powder Co., and Edwards on one team, against J. L. Winston, of the Austin Powder Co.; Matthew Herrington, of Laflin & Rand's W-A powder, and Nate Astfalk himself. As it turned out, all but Winston showed up, and he sent his regrets, a more important match, one against George Cubberly, at 25 of Charlie Zwirlein's birds, being the attraction.

A team race was shot, however, Capt. Money and Astfalk choosing sides. Mr. Colin R. Wise, of Passaic, who was present by special request to referee the original team race and eat the dinner dependent on the result, was made to do double duty, shooting 25 targets on each team; he was allowed, under the rules, two dinners, but found one quite sufficient. Astfalk's catering generally puts a stop to "repeating." Capt. Money's team was defeated by 18 targets, the winners making just a fraction over 80 per cent. As the background at these traps is an extremely hard one, the totals are really better than they look. There are few grounds where it is so difficult to catch a second glimpse of one's target if once one loses sight of it. All this will be altered when the proprietor gets in his fine work on the trees that cause all the trouble. Astfalk was justly tickled at leading his team and being high gun for the match. The race was shot at unknown angles.

The day was a lovely one, a regular early fall day, and as perfect for target shooting as if made to order. Under the circumstances it was rather strange that there was not a better turnout of shooters. Among the visitors was Mr. H. S. Peed, of Norfolk, Va., a new hand at the traps, but one who showed that he was all right in the field by the way he handled his gun. The poor light and the sharp quartering targets, thrown low into the trees, bothered him somewhat, but he "got there" rather oftener than the beginner does as a rule.

A new feature at New Jersey traps were the miss-and-outs, 50 cents entrance, re-entry in the first round. These are capital things to keep up the interest in a shoot when shooters and shells are growing scarce. It is perhaps a trifle too slow for some who want to be banging away at the rapid-fire style of shooting, but it makes a pleasant change and is capital practice for a man who is in the habit of trying hard for his last target—and losing it. In miss-and outs it is always your "last target" unless you break it. The way these events were run off to-day was as follows: The first round was shot at No. 1 trap, the shooters following in rotation as in live-bird shooting; the survivors moved on to No. 2 trap, then to No. 3, and so on returning for the sixth round to No. 1. To show how hard the shooting is at the Oakwood traps, it is only necessary to point out that five rounds were more than sufficient as a rule, while in only one event, No. 4, did the survivors return to No. 1. These events also were shot at unknown angles.

The scores in the team race were as follows:

Astfalk's Team.

N H Astfalk	111101111001111111010110111111111101111111101111111111—43

Wise	7	9	6	8	8	11	11	11	H S P	..	..	..	..	..	9	6	10
Capt Money	4	6	9	9	7	13	12	..									

No. 9, 10 targets: Apgar 10, Astfalk and Edwards 9, Wise 6, Schorty and H. S. P. 5.

All events were at unknown angles, except No. 5, which was at expert rule.

As stated above, a special feature of the afternoon's sport were the miss-and-out events, 50 cents entrance, re-entry in the first round. Five of these were shot, considerable interest being taken in the shooting by spectators as well as principals. Edwards and Wise both missed their first targets in No. 1 and re-entered, losing their first targets again. Schorty, Capt. Money and N. E Money performed the same trick in No. 2. Scores in these events were as below:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Edwards	0	111	10	111111111	110
N E Money	11110	0	1111	10	10
Schortemeier	10	0	1111	10	10
Wise	0	111	10	110	11110
Capt Money	11110	0	0	11110	1110
Astfalk	11111	110	110	0	10
Scott	110	10	....	.....	.....

* Re-entries.

EDWARD BANKS.

CUBBERLY DEFEATS WINSTON.

Sept. 24.—Jack Winston was in hard luck to-day, losing his second match at Yardville, and losing it too at the start, 5 birds out of his first 10 getting away from him. He finished by scoring 36 out of his next 40. Cubberly, Winston's opponent, walked right away from Winston in consequence of the above piece of work; he killed 19 straight before he let one go, and followed that up by dropping the next two, but finished the first string with 22 to Winston's 18. In the last half both men shot well, tieing with 23 out of 25; Cubberly's victory being gained by scoring 45 to Winston's 41. Cubberly once more showed his right to the title of George "One-barrel" Cubberly, 26 of his birds being scored with the first barrel, while several on which he used his second barrel might very safely have been left with only the use of one shell. The scores were:

J L Winston	220202200022202222120222—18
	122122121222012122102122—23—41
George Cubberly	121211111112?1122?000211—22
	111122221201212211021211—23—45

WINSTON WINS AT ELKWOOD PARK.

Sept. 25.—The match shot at Elkwood Park, N. J., to-day, between J. L. Winston (147) and Langdon, of New York, an amateur who shoots under the name of Count, resulted in a remarkably close finish after seesawing backward and forward, first with one in the lead, then with the other. The conditions were 100 targets per man, $147 a side, loser to pay for the birds, Winston at 32yds. and Count at 28yds. Both men killed 77 out of their 100, shooting off the tie on 25 birds, Winston winning by 22 to 21. Scores:

Winston (32)	112220022021222000221122?—19
	221120220221202100021021?—18

NEW JERSEY AMATEUR TRAP SHOOTERS' LEAGUE.

Sept. 26.—The fourth shoot of the New Jersey Amateur Trap-Shooters' League was held to-day on the grounds of the Bergen County Gun Club at Hackensack. The day was a lovely one for shooting and a good turnout was the result, about forty shooters taking part in the sweepstakes and team race. The League is composed of five clubs: Boiling Springs Fishing and Gun Club, Endeavor Gun Club, Bergen County Gun Club, Passaic City Gun Club and the Oritani Field Club, of Hackensack. Each club was represented in the team race by six men, not an easy number to get together always, especially under the by-laws of the League, which provide that no man who has shot on one team during the season shall be permitted to shoot on any other team during that season. This rule is a good one, but we think it would be much improved by adding the following proviso: "Unless the unanimous consent of the captains of the other teams be obtained, sanctioning such change." It happens sometimes, and did happen at the League's shoot at Passaic in August, that one team is a man short, while another club has several members present, one of whom is a member of that other club. No amount of agreement between captains can get over that by-law; that member cannot be transferred, even though all parties are willing. All this seems to us contrary to the spirit in which this League was formed, and also entirely foreign to the good-fellowship which should prevail in all such organizations. We recommend the above amendment to the management of the League, pointing out that a single dissentient voice would prevent any such change as contemplated. The insertion of the words "by ballot" after the word "obtained" would do away with all possible chance of any odium attaching to a negative vote.

To-day's shoot was a pleasant one, the Bergen County's maiden effort at tournament giving being an entire success. The club has spent a good deal of money in fixing up its grounds, which are on the east side of the New York, Susquehanna & Western Railroad, right in the Hackensack meadows. As a result of such location everything—club house, platforms, traps, screen, etc.—have had to be raised some 4ft. above the swampy ground, as high tides make it decidedly wet traveling in the vicinity of the Bergen County Gun Club's grounds. It cost the club some hundreds of dollars to put everything in shape, but it can now boast of a very comfortable little piece of property, well suited for the purposes for which it was designed. It takes less than five minutes to walk from the railroad station to the grounds, so that really it may be said that, in point of accessibility from New York, the promoters of the club could scarcely have made a better choice.

In our issue of Sept. 19 we gave a report of the League's meeting at which it formulated a definition of what in its opinion constituted an amateur trap shooter. At that meeting also the handicaps for the next three shoots of the League were fixed. From statements made to-day it seems that there was some misunderstanding at that meeting in regard to the figures quoted as to the percentages made by some of the teams. Under the handicap arranged for the first three shoots of the League, the Boiling Springs Club was on scratch with 30 targets per man to shoot at; the Endeavor and Passaic City clubs received 2 targets, each man on those teams shooting at 32; the Bergen County and the Oritani shot at 33 and 34 targets per man respectively. The handicaps adopted at the meeeting above referred to, held on Sept. 11, were as follows: Boiling Springs and Endeavor, scratch; Bergen County and Passaic City, 3 extra targets per man; Oritani, 5 extra targets per man. To-day George H. Piercy, vice-president of the League and captain of the Endeavor Gun Club, received the following telegram from Secretary W. H. Huck, of the Boiling Springs Club, who is also captain of the League: "The Bergen County Gun Club did not, I find, get its handicap reduced. Its team has been shooting a high percentage, and it is no more than right that your club should have the same handicap as Bergen County. If I was in your place I should enter a protest on these grounds." Mr. Piercy gave notice verbally, prior to the commencement of the team race, that he would enter a protest in writing against the Bergen County Gun Club's score in to-day's race simply for the purpose of having the handicaps reconsidered to see whether any mistake had been made.

On paper the Bergen County's team that shot in to-day's race is stronger than any team in the League. L. H. Schortemeier and J. S. Remsen are a very warm pair indeed for any two men in the League to tackle; Remsen's score in to-day's race is no criterion of what he can do; he was away off for once, and probably only for once. E. Dudley is good for over 80 per cent in a team race any time, while Griffiths, Bell and Chaffee can always be counted upon for good scores. The team is nothing like the one that did duty for the club in the three previous shoots, upon the results of which shoots the handicaps were made. It is true that the Endeavor Gun Club's team to-day beat its total even up by 5 targets; the 18 extra targets allowed the team of the Bergen County Club as a whole did the work, the 6 men breaking 15 of the 18 and winning by 10 breaks from their nearest competitors, the Endeavors.

The percentages of the different teams in to-day's race are low ones comparatively speaking. They run as follows: Endeavors 142 out of 180, average 78 8; Bergen County 152 out of 198, average 76.7; Boiling Springs 122 out of 180, average 67.2; Passaic City 128 out of 198, average 64 6; Oritani Field Club 134 out of 210, average 63.8.

The grounds are not easy ones to make a big score on; the reeds in the meadows are now turning yellow, making a low-thrown target extremely difficult to catch onto quickly and accurately. Care has to be taken when shooting at every target, slap-dash work won't do at all, particularly as the trapper boys are green as yet and the targets in consequence are not regular in their flight. It is good shooting so far as sport goes, but it makes a team race hard work. The conditions of the race are 15 targets, known traps and angles, and 15 targets, unknown angles, the allowance of extra targets being shot at unknown angles. It is worthy of note that only one man, Colin R. Wise, of the Passaic City Gun Club, made a straight 15 on the known angles. On the 15 targets at unknown angles not a single straight was made; Schorty, of the Bergen County, and Edwards and Louis Piercy, the boy shooter of the League, both of the Endeavor Gun Club, were high with 14 each. A curious feature of the three 14s above mentioned is that Louis Piercy shot Schorty's shells when making his score of 14 out of 15

So much space has been devoted to other matters of interest that it is impossible to say much about individual work. It will not do, however, to pass over altogether the shooting of Griffiths, Conklin, G. P. Ricardo, Wise and Lancom, for their respective teams. The latter is a new man in New Jersey trap-shooting circles, but he is beyond question a comer, and will make a worthy representative of his club—the Boiling Springs—and should be able to fill one of the gaps in that club's ranks when it comes to team work. Where were the old standbys of that club to-day—Paul Jeanneret, W. H. Huck, Frank Krebs, Gus Greiff, W. J. Simpson, Platt Adams, etc ?

Among the visitors to the grounds were (*place aux dames*) Wanda, Mrs. M. F. Lindsley, the representative of the absent Milt, of King's Smokeless Powder fame; Capt. A. W. Money, of the American E. C. Powder Co.; John L. Winston, of the Austin Powder Co.; and Carl von Lengerke, of the Schultze powder representatives in the United States.

The scores in the team race were as follows:

Bergen County (33).

L H Schortemeier	10101101111111111111101111111101 —28

In the sweeps, all of which were shot at unknown angles, there was some pretty sharp competition. The last two events, of 20 targets each, were shot after the team race, the light being absolutely gone before the second squad in the last event had finished their scores. The table below gives the results of each sweep:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Targets:	10	10	10	10	10	10	10	10	10	15	10	10	15	10	15	20	20

*Johnson	..	..	..	..	..	..	..	..	..	..	..	..	..	5	..	8	..

* In regard to the last-named shooter, Johnson, President Bell, of the Bergen County Gun Club, writes us that "the last name—Johnson—is that of the well-known swimmer, who holds, I believe, the world's record for 100yds. He is a charter member of the club, but has been yachting all summer. He returned yesterday (Friday), and had his yacht towed up the river to Hackensack, where she will lie up for the winter. He is an enthusiast at the traps."

EDWARD BANKS.

Joplin Gun Club.

JOPLIN, Mo., Sept 25.—The scores made by members of the Joplin Gun Club at its last shoot were as below:

One hundred targets, unknown angles, 20 targets per string:

	1st string.	2d string.	3d string.	4th string.	5th string.	Total.
Horn	18	15	13	20	18	84
Huffman	17	18	18	13	15	81
Leeman	12	16	10	15	14	67
Sumner	17	18	18	17	19	89
Sergeant	18	19	18	17	19	91
Cox	18	19	20	19	18	94

SERGEANT.

Lynchburg Gun Club.

LYNCHBURG, Va., Sept. 23.—The scores made at to-day's regular weekly shoot of the Lynchburg Gun Club are given below. In the last event C. W. Scott ran 25 straight and won the "clean score medal." Scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
Terry	16	21	18	20	Scott	16	21	20	25
Dornin	22	18	20	23	Moorman	13	18	21	21
						F.	M.	D.	

C. W. Scott, of the Lynchburg, Va., Gun Club, the only representative from Ole Virginny at the Hazard tournament in Cincinnati last May, didn't do a thing to the boys last week but run off with the "clean score" medal, running 25 straight in the last 25 of a series of four 25-target events. The grounds at Lynchburg are hard ones to make a good score on, so that Mr. Scott deserves extra credit for his good score.

On Long Island.

NEW YORK GERMAN GUN CLUB.

Sept. 16.—The New York German Gun Club met to-day for its monthly live-bird shoot at Dexter Park. Dr. Hudson won the club medal after shooting off the tie in a sweep. Several miss-and-outs were shot after the club race, three of these events being won by J. S. S. Remsen, a visitor, who ran 14 straight as a wind-up. The scores in the club shoot and in three sweeps were as below:

	Club Shoot.	No. 1.	No. 2.	No. 3.
Dr Hudson	11121101—7	111—3	22220—4	11002—3
F Sauter	00120101—4	122—3	10000—1	02011—3

* Guest.

IDLE HOUR GUN CLUB.

Sept. 21.—Nine members of the Idle Hour Gun Club took part in the club's monthly live-bird shoot held to-day at Dexter Park, L. I. Four members tied for high place in the club event, while one other lost only 1 bird and that fell dead out of bounds. Scores:

F Markert	1121121—7	H Boemmerman	1111010—5
J Bamberger	2221121—7	J F C Elfers	1012001—4
Geo Helmsteadt	2211211—7	Chris Larkeman	1002102—4
H Meyer	1111111—7	Wm Burrowes	0100022—3
H Hoffman	111•111—6		

HELL GATE GUN CLUB.

Sept. 22.—The Hell Gate Gun Club held its monthly club shoot this afternoon at Dexter Park, L. I. There were 26 shooters in the club event at 10 live birds per man, but only one of the 26, Henry Forster, managed to kill all his birds. Seven others managed to get within 1 of his score. The totals made were as below:

Henry Forster	1122222121—10	Richard Regan	0221120011— 7
Fred Trostel	1202121222— 9	John Krebs	0010111121— 7
E Paynter	1121011112— 9	Emil Marquardt	1111•00112— 7

FALCON GUN CLUB.

Sept. 24.—The Falcon Gun Club held its monthly shoot at Dexter Park this afternoon. The club event is 7 live birds, old Long Island rules, second barrel kill to count one-half. Scores in the club race were:

Aug Valges	1111101—6	H Van Staten	0200001—1½
John Vagts	0212110—4	Chris Meyer	2111111—6½
Chas Doscher	0000110—2	John Hermann	1110110—5
John Moller	2001111—4½	J H Meyer	0101011—4

Two team races, 5 men to a team, 3 birds per man, were shot. In the first Chris Meyer's team won by 10½ to 7. The same teams competed in the second race, Meyer's team allowing the others one miss as a kill. As a result Knebel's team won by using its handicap allowance. Scores:

No. 1—Chris Meyer's team: C. Meyer 2½, J. Moller 2½, H. Otten, Jr., 1, Geo. Valges 3, Chas. Doscher 1½—10½.

Knebel's team: H. Knebel Jr., ½, J. Hermann ½, J. N. Meyer 2, J. Vagts 1, H. Van Staden 1½—7.

No. 2—Meyer's team: C. Meyer 3, Moller 3, Otten 1½, Valges 1, Doscher 2—10½.

Knebel's team: Knebel 3, Hermann 1, J. N. Meyer 3, Vagts 1, Van Staden 2½—10½ + 1 allowance 11½.

NEW UTRECHT GUN CLUB.

Sept. 26.—The New Utrecht Gun Club has made arrangements to start in live-bird shooting on Saturday, Oct. 3. Negotiations have been begun for new grounds, but until they are ready the club will patch up its old ones and use them. The scores in the club shoot and the Hegeman trophy events, shot to-day at the Dyker Meadow grounds, were as below:

Dr Littlefield (A)	10101111111010101111011111—19	10001 w
D Deacon (A)	01101100110111101111001111—17	111111111111111 —15
Dr Wynn (A)	10110011100111111010001111—16	01100 w
J E Pool (B)	00111111101101111111110110—19	00100100111101100 — 7

Whitman	10000101010011011010111111—14— 83

Buck, of the Eureka, scored 16, and Levy, of the Garden City, scored 10 in Class C.

The Garfield Class B team was short one man; the Garden City team in the same class was also a man short. The Cicero Class B team needed two men to make up its complement. In Class C the Calumet Heights Club had things its own way.

W. A. Jones, of the Eureka B team, won the keg of Du Pont powder on the shoot-off by the lowest scores on each team.

Warren Gun Club Tournament.

WARREN, O., Sept. 19.—The following scores were made at the tournament of the Warren Gun Club, held Thursday, Sept. 17. Although the attendance was not large, the majority proved to be stayers. There was a large attendance of spectators, who were quite interested in the working of the magautrap. This trap gave excellent satisfaction, and all present voted it a success.

Event 6 was at 50 targets, for an L. C. Smith gun of $80 grade, and was won by Mingo (J. A. Flick), of Ravenna, O., on a score of 46.

Event 7 was at 25 birds, for a handsome gold badge given by the Peters Cartridge Co., and was won by J. W. Nonneman, of this city, on a score of 24. The contestants in this event were restricted to the use of Peters cartridges, loaded with King's Smokeless powder.

R. W. EWALT.

Calumet Heights Gun Club.

CHICAGO, Ill., Sept. 19.—In to-day's trophy contest Lamphere won in class A with a straight score of 25. A similar score has only been made once in the trophy contests of this season prior to Mr. Lamphere's score. The other was made by S. M. Booth. Houston won in class B after shooting off the tie with Norcom. R. B. Carson won in class C. Scores:

Class A.

Patty	11111111110111111111111101—23
Lamphere	11111111111111111111111111—25
Dr Shaw	01101111111010111111111101—21

Class B.

Houston	11111000011101111111111111—20
Metcalfe	11010111110000100111111101—16
Norcom	01111101111111111111010101—20

Class C.

Harlan	11100111011010110101000010—14
Davis	01111001110111001110011001—15
R B Carson	11101110011101000110101111—16

Ten other events were shot off, as shown in the table below. Nos. 1, 8 and 10 were at known traps, unknown angles; No. 2 at 5 pairs; No. 7, snipe shooting; the others were at unknown traps and angles. The day was bright, but a strong wind blowing in from the traps had a tendency to carry the targets to a higher elevation than usual.

Nos. 3, 4, 5 and 6 were team races, the teams being made up as follows: Houston's team—Houston, Lamphere, Dr. Shaw and R. B. Carson; Norcom's team—Norcom, Patty, Metcalfe and Harlan. No. 3 was a tie on 39 each; Nos. 4 and 5 were wins for Houston's team by 41 to 36 and 48 to 41 respectively. Norcom's team won Nos. 6 and 7 by 43 to 42 and 21 to 18.

Scores in the ten sweeps were:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	*10*	*10*	*15*	*15*	*15*	*15*	*10*	*25*	Targets:	*10*	*10*	*15*	*15*	*15*	*15*	*10*	*25*

No. 9 10 targets, unknown traps and angles: Norcom 5, Metcalfe 4, Houston 4.

No. 10, 25 targets, known traps, unknown angles: Metcalfe 18, Houston 17.

PATTY.

Pawtuxet Gun Club.

PAWTUXET, R. I., Sept. 12.—The shoot of the Pawtuxet Gun Club, held this afternoon on the club grounds, was the sixth of the series of eight now being held in competition for prizes, and made some changes in the standing of the various contestants. The crowd of shooters and spectators was as large as usual, and the rain interfered but little with the work at the traps. The scores, including that of Fessenden, who is not a member of the club, were as follows:

Class A: Whitaker 22, Greene 19, Sheldon 19, Wilson 17, Waterman 13, Mooney 10.

Class B: A. Hawkins 22, Badmington 13, J. Armstrong 10, King 10, Bain 9, Arnold 8, Fessenden 8, Barber 6.

There are two more of these shoots, to be held Sept. 19 and 26, and, as the prizes will go to the members having the four highest totals selected from the eight scores, the leaders may yet be passed by those further behind in the race. The totals of the four leaders in each class are now as follows:

Class A.		Class B.	
Sheldon	20 24 23 21—88	Amasa Hawkins	15 17 15 22—69
Whitaker	20 20 19 22—81	Graves	16 16 20 16—68
Wilson	14 19 23 17—73	Arnold	16 14 12 15—57
Greene	15 15 18 19—67	Badmington	15 15 13 13—56
Waterman	17 17 16 17—67		

These shoots will end the season for the club, as the hunting season commences in October. As practice shoots, they have developed new men and advanced the club until it is now the strongest trap-shooting club around Providence.

W. H. SHELDON, Sec'y.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., Sept. 19.—The scores made at the regular weekly shoot of the Audubon Gun Club, of this city, are given below. Event No. 1 was the badge shoot, and E. C. Burkhardt won the honors in Class A. Bird was high in Class B with 17 breaks, McArney with 16 breaks laying claim to high score in Class C. The totals of the different events are given in tabulated form, seven events in all being decided.

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

C Meyer	1012121111—9		

Dr. Tiffany's Powder.

GUILFORD CENTER, N. Y., Sept. 15.—*Editor Forest and Stream:* That a lie travels further and faster than the truth, and has more help on the way, is proverbial.

That few who read in the trap columns of a late issue of your paper the half truth—always worse than a whole lie—over the signature of Noel E. Money will take the trouble to read this letter is very possible. But, in justice to my friends and to myself, I can hardly do less than take up the gauntlet he throws down; and I am sure that FOREST AND STREAM, that has accorded Mr. Money the freedom of its columns, will give me a fair field and fair play there, even though I am not a paying advertiser.

In the letter previous to the one quoted from by Mr. Money (a letter which I notice he is careful not to use) I said in substance this: "I notice that you have put a new powder on the market. If you like to send me a sample to test I should be glad to give it a thorough trial. If it pleases me I shall want it in quantity." Was there anything criminal in that? I hold it a legitimate business transaction for the following reasons: Few trap shots *buy* a new nitro until they have a chance to *try* it. All the fraternity know that. It is our privilege, and few forego it. If something better than we are using is out we want to know it; but why should we invest in a new thing that may not be a practical success or may not please us as well as our old favorite until we have a chance to prove to ourselves that the new claimant for our favor is O. K.? That is a question the powder manufacturers are accustomed to answer by sending us "old timers" samples of their new products as soon as they are in the market; often *before*. I plainly and frankly asked Mr. M. for a sample. There was no compulsion about it; he was free to grant or refuse my request. Back came a pound can of his powder, but with it a bill for 60 cents. I immediately wrote Mr. M. that had I wished to *buy* his powder I could have purchased a pound of it of my New York jobber for 48 cents, or in 10lb. lots at 45 cents per pound, 2 per cent. off, and have had it shipped by freight, with other goods, at practically no expense; that, therefore, 60 cents plus 25 cents express charges was a price he of course could not expect me to pay (this part of my letter he doesn't publish, I notice), but that he had entirely misunderstood my former letter, in which I plainly asked for a *sample* to *test*, for I never bought a "pig in a poke," nor a new powder until I had had a chance to try it.

As for my statement that if a powder manufacturer has a good thing he loses nothing by letting me try it, I have some of the proofs of the fact before me as I write, and forward them for your inspection. A latter dated July 10, 1894, from the Du Pont Powder Co., states that among other goods they are shipping me on that day is a sample of their new Smokeless, "which," so runs the letter, "we would like you to try and let us hear the result." These are *some* of the results: 1. I have the receipted bill of the Du Pont Co., dated Aug. 3, 1894, for five 6¼lb. kegs of Du Pont Smokeless. Twice in 1895 I was the direct means of selling 25lbs. of that powder, and in a receipted bill of May 14, 1896, from a leading New York jobber, among other items I note one filled for 25lbs. Du Pont Smokeless—106¼lbs. in two years. Did the Du Pont people "lose" anything by the little 1lb. sample of their excellent nitro given me two years ago? I call it a good investment on their part, and I think they do.

Last year the Hazard Powder Co. sent me a 1lb. sample of their new smokeless powder, and I divided it among "the boys" to test. In less than ten days a cash order went in from this place for 25lbs. of it, and before the season closed another 25lbs. had been bought and divided among half a dozen of us. Did the Hazard people lose anything by their *practical* advertising of a new thing? Hardly.

Almost three years ago, not by personal solicitation, but through the kind offices of my good friend "Tee Kay" Keller (of U. S. cartridge fame), I received a small sample of the then new Walsrode Smokeless, loaded in good old U. S. Climax cases. I would hardly dare to tell the amount of that powder I have influenced the sale of—certainly much more than double that of Du Pont. But I feel sure the Walsrode Co. do not regret their modest investment.

E. L. TIFFANY, M.D.

Advertising in Programmes.

AT least once a week, more generally several times a week, FOREST AND STREAM has to go through the unpleasant task of saying "No" when it would really like to say "Yes." The number of requests that come to this office asking us to "Take a page in our programme" would, if footed up annually, surprise even ourselves. If every request received favorable attention, the amount of cash paid out each year to make our word good would form a respectable bank account for even a married man with a family. FOREST AND STREAM plays no favorites, so if one request was granted all would have to be treated alike. We cannot and do not advertise in tournament programmes, and club secretaries or tournament committees can save us the pain of dictating polite refusals if they will stick a pin here.

On the other hand, how about reciprocity? We advertise your shoots; we boom them with items of interest in regard to such shoots furnished us by the management; we extract from your programme matter that seems to us likely to be of importance and interest to possible guests at such gatherings. In fact, we don't do a thing to you, and very often you don't do a thing to us. When the tournament is over everybody is tired and it is often a case of "Oh! bother the scores!" You drop out of sight and we don't hear of you again until it gets to be time to "put in the papers" something about your steenth annual. You remember us then because we are necessary to you. Haven't we stated the case exactly as it occurs many times a year? Is that your idea of reciprocity?

To convey our idea of what reciprocity means as related to gun clubs and FOREST AND STREAM: Why, instead of asking us to pay for a page in your programme, don't you go to work and devote a small space in that work to telling the boys what sort of a paper we are, and what a lot FOREST AND STREAM has done for trap-shooting? You needn't be afraid of laying it on thick; we won't give you away and others *cannot*. Honest Injun! If we tell the boys what you are going to do for them, what the prospects are for a shoot, where to send their shells, guns, etc., and do not charge you a cent for doing it, you ought to reciprocate a little. Anyway, don't write and ask us to "take a page," but just hurry up your scores.

EDWARD BANKS.

Answers to Correspondents.

No notice taken of anonymous communications

C. G. G.—At what age should bitch pups be spayed? Ans. About six months.

J. E. N.—Ans. We can find no record of the dogs you mention. Address secretary A. K. C., who may be able to give you the information you desire.

C. F., Ansonia, Conn.—My dog has been troubled for some time with a disease which causes him to bite his paws continually. The flesh is black and on his forearms black things have come which look like warts. Will you please recommend some remedy and state the name of the disease. Ans. Treat for worms. Give Weyth's compound sulphur tablets three times a day. Apply following ointment to sore and irritable places: Balsam fern ʒ ii., thiel ʒ i., zinc oint. ʒ ii. Mix together.

L. D. H., Hartford, Conn.—My two English setter dogs, one three years old and one fourteen months, both drool quite badly. At times the saliva hangs in strings from one or both sides of the mouth, and at others it will lie in a frothy lump just inside the cheeks, and when the dog shakes his head he throws it out. I cannot exactly place the time when the older dog's trouble began, but the younger one never did until he had a light attack of distemper last spring. They are both perfectly healthy or seem to be; eat well and feel well; always ready for a run. I feed them almost entirely on scraps from the table, sometimes a little bread and milk or a meal of dog biscuit. They are fed twice a day, a light meal in the morning and a good one at night, and are never chained up; have the run of a big yard, with from an eight to twenty mile run once a week. I notice the frothy matter more when running and being in the water, but the drooling is around home at any time. Ans. The drooling is from one of the following causes: disease of the gums or cheeks, paralysis of the facial muscles, or due to a drug. Which of these it is can only be determined by an examination.

PUBLISHERS' DEPARTMENT.

All about Texas.

IF you wish to receive a 200-page handsomely illustrated book, telling all about Texas and her advantages, send 7 cents postage to D. C. Price, A. G. P. A., I. & G. N. R. R., Palestine, Texas, and the book will be sent to you by return mail. Texas is now attracting a large number of settlers by reason of her cheap lands and mild climate. You will not regret the amount. When writing mention this paper.—*Adv*

BIRDS AND THE FARM AND GARDEN.

IN response to a demand for Miss Florence A Merriam's paper, "How Birds Affect the Farm and Garden," we have reprinted it in a pamphlet of thirty-two pages, and it is now for sale at this office. Price, 5 cents per copy, postpaid; but with special prices to individuals or bird protection societies who may wish it in quantities for distribution.

OSMOND O. SMITH.

We are deeply pained to record the passing away of O. O. S.—Osmond O. Smith, of Fredonia, New York—who died at Dewatto, Washington, in the first week of September. A vague report of his death came to us shortly after that date, but confirmation of the unwelcome intelligence has only just now been received.

For many years, from 1876 to the present, Mr. Smith was a contributor to our columns over the signature O. O. S., which had become familiar to thousands of readers. His sketches covered outing experiences in fields so widely separated as Florida and New Jersey, Missouri, Oregon and Washington. They were permeated through and through with appreciative recognition of all that nature has to give to her children. His was the eye to recognize the majesty of the mountain range, to catch the beauty of the humblest wild flower growing in the shadow of the wood, and to study the sea mosses of the shore; and his was the pen so to picture these and all the manifold charms and delights of the outdoor world that others might share with him something of the joy of beholding them. Whatever he wrote was marked by never-failing vivacity and cheeriness; there was in it the spirit of looking on the bright side of things and making the best of the situation. We used to think, as successive papers were received from his pen, and we think now as we sum them up, that O. O. S. came as nearly as did any one we ever knew to the actual winning of what is best in field sportsmanship.

If it was a privilege to read what he wrote for publication, it was a privilege richer still to know him and to enjoy his friendship. "Noble and kind-hearted Mr. Smith" is the simple tribute of the letter which brings to us the announcement of his death. The unaffected grief which has filled the little cabin in the Northwest where his last days were spent among strangers will be shared by all who knew him.

SOME QUEER WAYS OF GAME BIRDS.

THERE are certain of our birds which have a well-defined migratory instinct which finds expression in a manner useful to them, for it impels them to leave the cheerless habitat of the North, with its inclement weather and dearth of food, for the warmth and abundance of the South. This annual migration has a well-defined purpose and is a matter of common knowledge.

The non-migratory game birds, notwithstanding their abundance and the wider opportunity afforded for studying them, have certain erratic habits and instincts, exhibited at certain times in the fall, which are quite as far from being definitely explained and settled as they were at the time when first noted.

The ruffed grouse in particular is subject in the autumn to a violent disarrangement of instinct and habits. For a few days it seems to lose its cunning, and its fears and shyness of man are much lessened. It leaves its old haunts, and shows no preference for open or cover. At all other times it is rare indeed when it will voluntarily go further than a short flight from its accustomed haunts. Its senses too seem to be dulled, for it is reckless in flight and will dash against obstacles which it ordinarily would avoid with ease.

Quail, too, show a decided uneasiness and change of habits at a certain time in the fall, often seeking a new habitat, so much so that many sportsmen believe that they migrate. What might serve as excellent summer quarters for the quail might be worthless to it in winter, hence it is necessary for it to seek a new range when winter approaches, one that comprises both shelter and food. To secure such it may be necessary for it to travel, which has by some been confounded with migration. Quail do not migrate in the sense that the term is understood, there being an obvious distinction between readjusting the habitat from summer to winter, and leaving one climate for another by continuous flight of all the species. Quail can be found throughout the North in winter as in summer, but not in the same haunts.

Prairie chickens exhibit changed habits of life when the frosts and high winds of fall set in. They grow wilder and the coveys of a certain district come together, forming what is called a pack. Then instead of having well-defined ways, as when they were in bevies, they seem to have no fixed habits. Their flights are much longer, and tameness is superseded by excessive wildness.

The ruffed grouse exhibits the most unaccountable traits of all. It seems to have no migratory sense of direction. It has a sort of crazy impulse to go somewhere, with but little heed of consequences.

Whether it is the fragments of an instinct which was ages ago once strong at a time when all contemporary bird life on the continent was forced to migrate, and which migration was rendered unnecessary as the world changed and earth became better organized, or whether it is some physical or mental aberration peculiar to the bird itself, no one can say.

It is in the realm of speculation, and while the impulse of the ruffed grouse to move about for a brief time with disorganized habits and instincts is commonly noted, it hardly explains the phenomenon by terming it migration. It may be that some new light can be shed on this hazy subject by more recent observers.

SUNDAY SHOOTING.

THE first arrest made by the agent of the newly-established Rod and Gun Club of Massachusetts was of a Sunday shooter. The record of the protective work in New Jersey for September shows a long list of arrests of Sunday gunners; and the month of October has opened with more notable work in the same line. On Monday of this week Deputy Game Wardens Ten Eyck and Squires, of Plainfield, arrested Otto Wagner, a farmer, and Fred Domeyer, a hide dealer, for shooting on Sunday at Warrenville. They were fined, and paid $20 apiece for their Sunday sport, and $20 each for three birds had in possession out of season, fines and costs aggregating $107.80.

In Massachusetts and in New Jersey the Sunday gunner is a nuisance, and one of the worst pests the authorities have to deal with. As a rule the man who shoots on Sunday in violation of law is quite as defiant of all other provisions of the game law; and as in this New Jersey instance kills game out of season. The Sunday gunner robs other gunners who respect the law; he is on a level with the man who shoots out of season; and it is quite as essential to suppress the one as the other. We are speaking now purely from the standpoint of game protection. There once came to us a plaint from a trap-shooting club whose members were indignant because the congregation of a church near their shooting grounds complained that the racket of the shooting disturbed the services on Sunday; and the club appeared to think that the preacher should talk louder or that the services should be postponed until after the shooting.

"MEN I HAVE FISHED WITH."

MR. FRED MATHER is making a hit with those reminiscent sketches of angling associates. "Men I Have Fished With" he puts it; but he began with boys and boyhood days. Whether he was conscious of it or not, there was art in this. If you would make sure your welcome as a story teller among the men of the rod and gun, begin with boyhood times. For where on earth will you find men who fished or hunted in their youth who do not love to be reminded of those happy days, and to live them over again in memory? They may have given up both pursuits years—ages—ago, and yet you shall not recall for them the youthful experiences of field or stream without winning their sympathetic attention. Fortunate indeed are the boys who have this privilege of going afield with rod and gun. Doubly fortunate are the grown men whose privilege it is to recall in reverie such experiences of former days. Thrice fortunate they who, amid the responsibilities and exactions of mature life, may renew their youth by actual active participation in field sports.

The boy who cultivates his taste for fishing or shooting is acquiring thereby something that may be of lifelong benefit. He is not only so storing up material for pleasant recollections in the years to come, but is providing means of recreation when recreation most urgently shall be needed. The man who enjoys fishing or shooting well enough to take a day or a week off now and then to indulge in it has in that very taste a valuable element of business equipment; for he will be induced by the gratification of that taste to renew his strength, clear the cobwebs from his brain, preserve his health, and keep himself mentally and physically in condition to do his best work. This is not theory, nor is it said here for the first time. It has been practically demonstrated over and over again in the observations of all men; and we have been preaching the doctrine for many years. Here is a specific instance in illustration: Some four years ago on this page was cited the case of a New York business man who once said in effect, "I don't care anything about fishing. I have tried it and can find no interest in it; moreover, I have no time to waste on it." That was four years ago. Since then he has found time—not to go fishing, but to be prostrated for months with illness brought on by too much confinement to business and not enough play—no time to go fishing. We do not cite this as a horrible example of a man who tried to do business without going fishing; and whose business in consequence went to the dogs. While he was undergoing this protracted siege of sickness his business interests were not wrecked. As a matter of fact the business went right on. For, you see, he had a partner who did go fishing; and by reason of the relaxation found in that pursuit gained strength to do the work of two men. Moral: If you don't like to fish yourself, do the next best thing, make choice of a partner who does. This is a business axiom second in importance only to that other rule, that if you are chained to business and can't go fishing or shooting, you should do the next best thing and read FOREST AND STREAM. Next to fishing is just now reading Fred Mather's stories of the men and boys he has fished with.

TECHNICALITIES.

OBSERVERS in the field of court procedure tell us that there is a growing tendency to increase the difficulty of securing convictions, in cases of unquestionable guilt, by the interposition of technicalities. Thieves rob the widow and go free, and murderers go unhanged, because of a flaw in an indictment, a missing word in a warrant of arrest. The tendency is manifested in causes big and little, from capital crimes to violations of the game laws. We reported last week the arrest of a Rhode Island grouse snarer who was captured red-handed with nineteen snared grouse in possession. When the case came to trial last Friday his counsel interposed a motion for its dismissal on the ground that the constable who had made the arrest had not been qualified to act, since he had not been elected to his office in due form. This was the turn given to the trial, as we find the proceedings reported in the Providence *Journal:*

Lawyer Thompson called Town Clerk Gough to read a certified copy of the Council records of the town of Johnston. They showed that on the 12th of last June Philip Randall, J. V. Barnes, Hiram Kimball, George Naylor and W. L. Plaisted were elected special constables under the game law; that on the 13th of August George Naylor resigned and William L. Plaisted was elected to fill the vacancy, qualifying on the 15th before Joseph Gough, Notary Public.

On these records Mr. Thompson contended that his client should be discharged. He quoted from the General Laws, Chap. 112, which provides that "annually, in the month of April, the Town or City Councils shall elect not less than one nor more than four special officers." The records did not show that any were elected in the month prescribed. None were elected until June. Mr. Thompson argued that the present administration followed their predecessors, who have elected previously in the month of June. The Council not only elected when they had no right to elect, but they elected five when the statutes provide for but four. After five were elected, what four were to say they constituted the legal number, even if they had been chosen in the month provided? He contended that Naylor's resignation did not create a vacancy, and consequently Plaisted's election in August was invalid, and there was no one elected in April, the only month during which the General Laws provide for the election of special game officers.

Attorney Lee urged that Plaisted was properly and legally appointed and qualified to serve warrants, upon which the defendant was brought into court.

Judge Phillips took the case for advisement, and will announce his decision Oct. 9.

MARYLAND

AN interesting work in black bass stocking is to be undertaken by the Maryland Game and Fish Protective Association this fall. They propose to transfer to the Potomac River, from the Chesapeake and Ohio Canal, when its waters shall have been drawn off, some of the black bass which are left in the pools, and which under usual conditions are left to perish or are scooped out by net fishermen. By planting the bass in the Potomac the Association hopes to increase the resources of a stream already offering rich reward for the angler. The system of transferring fish from the pools left by the receding waters of the Mississippi and other rivers in the West has long been prosecuted with decided advantage, and there is every reason to believe that the work will be equally successful in the Potomac. The Maryland Association has made an excellent beginning in protection activity Something of what has already been accomplished is outlined in another column and the record appears to giv abundant promise of a yet more vigorous campaign.

The Sportsman Tourist.

CAMP ALABAMA.

We had spent a month in the little town of Citronelle, Alabama, before we could learn anything definite as to the camping resources in that vicinity.

We had heard many alluring stories of wild turkey, deer and smaller game, to say nothing of alligators and crocodiles basking in the sun, but whether east, west, north or south, we were unable to discover. Some "reckoned fifteen miles south," others "five or ten miles ovah yondah," accompanied by a wave of the hand taking in half of the horizon, so after repeated efforts to gain information we had about given up our hopes in that direction and used to look ruefully at our carefully packed tent, boxes and duck boat sent all the way from Michigan and only awaiting an opportunity to become the snuggest of little homes.

Although apparently tired of the subject, we each kept our eyes and ears open and were at last rewarded by hearing of a place called by the natives Dog River, from eight to twelve miles out a certain road. A place with a name and a distinct way of approach was not to be despised, and without much hesitation we decided, game or no game, to try our fortunes there. Very easy to decide, but difficult to carry out.

The natives of Citronelle, though sadly in need of money, are uncommonly superior to its seductions. The few men with horses "reckoned they might accommodate us next week perhaps," and continued to pursue their usual occupation of loafing about the post office or station plentifully supplied with tobacco.

It was two weeks after we had made up our minds to go camping that a big farm wagon with two strong horses driven by a Northern man pulled up at our gate to transport us to Dog River. The tent, fly, stove and provision box we put in first, and surmounting all was the duck boat containing the breakables, and in which Mr. H. sat to keep a better watch on everything. I had the best seat, with the driver, and was supplied with a cushion which became very hard before the twelve miles were over. The roughest road that can well be imagined, winding through an interminable pine forest, over fallen trees, corduroy bridges sunken into marshes and creeks, frequently branching into two or three forks, and the fork we chose always losing itself in a tiny footpath, where our horses would have to be backed around and our steps retraced.

Dog River being some twenty or thirty miles long, emptying after hundreds of twists and turns into the Gulf of Mexico, we made for the nearest point. On the way we passed several ox carts with three and four yoke of oxen, their drivers with their long whips plodding sturdily beside them. These people come to Citronelle for their supplies for fifty miles around, often taking several days for the journey. During the last five miles we passed one house, a log structure with shutters and surrounded by a sort of stockade made of young pines, which inclosed a hard dirt yard containing an umbrella tree.

The place was deserted, but we stopped to rest and eat a lunch, and finding the water in the well good watered our horses and refreshed ourselves.

After this it was entirely a matter of chance. By the lay of the land we knew we were approaching the river and made our way for a mile in and out, uphill and down, removing fallen pines to make a road, crashing over others, until at a sudden turn we found ourselves on a high bank with the rushing, twisting river beneath.

After a cursory inspection, during which I held the horses, Mr. H. decided to unload where we were. The bank was high and level, the beach shelving and of firm white sand, while directly below us was a spring bubbling quietly up, and keeping a pool of clear, cold water.

Our guide and driver stayed until the young pines had been chopped down and made into tent poles, the tent and fly stretched over and made fast at the four corners, and the duck boat had been carried to the beach below; then he "'lowed he'd try and get home by dark," and promising to come for us in a week he made his crashing way back to the road. It had begun to rain, and as I sat on a camp stool surrounded by pails, hatchets, lanterns, etc., I experienced a rather dismal sensation as the rattling of his wagon gradually ceased.

Mr. H. had no time for such feelings. Before night he must have the tent intact, stove up, bed made, besides all the minor considerations. He worked as he never had worked before, and by the time the darkness settled down and the lanterns and lamps were lighted we had the cosiest, most comfortable tent imaginable. The tent itself was 8ft. 6in. by 11ft. 6in., with a fly which extended 7ft. in the front and 2ft. 3in. in the rear.

In one corner of the tent near the front was the stove (an invention of Mr. H.'s), the side walls of which set down in the ground 1ft.; the earth from the middle being dug out, giving a large fire-box; two lids on top gave plenty of room for cooking. In another corner was the bed; the four posts were young pines driven into the ground, while long boards were nailed on lengthwise and crosswise; on these rested pine strips about 2in. wide, making a sort of a spring; on top was a tick filled with pine needles. In another corner were shelves, on which we kept the ammunition, tackle box, clock, books, etc.; and in the fourth the table flanked by the provision box, which served as a seat. These with two stools and a rug, and out under the fly a table and wash-stand, constituted our furniture.

We had a very good supper of bacon, eggs, potatoes, bread, butter and tea, and after getting everything well under cover and ourselves snugly tied in, went to bed with a revolver under the pillow and the shotgun near at hand. Though very tired, we did not sleep much. The wind in the tops of the pines sounded like a gathering storm, the hooting of some night birds over our heads, and the cracking and crashing through the underbrush of the "piney woods" pigs, which are allowed to run wild through all that country, made us feel very far from civilization, and to crown it all we were awakened in the middle of the night by the weird song and cracking whip of some belated ox driver, where we did not know.

Next morning, however, we had forgotten our fears and were eager to be out exploring the river and woods. Mr. H. went down to the spring for water, but came back almost immediately in a very curious, stealthy manner, and getting his gun, crept quietly down the bank. I followed to the top of the steep incline and was rewarded by seeing a covey of quail fly up with a whir from the underbrush and out toward the opposite shore; but before they had gotten over the water there was a loud report, a flurry of feathers and down on the white sand two quivering heaps; another report and another bird fell in the water, but was borne away by the current before we could get it.

This was beginning our camping propitiously, and Mr. H. came to breakfast with a good appetite for his oat meal, coffee and condensed milk.

That day we stayed around camp, principally doing odd jobs and making more complete arrangements; but the next morning, after the camp work was done, wood collected, dishes washed and everything made right, we launched the little boat in the stream with oars and paddle, took with us two split-bamboo rods, with a box full of delicate flies such as the most epicurean fish might jump for, and with the gun and a basket of lunch prepared for a day on the river.

Directly in front of our camp was a turn, and we discovered that these were many, sometimes sharp, sometimes describing the most graceful curves. It was difficult paddling on account of the strong current, the rocks and the fallen trees; but a wilder, more picturesque scene we had never seen. The white, sandy banks, shelving down to the water or rising abruptly out of it, were covered with old forest trees of gum, bay, pine and oak, with a thick underbrush of blooming mountain laurel, while beneath the ground was sprinkled with white violets; the swift current swept in eddies into the curves of the bank, leaving the sand in well-defined strata; here and there a great pine had pitched headlong into the water, causing rills and rapids, while all along were little springs bubbling up through the sand or trickling down through the clay; overhead was a constant chatter of woodpeckers and the mellow notes of many birds, while little lizards sunned themselves on the logs, and an occasional long blacksnake slid into the water. We passed several creeks from 8 to 15ft. wide, and followed one for a mile or more. It was quite deep and limpid, and looked to be the home of many fish; but though we tried our most tempting flies, and finally resorted to angleworms, we caught no fish that day.

This was the beginning of a week of quiet pleasure, varied by shooting, fishing, paddling up and down the river, which we explored for many miles, or tramping through the woods with the gun, scaring the little lizards into their holes, watching the big turtles like traveling hassocks make their unwieldly way through the grass, or simply enjoying the splendid foliage, the balmy air and the clear blue sky.

We saw no wild turkeys, alligators or deer, though firmly persuaded of deer tracks on the shore of one of the creeks, but we did see and shoot many quail, and caught some fish, which added the dainties to our otherwise common fare.

We spent some time too in taking photographs, and at night it was enough to sit in our warm, light tent, with papers and books, and hear the strange sounds without, which soon ceased to alarm us and but made our camp seem more cheerful and bright.

At first we had felt some misgivings as to our guide returning at the proper time, but these gradually changed to fears that he would, and it was with considerable reluctance that we began the work of demolition, which left on the river bank only a rustic bed, some tent poles and a blackened hole in the ground. E. S. H.

CAMP SAINTS' REST.

Camp Saints' Rest was named by the sinners who occupied it this season, and who gave a sanctity to the place by the burning of incense (at $1 per pound) and the pouring forth of certain libations. It is a substantial little structure of logs and bark, with a somewhat ambitious covered porch, and possesses two windows with real glass in them. It is located on the eastern slope of a little valley leading down to the shore of Lake McCavanaugh, and through this valley there tinkles over its pebbly bed a cold spring brook whose sparkling waters follow every point of the compass before they ultimately mingle with the great St. Lawrence.

From this charming spot, carpeted with ferns and brooded over by mighty hemlocks and birches, half a score of rugged, unnamed mountains can be seen, and at their feet nestles the beautiful lake like a diamond in a setting of emerald. Here, indeed, is the "lodge in some vast wilderness" for which the poet sighed, and here the "boundless contiguity of shade" for which his spirit yearned.

The long, brown, winding streak of trail had been traversed, the heavy pack-baskets thrown off, and the camp-fire started. The slanting beams of the setting sun sifted down through the trees, the fragrance of Dill's best mingled with the aroma of the balsams and spruces, while the pungent odors from the coffee-pot and frying-pan enhanced the pleasures of anticipation. Such was our introduction to Camp Saints' Rest, and I doubt not that there are thousands of the readers of Forest and Stream who will recall with delight similar scenes and surroundings.

There were four of us, all told, including my wife, my friend Luques, and the guide, Will Martin, who may properly be described as "guide, philosopher and friend." And right here just a word in regard to him. Made up of cast iron and whiplash, experienced in all the ways of the woods, patient, good-natured and intelligent, a splendid shot and an equally good cook, he came pretty near being the ideal guide, and such men are exceedingly rare. It is a pleasure to put such a man on record, because the comfort and successful results of a forest outing depend so largely on the character and ability of the guide. Speaking of Martin's skill as a cook, there is a well-grounded belief in the St. Regis region that he can throw a flapjack up the chimney and catch it right side up in his pan outside the house when it comes down.

If the next occupants of Camp Saints' Rest will study the bill of fare tacked upon the wall they will be convinced that grim-visaged famine did not camp with us. Ah! those meals of blessed memory! How sweet and crisp the trout! how juicy the partridge! how brown and tender the frogs' legs! and how sweet and satisfying that grosser but wholesome fare, the cornbread, the salt pork and the fried onions! The gastronomic feats performed at that rough-hewn table will be long remembered, for in camp, as on shipboard, eating is a very important feature of each day's programme.

The Diana of our party had drawn first blood and had gotten her deer. She had never hunted at night nor worn a jack, but the noiseless paddle of Martin had brought her within range of the "two stars" shining from the bank, and with commendable coolness and accuracy she had put the lead squarely between the eyes of a big dry doe, whereupon there were congratulations on her second annual success, and she was crowned Queen of the Hunt; so it behooved the men to look after their laurels.

I had come into the woods to still-hunt because I believe this to be the most manly and sportsmanlike way to kill a deer. Certainly we were in a country well adapted to this style of sport. On every side of us rose high mountains, and an examination of the "signs" led us to believe that the fresh and well-worn deer trails leading up from the water promised well for our success. I had long since evolved the theory that the place to find the big deer is on the tops of the mountains, whither their natural cunning and wariness would prompt them to seek safe seclusion. A dozen deer had been killed by parties at the hotel near by, but as yet no big buck had been brought in, and a big buck was what we wanted. The average guide does not encourage this sort of still-hunting, because it involves a good deal of work and hard climbing, but Martin corroborated my notion, and we speedily made plans to seek the deer on grounds of their own choosing.

A high, round-topped mountain back of our camp was selected, and my legal friend was located on a big runway halfway to the summit. It was arranged that I should go around and climb the back side of the mountain, stopping just before I reached the top. Martin was to ascend from the opposite side and come over the top to meet me. It was well planned. After a hard climb I took a position where I could cover considerable ground with my eye, and waited for developments. They came in the shape of a crashing in the brush, and a magnificent buck, started by Martin from the crest above me, came tearing down the mountain side. He was a beautiful sight as he bounded past, with his big antlers laid close back on his shoulders, and it occurred to me that that shapely head was going to look well when mounted over my dining room mantel. The .44 Marlin in my hand had four notches on its stock, commemorative of similar occasions, and it was with considerable confidence that I "unhitched" on this flying targ t. With a big leap and a sudden acceleration of speed in another direction, the buck disappeared in the underbrush, but not until I had seen his tail drop and had pumped two more shots after him. Martin quickly joined me and we soon found blood enough to enable us to follow the trail easily. Within less than 200yds. we found where he had lain down, and then Martin said, "That's our meat, sure!" We sat down and took a smoke, waiting perhaps fifteen or twenty minutes, in the knowledge that a badly wounded deer if not followed too closely will usually lie down to stay. Then taking up the trail again, we followed it down the mountain straight toward Mud Pond, a mile away. But the blood stains were becoming smaller and less frequent, and finally ceased altogether. Then Martin slowly but surely followed the tracks until they led into many others near the shore of the pond, and could not be distinguished from them. And so, to my infinite chagrin, we lost him after all. It will be many a day before I get a chance at another deer like that, for, as Martin said when he saw his tracks, "He's a regular old horse!"

But it is not all of shooting to shoot, and, as he stopped bleeding, I suppose the noble animal is still alive and on the mend. Furthermore, I had the satisfaction of knowing that I had hunted him the right way, and also of demonstrating the truth of my theory that the best deer are not to be found in the daytime hanging around the clearings and wood roads, but rather on the most inaccessible mountains.

Encouraged by this day's experience, we hunted over five other mountains, finding everywhere abundant evidences of deer and numerous bear signs. It was glorious work in a glorious country and the views from the mountain tops repaid us for our efforts. Hitherto I had felt an apprehension of getting lost if I went alone into this trackless country, but a few days of this sort of work gave me confidence, and with the aid of a compass I found I could safely agree to meet my guide, at something near a stated time, on the side or top of a distant mountain, and also that once a man gets to feeling at home in the woods his mind is free to observe details more closely, so that he gets more pleasure and profit from his hunting trips.

Jacking is all right when there is no meat in camp, or one's time is limited, and it is all right for lazy men or cripples to sit all day on the runway waiting for the hounds to drive the deer, but I wish to go on record as being thoroughly converted to still-hunting.

All too soon the time arrived when we were to leave Lake McCavanaugh, to occupy another camp on the St. Regis River. It was a beautiful morning and everything about us invited a longer stay. Regretfully we went down to the shore of the lake and took a last look over its mirror-like surface to the blue mountains beyond, and as we shouldered our duffle and struck the trail we involuntarily looked back at the camp itself. A thin column of smoke arose from the dying fire, we heard the little brook lisping in the ferns, and as a turn in the path hid the cosy cabin of brown logs from our sight, I think we all wondered whether another year would find us in this same spot and with the same capacity for enjoying its charms. May the woodland fairies and the forest gods occupy it in our absence!

In another paper I shall try to tell you of more tangible success than I have thus far chronicled, but I am inclined to think that the most pungent and lasting recollections of my trip to the North Woods this season will be those associated with Camp Saints' Rest.

Arthur F. Rice.

"Foreshoulder."

Editor Forest and Stream:

In the Forest and Stream of Sept. 26 Siam's article on the vitality of moose speaks about breaking the spinal column just above the foreshoulder. Is foreshoulder a proper word to use? I have been a reader of the Forest and Stream for several years, and old hunters all use the word. As it seems to me, in saying foreshoulder would indicate that there were shoulders behind, and to avoid any mistake use the word foreshoulder; but as there are not shoulders behind, would not "breaking the spinal column just above the shoulders" be the proper way of writing it? Dentist.

Natural History.

DEER AND LILYPADS.

LANSING, Mich., Sept. 30.—*Editor Forest and Stream:* A few things in woodcraft are hard to explain. In the "Trapper's Guide," page 176, I find: "It has been said by somebody that people generally step a little further with the right foot than they do with the left, so that when they have nothing to guide them the tendency is to bear to the left; thus in time they make a circle." In "Woodcraft," by Nessmuk, page 20, I find: "Carry the compass in your hand and look at it every few minutes; for the tendency to swerve from a straight course when a man is lost—and nearly always to the right—is a thing past understanding." So much for the opinion of a real woodsman regarding a matter of fact.

Something like a year ago I mentioned a matter of conversation that I had with two of the most successful and observing hunters and trappers and practical woodsmen that Michigan ever produced, regarding deer eating lilypads. These men had spent a lifetime in the woods, had killed hundreds of deer and had unlimited opportunities for observation, and neither of them had ever seen a deer eat lilypads, or ever found a fragment of a lily leaf or stem in the throat or stomach of a deer; yet they had killed scores of deer while feeding among the lilypads, and examined a great many deer with a special object of getting at the actual facts in the case.

Not satisfied with this statement from two of the most competent woodsmen in Michigan, I called upon a gentleman who has for many years had quite an extensive deer park, and in the park was a small, shallow lake well stocked with lilies. In this lake, among the lilies, he had watched them feeding for hours and hours for a period extending over ten years at least. And yet this gentleman, a close student of nature and with opportunities seldom equaled by any man, never saw a deer eat a lilypad, or a lily leaf, or a lily stem. He had often seen them pick a stem, chew it for a while, and strip off the tender outer stem and leaf coating; but they never swallow the leaf or stem or any part of the lily.

In FOREST AND STREAM a few weeks ago I noticed some lady who was out with a guide had settled the question, and knows positively all about deer and that they did eat lilypads. She had seen acres of stems sticking out of the water, and her guide had told her that the pads had all been eaten off by the deer. If the guide had been a good observer he might have explained to her that the lilypads might have been picked by some other animal, or in some other way than by the deer; and that because a stem is seen sticking out of the mouth of a deer is no more evidence that the deer swallowed any part of the lily plant than that the observing lady herself would swallow every fish bone that she chanced to take in her mouth.

In FOREST AND STREAM of Sept. 19, W. L. S., of Township No. 2, Maine, writes: "She was standing among the pads, and would bury her head in the water up to her ears, bringing up each time a mouthful of stems." Now W. L. S. is on the right track, only he must give the matter a great deal more of close observation, when he will find, I am very sure, that the observation of my friends is correct. Deer do feed with their heads almost under the water, and when they are feeding in that way they are feeding on the tender weed growth that is so very abundant among the lily plants. They do sometimes pull off a stem perhaps, but not often, and when they do pull off a stem or leaf it is by accident, and the leaf or stem always comes up with a mouthful of other tender water weeds that they feed upon. They never swallow a lily leaf or lilypad or a stem of a lily plant. They sometimes take them into the mouth with other food, but they spit them out, and never swallow the pads or any part of the lily plant. JULIAN.

THE ACADEMY OF NATURAL SCIENCES, OF PHILADELPHIA.—*Editor Forest and Stream:* I frequently read your publication and derive much pleasure from it. The naturalist frequently sees curious statements in print about the habits of game. In your columns it has been said that deer do not eat lilypads. Of course, such a statement is ridiculous. In Maine and the Adirondacks I have literally seen miles of water with the stalks of the lilies sticking up out of the water minus the pads. I have also seen the deer eating them in water where they had to swim as they snipped off the pads. In some of the bogs of Maine you will often see more cropped stalks in the water than pads, and this in districts where moose are not plentiful, and in the Adirondacks it can hardly be said that moose account for the stalk ends minus the pads. Also where deer are much hunted they are nocturnal in habit, but are naturally diurnals.

In the mountains of Virginia, where I was this winter, deer had migrated in search of mast, as the dry weather had made it very scarce. This was in Craig county, in the Alleghany Mountains. DR. HENRY SKINNER.

Quail Adopted by Domestic Turkey.

MARYLAND, Sept. 28.—*Editor Forest and Stream:* A neighbor called my attention to a peculiar occurrence a few days ago. A turkey hatched a brood of young ones, she having stolen her nest, and brought them to the barn to be fed. He observed a small chick with the young turkeys which he thought was a young guinea, but upon closer inspection he found to be a young partridge (quail). It has now been with the turkeys for two months, and comes and goes regularly with them to be fed night and morning, and if he feeds them in the barn the partridge goes and eats with them. He also roosts with them on a fence near the house. The bird is now nearly full grown.

AL. HILL.

A Cow Moose.

LAST August, while camping on Ripogenus Lake, in Maine, we paddled out one evening with our two guides to catch a few trout for the next morning's breakfast. As we were about to turn into the stream at the head of the lake our guide suddenly pointed across the water to a small black object surrounded by foamy waves. It was undoubtedly a moose, and a big one, we judged, from the size of the waves.

We turned about and paddled with all our strength till, on nearer approach, the object proved to be a cow moose swimming some distance from the shore. Soon she caught sight of us and stared, shaking her enormous ears most comically, then laid them back and swam furiously for land. We paddled fast, in the hope of heading her off and chasing her across the lake, but she reached the shore a few yards ahead of us. Once on the bank, her ugly figure looked like an ill-shapen mule. She started at an easy trot across the marshy log-filled lagoon between the lake and the woods, swimming through the patches of water and climbing over the logs with little apparent labor. Then she disappeared in the woods, and calling to her calf, stamped off. R. K. THORNDIKE,

Game Bag and Gun.

Our readers are invited to send us for these columns notes of the game supply, shooting resorts, and their experience in the field.

SOME AMERICAN GAME BIRDS.*

II.—The Ruffed Grouse.

FROM the time when the mind of man runneth not to the contrary in matters of shooting for sport, the ruffed grouse, by common consent, has been classed with the most difficult of game birds which the sportsman endeavors to bring to bag under the approved conditions of sportsmanship, if indeed it be not the most difficult of all. For it taxes the sportsman's nerve, patience, skill, woodcraft and endurance as no other bird taxes them and as no other bird can tax them; and all these requirements are necessarily supplemented by a gun of good killing powers, one selected with special reference to cover shooting; and last, but not least, a dog of more than ordinary intelligence and good intent and good training, if the sport is to have any successful results and a pleasing finish in its action. If any element of the sportsman's craft be missing, success is marred accordingly.

The ruffed grouse in every art and article is a bird to fill the sportsman's ideal—its habitat is in nature's most picturesque setting; the bird is beautiful in its delicate tracings and markings, and rich and varied in its colorings; racy of form and faultless in symmetry; wild, dashing, daring, alert and infinitely resourceful in its crafty devices when pursued; exclusive in its habits and withal a bird of rare excellence for the table, its flesh being of delicate texture and pleasing flavor, so palatable, indeed, that it is by many epicures more highly prized than is the flesh of any other game bird. With those who may vaunt the excellence of the woodcock, the snipe, the prairie chicken, the duck, the turkey, etc., it also holds a high place in their esteem; and the exceptional man, whose fancy for one particular kind of bird prejudices him against all others, will not speak unkindly of it. And yet, delicious as it is when properly prepared for the table, it can easily be spoiled by ill cooking, and of bad cooks there is no end. The art of cooking it properly is quite as rare as is the skill of killing it properly. If it be cooked too much or if it be cooked improperly, it loses much of its rich delicacy of flavor and texture and becomes dry and unpalatable; and in that unfortunate condition it probably was when that eminent authority, Wilson, partook of it, and thereafter, in his "American Ornithology," wrote of it: "At these inclement seasons, however, they are generally lean and dry, and indeed at all times their flesh is far inferior to that of the quail or of the pinnated grouse." Yet, as tastes are not all alike, the superlative will probably be placed according to individual fancy in matters of food as in all other matters, and it is well that it is so. If all fancied alike, all would be monotony. Nevertheless, a man who cannot have a culinary spell cast over him by a skillfully cooked ruffed grouse, it having been kept a proper length of time after killing—not too long—has no music in his soul and may not be even fit for treason and spoils.

For its home the ruffed grouse prefers the country above the snow line, in its rough and timbered sections, for it is strictly a bird of the woods and thickets, preferring the roughest parts of a rough, hilly or mountainous country, and of these it many times selects the densest recesses; or the timber of seamy and rocky hillsides; or where ledges, fallen tree trunks and tree tops in the woods secluded from man guard against intrusion; and even the timbered swamps are not obnoxious to it when it seeks a habitat free from the incursions of man. For the latter it has the most uncompromising aversion. It selects its habitat in the places least frequented by him, though once the habitat is determined upon it holds to it with dauntless persistency, let the gunner disturb it as often as he may.

In choosing its habitat it prefers that it be near a supply of good water and an abundance of good food, for it is a good feeder, whortleberries, blackberries, beechnuts, acorns, chestnuts, partridge berries and buds being readily accepted as food in their proper season. The bud of the laurel is said to render the flesh poisonous for food purposes, though the belief seems to rest more on tradition than on any direct evidence.

The habitat of the ruffed grouse is in the timbered country from the Atlantic to the Pacific, bounded on the south in an irregular way by suitable habitat and the snow belt; and on the north into British America to a line not definitely determined, though, as a matter of course, all timbered or rough country within the region mentioned is not necessarily good ruffed grouse country. Some parts have been shot too much; some suffered from the worst of all despoilers, the snarer; while others, to all appearances favorable, are not frequented by it. Unlike the quail, which loves to make its home near the homes of man, and the prairie chicken, which sticks closely to the grain fields, the ruffed grouse is ever intent on making its home and haunts distinctly apart from those of man. In the East it is called "partridge;" in the section of Pennsylvania, "pheasant."

In the breeding season, when it has been free from pursuit and harassing alarms, it sometimes strays a short distance from cover into the adjacent fields, where grow huckleberries and blackberries, though rarely venturing further than a short flight from cover, and often but a few yards from it.

Though always a wary bird and ever avoiding man, it is not so wild and quick to take wing before the frost and unsettled weather of fall set in as it is afterward, and if the gunner disturb it once or twice the full wildness of its nature and its constant alertness to avoid man are fully set in action. Then man and the places he frequents are shunned as much as possible. Indeed it is not a social bird with its own kind. After the young birds have matured they separate, and in the fall the gunner will find them in ones and twos, and at rare times in threes.

Given to the sportsman the conditions of an open field and therein a ruffed grouse on the wing within range, the difficulties of killing it then are but little if any greater than those which obtain in the killing of a prairie chicken on the open prairie, though whether in open or cover the former is always swift and decisive in its flight; but in the open, whether it be on field or prairie, there is an even light and an unobstructed view wherein for safety the bird can rely only on its swiftness of wing, all too slow when pitted against the sportsman who can under those circumstances with quickness or deliberation command a large circle around him. Thus the ruffed grouse is at a fatal disadvantage when shot at in the open field, as is also every other bird when shot at under the same conditions; but these conditions are rare indeed in ruffed grouse shooting, for, as mentioned before, it ventures into the open only on such infrequent occasions as it is tempted to search for food, and then only in places seldom invaded by man and where it fancies there is freedom from pursuit. To this there seems to be an exception for a short period in the fall, when it is subject to a crazy waywardness.

While in the open field it is strong and swift of wing, in cover it is at its best. It will on occasion dash through the densest thickets with apparent ease, with no diminution of its swiftest speed, having seemingly a charmed manner of flying through tree tops and thickets as if they were but phantom trees of the woodland, or shadows offering no obstruction to its onward flight.

And in its favorite haunts it is a master of the art of self-defense in so far as it can utilize thickets, trees, old fences, ledges, stone walls, swift wings and endless cunning to evade its pursuer. Be the position of the shooter what it may in reference to this bird in cover, it, when flushed, takes instant advantage of the nearby thicket, or the trunk of the tree, or the old fence, keeping one or the other between itself and the gunner in its line of flight, thus in a great measure blocking all opportunity to shoot at it, or at least hampering the shooter greatly and thereby causing many a miss.

The bird, in most instances, times its rise so as to have the advantage of some nearby object as a shield to its flight. On occasion it will display a courage bordering on audacity, permitting the shooter to pass close by it and flushing after he is some yards further onward. This wile is oftenest practiced after it has been flushed and pursued. Both man and dog are apt to pass it then, though they may follow in the exact line of flight, and the shooter may hear the irritating roar of the bird's wings behind him, on the ground but a moment before passed over, or catch a shadowy glimpse as it dashes away from some tree top.

Owing to its short flights and its proneness to take a straight or nearly straight line, the persistent shooter may be able to flush the bird again and again; it sometimes in repeated flights returning to near the place where it was first found, and nearly always taking the flights so that ground and cover are to its advantage in avoiding danger. Once in a while a fool bird will be found, which will do the very thing it ought not to do, commonly paying for the lapse with its life; so that if there is anything in

* The first paper in this series, the Woodcock, was printed in issue of Sept. 12. Others to follow will be devoted to the Quail and the Snipe.

the theory of heredity, the ruffed grouse should be uniformly of high capabilities, the fool birds being killed so promptly and thus never breeding; and indeed such capabilities they have.

By far the greater part of the shooting is at close range, as it needs must be in thicket or woods, where the longest views are short and obstructed by trees, or ledges, or the hilly nature of the ground, or the undergrowth, and where in the early season the view may not be greater than a few yards or feet if the leaves have not fallen. It then is not an infrequent occurrence that the shooter will hear the startling whir of wings close by him, and yet be unable either to shoot or to mark the bird's course from inability to see the bird at all. The broken light of the woods, broken and broken again as it is through the irregular openings in the tree tops and branches and leaves interposing, with here and there shafts of clear light with masses of shadows interspersed everywhere, add a difficulty to quick and clear vision and therefore to the shooting, differing in this from shooting in the open.

The successful ruffed grouse shooter must be ever promptly ready to shoot, and further must be quick of eye and motion. He must instantly decide on the manner of making the shot, taking advantage of all the few opportunities offered, and avoiding the obstructions which interpose. No studied effort at aiming is possible. Cover shooting of all kinds requires quick action, but ruffed grouse shooting requires the quickest, for of all snap shooting ruffed grouse shooting is the snappiest; and the successful shooter of that bird must excel in that kind of shooting, since in most cases he will have but an instantaneous glimpse of the bird in the unfavorable mixed lights and shadows, with a view obstructed by the cover.

For this shooting the gun should be light, short of barrel—26 to 28in.—and a true cylinder bore, for a choked gun is entirely out of place in such cover shooting, equally unsatisfactory when it doesn't or when it does kill, it being a miss in the first instance and often a badly mutilated bird in the second. The average shooter will find that he has success far below his opportunities even when equipped with the gun most fitting for the work. In this shooting there is no waiting for opportunities to fit the gun. The successful shooter must take the shots that are offered and take them as they are offered, it matters not how difficult they appear or how brief the opportunities may be. He may catch but a momentary, shadowy glimpse of the bird as it crosses some diminutive opening, or he may see it for an instant in a maze of leaves and branches, or he may get only a partial glimpse of it and some moving leaves in the course of its flight, yet those are the opportunities which are the most numerous and which must be relied on for the bulk of the shooting; in short, that is ruffed grouse shooting.

If he be too indolent or apathetic to be ever ready to shoot, or if he be too slow to take advantage of the opportunities, his success will be but meager so far as material results are concerned, though he may be greatly encouraged by the belief that his last ill success was due to faults in the bird, and if he can have another opportunity he will acquit himself nicely. The opportunity comes and bears more excuses. Once in rare whiles the shooter will have a good opportunity, catching the bird in some corner so open that the advantage is with the shooter, but such instances are rare indeed, and by themselves would make but little sport.

To be ready for the opportunities the sportsman must be quiet and never relax his vigilance, and his gun must be so held that it can instantly be brought into position to shoot, and the nerves of the shooter must be constantly at a high tension, in readiness for the rise of the bird and the instantaneous shot. Every quality must be at a high key. The very moment that the shooter relaxes his attention will seem to be the moment that the bird will rise, and before the sportsman can get ready the opportunity is gone. Thus it will be seen that no man who dawdles with his gun, or who is slow in the handling of it, or who is noisy, can hope for any satisfactory success in shooting the bird of game birds, the ruffed grouse. On the other hand, one can be keyed up to too high a pitch, over-ready when the bird rises, and he giving a nervous start thereat, thereby does nearly as much to disarrange the desired results as does the more indolent brother who is but half ready. There are those who can never overcome this nervous start at the roar of this bird's wings, though they may be perfectly undisturbed in any other bird shooting.

And the skill of the shooter, be it ever so high in degree, must be supplemented by the work of a quiet, well-trained, intelligent dog, for the shooter is much better off without any dog at all than with one that is riotous, or one that ranges too far, or that is heedless of his work. Loud orders to the dog have no place in ruffed grouse shooting. The sportsman himself cannot observe too great a silence. Noise, the human voice in particular, alarms and puts the birds to flight.

The work required of the dog in this shooting is distinctly different from that required in any other kind of bird shooting, except perhaps woodcock shooting, which in a way it resembles, though a higher degree of dog intelligence and obedience are required, as the ruffed grouse is far more cunning and wary.

The "partridge dog" should not work far from the gun in cover, and he should be silent and diligent in his quest. Many experienced shooters highly commend the use of a small bell tied to the dog's collar, the low tinkling made by it constantly indicating the dog's whereabouts in the thick cover, and generally, when the bell stops, it indicates that the dog is not moving, and it is to be taken as an indication that he is on point, thus in a way keeping the shooter posted by ear as to his dog's doings when out of sight and supplementing his sight thereby.

The rattle-headed, highly nervous dog, or the one which gallops swiftly and merrily about, is distinctly out of place in this kind of shooting. The æsthetic shooter, whose dog must carry a high head and a tail lashing his sides merrily as he gallops and bounds about in the ecstacy of his enjoyment, as the dogs many times do in stirring tales of great work afield, would better take his fiery dog into the open where he can better disport himself unhampered, and where his pretty ways may be admired without any unpleasant interposition of the ruffed grouse. Such manner of the dog's seeking is incompatible with ruffed grouse shooting, for the shooting should be the dominant feature, not the joyousness of the dog.

I have been told of dogs which galloped with apparent recklessness in their quest of the ruffed grouse, going through the brush and dead leaves with all the noise which comes from such manner of going, and I have been assured that they were in some mystic manner very successful in securing points and avoiding flushes. I have seen many such dogs which filled all the specifications to a nicety save the one of pointing the birds. Their success was chiefly in spoiling the shooting. There may be such reckless and useful dogs, and if so they are the exception, one too rare to consider as a factor in the sport. Moreover, the range being close, an extremely fast dog is not needed. One of fair gait and persistent industry can easily beat out the necessary range, and the one which makes his quest patiently and soberly and quietly, working with judgment and honesty to the gun, will bring the shooter far more success in the results, to say nothing of the incomparable comfort and pleasure in shooting over him.

Nine out of every ten dogs which are running with high head and merry action are running because they are in high spirits and for their own pleasure, with no thought of the birds or of work to the gun. When they come on birds, such is often a matter of chance and their point work is marked by constant and detrimental errors. This kind of dog leads his partial master to believe that when he wears off the wildness and wire edge he will steady down to a useful grade of work; but often when such dog has worn off his exuberance he has worn off all there is of field performance in him, and he either loafs or does his work in the same slovenly manner, though, loafing, he does less of it.

In shooting for sport, the shooter takes his birds on the wing. Of course, in shooting for market, the market shooter has no thought of sport or its practices. His is the one object to kill the bird and bring it to bag. The manner of it is of the least importance. His theory and practice are founded on commercial principles, therefore he shoots his birds as he can, whether they be on the limb of a tree, on the ground, or flying. Some hunters have dogs trained to seek for the birds, and finding them, they flush and follow them. When flushed by the dog, the birds generally take to the trees, and the dog, barking, so engages their attention that they fall an easy prey to the hunter, he often bagging every bird in the covey under such circumstances. Often when flushed by the dog they fly to the tree tops immediately overhead, where they in fancied security calmly watch the dog. The shooter then drops them one by one, taking the lowest birds first, the falling of the lowest not disturbing the ones above, though if a top bird is dropped the others fly away forthwith.

As to the number a shooter can kill in a day, so much depends on the shooter's skill, the bird supply, and the local shooting conditions, that they alone determine it.

In some sections of New England two or three birds at the end of a day of diligent effort is considered a highly successful result, and it is not an infrequent occurrence in that section that a diligent day may have no birds at all at its ending. In certain favored sections of New York, Wisconsin, Minnesota, Dakota, etc., and in the mountain sections where the ruffed grouse abound, such a bag would be considered an absurdity if held forth as an index to good shooting, industry and superior results.

While in North Dakota recently I heard of one bag made to one gun in a day which was something extraordinary, it being eighty birds. They were shot at the air holes along the banks of the Red River after it had frozen over, the birds coming to those places for water. This was not recounted to me as a matter of sport, nor is it so set forth here, but it will give an idea of the abundance of the ruffed grouse in the sections where it is in the greatest abundance.

But the sportsman who seeks the ruffed grouse for the true sport of it, and who brings his birds to bag in the manner approved by sportsmanship, has a more exalted pleasure than comes from shooting any other game bird; for, first of all, he must be skillful with the gun, and when he shoots at the ruffed grouse, be he ever so skillful, he can only apply such skill as he can muster in a moment, the opportunities of ruffed grouse shooting being but mere fragments of the opportunities accorded to shooting in the open, and when the bird is brought to bag it represents a toiling through brush and bramble, wooded hill and dale, scrambling over ledges and floundering through swamps, all colored by constant expectancy, unavoidably lost opportunities and seeking to circumvent the birds by cunning woodcraft, supplemented by the wonderful powers of the dog, a degree of cunning, skill and persistent effort, greater than that required in the shooting of any other bird.

It is shooting pitched in the highest key, and that is why I think the shooter can justly feel a greater glow of pleasure when he makes a successful shot at a ruffed grouse, and why he loves this sport above all others, since it tests to the utmost his skill, his woodcraft, his patience, his endurance and his dog; and of the dogs, if he own a good one, he owns one of a thousand. B. Waters.

DEER IN THE BLACK FOREST.

New York, Sept. 25.—*Editor Forest and Stream:* My attention has been called to an article in Forest and Stream of Aug. 29 last, signed "Armin Tenner." In justice to my old and good friend Joe, I will give an account of an experience I had in Germany.

Some years ago I was invited to join a party of gentlemen for a few days' shooting in the Black Forest. Our party was made up of English, French, Swiss, German and one American—your humble servant. On the morning of the hunt, my good friend Mr. S., who was one of the principals of this particular preserve and my host, took me aside and said: "Now, on no account must you shoot a doe, as it would be considered a disgrace." This was all news to me, but I thanked him from the bottom of my heart for his kind warning, as up to that moment I did not know there even was an unwritten law against shooting a doe deer.

The occasion was what they call their annual shooting. We had, I believe, twenty guns in all and fifty beaters; I know the party seemed quite a small army to me as we gathered together before starting out; and I began to wonder what would be left for another year's sport after we had got through.

The beaters were sent out some miles away and were to beat toward us. We were stationed on runs where the game was most likely to break cover. For fear I might make a mistake, Mr. S. stationed one of the gamekeepers by my side to prevent any such accident. We had been at our posts but a few moments when the fun began. I could hear the crack of my neighbors' guns all around me, but not a sign of a deer as yet had I seen. The moments passed, which seemed like hours, and I became very restless and impatient, and all at once from the thicket bounded a deer. My gun was at my shoulder as quickly as possible, but before I could cover the object my friend the gamekeeper was whispering something, which in the excitement of the moment I did not hear; I only saw that a beautiful graceful creature, with head erect, standing some thirty paces from me, had come to a full stop, seemingly unconscious of our presence. As I said before, I could cover my object, and was about to shoot, when suddenly the point of my gun was thrown into the air, and away bounded the deer. My feelings can be better imagined than described. My pent-up wrath was showered upon my attendant, but it was all lost, as he did not speak or understand one word of English.

When the round up came several beautiful deer were brought in and laid side by side on the grass, two beautiful does being among them; but, thanks to my good friend Mr. S., I was spared the humiliation which was heaped upon two unfortunate Frenchmen who had slain the two innocent does.

I have related this experience, as I felt Mr. Armin Tenner was a trifle unjust—perhaps not from his standpoint, as he did not know the circumstances.

Does should be protected in any country. E. A. P.

TEXAS QUAIL, TURKEYS AND DOVES.

Marlin, Texas, Sept. 27.—I have no doubt most of us enjoy everything we read in dear old Forest and Stream, but frequently there is an article published which strikes a sounding chord in our hearts more than others.

"Sharptail Grouse Shooting," by O. H. Hampton, in the current issue, is one of these, in my case. It brought up "childhood's happy hours." Some of the first shooting I ever did was at chickens in Sauk county, Wis., seven miles from the same Wisconsin River mentioned by Mr. Hampton. I remember the first chicken killed by me as though it were yesterday. I was about ten or twelve years old, and the proud owner of a light, long, single-barreled gun, which I had "swapped" for.

My companion, T. M. Warren, had a double-barreled muzzleloader which cost his father $30. We were hunting out a strip of stubble on his father's hay marsh when two chickens flushed from under my feet. I shot from the hip, and mashed one at about 30ft., and then watched T. M. feather the other at about 40yds. There was good shooting there in those days, and the law was religiously observed by the local sportsmen.

Owing to a propitious season this year quail are more plentiful in this section—near the center of the State—than ever known before.

A number of wild turkeys have been killed about fifteen or twenty miles from here. It has been very dry for several months, and little water for game to drink except in small pools along the creeks. The natives would watch these places and when the turkeys would come to drink they would fire into the bunch. I know of one man who killed five at one shot.

Doves have been very numerous indeed, and have offered some fine sport. Our method is to drive to a tank about 6 o'clock in the evening, and shoot as the doves fly in to drink. We usually get enough to broil for break-

fast and make a pot-pie for dinner after missing half we shoot at.

One afternoon recently there were two doves sitting on the ground when I walked up to the tank. I walked them up at about 30yds., killing the first neatly and missing the second. Then one came flying in pretty well up, and I dropped him. While Hector, my pointer, was retrieving it, I killed another. I began to think I had caught the sleight and couldn't miss them, but about that time they came in as fast as I could load, and I would be ashamed to say exactly how many I missed in succession. At this stage of the game I read myself a lecture about getting rattled, and firmly vowed I would lead the next bird 6ft. at least. In a few minutes here came one up high. I followed it with the gun until as near as it would be, then pulled ahead anywhere from 4 to 8ft., and down he came, without a flutter, at about 50 or 60yds. The next two were killed and then it was dark.

E. R. E.

MEN I HAVE HUNTED WITH.

It is impossible to refrain any longer keeping pen from paper or withholding the manuscript in which I was compelled to relieve my desire to acknowledge the enjoyment of your (our) contributors. But our boy Fred has upset all my balance. I find that I knew Fred many, many years, although I never saw him or his name until it appeared in FOREST AND STREAM. But just as truly he has been with me on stream, in forest and field for more than half a century; and no doubt with a host of fishermen, hunters and nature's noblemen, who were just as unconscious of his identity as myself.

His gentle description of old-time friends, I fear, is unique, but a contrast, a moral and conclusion may be permissible, possibly instructive.

Upon one occasion a gunner, going a few feet away through an open wood, put up a quail, which circled in front and around me. While I was holding, until the bird passed a big tree, the report of my companion's gun seemed to have destroyed the drum of my ear, upon which I placed my hand, almost discharging and dropping my own gun. When I had recovered from the shock, I said, as quietly as possible: "Never do that again, for you will more probably kill your companion than the bird, which would be his shot both from courtesy and safety. Never forget either rule."

On another occasion I had out a young, partly trained setter, which started and ran after a rabbit past my companion, placing the three in line. Up went the gun. I yelled: "Don't shoot! don't! don't!" The gun and rabbit went off, the dog howled, and both men made an end of the hunt and my comradeship. They had no self-restraint, and something else, in the field at least. Thank heaven, they were exceptions also.

Moral: Hunt, shoot, fish and boat only with sportsmen.

Conclusion: That the definition of "A True Sportsman" was not made very lucid in the discussion of the FOREST AND STREAM fraternity; also, that our Fred, boy and man, has delineated the true sportsman so distinctly that every boy and man who has the elements in his soul recognizes the ideal and living picture. From Old Port up, every one of Fred's friends—our friends now—have stamped all over them gentle boy or man.

No doubt Gen. Miller would have captured that giant negro quietly if he could have done so; but as the giant was neither born nor schooled to gentle ways, and Mat had to capture, he took him "on the wing, on the ground (mostly, I suppose) or any way." The giant appears quite gentle when Fred introduces him to the company of FOREST AND STREAM. He had one schooling from a master.

The deduction is, that a gentleman is not necessarily a sportsman. That a true sportsman must be a gentleman, unpolished as Old Port or refined to the utmost delicacy in courtly manners. The gentle manhood permeates every descendant of the gentle Izaak, and every good hunter was certainly a fisherman before "Johnny got his gun."

PENNSYLVANIA. JUNIATA.

BOSTON AND MAINE.

BOSTON, Oct. 1.—Never has the opening of the big game season in Maine started off with so much enthusiasm as it has to-day. The old hunters are about all going, and the novices all want to go. Every man I have met on the streets to-day at all interested in shooting has remarked, "Thought you were down in Maine; when are you going? I want to go; shall go on the first snow," etc., etc. The railways are all making great calculations on the shooting travel, and they are likely to realize much. The newspapers are full of hunting reports and reports of game. Many of these reports are unreasonable and absurd in the extreme. A dispatch from Bangor the day before the open season gave an account of a big bull moose that tackled the engine on the Bangor & Aroostook road and was killed. The trains frequently kill deer, if these reports are to be believed.

In one day this week the Boston & Maine sold twenty-five tickets to sportsmen at its office on Washington street, and other days the sales have been very large. The sportsmen seem generally to expect tracking snows, which sometimes come in October. In the region of the White Mountains snows have already fallen, but it is too early to count on snow for tracking. Mr. R. D. Jones, of the Boston & Maine office, starts Friday for the Penobscott region on a hunting trip. His wife will go with him. A deer and a moose or two are expected. Mr. A. H. Proctor has recently returned from his fall fishing trip to the Rangeleys.

Oct. 5.—Mr. and Mrs. F. H. Talcott have just returned from a fishing trip to Eustis, Me., where they visited Big Spencer and other lakes and ponds. They had good luck with trout while the season lasted. Mr. A. F. Breed was at the Rangeleys in company with Mr. Abel H. Proctor, mentioned in my former letter. Senator W. P. Frye and Mrs. Frye have paid their beautiful camp on Cupsuptic Lake their usual fall visit. The Senator tells a friend that the fishing at the Rangeleys is doomed. He finds it especially hard to get even a few trout, where in former years they were abundant. The fishing cannot stand the strain of the past three or four years, especially the last year. "Whoever lives ten years will see the Rangeleys worse played out for trout fishing than are the Adirondacks to-day." Such are the ideas of a man who has visited the same camp in the Rangeleys almost every season for twenty or thirty years. Legislation should take a strong hand before it is too late.

I have it from undeniable sources that partridges are positively scarce in Androscoggin and Oxford counties in Maine. Lewiston and Auburn gunners, even with the help of some of the best dogs in the country, have had very little success with partridges, while as for woodcock the season was a failure. Reports also indicate a scarcity of partridges in Penobscot county.

The Maine woods are full of hunters, and therein lies the terror. A gentleman remarked in the office of the Boston & Maine Railroad the other day, as he purchased his ticket for a hunting trip: "If I had not arranged with a party to go, I would not go one inch. I am positively afraid of my life. There are too many green gunners in the woods; they shoot at everything that moves. I dread some terrible accident. Our party is made up of men who will not shoot till they are sure of what they are firing at; but not so with the greenhorns that are rushing to the Maine woods." I learn that more Maine people will hunt moose, deer and caribou this year than ever before, and hence the sportsmen from outside the State will meet with greater competition.

SPECIAL.

CHICAGO AND THE WEST.

Good Times Now.

CHICAGO, Oct. 3.—There are good times now. The jacksnipe have come in all over this country in good numbers, and the weather is such that it is likely they will stay and offer two or three weeks of good shooting. All the wet sloughs just west of the city are offering good fun, and the wet ground near Auburn Park has held a lot of birds lately, though this fact is not widely known. In the Fox Lake region of upper Illinois the birds have come in a very good flight. But it is along the good old Kankakee that they are most abundant, and there the boys have been having great sport for two weeks, and will have for two weeks more. This is the best year on the Kankakee there has been for a long time, both for ducks and snipe. The water is extremely high, and this has drawn the birds in something like the old numbers. Water Valley, Koutts, Momence, Davis, and other points on the river have yielded fine bags. Last week the Crown Point, Ind., shooters, among them Mr. Morton, county clerk for that county, had very nice sport on the marsh below Fuller's Island, above Water Valley and Shelby. Here there was a large section of the marsh burned out, so that a series of pond holes and mud banks were formed, at which the birds came in regularly, so that bags of a couple of dozen to the gun daily was about a fair size. On last Wednesday, however, there came a very heavy rain which lasted two days and completely flooded the entire country. Acting on Mr. Morton's advice, I ran down to Shelby to have a look at this Fuller's Island country, but found it all afloat and out of the question for shooting anything but ducks or snipe with legs 8ft. long. I therefore went on north to the edge of the marsh, and here blundered into a little patch where there were about fifty snipe monkeying around, biting the dust. Here I had a bit of good shooting, and killed a dozen in as many minutes, the bag netting up about twenty-five fine jacks for the day to my own gun, though the shooting did not last long. At one time I had five birds down before I had time to pick up any of them. This little bit of high ground was almost the only place where I could find any number of birds, though they were widely scattered over a strip of country three miles across, a few here and there. The wet weather had entirely unsettled them, and it was too soon after the rain to get them located anywhere satisfactorily.

Billy Mussey has been having very fine jack shooting at the old reliable Maksawba Club. In two trips to that ground (near Davis, Ind.) he brought back ninety-seven birds, averaging I presume a couple of dozen on each day of actual shooting. Billy had solemnly promised to go shooting with me next week, but sneaked off the day I had sneaked off. I am sorry he proved untrue to me, and shall rebuke him when he comes back, but I don't believe he will have any more birds than I got on my little lonesome shoot. We have got plenty of meat hung up in this office for a while now, anyhow till next week, and by that time Billy will want to go again. Billy tells me that John Watson, Roll Organ, L. R. Brown, Mike Petrie and others shooting at Maksawba the past week have had fine fun, killing all the birds they cared to get. Mr. Mussey himself was lucky enough to kill a fine specimen of a bird rarely seen in this country, the robin-breasted snipe.

The heavy rains of this week will not hurt the snipe shooting, for though the marsh is very wet, the bulk of the surface water will soon run down and the feeding grounds will be in great shape. I would advise a look at Momence this week, and can say that Water Valley country, especially around Fuller's Island and the edge of the marsh near the Monon tracks, will in all probability be good, at least they were good this week. It is not desirable to hunt near the town of Shelby, as that region has had too much water over it lately and will not soon be dry enough to make feeding grounds. The famous strip of marsh near Koutts should be in good shape this week. There are a great many rail (the lesser rail) all over the wet marsh of the Kankakee, these birds being away out half a mile into the country further than they have been seen for years, and over jacksnipe ground, which of course is no longer good jacksnipe ground when it is wet enough for rail. The shooters of Chicago are lucky just now.

In Dakota.

Mr. F. R. Bissell, secretary of the Illinois State Sportsmen's Association, has gone to Dakota for a long shooting trip. Mr. Bissell is the kind of man everyone wishes to have a good time when he goes shooting.

From Cincinnati.

I missed a visit I did not willingly let go this week when I failed to meet two friends who called on their way from Cincinnati, none less than Col. Bill Peabody and Bob Burton, whom I have tried to tell people all about in the story of a certain trip to Texas a couple of years ago. The city of Cincinnati, I must critically admit, may not be able to furnish quite as high a grade of choice breakfast bacon as Chicago, but she does raise some mighty nice men.

Squirrels Ate the Cow.

I am grieved to see in the daily dispatches the news that the squirrels are so thick in the neighborhood of Vanceburg, Ky., that they are killing off the cattle. The dispatch in this case is as below, and I have no doubt it is true if the facts are stated correctly. But methinks this story would sit more seemly did it come from the weird region of the Maksawba Club grounds, where white blackbirds, pink muskrats and the like are betimes discovered in the act of unusual and extraordinary performance. The details read as follows:

"VANCEBURG, Ky., Sept. 27.—[Special.]—John S. Parks, of Triplet, heard a piteous lowing of his fine Jersey cow in the field near his house this morning. He went out and found it literally covered with squirrels, which were biting and gashing it. The cow died an hour later from loss of blood."

Preserved.

Mr. Ferd W. Peck, of Chicago, is reported as adding largely to his already extensive holdings of shore property on Lake Koshkonong, Wis., where he has for some years had a fine summer home. Lake Koshkonong is justly famous for its canvasback ducks, than which none of the United States are more delicate of flavor. It is a wild celery lake and will hold these birds so long as any continue to cross on this line of migration.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Reed Birds and Mud Hens in New Jersey.

THE reed bird, which is the bobolink of the North and the rice bird of the South, comes to the tide meadows of New Jersey about Sept. 1, clad in his yellow and brown livery, to fatten on the seeds of the wild oats which ripen at that season. The bird is of the size and general appearance of the English sparrow, and takes on fat at a wonderful rate, and is considered a great table delicacy. There is no sport in shooting it. Now and then a rail bird shooter will waste a load on a passing reed bird, but it is the prey of the market gunner only. It is never found on salt marshes. It is most abundant in Salem county, there are a few in Cumberland, none in Cape May. In Salem, the shooter during the summer builds a blind near the tide meadows and plants lines of millet radiating outward like a star. When the season begins the shooter enters his blind and waits until a line of millet is covered with reed birds, when he fires a big gun loaded with dust shot, and then picks up a hundred or more birds, brings them to his blind, cleans them, ties them in bunches of a dozen each, and waits for his millet to attract more birds, and so continues during the day until he has made $10 to $15.

This scientific destruction of the reed bird is confined to Salem county. Cumberland county is where the rail are most abundant.

The mud hen, clapper rail (*Rallus crepitans*) or salt-water marsh hen, is as large as a small chicken; in countless numbers it covers the salt marshes along the coast; nests in May and June, and has its young full grown and ready for autumn migration when the first hard frost comes.

There are always high tides late in September which are taken advantage of by numerous shooters. The mud hens are driven up upon sandbanks and drift stuff and the gunner is pushed up to them. If shot on the wing they are taken singly, but often a half dozen or more are killed sitting on the drifting dead reeds. It is contemptible "sport." The young birds are good to eat, and securing them is on a level with reed bird shooting, but the old birds are sedgy and worthless. I don't think any tears should be shed over the demise of the mud hen. He is not a game bird, he is not good to eat, and he can be secured with an oar or stick almost as well as with a gun; he is not pretty nor musical.

There were very large bags made a day or two this season. At Anglesea more than 1,000 were killed at a single tide. One gentleman got 147 and ran out of cartridges.

F. S. J. C.

Uniform Game Seasons.

Editor Forest and Stream:

In reading an article relative to the New Jersey game law in a recent issue of FOREST AND STREAM, my attention was directed to that which I have always held to be the keynote of the whole business of preserving a reasonable game supply, viz., prohibit the killing of game of any kind except from Sept. 1 to Dec. 31 of each year; this done, you will have to a great extent solved the problem of game preservation in this State. Within the limits named, open seasons for the several sorts of game may be fixed, as for instance: deer, from Sept. 15 to Nov. 1; quail, from Nov. 1 to Dec. 25; grouse, from Sept. 15 to Dec. 31, and so on; but have all close on or before Dec. 31.

So long as the open seasons lap over each other, as under the provisions of the existing law, we have practically for the law breakers a season of "excuse for hunting" extending from Aug. 15, and in some localities even from July 1, to May 1 following. While it is possible that no special harm would arise from extending the duck season on Long Island to March 1, there is certainly no excuse for any provision of law that permits any kind of upland shooting except from Sept. 1 to Dec. 31.

While the law of excuse continues to exist game will be illegally killed by the pot-hunter and the amateur sportsman, honest perhaps under ordinary circumstances, but whose desire to kill something gets the better of his judgment when prohibited game gets in the line of sight.

There is no possible sense in having a series of open seasons slipping over one another like the points of a telescope and extending through the entire year; three months is an amply sufficient season for any and all legitimate shooting, and ought to be long enough to satisfy even the game hog.

In conclusion permit me to add a plank to the platform: "Prohibit the killing of any sort of game in the Northern States except between Sept. 1 and Dec. 31."

S.

TROY, N. Y.

Mississippi Game Notes.

BLUE MOUNTAIN, Miss.—We have not had enough rain in this immediate section to run in a ditch since the middle of May, consequently our crops are very short, not a half crop of cotton, something over a half crop of corn, sweet potatoes almost a failure, peas no good, and hay one-fifth of a crop. I do not know of anything that is plentiful but quail. The dry season just suited them. There are some squirrels, but there will be less in two weeks, for there is but little mast, and in that time they will have eaten up all there is. There are but few wild turkeys here, and the few there are get killed before they are well feathered. There are no ducks.

S. N. R.

St. Mary's Mountain Goats.

Editor Forest and Stream:

The Rocky Mountain goat is generally considered such a trophy by those lucky hunters who have been so fortunate as to secure one, that I am tempted to tell your readers where they are sure to get it.

In August of this year I joined a party of cavalry officers at Fort Assiniboine, Mont., and we made up a party at that post with the avowed intention of getting goats and sheep if they were to be had.

We went 150 miles west from Fort Assiniboine by rail to Blackfoot Station on the Great Northern R. R., and from there struck out northwest to Norris Cabin in the St. Mary's Lake country, about forty miles from Blackfoot.

Here we made our permanent camp. From this point we made short hunting trips of two or three days' duration into the surrounding country, having good success every time. The "lick" on Kootenai Mountain, four hours' climb from our permanent camp, yielded one or more sheep every time any of our party went up, and we went frequently. There were no goats on this mountain.

No finer trout fishing is found in the Rockies than that in St. Mary's Lake and river. Speckled trout run up to 4lbs., and lake trout certainly over 10lbs., and in almost limitless quantities.

There appear to be very few deer in this country, but grizzly bears are very plentiful. They tell me that May is the best bear month, as they will then come to a bait (usually a horse killed for the purpose, near a platform blind).

This country is on the Blackfoot reservation, and as it will be thrown open to settlement within a year, and the best hunting will then be a thing of the past, I would advise those who want to try for a goat to move quickly.

Outfits can be had at Blackfoot Station, and wagons can go as far as Norris's cabin, on St. Mary's Lake. Beyond the lake pack animals must be used.

I have hunted big game in many sections of the West, but have never seen a more attractive country than the St. Mary's Lake region. H. E. HAYWARD.

[Our correspondent mentions Billy Jackson as a good guide, and we add the name of Jack Monroe. They may be addressed at Kipp, Mont.]

Barnegat Shooting.

BARNEGAT INLET, N. J., Oct. 1.—There has been a great flight of snipe of all kinds at North Point of Beach, Sea Dog Shoals and Sedge Islands during the past few days; the yellow-legs making the air resound with their plaintive whistling. I learn that a nice lot of golden plover and large yellow-legs were killed by a gentleman while standing on the porch of Sedge Island Lodge.

Last Saturday I caught some very fine bluefish just over the bar, at the inlet, some weighing over 7lbs. Captains report good sport with large weakfish and croakers outside the bar. They use a cabin yacht and when the fish are located the sheet is "eased off" and they drift; using hard clams for bait, and a No. 6.0 snelled hook with a 2oz. sinker. The fish average from 4 to 8lbs. Each yacht taking from twenty to forty in a day.

The bass have been biting very well during the past week in Mud and Sedge channels; the sportsmen using a spoon and trolling from a rowboat, also still-fishing, using crab for bait. I saw some weighing 6lbs. each which were caught in Sedge Channel, near Buster Island.

SEA DOG.

Kentucky Game Abundant.

FULTON COUNTY, Ky., Sept. 29.—On the sandbars of the Mississippi River, below Cairo, Ill., wild geese have already made their appearance in goodly flocks. This is not usual so early in the season.

Mallards are also coming into the lakes and bayous, and as there is splendid feed and a much better supply of water than for years past, it is likely that the shooting will be exceptionally fine this season.

I have never seen such flocks of doves as we have this year. They fly in droves like wild pigeons use to do. Some of our shooters have been having fine sport in shooting them.

The quail are also very abundant, and there has not been so many squirrels for many years as during the summer, and fall sportsmen in this section will have good sport this season. J. N. HALL.

Abundance of Snipe.

WINNIPEG, Sept. 29.—We are having a spell of Indian summer which will delay the aquatic birds in leaving us for a more congenial clime. It, however, lengthens our sport with them. Mr. Hough may look forward to the best snipe shooting of years. I never saw them so plentiful. I had a party of friends out last Saturday afternoon and they made a hole in a thousand cartridges, but the bag was not so large as it might have been.

THOMAS JOHNSON.

Duck Shooting from Launches on Long Island Waters.

THE New York law permits duck shooting from boats propelled by hand and from sail boats in Long Island Sound, Gardiner and Peconic bays; but it does not permit shooting from naphtha nor steam launches, which is reported to be practiced extensively.

Maine Big Game Hunters.

NEW YORK, Oct. 6.—*Editor Forest and Stream:* Messrs. John J. Sullivan and John W. Phillips, of the New York Health Department, leave for Greenville Oct. 10 for a hunting trip of two or three weeks in the Moosehead region. Mr. A. H. Isbell, who is a crack rifleman and pistol expert, went into Darling Camps on Sebois last week.

Dogs Deadheaded in Virginia.

DURING the hunting season, *i. e.*, from Oct. 1, 1896, to March 31, 1897, the Norfolk & Western Railroad Company will take free in baggage cars, when accompanied by owner, and at their risk, the dogs of sportsmen or hunting parties, not exceeding one dog to each man.

W. B. BEVILL, General Passenger Agent.

New Hampshire Small Game.

BRISTOL, N. H., Sept. 28.—I have been having a few days of fine sport with the grouse and the grays in this vicinity, and find both very plenty. J. W. B.

Game and Fish Protection.

MARYLAND ASSOCIATION WORK.

BALTIMORE, Sept. 30.—*Editor Forest and Stream:* Thinking that it might be interesting to the readers of the FOREST AND STREAM to know of the work that is being done by the Maryland Game and Fish Protective Association and the State game warden, I will encroach upon the columns of your valuable paper for a little space.

At the last session of the General Assembly of Maryland the Game and Fish Protective Association obtained some valuable additions to the game and fish laws. The enactment of a law providing for the appointment of a game warden with power to appoint deputies *ad libitum* was the most important legislation enacted in the interests of sportsmen. The game warden's department and the Game and Fish Protective Association are practically one and the same, they go hand in hand and are in perfect harmony. Mr. J. Olney Norris is the game warden, and has appointed over 100 deputies. Since the organization of the department last June a great many offenders have been arrested, and in every instance the guilty ones were convicted. Several interesting cases are now pending trial. The most important case to be tried is the one which which will come up during the present term of the Circuit Court of Baltimore county, in which James F. Butler and Robert Smith are charged with having perpetrated the dastardly crime of poisoning 3,000 English pheasants at the Bowley's Quarter game preserve, a full account of which was given in the FOREST AND STREAM last week.

The preservation and propagation of black bass in the Potomac River is a matter in which the Association is deeply interested. No stream in this country is better adapted to bass than the Potomac, and with proper restrictions and enforcement of the fish laws it will be utterly impossible to exhaust the supply of bass in the Potomac by legitimate angling. According to a tri-party agreement on the part of representative sportsmen from Maryland, Virginia and West Virginia, who met at the Blue Ridge Rod and Gun Club, near Harper's Ferry, last November, recommending a uniform law for the three States, prohibiting the taking of bass in the Potomac in any manner save only with hook and line, the time is near at hand when the Potomac River will become the best bass stream in this country. The Legislatures of Maryland and Virginia passed the law last winter, and West Virginia will do likewise at the approaching session of its Legislature. This law will do away with all fish traps, outlines, seining, etc., which have been very destructive agents in depleting the Potomac for years.

Bass are abundant and fishing is very fine at this time. My friend Dr. W. S. Harban, of Washington, and a number of the Blue Ridge Club caught twenty-three fine fish one day last week and twenty-two the day following, the largest weighing 4½lbs. It was my good fortune to catch a fine string myself during a recent visit to the Blue Ridge Club as Dr. Harban's guest.

I have just returned from a tour of inspection in my official capacity, consulting the deputy wardens along the Potomac and the Chesapeake and Ohio Canal, from Harper's Ferry to Williamsport, with a view to carrying out a scheme that will put at least 1,000,000 bass into the Potomac. The Chesapeake and Ohio Canal contains great quantities of bass. At the close of the season in December the water is drawn from the canal, but there are large and small pools all along the canal which hold considerable water; in these the fish congregate by the thousand, and it is the determination of the Association to seine these pools, putting all the bass into the Potomac, and to destroy all the German carp, for they are regarded as the worst nuisance ever dumped into American waters. Thousands upon thousands of small bass die in these pools every year, and barrels upon barrels of large bass have been taken from them with seines for years; but, thanks to Col. G. L. Nicholson, general superintendent of the canal, this has been stopped. Col. Nicholson has issued orders prohibiting any one from seining in the canal. We have the assurance that Col. Nicholson will assist the Association in every way he possibly can in consummating our plans. The Blue Ridge and Woodmont clubs and sportsmen in general will also lend a helping hand.

Deputy Game Wardens Armstrong, Bowers and Webb, of Hagerstown, were particularly attentive to me, and I am under many obligations to them for much assistance and good advice, and the Association will find them ready to coöperate with us in every way they possibly can. The same may be said of all the deputy game wardens in western Maryland along the Potomac. These facts are mentioned to show how harmoniously the Game and Fish Protective Association and the game warden's department fraternize. GEORGE W. MASSAMORE,

Sec'y-Treas. and Assistant Game Warden.

War Begun in Massachusetts.

BOSTON, Oct. 1.—*Editor Forest and Stream:* Inclosed please find a clipping from the Boston *Herald* in reference to the war which has commenced on poachers in this locality. The Rod and Gun Club is a new club which has been recently formed, and they propose to take care of the game in New England and see that the game laws are strictly adhered to. ROBERT SMITH.

The Rod and Gun Club is taking active measures to enforce the fish and game laws of the State in behalf of legitimate sport, and a war has been begun on poachers which will be kept up, it is said, until the treasury of the club is exhausted. As its membership includes some of the wealthiest men in the State, this will not be for some time to come.

Game commissioners, appointed by the State, are on the pay rolls of the club, and for the past three weeks they have been actively engaged in looking over the ground.

The first arrest was made Sunday, when Clarence Hattenburg was caught at Easton with two partridges. He was taken before Judge Fox, of Taunton, yesterday morning. He pleaded guilty, and, it being a first offense, a fine of $20 was imposed.

Commissioner Wm. O. Quggle, who made the arrest, said to a reporter of the *Herald:* "Since I started out three weeks ago to enforce the game laws, I have found plenty of evidence of law breaking. At Easton and North Easton particularly men have been going out day after day, and if this sort of thing is kept up it would not be long before there would be no game in the State worth talking about.

"As it is now, sportsmen who go out find very little, while the trappers simply set their snares during the day, go home for the night and in the morning come for the game.

"The case to-day was the first of many I expect to have in court before long, for I have already secured evidence enough to secure convictions. It is the determination of the Rod and Gun Club to push every case to the full extent of the law." BOSTON.

A New Jersey Month.

IN his report to the Fish and Game Commissioners for the month of September, Protector Charles A. Shriner says of the game law and its working:

The past month has added materially to the ever increasing volume of evidence that the laws regarding game passed by the last Legislature are wholly inefficient for the purposes for which they were enacted and that a continuation of these laws cannot but result in the total extermination of game in this State. With the yearly increase in the number of gunners has come a material elongation of the periods in which game of different kinds may be lawfully taken; in only one instance was the period made shorter, being the season for the killing of reed and rail birds, this being fixed so as to prohibit the killing at a time when the birds are the most numerous and in the best condition for the table. But the extending of the seasons for the lawful killing of game is not the worst feature of the present game laws; the most obnoxious feature is that the law permits the killing of some kind of game during many months, thus giving pothunters and poachers a warrant for being seen with guns in the woods and fields at almost all times of the year. Temptations to violate the game laws were thus afforded by statutes intended to secure an observance of the laws.

As the past month afforded opportunities for the killing of song and insectivorous birds and other violations of the game laws to a greater extent than during the summer months, the wardens were instructed to be more vigilant than ever, and if possible to secure the punishment of every violator of the law. To apprehend all the offenders would be a manifest impossibility, but the result of the work of the wardens has been gratifying as far as their vigilance is concerned.

The record of prosecutions during September comprises not less than seventy-two cases, most of them for the illegal killing of insectivorous birds, many for Sunday gunning, others for taking bass of unlawful size and use of set lines.

Pennsylvania Game Law.

THE Legislative Committee of the Pennsylvania State Sportsmen's Association met Sept. 30 at Harrisburg. The attendance was small and the chairman of the committee, in calling the meeting to order, said that the showing made by the members of the committee was decidedly disappointing.

The business transacted was of a preliminary nature. The meeting passed a motion that a committee be appointed to draft a bill for presentation at the next meeting of the Legislature, fixing the open season for all game from Oct. 1 to Dec. 31. There was quite a difference of opinion upon this point, and it is more than probable that when the committee finally acts upon such a bill its contents will be much modified.

The questions of the sale of game and also of the non-exportation of the same were discussed, and a committee appointed to look into such questions.

J. F. O'Neill was elected secretary of the Legislative Committee, and will act in that capacity at all meetings of the committee. The meeting adjourned to meet again at the call of the chair.

Sea and River Fishing.

MEN I HAVE FISHED WITH.

XV.—Charles Guyon.

THE little mining town of Potosi lies in the southwest corner of Wisconsin. It has three streets in the only possible places for streets; the three narrow valleys which meet in the center of the village afford outlets for travel. Some two miles to the west one valley leads to the Grant River, near its mouth, and here a Mississippi steamer came for freight occasionally. A stage came from Galena down another valley, and thus Potosi was connected with the outside world. Here I drifted in the spring, and found good fishing and shooting. My friend Loeser had gone a few miles further north to Fennimore Grove, near Lancaster, where he settled down into a farmer's life.

Charley Guyon was one of the French-Canadian colony which formed the largest portion of the village. There was a settlement of Cornish miners in one of the outskirts called British Hollow, but the two peoples mixed very little except in the way of trade and in the gambling rooms, which were then run wide open. Charley was a strong young fellow about my age, and he proposed that we should go jacking for fish some night.

"I don't know the first thing about jacking, Charley. I'll go and try it. Tell me all about it."

"Well, it's this way," said he (very few of the French-Canadians spoke anything like a dialect). "We have a jack light on one side of the bow and it hangs over the water, so that no fire drops into the boat. One man paddles and the other stands in the bow, and when he sees a fish he gigs it."

The jack was a cresset made of strap iron—a 12in. ring to which half a dozen strips were riveted to form the bowl, which was fastened to an iron staff long enough to bring the bowl above a man's eyes as he stood in the boat. Charley had gathered a lot of bark from the shell-bark hickory, which he said made the best of all lights, and we got a ride to the landing with our traps. The "gig" was a spear of some six or eight prongs, with a wooden handle about 8ft. long, to which a small cord was attached to the upper end to recover it by.

As soon as it was dark enough we lighted the jack and started. The boat was a light-bottomed scow and I used the paddle. Guyon stood in the bow and gave orders; he did not use nautical terms, but said "right" or "left" as

he required the boat to go. Soon he said, "Steady, left, hold up," and then after a pause, "Go on slow, there's a big pike about here, but he was shy and I couldn't get a crack at him. Hold on, right a little," and he poised his gig and sent it buzzing into the water. "A clean miss. I didn't strike low enough. Go toward that tree top out there, there may be some buffalo near it."

Surely I must have misunderstood; he could not mean that buffalo might be grazing in that tree top, but I was in a strange land, and my new friend might be having a little fun at my expense, so I kept still. Soon the orders came, and as the spear left his hand it struck and gave a little tremble, and my companion yelled out: "I got him!" and taking hold of the string which was tied to the gunwale he pulled the gig staff to him and then landed in the boat a huge fish of about 20lbs.—huge to me. "There's your buffalo," said he.

I looked at the great ungainly fish, with a hump on its back and a mouth like a sucker, and asked if it was good to eat.

"Oh, yes, it's better than red-horse, but not as good as bass and pike. Here, you take the gig and I'll paddle. Now you've got to put the gig into the fish and not in the place he looks to be at. If he's nearly under you throw right at him, always with the gig across his body and not in line with him. The further he is away the more you must throw under him, because he's deeper than he looks to be. You know how a board appears to be bent when half of it is in the water, the lower end seems to be higher than it is. Well, it's just so with a fish; unless he's right under you he's deeper than he looks, and the further off he is the deeper under him you must strike."

I took the gig, with some doubt of my ability to gauge the depth of a fish and judge his true position, for I knew what Guyon said was true, only I had never thought of it before. I did think of his names of fishes; we had a buffalo and he spoke of red-horse. I had seen dogfish and catfish, but where was this kind of nomenclature to end? Soon I saw several large fish. There had been plenty of small ones seen, but with a 20lb. fish in the boat as a pattern my ideas were no doubt enlarged. Soon I said: "Steady, stop!" and plunge went the gig and missed.

"I knew you wouldn't touch that fish," said Guyon; "you threw too far from the boat, and it went clean over him by two feet. Next time aim two feet below where he looks to be at and you may get him. It's very seldom that a man throws the gig under a fish that lies ten feet away from the boat. Try it again."

At the next chance I was bound to miss the fish by throwing under it, if I missed it at all, and I plunged the gig in the water at what seemed an absurd low point and struck a pike of some 5lbs.

"There," said the man at the paddle, "I knew you could do it if you could only believe the fish was a foot or two below where he looked to be at." This use of the word "at" was new to me then, but I found it common in the West and South. Lately it has had attention called to it by its use in Congress. It sounds odd to those who hear it for the first time.

And so we passed the first half of the night, and returned to the warehouse and slept in it, for Charley had the key; but we took the precaution to take our fish inside too, for he said: "The moon will be up in an hour and she'll spoil the fish, and then we don't want minks and wildcats carryin' 'em off or chewing them up. We'll get a ride up in the morning, for Joe Hall's going to bring down some potatoes and there'll be teams down with lead."

Morning came and we went back with the first empty wagon, taking over 200lbs. of fish—bass, pike, buffalo and big red-finned suckers, which proved to be the "red-horse;" and I had been initiated into the mysteries of jacking for fish, handling a gig, had received a lesson in practical optics, and knew positively that a fish in the water was not always in the place which it appeared to be "at."

Somewhere in an omnivorous course of reading I remember a statement that "Man shall not live by bread alone," and in the practical every-day life it began to be painfully evident that no matter how desirable it might be to hunt and fish forever, there were needs other than what the chase afforded. There was a man who really demanded pay for letting me live in his house. Of course the house was built, and I did not hurt it by living in it; but he had put a man out because he did not pay. Then there came a day when a really serious bit of thinking over the sordid spirit of man had been indulged in for fully ten minutes, when Charley Guyon came along.

"Say," he began, "you ain't doin' anything, an' I want a pardner to sink a shaft. I think I know where we can make a strike, an' I've got all the tools. What d'ye say, will you jine me?"

"Well, Charley, I was just thinking that it was about time that I went at something; but I don't know the first thing about lead mining. Tell me all about it; how do you do it?"

"It's just like this: A man owns a piece of land and he throws it open for mining or he keeps it for other purposes. Suppose he throws it open; then any one can dig and he takes one-tenth of the mineral for rent. A windlass, rope, bucket, pick and spade are all the tools we use. Mineral may be struck at ten feet, or it may be at sixty, but we go down until we come to hard pan; it never lies below that. You may get some "drift" that will pay or may not; it's all chance. You may work a week and not get a dollar, and you may strike a lead*, and then you drift in and follow it. You see there are lots of abandoned shafts which were sunk ten years ago, when mineral was worth only ten dollars per thousand. Now it is worth thirty dollars and two men can make wages if they get a thousand pounds per week."

"And a fellow has to work down there under ground like a mole to do this?"

"Yes, but pardners take turns, one in the shaft and one at the windlass, and of a hot day you'll prefer to be below. There's men here who hire other men to 'tend windlass, and they take the chances—make it all if they strike it big, or lose their time and the man's wages. It's all chance, just the same as when you go into Coons's and sit in a keno game; you may win or you may not. But all business is chance anyway, just like gambling; the only man who's got a sure thing is the man who works for wages, and he gets left sometimes."

* This is pronounced leed in the mines, and is a corruption of lode.

Behold the mighty hunter, with a band and candle socket on his hat, grubbing away like a well-digger, and assorting an occasional lump of "drift," with its white coating, from the earth and clay, and depositing it in a "hen's nest" until there was a bucketful—always hoping that the next stroke of the pick would cut into a bright bit of galena; or at the windlass waiting for the word "up," and dumping the earth on the down-hill side and keeping an eye out for stray bits which had escaped the eyes below. So passed the summer, with occasional fishing trips with Henry Neaville and his brother Frank, for Guyon cared little for the sportsmanlike methods of fishing, gigging and netting them in quantities was his delight, yet the fun of it was ever uppermost in his mind. He thought fishing with a hook and line was too slow work; his mind was active and required more exciting sport.

In considering what constitutes sport, a question on which the doctors disagree, it might be well to allow a little latitude for individual notions; I was about to say idiosyncrasies, but if Guyon was living he would ask: "What's them?" and so we will let it go at "notions." Please remember that this was forty years ago, and none of us had given thought to the possible exhaustion of a source of fish supply which seemed only to invite the slayer by appearing next year in undiminished numbers. This is the only excuse I have to offer for our destruction of life in those days of its plenty, and an excuse seems necessary to-day. If it is sufficient, well and good; it is all I have, and I throw myself on the mercy of the court. We all needed education in the matter of fish and game preservation in those days, and I hope that I have atoned for the misdeeds of my youth by both precept and example in later years.

In sketching Charles Guyon, who was an honest, sturdy fellow, not averse to a fight if it was forced upon him, but not a quarrelsome man, it is only fair to him to say that, having been reared in a mining town, gambling came as a natural thing, just as luck in mining did, and if his week had been successful Saturday night found him at the keno table staking the last sovereign that he had earned. The smelters sent wagons to weigh and gather the mineral every Saturday afternoon, and the pay was in British sovereigns, which passed for $5, for no miner would accept paper money for his mineral, although he sometimes did in exchange for his gold.

Saturday nights the gambling places and the drunkeries kept open until morning, and the Cornish miners from British Hollow rested from their labors by drinking, gambling and fighting. These were the highest forms of sport known to them, and in fact to the majority of men who work underground all the week in all parts of the world. One night I dropped into Sam Coons's to look on. Here I want to say that I have never won or lost $1 in any form of gambling except at the house of a gentleman in Germany, where a small stake was the custom, and there was no escape. I don't claim any special credit for this because I never had a desire to gamble—was too cowardly to risk my wealth, if you wish to put it in that way. Plenty of good men gamble, and I have other faults, but am not one of those of whom Byron says they

> "Compound for sins they're not inclined to
> By damning those they have no mind to."

I have occasionally played cards in a perfunctory way, without caring for them, and have engaged in games to decide who should pay for oysters, cigars and such other goods as an army sutler possessed, but a book always suited me better. Speaking of games in connection with Potosi wakes me up. In the sketch of Gen. Martin Miller, No. XI., the fact was recorded that Herr Driesbach, the great lion tamer, used to come to my father's house to play chess, and to my great surprise Bill Patterson pointed out a finely-built, powerful man whom we had just passed and said: "That's Driesbach, the lion tamer." I hurried after him and the result was that I often went out to his farm of an evening and had a game of chess, the only game that I ever thought worth the candle. Chess players were very scarce in Potosi, and Driesbach and I were out of practice, but if I won one game out of five it was sufficient.

One evening he said: "You aren't one-half the man your father was, he must have been over 6ft."

"Yes, 6ft. 2in. and no spare meat."

"Well, I remember once when we crossed the river to Albany in a small boat and a 'longshoreman was smoking a pipe in the faces of two ladies who sat in the stern. Your father spoke to him about it and got an impudent reply, and he then jerked the pipe from the fellow's mouth and threw it overboard. Then threats of vengeance came when we should get on shore. Your father hurried up and ran up the steps to the dock and waited. Then he said: 'My friend, you were going to lick me when you got on shore. I'm in a hurry to go to business and have only got a few minutes to spare, and I would like you to do it now?' The man looked him over and said: 'Be jabers, it isn't worth while for the likes of us to be foighten' about an ould poipe.' Now, Fred, that 'longshoreman would have cleaned you up in about two seconds. Why, you ain't a bit like the old man." I learn from my old friend, Hon. J. W. Seaton, who still lives in Potosi, that Driesbach died something like fifteen years ago, and the vest made from a pet leopard skin was given by Driesbach to Judge Seaton, who has it now.

There was a feeble game law in Wisconsin at this time, and once when Guyon and I had been up the Grant River looking for a place to sink a shaft where there was a prospect of several lodes, meeting and forming a mine of wealth, we met a party who had killed a deer out of season. It was Sam Coons and a professional gambler called Coachee. "Now, boys," said Coachee, "we killed this over in Iowa, where there is no law against it, but we don't want to have any talk about it. We ain't goin' to sell it; just brought it over for our friends, and if you'll take a quarter home, here it is. We took the quarter, Guyon and I. We knew that the deer was killed in Wisconsin, but—we let it go at that. We would only have made fools of ourselves if we had been Quixotic enough to have complained, and there would have been no venison for us. Put yourself in his place. These things, no doubt, are different in Grant county to-day, but I have not been there since 1857—time enough to bring all the changes in game protection which have been wrought in other parts of the country.

When we went to work in the woods near the river I took my rifle as soon as Sept. 1 came around and it was lawful to use it. This was the one that father gave me. I only remember that the barrel was half round and half octagon, an unusual departure from the general make of rifles, which were generally all octagon, and were stocked to the muzzle, although short stocks were coming into fashion. Caliber was a word little used in connection with hunting rifles, but we reckoned them by the number of round bullets to the pound. Squirrel rifles ran as small as 120 to the pound; mine was thirty to the pound, and that was considered very large. I never used any large bullets in it—"slugs" we called them—for the theory was that they were only good in the open country, and that contact with a twig would deflect them more than it would round bullets. A modern rifleman would not know how to tell the caliber of a rifle by our measure, and I can't inform him. I only know that with such guns, and many smaller, the old-time hunters killed the biggest animals on the continent, often when the first shot must disable a grizzly or a panther, for it took time to measure powder and reload.

I had to go to the village for something, and left the rifle loaded, also the powder horn and box of caps. The bullets and patches were in a leather box on my belt, which I wore. On returning I heard several shots some distance from our shaft. Guyon and the rifle were gone. The shots kept up, and I started at a lively gait until I came in view of the shooting match. There was Guyon in among the branches of a fallen beech tree, crack went the rifle, and a big buck charged into the branches, but could not reach him. His back was toward me and I hailed: "Hello, Charley! What are you doin' to that deer?"

He turned and said: "You are a great fellow to go off with all the bullets. Got any with you? If you have, throw me one. Don't come in here too close or that deer will kill you; he's fightin' mad now."

I did go in on a run and got into the tree top just in time to avoid the charge of the buck, and handed Guyon a bullet, which he rammed down without a patch, and planted it in the deer's frontal bone and dropped him.

Such a looking deer I never did see. Guyon's only bullet had broken one antler close to the head and angered him. The treetop was fortunately at hand and made a natural abattis, behind which the man could carry on the offensive and shift to avoid the enemy as occasion required. But the deer! His head was literally skinned all around his eyes and from his forehead to his nose.

Charles said: "When he came for me and I was safe in this treetop I whittled green beech plugs for bullets, and thought if one took him in the eye it would drop him. Every time a plug hit him he would snort, shake his head and come at me. See how he has wet me. I think I shot more than twenty plugs at him, and I don't know how I would have got out of this brush if you hadn't come."

The story was too good to keep. He didn't hear the last of it for some time.

Bill Patterson said: "Charley, that venison was very good, but there was a taste of beechnuts about it. It isn't late enough for the nuts to drop; how do you suppose it got that flavor?"

Joe Hall hailed him with: "Hey, Charley! That venison tasted as if he had broken into Darcy's shop and had eaten his shoe pegs. What d' ye s'pose he'd been feedin' on?"

The multitude of islands between Wisconsin and Iowa at this point renders it difficult to tell where Grant River ends or loses itself in the Father of Waters. It is several miles from shore to shore, and channels of many depths and widths separate the islands. These waterways, the "kills" of New York and the "bayous" of the lower Mississippi, are here called sloughs, pronounced sloo. One of the beauties of our language is that this word may be pronounced sluff, slouw or sloo, each having a different meaning. In a recent letter from Mr. Seaton he says, in reply to a question, "The inland island waters, most of which go dry in summer, I think, are properly called sloughs, and the name is not a provincialism peculiar to this part of the Mississippi valley. Webster gives the pronunciation 'slou,' and here it is spelled sloo and means a sink or depression in the islands in which the water gathers and in some cases remains all the time, and in others it signifies channels or sluiceways in which part of the waters pass from one stream to the other, *i. e.*, the over-swollen Mississippi to the depressed Grant River and *vice versa*, hence we have 'Swift sloo,' 'Hay sloo' and several others known to the fishers and hunters. They are the natural habitat and breeding places for frogs, reptiles and mosquitoes, as well as a great resort for ducks in the spring and fall. During the spring freshets the fish gather in them in large quantities and are entrapped when the water falls, which is usually in August and September. This year a large number of German carp and black bass were taken in willow woven nets by the boys, although this is prohibited by law. The upper waters of the Mississippi were stocked a few years ago with these fish by the Government. It is in April and May, when the 'spring rise' overflows the banks and spreads over the bottoms, that the fat catfish, buffalo and other fishes are found out of the channels and main streams feeding in the grassy bottoms. Then the boys wade in and have their fun catching them. Sloughs are creations of the great river and are part of it."

The domesticated hog ran wild on these islands and once a man said to me: "Now, you will want some pork, and you ought to buy a claim o' hogs. I've got five marked sows on the islands and I'll sell you a claim in 'em fur a dollar."

On inquiry Charley said: "That's all right. There's about ten claims o' hogs on the islands. It's this a-way: a man turns out a sow with certain ear marks, and all the pigs found with her in the fall are hers if there's a hundred. Give him a dollar and you can kill all the pigs you want, only don't kill an old one with marks in its ears." I bought in and was part owner of all pork on the hoof that had two Vs in the right ear and a round hole in the left.

Guyon, Bill Patterson, Henry Neaville and I went for pork about the middle of September. Charley and Bill skinned theirs, and this was the usual custom, but I agree with Neaville that a properly dressed pig looked best, but "How can we dress them on these islands?" I asked. Henry said, "I'll show you," and we pulled the scow up high and dry, filled it with water, made a roaring fire and heated a lot of stones which had been brought to the island for the purpose, and boiled the water to scald the pigs. How easy it is to do things if you know how! Fresh pork was cheap in those days, and I have seen where a hog had been killed and only one ham taken and

the rest left in the woods, perhaps by some fellow who never paid his $1 to "buy into a claim o' hogs."

Once, while alone going down to the marshes with my rifle to get a duck or two for dinner, for it was the only gun I owned, I went a little way up the side of the bluff to get a view of the overflowed lands, and make a reconnoissance of the flocks of ducks and of such cover as might conceal an approach to them. I sat on a log to view the scene and recover some lost breath. It was early in the afternoon, and the log was so comfortable that I sat some time. Four half-grown foxes were playing in the leaves like kittens, and a move would have spoiled the show. Suddenly there was a shot close by and the foxes vanished; a pig squealed, an old hog grunted and a boy screamed. I jumped at the shot and started slowly to see who was shooting, but ran when I heard the boy. There he was on his back, and a big sow chewing his arm. Quicker than I can tell it I shot and fortunately hit the hog in the eye and she dropped dead. Then I became excited at what might have happened if I had missed the hog or killed the boy. He had fainted, and, having no water, I fanned him until he came to. His arm was badly torn, but no bones were broken and the doctor soon had him repaired. A hog will charge a man any time if he makes a pig squeal, and then they are dangerous animals. On telling this pig scrape to Charley he showed me some great scars on his legs where he was bitten under similar circumstances, only that he seized a hanging limb and drew himself into a tree, and fortunately some strangers heard his yell and came to his rescue, or he would have bled to death.

Charley Guyon inherited the taste of his countrymen for the violin, and he and another noted fiddler named Montpleasure had played with a traveling minstrel troupe which went up through Wisconsin and Iowa, and some of his experiences were laughable. Said he: "We struck a little town in northern Iowa just in time for a late supper and to get to the hall. The box of burnt cork couldn't be found and there wasn't corks enough in the single hotel to make 'paste' for the troupe of ten. Yes, we had ten, all good men too if we did take in small towns, but what was to be done? The hall was filling and we had small boys out looking for corks and coming back saying, 'Mother says she ain't got no corks,' or 'Pap says he'll get you a cork ef you'll give him six tickets.' The hall was full and the people began to get uneasy, when in came the landlord to the dressing room with four boxes of shoeblacking and asked if that wouldn't do. Charley French thought it would, and we wet it up and used it and rushed on the stage. The overture went off well and the opening chorus was half through when the boys began to feel uncomfortable. The stuff had stiffened and we felt as if we were varnished, and soon it began to peel off. Such looking niggers you never did see. We got laughing and the audience roared; our tenor tried to sing 'Swanee River,' but it was uphill work; he looked like a darky with the small pox; we shook our sides and the people screamed until he got mad and left the stage. It was well for us that it hit the audience as being funny, but we got through somehow, and as they wanted to dance we played for them until morning, after we washed up. They had never had such dance music, and they wanted us to promise to come again, which we did and had a grand reception."

Once when we were discussing the chances of sinking a shaft in a new place he burst out laughing. I waited to hear what the cause of this hilarity was and as soon as he could pull himself together he tried to say, between shrieks: "Bones asked why this troupe of minstrels was like a gang of burglars which had been discovered. Ha, ha! ho, ho!—O, I can't tell it. But the answer was because we—he, he! O, my!—because—because we're spotted!" And then he couldn't stop. A roll on the ground and a kicking of heels was the only sedative, and it always got in its quieting work if no one started a laugh; if they did it took longer.

I think Charley never tired of this yarn, for he would laugh all the time until he cried; it was the great event in his uneventful life.

He was as happy as that happy race, the French-Canadian, usually is—happy if it rained or if the day was bright; happy in luck of any kind, if he had strings for his fiddle and rheumatism and the toothache kept away. Mr. Seaton does not know the date of his death, but thinks it happened about twenty years ago. It matters little; those who knew him know that he died happy, and if he indulged in any retrospect of life at all, that night when shoe-blacking was substituted for burnt cork took a prominent place, and I can imagine his last words to be: "It was the best thing we could get." FRED MATHER.

For Fly-Fishing only at the Upper Dam.

Editor Forest and Stream:

In the last issue of the Phillips (Maine) *Phonograph* I find in "Fly Rod's Note Book" the following item: "Great will be the rejoicing among the fly-fishermen to hear that the grand old pools at Upper Dam are not for the plug fisherman after this. The Fish Commissioners held a hearing Sept. 9, when it was asked that 'From the gate-house to open water in Mollychunkamunk Lake should be for artificial fly only,' and there is no doubt but what this will become a law." Now let every fly-fisherman pure and simple, from the Provinces to California, drop on his or her marrow bones and pray (each after his or her fashion) that this petition may be granted. It will be one of the grandest things the Commissioners ever did (and they have done many) and will everlastingly redound to their credit. Just fancy the smiles that will wreath the faces of those 8-pounders when they realize what the Hon. Board is doing for them. Congratulations, please.

J. W. B.

Large Black Bass.

MESSRS. WILLIAM MILLS & SONS show in their window at No. 7 Warren street a mounted small-mouth black bass, caught at Lake Mahopac, in Putnam county, New York, by Reuben Miller. The fish was weighed by proprietor Dean, of the hotel at the lake, and was found to score 8lbs. It measures 24in. in length, 7½in. depth, spread of tail, 7in. (8in. when taken). The bait was a yellow perch. If you would see a handsome black bass specimen, go and look at this big fish.

James A. Patterson, Jr., of this city, has the credit of another large bass taken in the same waters; it weighed 6½lbs., and is to be seen in the window of the United States Net and Twine Co., at 316 Broadway.

CHICAGO AND THE WEST.

More About Minnetonka.

CHICAGO, Ill., Sept. 14.—The more one sees of the great State of Minnesota, the more one becomes impressed with its beauty and extent of resources. No part of the West is to-day more full of interest to the lover of rod and gun, and I repeat that it is sure to be the case within a few years that Minnesota will absorb a great deal of travel which now goes beyond it or stops this side of it.

Minnesota is a land of prairies and of forests, the one intermingling with the other. Up in the north the big pine woods run in a long wilderness into the far cold country, and here there are moose and deer and bear and elk even to-day, and muscallonge fishing such as there is nowhere else in all probability. Yet quite as far to the north the prairie runs also, and the "sand ridge" country of the extreme northwest corner of Minnesota and the northeast corner of Dakota is one of the best grouse grounds left. It would take a world of exploration and a dozen volumes of writing to describe the many grand angling waters of the east and northeastern part of Minnesota, or indeed those of the western side where the lakes lie in prairie or hardwood timber country. Many of these prairie lakes have the rankest growth of wild rice, and are not better for fish than for fowl. No section ever offered finer duck shooting than Minnesota in its prime.

Long years ago, as I imagine a great many readers will remember, the glories of the Kandiyohi Pass and the Coronas country were graphically described in the monthly magazines by that old-time expert, Mr. C. A. Zimmerman. Readers of FOREST AND STREAM will remember Mr. Zimmerman very well by his pictures of duck shooting. "A Side Shot," "A Lost Opportunity," "Stopping an Incomer," "Shooting over Decoys," "A Tight Shell," etc., are more than household words. Mr. Zimmerman—who has led a varied career as soldier, war correspondent, war artist and business man—knew his Minnesota well, and chose as the best part of it the lower end of the "Big Woods"—that great section of hardwood timber which sweeps down the center of the State to the southern edge, acting as a many-fingered clasp to the gems of Minnetonka. Here, on an island in the lake, cut off from the world at will by a drawbridge of his own invention, Mr. Zimmerman has built him a lovely cottage on a commanding site and is spending his riper days as much in the heart of nature as he could ask. He is superintendent of the entire water transportation on Lake Minnetonka, which numbers a goodly fleet of steamers, and has besides the pleasant task of handling a large photograph gallery and studio; for with matters of art Mr. Zimmerman has always been entangled, and besides his use of the brush has never had his hands off from lenses and slides since he was a boy, almost a generation before the amateur photographer of to-day. He made his own cameras and arranged his own lenses, being first a scientist and then an artist and then an experimenter. Naturally an artist, a sportsman, a traveler, an observer and a writer all in one offers interest to the passer-by, and in these ways Mr. Zimmerman belongs to the public and cannot complain if he is rated as one of the attractions of Minnetonka. Mr. Zimmerman's warmth of heart, his rich fund of experience, his deep kindliness of nature, belong only to his family and friends.

It happens that Mr. Carrington Phelps, the host who was struggling to keep up with my Minnetonka appetite at the time, was the old-time friend and shooting companion of Mr. Zimmerman. Mr. Phelps can be recognized in portrait as the figure in one of the shooting scenes, just as Mr. Zimmerman has painted a portrait of himself in another. The two setter dogs, which figure in another picture, were actual and much beloved dogs, and both Mr. Phelps and Mr. Zimmerman have shot many ducks over them. Mr. Zimmerman was very fond too of Mr. Phelps's famous old Chesapeake Bay dog Darby, and speaks of him even yet as possessed of human intelligence. Of the same strain is Mr. Phelps's retriever Poule d'Eau (happy name), who besieges every visitor with a chip carried continually about and a beseeching look in the big brown eyes that asks very plainly that one throw the chip in the water for a sample of Poule d'Eau's retrieving. But let not the stranger be wheedled by Poule d'Eau, for she will keep him busy throwing sticks for her all day, and never tires of swimming for chips, diving for stones and disporting in the water so long as she can coax any one to play with her. Poule d'Eau is the only dog I ever really saw that would dive for an inanimate object for the fun of the thing. We often noted her to stay for several seconds under the water. She is a grand duck dog, though both Mr. Phelps and Mr. Zimmerman contend she does not equal old Darby. It is one of the pleasant things one likes to remember that these two shooting friends, Mr. Phelps and Mr. Zimmerman, both have their homes now on Minnetonka, and continue to live as neighbors at least, though they have both been very remiss of late years about taking their fall hunt for ducks. This fact I pointed out to them for sake of Poule d'Eau, who came always when we three sat on the lake bluff together and held up her chips reproachfully, looking up with soft eye pleadingly and plainly begging to be taken out duck shooting this very fall. At sight of which we all dreamed dreams about loading the old camp outfit into the wagon and taking a trip this very fall to some of the old lakes and having an old-time shoot, with Poule d'Eau as impersonator of Darby and the setters. So strongly did I urge upon them this duty to the dog that I left them both feeling very uncomfortable and promising all kinds of wild things if I would come out in October.

One day, in order that we might see something of Minnetonka and perhaps get a line on some of the fish besides, Mr. Phelps and his son Carrington pulled us out for a cruise among the islands. That was a very pleasant boat ride, and, I imagine, an exceptional one. Mr. Phelps is an old Yale man, and was captain of the Yale boat in 1870. He can show pennants and cups (trophies in the single and double sculls) dating back to his college days, and can, moreover, pull an oar which is its own certificate. His son Carrington has certainly had good training on the inland sea of Minnetonka, and some day maybe he too will pull an oar in the Yale boat—I am sure it will be a good one. Far be it from a scrub oarsman to row in such company as the above, and I did not. I only watched the ease and beauty of perfect rowing as the two, father and son, hit her up with the Yarra-Yarra stroke for a mile or so just for the fun of the thing. A crew like that make a very fine trolling motor, and naturally it was not long before I had a strike on the trolling spoon which we had out. Alas, the line broke and I lost my fish after a brief moment of fun with him, whereat I said: "Oh, dear!" That is what I said. "How unfortunate," said I, "oh, dear!"

The loss of this fish was indeed unfortunate, for we needed a fish for lunch. At length, seeing that the casting rod was not going to do much for us, Mr. Phelps fell back upon his Minnetonka trolling rig, a vast bamboo with no reel, but with a stout linen line as long as the pole, and attached thereto a No. 8 spoon, the latter baited with a big frog. We anchored our boat just at the mouth of one of the deep channels between two arms of the lake, which make a feature of Minnetonka navigation. This channel was 200yds. or so in length, 10 or 15ft. deep, and debouched into a great circular hole, which was over 30ft. deep in the middle. This spot Mr. Phelps had often found good for a pike or so, and we concluded that we must stay there until we caught something to eat, for we were making believe of living chiefly by hunting and fishing. I kept on casting, viewing with amusement the vast sweeps of Mr. Phelps's lure, which was about the size of a dishpan as it swirled and eddied and ripped through the water. It seemed very likely he would scare some fish to death or desperation with it, but it never occurred to me that he would catch anything. But just as I was making a nice little cast with my brass rig I heard an exclamation from Mr. Phelps, who was standing up and working his dishpan from the bow of the anchored boat. "I saw him," he said; and then as he cast again: "I've got him." And sure enough he had a great, lashing whale of a pike, which after long coaxing and maneuvering we discovered to weigh 7¼lbs.

"Well, we've got enough to cook," said Mr. Phelps, "but before we pull up just you try over in there toward the mouth of the channel."

I tried, but got no strike; and then Mr. Phelps tried with his dishpan and got a strike, and missed hooking the fish. "Cast right in, quick," he said, and obeying I got a heavy strike, and soon was at work with my first Minnetonka pike. Much to my delight, he did not prove one of the snake sort of pickerel, but he was a fighter and a stayer. He went out of water like a muscallonge once, and rushed and sounded and sulked for quite a long time, and was so heavy that my wrist tired in holding him up. At last we got him after a fight much longer than the big bamboo had offered, and we found that my fish weighed 6¾lbs. I think I never have seen pickerel (pike these should be called) fight so long and hard as these did. It would be in very bad taste not to call fishing for such fish good sport, whatever may be the habits of the same fish in other waters or at other times.

How to Broil a Pike.

We now went ashore to prepare our fish for cooking, and here again I had my notions about pike changed materially. I had never believed they were really good to eat, but this was simply ignorance on my part. They are good, and mighty good, if you know how to prepare and cook them. In this I had a lesson. Mr. Phelps first skinned the smaller of the pike, leaving a vast white carcass of yellow-white, firm flesh, showing all the interlacing muscles which had been making trouble for the little bass rod an hour before. Then he very deftly cut apart the flesh along the back line—the fins had already been removed—and the first thing we knew there lay two long strips of the flesh, almost entirely boneless, the backbone and nearly all the ribs being left attached to the skeleton, which was attached to the head. These two long strips of pike tenderloin he carefully washed, and taking about one and a half of them—for our fish was almost too large to be eaten outright—he led the way up to a certain grassy knoll that he knew very well, and proceeded to show me still more about the possibilities of the pickerel.

"Get me some wood," he said to us, "and I will show you a broiled fish pretty soon. Don't pick up just any old wet wood or rotten sticks you see lying about, but get me some clean, dry sticks, broken off from a tree that is dead and seasoned, but not lying down on the ground. You will find a dead ironwood tree just yonder, and that is the hardest, heaviest and best wood to burn that grows in these woods. I want my fuel from that tree, because the art of broiling depends first of all upon the fire."

We brought an armful of this stubborn, tough, close-grained hardwood, and Mr. Phelps built a fire of it, and then calmly sat down and waited. In a quarter or half an hour he had a bed of glowing coals several inches deep. The fire had made no smoke and the coals made no smoke, but they were red hot. Over this bed of coals Mr. Phelps adjusted his broiler, with his tenderloin of pike clamped firmly therein. First he seared the surface at the heat, and after the cooking had well begun he put on abundance of pepper and salt, and as the surface began to brown he began to baste it with butter, not poor butter, but good fresh sweet butter. Gradually the color of the tenderloin began to turn brown, dark brown, deep brown, deeper brown. Carrington and I protested that the fish was done, and that he was trying to kill us by such delay; but inexorably he broiled on, never adding a stick to the bed of redhot coals, which held heat enough for all that was demanded of them. Meantime, with one hand, Mr. Phelps had made at the edge of the fire a pot of coffee, which was sending up a most gracious aroma. I recognized in him at once that rare and precious being—a good woods cook. Stern as fate was he about his tenderloin, heeding no importunities. The brown surface began to crack apart and flake open, though never a bit of burning occurred. At length Mr. Phelps sighed and took away his broiler from the fire. We all sighed, and fell upon the tenderloin, exulting. Boneless, flaky, delicious was this tenderloin of pike. Still with one hand Mr. Phelps went on with his cookery, and soon had toasted in the broiler a number of slices of bread, each done to a nicety, and none burned or disfigured. Herewith we ate our tenderloin of pike, our big basket furnishing forth sundry and divers other articles for outdoor lunch made and provided. Let no man scoff more at pike, either upon the rod or upon the table, for by so doing he but proclaims his ignorance, even as I did before this memorable day.

How to Make a Pike Bait.

While upon the subject of pike, let me tell of something else I learned that day on Minnetonka. "I will show you the best pike bait on earth," said Mr. Phelps, when we had finished cleaning our big pike. So saying, he took up the discarded head of the fish and began a careful dissection of the white, pearly, tough skin which covered the

lower jaw. He began at the base of the gills and peeled this white skin off carefully clear to the point of the lower jaw. He then had a forked bit of white substance about 6in. long, dimly suggestive of a frog with its spread legs.

"You put this bait on the hook of a big spoon and troll or cast with it," said he. "I have always found a frog on a spoon hook the best bait I could use for pickerel, and this is equally as good or perhaps better, and has the further merit of being indestructible. I shall take these two baits home with me and pickel them in brine. This will not destroy their brilliance at all, and these two baits will last me all the season. It makes no difference how many fish you take on this bait, it never is hurt by the teeth of the fish, for it is tough as leather."

Of course everybody has used the "throat latch" of the wall-eyed pike as a bait for a trolling spoon, or has used the same bait or a fin for a trout bait on the single hook, but this was not the throat cover of the fish, but the skin of the lower jaw. Mr. Phelps did as he said with his baits, and five days later, when I dropped off at the lake on my way home, he used one of the baits and caught on it the only fish we took on a lazy afternoon of fishing. On the same afternoon that we caught the two big pike he used this bait on his big spoon and had two strikes to my one all the time, I casting with spoon and frog beside him. We took no bass on this bait, as it was probably too large, but for a lure for big pike I doubt if it can be beaten. At the time of our fishing the bass had apparently taken to the deep water and we got but one, which Carrington took, nicely casting frog. This fish weighed 3½lbs. and was a fighter also. It might have been the season of the year, or the depth of the water, or what not, but surely the Minnetonka fish gave us a lot of sport. Without exception they were clean, bright, healthy looking fish, and far superior to fish taken in shallow and weedy waters.

A Double Fireplace.

After our lunch we went over to Mr. Zimmerman's island, effecting a landing without opposition, for the inhabitants were all away. None the less we went into the house and saw all Mr. Zimmerman's pictures, some the originals of his well-known ducking scenes, others of which he keeps at his studio in St. Paul. And we also made open exploration of Mr. Zimmerman's fireplace. When he built this fireplace the stone masons thought Mr. Zimmerman crazy and at first refused to do the work, which they executed at all only with many shakings of the head. In short, this fireplace is a double one and serves for two rooms. It therefore has no back at all, so that if you want to see the back of the fire in one room you can go into the next room, where the back of the fire is the front of the fire in the other room. This is plain, I hope. If there is no fire burning you can go into the next room right through the fireplace, which is only the expansion and cutting away of a wide section of the bottom of the big chimney. Of course, theoretically this sort of an open-faced fireplace must smoke and be troublesome to the last degree, but the perversity of things is shown in the fact that it does nothing of the kind, but is just a great big, smokeless, comfortable camp-fire in the middle of the house. It requires a great deal of courage and insistence to really have an idea which is new, people are so hostile about it. There are so many stone masons in the world.

On another time Mr. Phelps and I rode all over his domain—a couple of miles across, all timbered with the primeval forests and as wild looking as though it were in the wilderness of upper Minnesota instead of at the door the great Twin Cities—and had still further opportunity of becoming acquainted with the beauties of lovely Minnetonka. From the high bluffs along the curving shores, which some day will hold hotels and cottages, I suppose, we could see the great lake stretching away to every point of the compass, arm on arm and wide sea after sea. This seems to be the southernmost of the big Minnesota series of fresh-water lakes, though I am told the Mille Lacs are larger. Minnetonka seems held back by some sort of ledge which dams it back and up from the level of the Mississippi River Valley, its outlet being the Minnehaha Creek, which has to take a big drop to get to the level of the great river. It is a singular fact that the small-mouthed black bass and the wall-eyed pike are not found in Minnetonka—more shame to the fish commission—the game fish there being represented by the pike (*Esox lucius*) and the large-mouth bass. The small-mouth bass, the wall-eyed pike and the muscallonge are all found in the Mississippi waters of that region. I am disposed to think the big-mouth bass and the pike are glacial in their origin like the niggerhead boulder and the church sociable Anyhow, in Indiana, which is glacial in the upper tier of counties, there are no wall-eyes or small-mouthed bass, though many sociables and boulders.

Wild Rice.

All the shallow bays of Minnetonka are filled with the wild rice which makes the great attraction for the myriads of wildfowl in all the great system of lakes over the State. The many ducks which used to make such fine shooting when Mr. Phelps and Mr. Zimmerman first moved in on Minnetonka have now gone the way of all flesh, but the wild rice grows as tall and beautiful as ever. On one of the islands of the lake live a half-breed and his family who do a good business in selling the wild rice, which they retail, if memory serves me rightly, at 25 cents a quart, or a pint, or a gallon, I don't know which. But I do know that wild rice is exceedingly good to eat, for Mrs. Phelps had some cooked for us, and it was delicious. It is the correct thing with mallard or teal in a Minnesota duck camp. The Indians knock off the long-bearded heads into their boats as they push through the tall rice, and afterward parch away the beards of the grain. It then is ready for sale or for the cooking pot. It has the shape of long, dark covered cylinders a trifle larger around than a needle and perhaps half an inch or so in length. When cooked these grains swell up even more than those of the domestic rice, though the result is a dish of not pure white, but dirty brownish and white grains. It is very sweet, and far more delicate than the tame rice, and there is no husk to it at all, contrary to appearance. When Mr. Phelps and Mr. Zimmerman and I pitch our mallard camp—when dreams come true—we are going to cook wild rice with our mallards every day.

Ways of a Tame Fox.

At Mr. Phelps's home camp on Minnetonka there were of course a number of pets about, including Poule d'Eau, a litter of seven puppies, a rattle-headed retriever called Buffalo and a faithful old pointer called Tige, now almost upon the verge of dissolution after a long life of glory in the open country. Poor old Tige! It is one of the saddest things of sportsmanship to have to see a favorite bird dog grow old and helpless. Tige was so helpless he could not walk far, but was anxious as ever to go when he saw us start out along the woods road. He would walk a little way and then give in, lying down in the road and whining pitifully at realizing that his strength was gone forever.

But most interesting of all the home menagerie was the red fox called Roxie, one of the oddest pets I ever saw. Roxie is about two or three years old, but much smaller than an adult red fox should be, thanks to a life of captivity. In her youth Roxie would bite any hand extended to her, but her owner whipped her so conscientiously that he broke her entirely of that habit; so that she is now harmless. Roxie is, however, too wild by ineradicable nature ever to be on terms of close friendship with many. Mrs. Phelps can pick her up at will as though she were a kitten, but no one else can catch her without pulling her in by the chain to which she is attached. Sometimes I would thus get her up to reaching distance and would scratch her ear, an operation much relished by her, and sometimes she would eat from one's hand; but always she did this under protest, with little whines and grunts of protest and contempt. As nearly as I could tell, that was just the feeling Roxie had for human beings—one of contempt. Sometimes she would stand and look at one with her eyes half closed, in the most unmistakably cynical fashion one ever saw, showing plainly enough what was her estimate of humanity. All day long Roxie was rarely still, but was running full length of the chain most of the time, and very often carrying in her mouth a chip or bit of wood, which was her fashion of play. She would dig holes in the earth to some depth, but preferred to hide in her hollow log, which served as a kennel. With the retriever puppy, a round, curly little fellow a few weeks old, she was on the best of terms, and would play with it by the hour, never hurting it in the least, though often its sharp teeth must have hurt her ears. At night, when shut up in her log house, Roxie would utter a loud wail of protest, a curious indescribable whining howl, blended with a snuffle and cough. None of the dogs about the house ever troubled Roxie, and they seemed included in her general contempt for all things mundane. Roxie was always busy with her own thoughts, and it was impossible to evade the conviction that her constant thought was of freedom. It is curious that this animal was always willing to be taken away from the house into the woods, but never willing to come back again. Mrs. Phelps often took her qut in the woods for a walk, or carried her along in her arms; but Mrs. Phelps says that no matter how long the walk or how devious, the fox always knew when the turn was made for home, and would then invariably lie down on the ground and utter a loud and pitiful cry of protest at being taken back.

One night after my visit the fox managed to break away with her chain dragging and escaped into the woods, much to the sorrow of the family, who value the little creature very much. Several hours elapsed before anything was done toward her recovery, and then Mr. Phelps bethought him of a neighbor a few miles away who had a pack of foxhounds. A grand fox hunt was at once put in operation, and the dogs trailed about over the big tract of woodland on Mr. Phelps's peninsula for some time, often apparently running a hot scent. The fox seemed to have made not for the high grounds, but for the meadows and edges of the rice swamps beyond the timber, for here was where the hounds clung. Nothing came of it the first day, and on the second day it was dry and hot and no success was had. At length Mr. Phelps saw a faint trail in the dust of the road which looked like the drag of the chain, and the young foxhounds here took up the running and soon began to bay. Running in to them, Mr. Phelps found Roxie tangled by the chain in the high grass, saved only by the youth and inexperience of the hounds from an ignominious death. Roxie was taken up and carried home, still grinning as contemptuously and cynically as ever.

The Rails n the Rice.

When we were about the lake on our fishing trips at Minnetonka we could always hear the merry voices of myriads of rails in the wild rice, and often would make some sudden noise or rap on the boat for the purpose of hearing the noisy chorus they would set up after the fashion of their kind. "I love to hear those little fellows," said Mr. Phelps, "for they remind me of the old mallard days in the up country. They were there in the wild rice as they are here, and their note is one of the familiar and pleasant sounds always associated with those days. People ask me if these rails could be shot here as they get them in the East, but I don't suppose a boat could be pushed through the rice here, and besides I would not think of shooting these little fellows. I keep them for my orchestra. Hear them chatter, day and night! Always there is a cheery sound to a rail's voice, some way."

It was pleasant to idle about Minnetonka, to row, to sail, to watch boat races, to catch big fish and eat them, to wonder about the big Indian mounds (many of them dotted with trees as thick as a man's body, and all of them to be found upon the highest and most sightly points about the lake), to study geology, and ichthyology, and forestry, and cookery, and natural history and many other useful things; to listen to rail birds in the rice, and to wish you could see Poule d'Eau carrying a mallard instead of a stick. Minnetonka is a sermon and a lesson. All this leisure, all this wealth, all this longing to be with nature in spite of all the hurry and worry of business life, is proof enough of the pleasant dogma of FOREST AND STREAM. The people of America need rest and realize it. Minnetonka is a great resting place for thousands of people. All through the summer thousands of folk come here and rest, to depart when winter comes for the intense struggle of the American business life. At the time of my trip there the season was just drawing to a close. As old Tige lay by the smouldering camp-fire on the morning of my departure, a brown leaf, broken from its stem, whirled and fluttered down like a crippled bird and fell close by his gray muzzle. Evidently the end of things was to come again. But after the end is the beginning, and next year Minnetonka will be there as young and a cheerful as ever, and as openly proclaiming the dogma o FOREST AND STREAM.

E. HOUGH.

ANGLING NOTES.

Red Mascalonge.

ON my way to the Metabetchouan River, at Lake St. John, for ouananiche, I spent a little time in Montreal, and called on my friend, Dr. W. H. Drummond, president of the St. Maurice Club. He told me that a friend had sent him the day before a red mascalonge, and he wished that I might have seen it before it was cooked. A red mascalonge was something new to me, for I had never even heard of such a fish before, and while we were talking about it the friend who caught it came in. He is Mr. J. Stevenson Brown, of Montreal, and he told me that the fish was caught in a tributary of the Ottawa River called Back River, as it runs back of the city of Montreal. The red mascalonge are uncommon and it is only occasionally that one is taken, although "black mascalonge" are common enough. The red mascalonge has a red tail and red fins, "the red being the color of a maple leaf in autumn or the red of the setting sun." In every other particular except the red coloring they resemble the "black mascalonge," but they are considered a rare fish, and because of its rarity it was presented to his friend. In saying it was a rare fish I was not to get the impression that it was a freak fish, for they were recognized as distinctively a variety of the ordinary mascalonge. All the pike family are inclined to highly colored fins at some seasons, but a mascalonge with pure red tail and fins is new to me.

Black Mascalonge.

The use of the term black mascalonge led me to inquire about the fish, and I found that the ordinary mascalonge of the Ottawa River was unspotted, like the Wisconsin mascalonge and Kentucky pike, although both are structurally the same as the spotted mascalonge of the St. Lawrence. Dr. Drummond and Mr. Brown informed me that the spotted mascalonge was not known in the Ottawa or its tributaries, but the black fish was abundant, probably more abundant than in any tributary of the St. Lawrence. At Isle Perrot, about fifteen miles above the city of Montreal, it is not uncommon to take half a dozen fish per boat in a day, and they run as high as 50lbs. each in weight.

The black mascalonge are probably the same as the unspotted mascalonge of the West and the Kentucky pike. The common pike, the fish that is generally called pickerel in New York State, is caught with the mascalonge, but both the red and black mascalonge have the proportionately shorter upper jaw characteristic of the mascalonge, and their heads are fuller in front of the eyes. This Mr. Brown mentioned to show that the mascalonge had not been confused in any way with the pike, for his catch in one day consisted of red and black muscalonge and pike.

The Red Ibis Fly.

There are times when trout will take the red ibis fly to the exclusion of other artificial flies, and anglers have often wondered what there was in nature that the trout could mistake the red ibis for, as there seems to be no red fly as red as the artificial red ibis. Mr. Brown, who is an entomologist of repute, told me that he had found a beetle that in the water was as red as the red of the red ibis, but when the beetle was taken from the water it assumed a brick-red color. His idea was that this beetle, which is not common, was known to trout in some waters as a rare tidbit, and in such waters when the red ibis was cast on the water it was taken by the trout for the red beetle.

Within two weeks after talking with Mr. Brown in Montreal, I was fishing for trout in Lac des Passes, of the Triton Club's preserve, and for the first time in years I put a red ibis fly on my cast, for I have never been partial to the red ibis for trout, and the trout took it that day in preference to anything else I could or did offer them. Later when I put a Parmachenee-belle and a red ibis on the same cast the belle had the call with the fish. This result was pleasing to me, for I argued that I had not been wrong during all the years that my fly books were barren of red ibis trout flies. But every one with whom I talked, who had fished the Triton Club waters, said that a fly in which red predominated was the more killing fly. To satisfy myself I one day put a Parmachenee-belle and a Marston's fancy, which has no red in it, on the same cast, and the first fish that I hooked were a brace of trout weighing 5lbs., one of 2¼lbs. and the other 2¼lbs. One had taken the Parmachenee-belle and the other the Marston's fancy, while the third fly, a professor, attracted no attention from the fish. The trout seemed to take both the flies first mentioned impartially and yet the largest trout I hooked was on the professor. Except for one afternoon, when the red ibis was the favorite, no flies that I used were taken so readily as the Parmachenee-belle and the Marston's fancy, and there seemed to be little choice between them; but when these two flies were taken I would sometimes get a third trout on the third fly, whatever it happened to be, until I fished with two flies only.

"The Biggest Fish Gets Away."

It has come to be a saying that the largest fish gets away after it has been hooked. Certainly it is not in the nature of things that the smallest fish should get away. It's natural for the largest fish, if any, to get away, for it has the best right to get away. Never, I believe, have I told in cold type of losing my largest fish, for that is a part of angling that is understood without explanation or diagram, but I will tell of losing one large fish because it was through my own stupidity and it will do me good to confess it, and will explain one cause of losing the biggest fish. One afternoon at the Triton Club, the present month, the lake was smooth as glass, but here and there a trout could be seen breaking the surface. I was using a fine leader, but my flies were rather large for the leader when the lake was so still, being Nos. 3 and 4 old scale hooks, and I changed the two upper flies; one that I put on was a professor on a No. 10 hook, as I had none in my book larger. During the afternoon I caught a number of trout up to 2¼lbs. in weight on this fly, as the canoe was paddled around the lake for me to cast wherever I could see a rising fish. I was really killing time until the evening fishing, when the big trout might be expected to come on the shallows to feed. The professor had become somewhat worn, for Tomah did not remove it from the mouth of a fish with the gentlest hand, my chief desire being to put the fish back in the water as quickly as possible uninjured, and I said to him that before the evening fishing

commenced I would take the professor off and put on a fly with heavier gut. About 5 o'clock I came to the mouth of the pass where my friend Mr. Rathbone was fishing, and he said there was nothing there over 1½lbs. and he was going to the next pass for the evening fishing, and I told him I would remain there, for I thought the big trout would be coming in in about an hour, judging from my experience in the same place the evening before. Mr. Rathbone started through the pass and I put my rod down in the canoe to fill my pipe, still talking with Rathbone as his canoe was disappearing in the bend in the pass. The pipe lighted, I took up my rod; I had really no intention of doing any real fishing for an hour, as Rathbone had been on the spot two hours, but with the rod in my hand I made a cast, when there was a boil on the water, and I struck. The next moment the line was disappearing from my reel at a rate which told me I had hooked one monster fish or two big ones, and I thought what an ass I was to leave that professor, with its thin, worn gut, on my cast. With his paddle Tomah backed the canoe toward the middle of the lake in the direction that the fish had already taken. After some good fighting I reeled the fish up near the stern of the canoe and Tomah exclaimed: "Two: one big one—six pounds!"

"Which fly is the big fish on?"

"Can't see; but the big fish is on top."

That was not encouraging, for the stretcher fly was all right, and "on top" might mean the second or third fly, and they were not all right. A moment later Tomah announced to me, "Big fish on middle fly."

Shades of my piscatorial ancestors, who will rise up and call me an angling chump; the middle fly was the professor! I soon got a sight of the fish, and they worked like a well-broken team, swimming together like two souls with but a single thought—to get away together in the same direction. Two or three times I brought them near to the canoe, and Tomah took one hand from the paddle to grasp the landing net. "Don't try to net them until I tell you, and then save only the big fish; let the other fellow go if he will."

I drew them along parallel to the canoe, with their dorsal fins out of water, and saw clearly that one was nearly twice as large as the other, and concluded that Tomah was a good judge of the weight of a fish in the water. The smaller fish turned on its side, and the larger acted as though he had about enough of it, and then in my own mind I determined to save them both. Slowly I reeled and drew them toward the canoe, and they came together so nicely, the big fish, a female, showing her white belly, and the smaller fish dressed in red that the males assume when the autumn leaves begin to fall, and I thought this is too easy! Nearer and nearer they came, and I had to restrain Tomah, who wished to put the net in the water, for I was not cock sure that the trout were ready for it, although both were turning on their sides and righting themselves again 10ft. from my face. I swung them gradually toward the stern of the canoe, yet still prepared for a last run, when suddenly there was a splash and a boil in the water, and two hearts no longer beat as one; for in the last frenzy the trout had darted in an opposite direction, and by sheer force of weight the larger fish had parted the thin gut above the professor and was gone at the very moment I had about decided that she was my fish. The male fish was soon in the net, and when placed on the scales weighed 3½lbs., and I told Tomah that he made a good guess at the weight of the big one that got away. As a rule, I do not turn a hair at the loss of a big fish, for I have been through the operation too many times, and have become philosophical, or hardened, or indifferent, whichever is the right term, and usually go through it without missing a puff on my pipe; but here was a case where I lost the biggest fish through my own stupidity, when I knew well that disaster was sure to follow the retention of a weak fly on my cast, and ever since that moment when the big trout disappeared with a final flirt of its tail in the direction of my face, while its head pointed toward the bottom of the lake with the broken professor in its jaw, I have been trying to convince myself that I was glad of it. Certainly if any one else should lose a big fish through tackle that he knew was defective when he put it in use, at a time when he had plenty of sound tackle to replace it, he would not get much sympathy from me, and I know of no good reason why, under similar circumstances, I should have any sympathy for myself; and perhaps I am glad that I lost Tomah's 6-pounder, for if I should hook another it will not be on a defective fly of which I have been forewarned by personal examination.

If I wished to excuse myself, which I do not, I might say that I was not expecting a big fish, for my friend had been fishing the place for two hours and he said there were no big fish there, and further, I did not expect any big trout to come in for an hour. The answer to that is that under such circumstances, if I believed what I thought I did, I should have kept the rod and the weak fly in the canoe and not have monkeyed with it on the water where big trout were liable to be at any moment. If a man puts his flies on the water he must put them there in a proper condition to take the kind of fish that are known or supposed to inhabit the water. I knew I was fishing for big fish, knew that big fish were in the lake, and Rathbone and I had agreed to kill no trout under 2lbs. in weight. I knew that I had over and over hooked two and three fish at a time, and knowing all this I deliberately presented a fly that was so weakened that while it would hold a 6lb. trout alone delicately handled, it would not hold such a fish if one of the other flies should be taken by a big fish not in accord with the first one. Any one who will do this sort of thing deserves to lose his big fish.

How Pike Came to Long Lake.

Last summer, when the Fisheries, Game and Forest Commission and a special Legislative Committee were going through the Adirondacks to the John Brown farm, which was to be turned over to the keeping of the Commision, the party passed through Long Lake. It was a day's journey from the Sagamore Hotel on Long Lake to Wawbeek Lodge on Upper Saranac, with no hotel between, and it was decided to have a guide's dinner at Racquette River carry. An extra guide was sent down from the Sagamore early in the morning with provisions and cooking utensils, and when my boat reached the carry I found this guide to be Jeremiah Plumley, brother of "Honest John" Plumley, made famous by Murray in his Adirondack Wilderness.

Jerry Plumley was born sixty-two years ago in what was then known as St. John's Clearing, now the town of Long Lake, and he was the first child born in the clearing. He says that when he was a boy Long Lake was like a vast spring hole filled with trout, and in raspberry time no other bait was required for trout than one of the berries on the hook, as the trout took them readily.

I asked Jerry if he could tell me the exact date of the introduction of pike, the so-called pickerel, into Long Lake, and the circumstances surrounding it. He said the pike were brought from Harris Lake in Newcomb, and were brought to Long Lake and planted by Lysander Hall, Robert and William Shaw, but he would send me the date and other particulars when he returned where he could consult some records. I had fished Long Lake and Racquette River, particularly the foot of the rapids above Mother Johnson's, before the advent of the pike, and knew that they must have been planted within the last thirty years. Jerry thinks Hall was instigated by spite against a fishing club that formerly fished near Mother Johnson's, of which David Banks (then David Banks, Jr.) was a prominent member, although he claimed with the two Shaws that trout fishing was no longer of sufficient importance to attract visitors, and it was desirable to have fishing of some kind in the lake. Years ago I talked with David Banks about the Lysander Hall incident, but the particulars have all gone from my memory; still to the best of my recollection Hall was discharged from the employ of the club for cause, and was instrumental in procuring the pike more for the injury they would do the trout fishing than from any good they would do; but I never heard that this was the motive of the Shaw brothers, particularly Robert Shaw, whom I knew as a minister, justice of the peace and all-round pooh bah of Long Lake.

Jerry Plumley writes that he was in error about the pike coming from Harris Lake (by the way, Harris Lake is now a good black bass lake), that they were caught in Woodruff Pond by Richard Parker and by Hall and the Shaws, as stated; they were brought to Long Lake and planted in April, 1867, and this was the beginning of the end of trout fishing in Long Lake and even in adjoining waters, where the pike have found their own way or been transplanted by man through ignorance or malice. Long Lake in its primitive condition must have been a perfect lake for trout, for both the lake and brook trout found therein were noted even in my day for their perfection of quality and their rich red flesh, showing the highest possible food conditions.

This was the case in Indian Lake, now given over to pike, and it is the case still in the Seven Chain of Lakes.

To think that such a lake as Long Lake and tributaries should now be infested with pike, and that the trout should be exterminated, is sufficient to make one execrate those who are responsible for this state of affairs, provided they really did it through malice.

But to this day waters are being stocked with fish wholly unsuitable for them, and it is done with a desire to improve the fishing, not through spite, but errors of this kind are as difficult to undo as the spiteful planting of predaceous fish and the result is the same.

A. N. Cheney.

LAKE WINNEPESAUKEE FISHING.

Editor Forest and Stream:

Your correspondent, who writes to inquire about the food of Lake Winnepesaukee bass, is quite right when he concludes that there is an abundance of natural food in the lake which rather detracts from its attractiveness as an angling resort. The lake has been abundantly stocked with smelt from the Lakeport fish hatchery, and while this is no doubt a good thing for the fish, it is rather a poor thing for the angler. Too much fish food quite often deteriorates angling waters as much as over fishing; however, the first is preferable to the latter, and let us be thankful that it is so instead of being fished out, as some other waters are.

Black bass are fastidious fish under the best of circumstances, and, as every angler knows, there is no lure which is sure to attract them any one day. In Lake Winnepesaukee, however, they seem to have reconciled themselves to a diet of young smelt almost exclusively, and they merely take a fly or spoon occasionally, with the idea of having a romp with it and perhaps to keep "their hand in," as one fisherman expressed it. I have fished this lake quite industriously for the last two years, and my luck on bass has been such that I would be ashamed to have it known how many I didn't catch. Of those which did manage to measure their length on the bottom of my boat I invariably found that their stomachs were filled with smelt about 1 or 2in. long, and there was little, if any, trace of any other food.

The smelt are wonderfully numerous in the lake; in the winter and early spring shoals of thousands and thousands may be seen through the ice on almost any sandy beach along the shore. When the ice goes out in the spring the smelt run up the brooks to spawn, and at such times the natives around the lake go out with dip-nets in the night time and dip them out of the brooks by the bushel. I know of a party of four men who went to the Sandwich Brook last spring and in one night filled six bushel baskets with smelt, and claimed that they would have got as many more if they had had baskets to put the fish into. These smelt are not nearly as large as the salt-water smelt, although I have no doubt that they would grow quite as big if given the chance.

Another fish recently planted in the lake supplies a large amount of food to the lake trout. This is what is locally known as the "shad waiter," but in reality seems to be the whitefish, or whiting, of the great lakes. I have never had a satisfactory explanation of the exact identity of this fish, and perhaps some one else may be able to enlighten me on the subject. They are caught mostly in the winter time, and in deep water, 50 to 70ft. Some of the local fishermen claim that they are not the whitefish, and are not fit to eat—only fit for trout bait—but I know that the contrary is true, as I have relished them on many an occasion.

Winter fishing for lake trout is quite a—I was going to say "industry"—sport on Lake Winnepesaukee. It includes many discomforts and few fish in return, but it gives one a good excuse for an outing at a time when the surrounding mountains are clad in white and crowned with glistening, pearly diadems. A sunrise on a frosty morning on Lake Winnepesaukee is a rare treat.

Ice-fishing for lake trout consists in "bobbing" a piece of cut fish at the end of about 40 or 50ft. of silk line fo an indefinite period or until you have a strike. As soon as a strike is felt up shoots the arm and the line is hauled in hand over hand without a stop until the trout lies floundering on the ice. There is no playing of the fish, and if you average one or two bites a day you are doing well. One man usually has from two to six holes which he fishes at the same time, going from one to the other and bobbing a little while at each. Snow or brush is piled up on the windward side to secure some comfort, but withal it is rather poor sport unless one is endowed with a large share of the virtue of patience and is fond of winter scenery. Most of the fishermen are local parties and few sportsmen have hardihood enough to expose themselves to the rigors of a Winnepesaukee winter, but there are a few who go there regularly every winter and enjoy it. The local men sell their fish almost entirely to the storekeepers, who ship them to the market outside of the State, which is against the New Hampshire law. At one of these stores I once tried to buy a copy of Forest and Stream, when the worthy owner told me that he did not keep it and would "not give it house room." He said that if it was not for that blankety sheet they would not have to be so careful about shipping their trout, and all buying of trout out of season was ruined by the agitation of that blankety sheet. Verily, Mr. Editor, we love you for the enemies you have made. Matterhorn.

Wells River, Vt.

DELAWARE RIVER SALMON AND OTHER SALMON.

Editor Forest and Stream:

In the editorial columns of Forest and Stream for Sept. 26 the statement is made that planted salmon are appearing in the Delaware River, and the sentiment is expressed that "it is preposterous that the enterprise should be defeated by the lawlessness of the gang of spearers who infest these waters." I fear that the enterprise will be defeated by the combined forces of the spearers and the shad netters. We are to judge of future history by past history. By consulting past history we learn that each individual salmon is a fine prize easily captured by the stupidest fisherman, with spear or net; and the temptation to catch him is too great to be resisted by the people who live near the streams and who have no difficulty in discovering the resting pools and the shallow-water spawning beds of these great active acrobats. In the European countries, where poachers are promptly and severely dealt with, salmon poaching cannot be stopped. In this country the Province of Quebec has the best salmon regulations, because leases of salmon property give a large annual income to the Government, and yet I have heard natives boast of spearing salmon on the spawning beds in such well-protected streams as the Bay Chaleur waters—and in the streams down east on the Gulf coast nets are set in the resting pools almost without regard for the authorities. The population is small, the people are all loyal to each other in poaching matters, and the Government inspector's approach is heralded long in advance of his coming. There are many rivers which the inspector does not visit anyway.

On the eastern Quebec coast the herring nets capture great quantities of the smolts; and in some places the cod traps, which pay no salmon license, catch many more salmon than the licensed netters. It is said that the cod trappers are allowed to ruin the codfishing and the salmon fishing because they belong to the influential class which has the strongest pull with the politicians. In Nova Scotia, New Brunswick and Cape Breton most of the salmon rivers have been poached until they have become unattractive to the rod fisherman, but the worst poaching at the present time is being done in Newfoundland. Last June I counted eleven salmon nets in the first half mile of one river (Coal River), and four of the eleven nets barred the stream. A very few salmon manage to get by such obstruction by jumping over the nets. The inhabitants on that river told me that a few years ago the stream furnished annually ten barrels of salmon to two short nets, and they could not understand why the fishing this year was a failure and no one caught a barrelful. On two other salmon streams I found nets at the only resting pools, and the big resting pool in the north branch of the Humber River is netted as a matter of course by natives who have no hesitation about telling of their catches. The authorities are not likely to catch any of the poachers, because they go at it in a ponderous way with war ships. One might as well "hunt ducks with a brass band." No sooner does the man-of-war appear at any part of the coast than the nets are expeditiously stowed away by the natives. I have talked with natives from North Labrador to Codroy River and they all say that the salmon resting pools in the rivers are netted and speared as a matter of course. The population is increasing as the salmon are decreasing, and the future for salmon fishing is pretty dark. Almost all of the Newfoundland streams would yield a good income to the Government, but the salmon fisherman who goes up there and looks over the streams decides not to invest his money. The Codroy River is an exception in that its salmon are protected, because there are summer visitors camped on the pool during a greater part of the season.

While there appears to be no doubt that the Atlantic coast rivers from the Delaware to Maine could be restocked with salmon, but in these rivers the white fisherman has shown his superiority over the Indian by his ability to catch the last salmon in the river and thus cut off his supply. If salmon reappear in the Delaware they will be speared on the shallow-water spawning beds as in days of yore, but the greatest obstacle will probably be in the shad nets. Salmon run into shad nets freely because they have confidence in their ability to smash any kind of net, but the gauntlet is too long in our shad rivers. I have known a good many shad fishermen and none of them were strongly addicted to the habit of putting captured salmon back in the river. Robert T. Morris.

New York.

Black Bass Stocking in New Jersey.

I have received during the past month a considerable number of applications for black bass and pickerel, but investigation shows that in only a very few instances were the waters sought to be stocked adapted for that purpose. The United States Fish Commissioner has complied with the requests of a number of our citizens for black bass in suitable waters. Under the circumstances I would respectfully suggest that no attempt be made this year of transferring fish from one water to another, the number of applications entitled to favorable consideration being

altogether out of proportion to the cost of instituting the work.

As a favorable opportunity presented itself for obtaining small-mouthed bass in Sussex county, 188 of these fish were placed in Culver's Lake, making a total of 236 adult small-mouthed bass placed in that water during the past year.—*Protector Shriner's Report for September.*

"POPSKINNY."

IN FOREST AND STREAM of Sept. 12 Mr. A. C. Stott, of Stottville, N. Y., kindly corrects my phonetic spelling of the name of the creek where we boys fished, and gives it "Popscheny," as taken from an old map published in 1776 "by act of Parliament." He writes me under date of Sept. 18 as follows: "I have been much interested in looking up the earliest recorded spelling of this word. In the 'History of the City of Albany, New York,' by A. J. Weise, published in Albany in 1884, I find a full account of the early Dutch settlement of that part of our State. * * * Again, quoting Weise's own words: 'In order to possess an extent of land on the east side of the river equal to that which he [Killian Van Rensselaer, the original Patroon] had purchased on the west side, the Patroon instructed Jacob Albertyen Planck, the first sheriff of Rensselaerwyck, to buy from the Indians the tract of land called Papsickenekas, extending southward from a point opposite Swack Island. This additional land was purchased on the 30th of April, 1637.' According to Weise, Castle Island is the one directly in front of Albany, on which the warehouses now stand. This being correct, the distance from a point opposite Castle Island to a point opposite Swack Island, on the east side of the river, covers the present site of East Albany and Greenbush. As Papsickenekas was the name by which this tract of land was then known, is it not more than probable that your 'Popskinny' and the English 'Popscheny' are derived from the original Indian or Dutch name? The name does not appear in the 'Index to Documents Relating to the Colonial History of the State of New York.'"

Now enters into the field my lifelong friend Col. David A. Teller, of Greenbush, whose ancestral estate lies upon the banks of the water with the disputed name. He had been invited to look up the old titles and see if any of the lawyers who drew the deeds for his family in the long ago could spell a word of three syllables. His answer was delayed so long that I began to think he would not reply because of a certain transaction in apples some years ago. He claims that John Atwood and I did feloniously and with premeditation despoil his favorite apple tree of its fruit in A. D. 1847. Generously overlooking private animosities, he writes: "I have been so crippled with rheumatism that I could not hold a pen to write you until now. * * * As to that creek, concerning which there has been a discussion about the spelling of its name, I will try to settle the point for all time. You are wrong. You always did march left in front and I am not surprised that you did not get this right.*

"After a thorough and exhaustive search through the old deeds of my farm I find that all who have engaged in this spelling match are wrong. It isn't a creek at all and never was one. It is a 'kill' pure and simple, and this is the way it is spelled in all of our old papers: 'Papskanee Kill.' Paste this in your hat to preserve in case you put your reveries in book form."

There you have it! Who shall decide when doctors disagree? It is safe to say that when Col. Teller's mind is entirely diverted from apples he would pronounce the name "Popskinny," as I have used it; but if he should have that valuable fruit in mind he might say: "The name of that kill—it is not a creek, sir—is Papskanee, sir! Emphasis on the 'pap,' sir."

Here in the hands of these eminent investigators of musty records I will leave the question, only to be renewed when Col. Teller and I fight our battles over in his mansion on the banks of the Popskinny. F. M.

* The apple transaction is evidently in mind.

AT LAKE WEBB, ME.

BOSTON, Oct. 3.—*Editor Forest and Stream:* I reported my luck a few weeks ago, and pretty poor luck it was, too. I now report that of a friend. Mr. J. S. Duncklee, the chairman of the Boston board of assessors, is an expert with both rod and gun, and I have passed many enjoyable days with him following the streams in Maine and New Hampshire. He is one of the few men hereabouts who always get several messes of trout in the early spring from the brooks within a dozen miles of the gilded dome on Beacon Hill. In 1887 he made his trip with me to Ward's camps on the Dead Diamond River, and he liked the region so well that he went there half a dozen successive years. Last year and this, however, he passed his vacation at Lake Webb, 'way down in Maine, taking Mrs. D. along. It is of the trip of this season I propose to speak. The weather was not of the best for camp life in the woods, but he always got trout when he went out for them.

On the last day in camp, however, Sept. 22, he had a short period of excitement that was alone worth the journey. Toward night he and Mr. Chase, the proprietor of the camps, took the little steam launch and went up to one of the favorite pools to try for the speckled beauties. They had hardly got the anchor down before the wind began to blow and a young gale was soon making whitecaps all over the lake. Mr. Duncklee used three flies—a Montreal, a coachman and an Alexandra—with a light bethabara rod of his own make. Of course with a wind such as he encountered casting was difficult, but he soon had a strike and brought a pound trout to the net, and for the next three-quarters of an hour he had more sport than he ever before experienced in double that time. He caught five trout that weighed as follows: 1lb., 2lbs., 2lbs., 3lbs., 3¼lbs.; total 11¼lbs. He was satisfied, and he ought to have been. During his stay he caught one landlocked salmon that gave him plenty of excitement before he was brought to the net.

By the way, let me say how pleased I was to read in the FOREST AND STREAM of July 25 Mr. Barney's brief account of his trip to Ward's old camp on the Dead Diamond. It brought vividly to mind the many happy days I had spent there with Mr. Duncklee and my old camping partner, Jack Riedell, of Manchester. For eight successive years the latter gentleman and I, with Peter Bennett as guide, boated up the river to that beautiful spot, where we caught all the trout we wanted, and where we found all the enjoyments that any reasonable men could expect or desire. WM. B. SMART.

New Jersey Coast Fishing.

ASBURY Park, N. J., Oct. 3.—It would be a relief to record something of interest in relation to surf fishing. Never has September been so devoid of results. The most experienced have been unable to make any catch worthy of note. The bays and rivers have, however, given good results, particularly is this true of Barnegat. Whenever night fishing has been prosecuted weakfish, kingfish and sheepshead have been plentiful; and now the striped bass are working in from the ocean and are biting freely.

Much the same course should be pursued in taking the bass as I have recommended for night weakfishing, with this difference: the bass is best taken along the sedges where the channel runs close in; pay off to the tide with line but little loaded, and results are nearly certain.

Charles Atkins, proprietor of the Ocean Hotel, has just returned from a week's trip at Harvey's Cedars, a favorite fishing resort along Barnegat, and succeeded in taking four red drum or channel bass, of 24½, 32, 35 and 42lbs. respectively. He reports that fishing for all other varieties is pretty poor yet, as the fish are still in the upper portion of the bay.

The cool evenings have started the pickerel biting, and some good catches are being made from the lakes. This usually lasts until freezing weather and gives good sport with proper tackle. White perch, too, are now at their best and are taking the hook freely. LEONARD HULIT.

The Kennel.

FIXTURES.

BENCH SHOWS.

Dec. 1 to 4.—City of the Straits Kennel Club's local show, Detriot, Mich. R. H. Roberts, Sec'y.

Dec. 8 to 11.—Augusta, Ga.—Georgia Poultry and Pet Stock Association. J. W. Killingsworth, Sec'y.

Dec. 15 to 18.—Central Michigan Poultry and Pet Stock Association's show, Lansing, Mich. C. H. Crane, Sec'y.

FIELD TRIALS.

Oct. 19.—Brunswick Fur Club's annual hound trials, Barre, Mass. Bradford S. Turpin, Sec'y, Roxbury, Mass.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.

Nov. 2.—Carlisle, Ind.—Union Field Trial Club's inaugural trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Nov. 10.—Columbus, Wis.—Northwestern Beagle Club's trials. Louis Steffen, Sec'y, Milwaukee.

Nov. 10.—Leamington, Ont.—Peninsular Field Trial Club, Leamington, Ont.

Nov. 10.—Waynesburg, Greene County, Pa.—Central Beagle Club's trials. L. O. Seidle, Sec'y.

Nov. 16.—National Fox Hunting Association's third annual trials, Bardstown, Ky. F. J. Hagan, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Dec. 14.—Athens, Ala.—Dixie Red Fox Club's second annual trials J. H. Wallace, Sec'y, Huntsville, Ala.

COURSING.

Oct. 21.—Altcar Coursing Club's meeting, Great Bend, Kan. T. W. Bartels, Sec'y.

Oct. 28.—Kenmore Coursing Club's annual meeting, Herrington, Kan. C. A. Robinson, Sec'y.

Oct. 13.—American Coursing Club's annual meeting, Huron, S. D F. B. Coyne, Sec'y.

1897.

Jan. —.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Jan. 18.—West Point, Miss.—U. S. F. T. C. winter trials. W. B. Stafford, Sec'y, Trenton, Tenn.

C. F. T. C. DERBY ENTRIES.

THE entries to the Continental Field Trials Club's Derby on quail number fifty three, of which twelve are pointers. All were born in 1895:

ROBERT EMMETT—J. P. Green's b., w. and t. English setter dog (Sam Gross—Bess R.).

SARSFIELD—J. P. Green's b., w. and t. English setter dog (Rodfield—Opal).

POTOMAC—Fox & Blythe's b., w. and t. English setter dog (Antonio—Countess Rush).

CAROLINE—Fox & Blythe's b., w. and t. English setter bitch (Antonio—Countess Rush).

ROWE F.—John T. Mayfield's lem. and w. English setter dog (Antonio—Nellie Hope).

ANTHONY F.—John T. Mayfield's lem. and w. English setter dog (Antonio—Nellie Hope).

JOSIE FREEMAN—Mayfield & Gude's b., w. and t. English setter bitch (Antonio—Nellie Hope).

RODFIELD'S BOY—John T. Mayfield's (agt.) b., w. and t. English setter dog (Rodfield—Sue Gladstone).

STELLA HOPE—John T. Mayfield's (agt.) l. and w. English setter bitch (Antonio—Nellie Hope).

BILLY T.—W. R. Holliday's b. and w. English setter dog (Revenue—Daisy Bondhu).

KENO N.—C. E. Nathurst's b., w. and t. English setter dog (Count Lucifer—Dashing Mamie).

SARAGOSSA BELLE—P. M. Essig's b., w. and t. English setter bitch (Gleam's Pink—Maud E.).

DAVE EARL—Theo. Goodman's b., w. and t. English setter dog (Count Gladstone IV.—Dan's Lady).

ALBERT LANG—Theo. Goodman's b., w. and t. English setter dog (Count Gladstone IV.—Dan's Lady).

TARTAR—S. L. James's b., w. and t. English setter dog (Count Gladstone IV.—Rod's Sylph).

GLEAM'S ROY—J. J. Kinnane's b., w. and t. English setter dog (Gleam's Sport—Marie Avent).

FLORENCE GLADSTONE II.—J. D. Poston's b., w. and t. English setter bitch (Antonio—Florence Gladstone).

ABDALLA CRESSA—J. B. Turner's liv. and w. pointer bitch (Rex—Tinney Kent).

ROD'S PELL—H. R. Edward's b., w. and t. English setter bitch (Rodfield—Opel).

MINNIE P.—A. C. Peterson's o. and w. English setter bitch (Antonio—Nelly Bly).

PIN MONEY—Charlottesville F. T. Kennels' b. b. English setter bitch (Count Gladstone IV.—Daisy Croft).

SHADOW—Charlottesville F. T. Kennels' l. and w. English setter bitch (Count Gladstone IV.—Daisy Croft).

SAHIB—Charlottesville F. T. Kennels' liv. and w. pointer dog (Delhi—Selah).

RUPEE—Charlottesville F.T. Kennels' liv. and w. pointer bitch (Delhi—Selah).

DEACON—Charlottesville F. T. Kennels' b. and w. pointer dog (Rip Rap—Dolly D.).

SAM HILL—Dr. Jas. McDowell's b., w. and t. English setter dog (Rodfield—Indiana Belle).

AGNES WICKFIELD—H. S. Bevan's b., w. and t. English setter bitch (Whyte B.—Rosa Bevan).

DINGLEY DELL—H. S. Bevan's b., w. and t. English setter bitch (Whyte B.—Rosa Bevan).

JENNY WREN—H. S. Bevan's b., w. and t. English setter bitch (Whyte B.—Rosa Bevan).

RIPPLE—H. S. Smith's liv. and w. pointer bitch (Rip Rap—Pearl's Dot).

MERRY MAIDEN—P. Lorillard, Jr.'s, b., w. and t. English setter bitch (Eugene T.—Maiden Mine).

LUTA L.—P. Lorillard, Jr.'s, b., w. and t. English setter bitch (Eugene T.—Beryl).

OLIVETTE—P. Lorillard, Jr.'s, b., w. and t. English setter bitch (Eugene T.—Beryl).

COUNT GLOSTER—P. Lorillard, Jr.'s, b., w. and t. English setter dog (Eugene T.—Gloster Girl).

MAID'S LAD—P. Lorillard, Jr.'s, b., w. and t. English setter dog (Eugene T.—Maiden Mine).

TYRONE—Edward A. Burdett's b., w. and t. English setter dog (Cincinnatus Pride—Gossip).

ABBOTSFORD MARION—Edward A. Burdett's b., w. and t. English setter bitch (Cincinnatus Pride—Gossip).

FIREFLY—Jas. S. Crane's liv. and w. pointer bitch (Rip Rap—Clipaway II).

ALICE B.—W. H. Beazell's b., w. and t. English setter bitch (Whyte B.—Rosa Bevan).

WALTER GLADSTONE—H. B. Ledbetter's b., w. and t. English setter dog (Gladstone's Boy—Nat's Queen).

ALLOYSIA—Dr. C. I. Shoop's liv. and w. pointer bitch (Rip Rap—Dolly D.).

FAIRY KENT—Paul H. Gotzian's liv. and w. pointer bitch (Lad of Beaufort—Daisy Kent).

ALLIE W.—Del Monte Kennels' b. and w. English setter bitch (Prince Lucifer—Clare).

TICK TICK—Del Monte Kennels' liv. and w. pointer dog (Tick Boy—Lula K.).

MOERLEIN—T. W. O'Byrne's b. and w. pointer dog (Rip Rap—Belle of Ossian).

RED SKIN—T. W. O'Byrne's liv. and w. pointer dog (Louis Kent—Fleety Fay).

RODSTONE—N. B. Nesbitt's (agt.) b., w. and t. English setter dog (Cinch—Rod's Florence).

HURSTBURN ZIP—D. E. Rose's (agt.) b., w. and t. English setter dog (Tony Boy—Dimple).

COUNT ODUM—D. E. Rose's (agt.) o. and w. English setter dog (Count Gladstone—Marie Avent).

CHRISTINA—D. E. Rose's (agt.) b., w. and t. English setter bitch (Blue Ridge Mark—Lou R.).

GUENN—D. E. Rose's (agt.) b., w. and t. English setter bith (Blue Ridge Mark—Lou R.).

ALABAMA GIRL—D. E. Rose's (agt.) l. and w. pointer bitch (Von Arrow—Lady Mull).

ROD GLADSTONE—Wm. Pollard's b., w. and t. English setter dog (Rodfield—Sue Gladstone).

P. T. MADISON, Sec'y-Treas.

CHICKEN TRIALS.

WITH the admonitory and expensive experience of the Continental Field Trials Club in giving trials on chickens at Kennedy, Minn., recently—an experience which, it is safe to say, will deter it, and all other clubs whose members are non-residents of the chicken country, from ever giving a trial on chickens again, at least on any financial policy which contemplates guaranteed purses—a lesson may be learnt. The club paid a large deficit out of its treasury in settling the chicken trial accounts.

The guaranteed purse, given so many years and so disastrously by most of the field trial clubs, gave the Continental Club one of the discouraging blows which such purse sooner or later, generally sooner, gives to any club which guarantees it.

Speaking generally, there never was at any time any sound financial reason for giving the large guaranteed purses which have been given. Most of them were the outcome of club rivalries, and the large purses, so engendered, reduced the policy and action of the club to the purely commercial, instead of being an institution for the encouragement of wholesome field sports with dog and gun and the improvement of the dog, as the clubs professed their purposes to be. For when the secretary was confronted with a fixed amount of club liability on the one hand and a vague and erratic support on the other, he had to devote all his energies to securing a revenue. In some successful years the club might have a few hundred dollars to its credit, and after several successful years there might even be a few thousand; but the faultiness of the system in the end was sure to work a harm, and not infrequently ruin.

There is no reason why a body of men should guarantee a fixed amount in purses. The field trial clubs are not money-making concerns, and none of them own any property, so that when a member joins, the assets are simply the enthusiasm and good-fellowship of the members, and a common interest and purpose in sport with dog and gun, and the better improvement of the dog.

FOREST AND STREAM pointed out some years ago the fallacy of the field trial clubs' financial policy, but at that time, as the troubles were not directly at hand, the morrow could care for itself. At present all the great clubs of the United States are confronted with possible deficits, and have faced others to the damage of their treasuries—so much so that there is very little treasury left.

It is folly to ignore such important matters on the assumption that they are but temporary and will soon pass away; on the contrary, the clubs pass away and the trouble is constant.

A few years ago, when there was a boom in field dogs, and the swift-galloping dog was eagerly sought because such a dog was the fashion, and his brothers, sisters, cousins and aunts sold at high figures because they had the same blood and color as the dog which had the swift gallop, a large support was brought in by the commercial possibilities. The dog which ran fast was many times found to be an imitation dog, which had the appearance of seeking wide and fast, when, as a matter of fact, he was running because he felt in high spirits; and moreover those times have passed away. The boom has had its rise, progress and decline, and it is the part of common sense to accept the situation as it is.

Field trials should be encouraged, but it should be done on a sound basis. Make them a sweepstake. The competitors then make their own rewards.

The club under such system gives prestige to the event, conducts the competition under orderly conditions and affords impartial arbitration to the competitors. The club members, having paid their dues, have done all that the sport, its intrinsic value and their own personal enthusiasm should require. There should be no financial policy tolerated which will require an assessment.

Of course it will be difficult for those who have encouraged field trials on a commercial basis, and whose interest is in taking the money instead of contributing it, to see the matter in the light herein presented, but it is better to have field trials on the sweepstake plan than not to have any at all. Every club which disbands is so much loss to those who follow the business professionally, for while the club may be in public action but one week of the year, that week does much in making the year's interest permanent throughout the country.

In the great Northwest, in the chicken country where so many thousand sportsmen live and where so many good dogs are owned, the local sportsmen should organize on the sweepstake policy and make trials of their own. Secretaries can be found who will do the work for the good of the cause free of expense, and local judges would officiate at a reasonable compensation. At all events we feel certain that it will be a long time before a club whose members are non-resident will give a field trial on chickens, and unless a different financial policy is adopted there will be fewer to give them on quail.

Aberrations of Fancy.

NOT having been in either Paris or London for some years, I was somewhat startled to see a paragraph in a daily paper in which the various items of a dog's tailoring bill, amounting to £13 odd, were set down; and still more so when I saw, on reading a magazine article on the subject, that this was no isolated case of folly, but that there were a sufficient number of people, who appear to find a difficulty in spending their incomes on sensible or charitable objects, to support a very fashionable canine toilet club in London, and another, on a still larger scale, I believe, in Paris. Now, sir, England being a free country, of course all have the right to spend their own money as they like within certain limits, but surely those limits are exceeded when, to gratify a stupid desire to be conspicuous, or in mere general inanity, they put a noble animal like the dog to such an amount of suffering and humiliation as this craze must cause those unfortunate members of the canine race who happen to possess masters, or rather mistresses, with more money than brains. I pass over the daily bath, or rather shampoo, as it is called, which certainly cannot be good for the dog, and must be so repugnant to his feelings as to make him regard the entrance to the toilet club with much the same feelings as a lost soul might look on the portals of Dante's Inferno. But what can one say of wedding garments, of theater costumes and, for aught I know, ball dresses. Everyone who has kept dogs knows that they are most keenly alive to ridicule, and the amount of canine chaff which a poor little over-dressed Lulu, in tight boots, must undergo during a walk with its mistress, must be more than enough to embitter the rest of its existence. One can only hope that common sense, not to say humanity, will soon step in, or that some new and harmless eccentricity may create a diversion in favor of the poor lap dogs, who henceforth may be allowed to run about in a natural state and not as dressed-up puppets.—*C. H. W. in Field (London).*

Montreal Show Matters.

NEW YORK.—*Editor Forest and Stream:* Permit me through your widely-read columns to express my sincere thanks to those exhibitors who stood to their guns while a malicious and wholly unwarranted attack was being made upon the management of the Montreal dog show. Because the worthy secretary of this Montreal show neglected sending advertisements and news to certain kennel papers one of the "disappointed" advised exhibitors to not make entries. These same dog owners were also asked to believe that the Association, whose list of officers included the names of Sir Donald A. Smith, Sir Joseph Hickson, Samuel Coulson, Esq., Dr. W. H. Drummond and other esteemed citizens, was not "right." In other words, they were given to understand that a prize winner would be paid with nothing more substantial than blue ribbon. The exhibitors responded by rolling up a splendid entry of nearly 500, which for quality was never equaled in Canada. This entry is the more remarkable because Toronto, which was boomed for months and enriched to the amount of many hundreds of dollars by the specialty clubs, did not succeed in getting 520 entries and had a falling off of over 200 since 1892, as well as a reduction of $1 on each fee for entry.

It is a healthy sign that no kennel paper can judge, report, manage shows, deal in dogs and dictate to exhibitors where they shall exhibit; but I thought this was made clear some years ago, and that there would be no further necessity for illustrating the utter folly of the "killing" process when applied to properly conducted dog shows and their judges.

The exact number of entries at Montreal was 478, of which the following were the largest classes: twenty-one St. Bernards, fourteen wolfhounds, seventeen greyhounds, twenty-three foxhounds, twenty-one Irish setters, fifty-three spaniels, thirty-five collies, thirty-three bull terriers, twenty-seven dachshunde, sixty-three fox terriers, twenty-four Irish terriers, fourteen toy spaniels.

CHAS. H. MASON.

The Monongahela Valley Trials.

PITTSBURGH, Pa., Oct. 1.—*Editor Forest and Stream:* During the field trials the headquarters will be at the same place as last year, Richard S. Scott's, Khedive, Pa. The drawing will take place at 8 o'clock P. M., Tuesday, Oct. 27, at which time the starting fee of $5 must be paid.

The preserve can be reached by boat to Rice's Landing, and there livery accommodations can be secured at Love's livery stable, or by rail to Waynesburgh, where excellent livery service can be obtained at Ganiear & Sayer's livery stable. The boat leaves the wharf, foot of Smithfield street, at 3 P. M. week days and 9 A. M. Sundays. Trains for Waynesburgh leave the Union station at 7:30 A. M. and 2:55 P. M., city time, arriving at Waynesburgh at 10:45 A. M. and 7 P. M. There is no Sunday train. I shall leave for the preserve Saturday, Oct. 24. Any communications after that date will reach me by addressing me at Homeville, Green county, Pa.

S. B. CUMMINGS, Sec'y.

POINTS AND FLUSHES.

A somewhat complicated case was decided recently by General Customs Appraiser Wilkinson, at Philadelphia, the case being an appeal from the decision of the local customs appraisers of that port. All the trouble arose over the invoice, which showed that one dog had been shipped from Germany by ex-Postmaster-General Wanamaker, whereas three arrived in port, the bitch having whelped *in transitu*. While in Germany Mr. Wanamaker saw a fox terrier bitch in Hagenbeck's Circus, the bitch in question, whose intelligence and tricks so won his admiration that he bought her for 500 marks. The manager informed him that the bitch was in whelp to a dog of excellent breeding, and that her progeny would be of a kind to swell his bosom with pride. The local appraisers had valued the puppies at a figure which called for a duty of $2 per pup; but as it was apparent that the father was all a mistake, an intruder of irrelevant breeding, the duty was reduced one-half. But it is a strange phase of human nature abroad which will permit men to perpetrate frauds in dog matters.

Blanks for the All-Age Stake of the International Field Trials Club can be obtained of the honorary secretary, W. B. Wells, Chatham, Ontario, Can.

The Aberdeen Coursing Club's Meeting, Aberdeen, S. D., scheduled for Sept. 29, ended on Oct. 2. The judging and slipping were good and the jack rabbits were fast. Glenrosa won the Aberdeen cup. In the last day's coursing there were five puppies left in the Derby, named Cashier, Snowbird, and Lady Aberdeen, belonging to Nichols and Ladd, of Mitchell, S. D.; Moonshine, belonging to A. P. Slocum, of Oakes, N. D.; and Lucky Colors, owned in Aberdeen by R. H. Woods. Lucky Colors, being the odd dog, took the bye course. Moonshine beat Cashier, and Snowbird beat Lady Aberdeen. In the next round Moonshine beat Lucky Colors and Snowbird got the bye. Then in the final course Snowbird beat Moonshine. Nichols and Ladd won $200 in first money with Snowbird, besides fourth and fifth moneys with Cashier and Lady Aberdeen. Mr. Slocum got $100 as second money, and Mr. Woods won $50 with Lucky Colors.

The Brunswick Fur Club has sent out invitations to its eighth annual field trials, to be held at Barre, Mass., beginning on Oct. 19. The club headquarters will be at the Hotel Barre. The trials will be judged by Messrs. S. B. Mills and William Jones, Needham, Mass.; Eugene Brooks, Vernon, Vt.; Nathan Stewart, Gorham, N. H., and Bradford S. Turpin, Roxbury, Mass. The Derby, open to all hounds whelped on or after Jan. 1, 1895, will be run on Tuesday, Oct. 20. Entries close on Monday evening, Oct. 19. Fee to start, $2. The All-Age Stake will be run on Wednesday, Thursday and Friday, Oct. 21–23. Entries close on Tuesday evening, Oct. 20. Fee to start, $3. The winner of the Derby will hold the R. D. Perry cup for one year. The winner of the All-Age Stake will hold the *American Field* cup for one year and receive the club medal. Silver medals donated by members of the club will be given to the first prize winners in the hunting, trailing, endurance and speed classes of the All-Age Stake. In addition to these special prizes, a percentage of the entry fees will be given to the first, second and third prize winners in the Derby and in the several classes of the All-Age Stake. Comfortable quarters for the hounds will be provided near the hotel. The shooting of foxes during the trials will be prohibited. The trials are open to the world and promise to be unusually interesting.

Mr. T. Farrar Rockham, secretary of the American Pet Dog Club, writes us under date of Sept. 30 that there will be a regular meeting of the club held at the Hoffman House, New York, Oct. 7, at 2 o'clock. He mentions that there is business of much importance to transact, as well as the election of new members, so that it is important for members to be present.

Mr. P. T. Madison, secretary of the Continental Field Trials Club, informs us that he intended to start for Mississippi on Monday or Tuesday of this week to make arrangements for the club's forthcoming trials on quail.

The *Collie Club Chronicle* reports the following new members elected during the past month: G. G. Haven, John J. James, J. A. Finlayson, all of New York; Felix Flannigan, Providence, R. I.; Louis Fackler, Paterson, N. J.; Fred Holdsworth and Gheub Holdsworth, Westerly, R. I.

In our business columns, P. O. Box 566, Scranton, Pa., offers for sale a broken pointer. Wm. P. Pickett, Brooklyn, offers trained English setter. Forrest W. Forbes, Westboro, Mass., wants broken setter. J. Hope, Philadelphia, offers Russian wolfhound. R. E. Smith, Afton, N. Y., offers rabbit dog and beagle. Dr. E. B. Fletcher, Erie, Pa., wants broken bird dog. Jess. M. Whaite, Agricola, Ga., will train dogs.

The second annual sale of the Rancocas Kennel will take place at Durland's Riding Academy, New York. The list includes dogs and bitches of famous blood and performance, young shooting dogs and untried puppies. More particulars are given in the advertisement of this sale in our business columns.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. W. H. Worth claims the name
Lawn Nestle, for Gordon setter bitch, whelped Aug. 10, 1896, by Pilot of Lorain—Lawn Nola.
Lawn Bonnie Belle, for Gordon setter bitch, whelped March 3, 1896, by champion Rexmont—Lawn Pretty Belle.
Lawn Button, for Gordon setter dog, whelped Sept. 24, 1896, by champion Rexmont—Lawn Pretty Belle.
Lawn Busy, for Gordon setter dog, same litter.
Lawn Blade, for Gordon setter dog, same litter.
Lawn Brownie, for Gordon setter bitch, same litter.
Lawn Bright Eyes, for Gordon setter bitch, same litter
Lawn Blanche, for Gordon setter bitch, same letter.

BRED.

Mr. G. G. Williamson's Dan's Lady, English setter bitch, Sept. 19, to champion Count Gladstone IV.

WHELPS.

Mr. G. G. Williamson's Belle of Piedmont, Jr., English setter bitch, whelped, Sept. 21, five (two dogs), by champion Antonio.
Mr. W. H. Worth's
Lawn Nola, Gordon setter bitch, whelped, Aug. 10, seven (four dogs), by Pilot of Lorain.
Lawn Pretty Belle, Gordon setter bitch, whelped, Sept. 24, nine (six dogs), by champion Rexmont.

SALES.

Mr. W. H. Worth has sold
Lawn Nettie, Gordon setter bitch, to Mr. J. T. Trayes.
Lawn Pilot, Gordon setter dog, to Mr. J. T. Trayes.
Lawn Prize, Gordon setter dog, to Mr. E. L. Dunn.
Pilot of Lorain, Gordon setter dog, to Mr. J. C. Crate.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE VALUE OF GOOD ROADS.

THE subject of good roads is one that appeals to every wheelman. If he has never before noticed the character of the roads in his neighborhood, he is bound to do so when he rides over them. The bicycle is responsive to almost imperceptible grades, and to the rider the topography of the country assumes a new importance. He is surprised to find how much chance has had to do with the laying out of highways, and how many needless ascents and descents are made where slight detours would have assured an easy grade.

But the character of the roadbed itself is what most interests him. Hard, smooth roads give a sense of pleasure of a high order, while rough, sandy or muddy roads leave an indelible impress of disgust.

Because of his practical experience, the wheelman is quick to appreciate the economic value of good roads. He understands the tremendous handicap a horse labors under in hauling over bad roads to a degree that is incomprehensible to the man who travels on foot or in a carriage, and who has never had the thing impressed upon his physical senses.

But while good roads are desirable for everyone who passes over them on wheels, be he cyclist or horse owner, it is often a very difficult thing to show how they return the money spent for their improvement. Examples where the dollars and cents figure are therefore desirable arguments.

In an article in the *Independent* Professor Fernow gives a very interesting account of the results achieved by road improvements made by the little municipality of Goslar, in the Hartz Mountains of Germany. This old town owns a forest of 7,500 acres which its citizens treasure as one of their best investments, because it not only furnishes them outing grounds and good sport in the way of hunting, but also a sure and constantly increasing revenue. Under conservative management the annual cut is 350,000 cubic feet of wood, from which a net income is derived of $25,000 a year, or $3.50 per acre; a surprising return from soil unfit for agriculture.

The part that good roads has to play in this result is considerable. Previous to 1875 the forest was without good roads, but in that year the manager secured an appropriation for road improvement, and each year since then money has been spent for that purpose.

In 1891 $25,000 had been invested in roads, and the district had 141 miles of good roads. The manager kept an account of the direct influence of this improvement on the cost of his forestry operations, with the result that he was able to show a reduction in the annual cost of logging of $2,450, and in the cost of hauling of $2,520; while owing to the fact that much formerly unsalable material could now be disposed of, his sales were increased by $3,255. From these three sources the annual profit of the forest was increased $8,255, or nearly 33 per cent. of the entire amount invested in road improvements.

One road which was singled out for an example showed the following result: It had been macadamized and maintained one year at a cost of $7,440. Previous to improvement, 4,273 loads of wood measuring 110 cubic feet each were hauled each year at a cost of $3.60 per load, or a total of $15,282 for transportation. On the new road this same bulk of wood was moved in 2,652 loads of 177 cubic feet each. The cost, at the uniform price of $3.60 per load, was $9,547, so that the saving in the item of transportation alone was $5,735, or 75 per cent. of the cost of the road in one year.

THE CARE AND USE OF BICYCLE CHAINS.

IT is perhaps needless to say that the chain is the most important part of a bicycle to have in good order, and after a great deal of experiment I have concluded that my method gives the best results with the least labor.

I have tried various processes, such as boiling in various materials and other operations; all good in their way, but objectionable on account of time required, and general dirt and muss. What is required is an operation that will keep a chain in average good order with the least amount of work and annoyance; not like the usual way of at one time an excess of cleaning, polishing and oiling, succeeded by long periods of neglect.

My method is as follows: Procure a wide-mouthed bottle with a tight stopper or cork, holding say 8 to 12oz.—I use a Vichy salts bottle—put in it a piece of paraffine candle 4 to 6in. long, and fill the bottle with benzine. In a day or two the paraffine will dissolve and remain liquid at a temperature of 60° and over. Take 4oz. castile soap and dissolve in as little boiling water as will thoroughly dissolve it, and while hot stir in an equal bulk of the finest graphite. Put in a tin box with a tight cover; when cold it will be solid. As it dries and becomes too solid, add a little water from time to time. Procure one or two of the cheapest nail brushes, costing 5 or 10 cents each, and a couple of tooth brushes; old ones will do if not too much worn.

This is the outfit. To use it, after each run of say ten or twenty miles, turn the wheel over on its handles and slowly revolve the chain, brushing thoroughly outside and inside, also removing any dirt or dust from the sprockets, using the nail brushes. Then with one of the tooth brushes dip in the paraffine liquid and brush the inside of chain, working the liquid into the joints. It will flow into the joints and lubricate them, and in a few

minutes the benzine evaporates and leaves the paraffine. Any excess that may run through to outside of chain can be removed with a rag. Then with the other tooth brush apply the soap and graphite mixture on inside of chain and sprocket teeth. By inside of chain I mean that portion than runs against the sprockets.

A chain treated in this way does not gather dust, the pins or rivets are lubricated, and the surface of chain and sprocket teeth acquire a glassy surface and do not wear.

The entire operation requires but a few minutes. One of my wheels has run some 4,000 miles under this treatment; the sprockets are not worn, the chain is in good order and has not stretched to an amount to impair its efficiency.

If the soap and graphite mixture is applied to chain and sprocket when new the graphite appears to more readily adhere to the metal.

One word of caution: do not open the paraffine-benzine mixture near a light or fire. Also, it is best to have both chain and mixture at a temperature of 70° or over.

LOW GEAR.

SECOND-HAND BICYCLES.

THERE is much to be said on both sides of the subject of buying a second-hand wheel, and a great deal depends upon the individual requirements of the rider. Second-hand bicycles are often sold for ridiculously low prices, and many people are tempted by this consideration alone to buy them. Such purchases frequently turn out poor bargains, and after a little while it will be found that the wheel is only fit for the junk dealer.

As a general principle it is safe to assume that there is a reason for a bicycle becoming second-hand, which reason if known would not tend to enhance its value. The number of persons who part with good bicycles on account of some whim, or from straitened circumstances, or for any reason other than that the wheel is not up to mark, is not large.

As a rule, the bicycle is very heavy and old-fashioned, or the bearings are worn and the wheel runs hard, or the fork has been bent and is liable to break, which consciousness does not have a soothing effect on the nerves of the rider when going down a bad hill; or the frame is racked and shaky, or none of the nuts will stay in place, and the whole thing is on the verge of disruption. The unsuspicious buyer is sure to learn these facts sooner or later, and he will then wish that he had paid more money and gotten a reliable wheel in the first place.

However, the second-hand bicycle has its uses, provided it has no dangerous defects. It is useful for the rough and tumble struggle of learning to ride, and it is useful to lend to the kind of people who borrow.

It insures more exercise than a new bicycle, and if you want to get good and tired you can do so in half the time it would take on the other.

The second-hand wheel does not require to be cleaned, as does a first-class bicycle, and one need not worry if it is left out over night in the rain, or if the baggage man finds a position for it near a pile of trunks.

While some second-hand wheels go to pieces on the slightest provocation, others are practically indestructible. From time to time one sees old relics of ten or fifteen years ago that have been in hard service constantly.

These old wheels are heavy and hard-running, but they are proof against the thank-you-mams, ruts and stone walls, and point to a moral in bicycle construction that some of the manufacturers of "strictly high grade" bicycles would do well to reflect upon.

The Mather Wheelmen.

BROOKLYN, N. Y.—*Editor Forest and Stream:* The very flattering notice of my articles made by a Matherite on page 274 is the cause of the pink tint in this ink; it was so strong that it even made my ink stand. Seriously there is no offense in his speaking of me as "old," for it is a joyful fact that I was born in time to get more fun out of this world than seems possible to be extracted now, unless a boy has a rich father who will shell out the shekels to let him go to the far-off game country which was close to my boyhood door. But as to naming a bicycle club after me, that is a serious matter. I shall insist on knowing how he pronounces my name before consenting. The mail carrier who serves me insists on calling me "Mayther" and the law says I must not kill him. If my young friend will solemnly promise to pronounce the "a" as in "father" or in "fat" in naming his bicycle club, I will be happy to sit on the fence and review the parade; but if he follows the example of the postman he may not have the approval of F. M.

Yachting.

THE last number of *Le Yacht* to hand, that of Sept. 19, contains an interesting article on the 15ft. class in America, by Mr. L. More, the well-known French writer. Following the bad example of *The Yachtsman*, *Le Yacht* neglects to state that the lines of El Heirie which help to illustrate Mr. More's article are reproduced directly from the FOREST AND STREAM of Aug. 22. We have no objection to such a use of our illustrations, but as we make a custom of crediting to its rightful owners everything which we reproduce from another journal we look for the same courtesy in return.

ONE of the strongest arguments we have yet seen for the Payne bill is the new counter which has been carried through the season by one of the principal steam yachts of the New York fleet. This counter, of which a good deal has been said by the daily papers, was put on during the winter in the laudable attempt to modernize the yacht, in view of the higher standard of taste in such matters now prevailing in this country. The original counter, put on when the yacht was built, a dozen years ago, was of what may be called the Tweedle Dee type, modeled mainly after that homely but useful article, the dish pan. The new and presumably *fin de siècle* counter may be called, to distinguish it from the other, the Tweedle Dum type; further than which, no description of the details is necessary. The only gain is in deck room, and both in design and construction the work calls for only adverse criticism; the joining of the old and new work is visible at a great distance, a careless piece of handiwork, and the sheer is carried out so badly that the taffrail has the appearance of having dropped at its after point.

That such work as this *needs* all the protection from the competition of the Clyde shipyards that a paternal government can bestow upon it, is too plain to be disputed; whether it *deserves* such protection is another question which the yacht owner, who pays the bills, should consider carefully.

THE victory of Quissetta over Amorita is one of the remarkable events of the yaching year, and from one point of view at least is a matter for congratulation on the part of all old fogies who still cling to the nearly extinct notion that there are certain standards of beauty in naval architecture to which all craft other than car floats and garbage scows may and should conform without undue detriment to speed and other essentials. Though the work of an expert designer with many handsome craft to his credit, as well as a marine artist by profession, Amorita was designed in up-to-date fashion directly counter to this theory. The one end in view was extreme speed under the conditions that prevail on the Sound in summer, and to attain this end under the rule as it stood, the topsides were spread out beyond the under-water body to an extreme degree, especially at the ends. The bow in particular is quite as ugly as anything that even the smaller classes have yet produced.

The winning yacht, a smaller craft than Amorita, is first and foremost a very handsome vessel, in appearance much like her single-stick sister, Norota, one of the handsomest yachts in the fleet.

We have no great love for the type to which both of these schooners belong; a draft of 12ft. on a waterline of 70, or of 11ft. on 66ft., unfits them for all work but racing in the waters where their lives are spent, and they are not of a type for offshore work. At the same time we have a strong preference for the handsomer of the two, and consequently take pleasure in her victory in racing.

IT is now reported that the Emperor of Germany will take up the matter of the Meteor-Isolde collision and push the investigation further, with a view to settling the responsibility on the proper person. From some of the comments on the disaster it might be inferred that the Emperor was personally concerned, and that vital international issues were involved. All this is absurd; the ownership and nationality of the different yachts involved do not affect the matter in the slightest degree, and so far as the Emperor is concerned, as he was in Germany at the time and his yacht in the hands of an expert and properly qualified skipper, no blame whatever can attach to him, even though the responsibility be ultimately fastened on Meteor II. We hope that the report is true, and that the whole matter will be thoroughly and impartially investigated.

ONE of the silly rumors of the silly season is to the effect that Defender is to be purchased and converted into a schooner for the regular racing of next season. Such a use of the yacht is manifestly impossible on account of her great draft, 19ft. as she now is, and even more as a schooner with interior furnishings. With such a draft it would be practically impossible to sail her over the course of the New York, the Larchmont and most of the other yacht clubs; she could find very few safe harbors; she could not haul on any of the yacht railways, but would have to be docked at great expense in the Erie Basin Docks. Colonia is the extreme limit of practicable use, with her 15ft.; another 5ft. in addition is out of the question; and it is equally impossible to lessen Defender's draft without sacrificing her speed.

ONE of the minor incidents of the destructive cyclone which tore up the Atlantic coast on Sept. 29-30 was the destruction of the 15-footer Ethelwynn, at her moorings, off Bath Beach. The yacht had been for three weeks in the charge of the United States Marshal, having been libeled by Thos. Manning for a bill of $56 for storage and fitting out. She was advertised to be sold at auction on the afternoon of Sept. 30. At about 2 o'clock in the morning of that day she parted her mooring lines and went into the wooden pier at Avoca Villa, Bath Beach, where she was very badly smashed up. In the afternoon the wreck was bought in by a junk dealer for the sum of $11.50, and after reserving the sails and gear the hull was resold by him for $5. The report is now in circulation through the American and Canadian papers that she cost last year the magnificent sum of $2,500.

The Niagara Tanks.

DURING the past week the following letter was cabled from London to New York:

"SAVOY HOTEL, London, Sept. 26, 1896.—*To the Council of the Yacht Racing Association:* Gentlemen—The yachting season of 1896 is now at an end, and we are returning to my home in America, but before departing from England I feel it my duty to send you this communication. I had hoped all summer to receive a letter from your Association which would have made this communication unnecessary.

"My yacht Niagara, which has two small water tanks of 30 gallons each for the ordinary supply of her crew, was in 1895 measured by one of the official measurers of the Yacht Racing Association for a racing certificate, and entered in the races of that year, sailing some fifty or more. These tanks were constructed by Herreshoff in accordance with the original plan of the vessel solely for the above mentioned purpose. The manner in which the tanks were constructed was visible to the eye, known to many of the members of your Association, and was no secret. The Niagara was in a like manner measured in 1896. These tanks were not altered.

"After the race of the Royal Thames Y. C., on May 22, 1896, in my absence, without any previous communication with me, without any notice to me—although such notice could easily have been given—and without any prior knowledge on my part, a committee of your Association suddenly boarded the Niagara and made certain examinations. Notice of this visit was made to me five days later in the following letter from the secretary of the Yacht Racing Association:

"'YACHT RACING ASSOCIATION, 24 Sussex Gardens, Hyde Park, London, W., May 27, 1896.—Dear Sir: A report was made to the Council of the Yacht Racing Association that your yacht Niagara was fitted with a tank under the seat on each side of the cabin, and that these were connected by a pipe so as to make it possible, by merely turning a cock, to run water from one tank into the other, and thus use them as shifting water ballast, which might be advantageous in certain cases.

"'Three members of the council were in consequence requested to inspect the tanks, which they did immediately after the race of the Royal Thames Y. C., on May 22, and in your absence were offered every facility by Capt. Barr.

"'The members of the council do not wish to convey any idea on their part that the tanks were used for the purpose indicated. On the contrary, their impression is the other way. But I am requested to suggest, in order to place the matter beyond suspicion, that it is desirable to make impracticable the run of the water from one tank to the other, which could readily be done by a small alteration in the pipes.

"'I should be glad to hear, for the information of the council, that this will be done at once. DIXON KEMP.'

"I repeat that this communication was the first notice I had from the Yacht Racing Association of this extraordinary action on their part. I was never informed who constituted the committee, who failed even to leave their names with my sailing master. I answered this communication on June 2, expressing my sense of the discourtesy shown and implied by such procedure. My answer follows, which was not to my knowledge included in the correspondence given out to the press:

"'NIAGARA, Harwich, June 2, 1896.—Dear Sir: I beg to acknowledge the receipt of yours of May 27 regarding the Niagara's water tanks. I greatly regret not having had the courtesy of notification of the intended visit of the committee, as it would have afforded me much pleasure to have been present and personally shown them over the yacht, but I am pleased to hear from you that the investigation was satisfactory. Any report that the tanks were used for shifting water ballast is absolutely false, and upon reading the Yacht Racing Association's rules carefully, I fail to see that they in any why conflict with them.

"'However, for the sake of harmony I am willing to make any change to meet the approval of the council, providing such change shall not increase the weight to be carried. As it is, she races with every possible pound of weight out of her, and I do not wish any alteration that would make her any heavier. In order that the question cannot again arise, kindly let me know exactly how the council suggest making the change and still leave three days' water carrying capacity for the needs of the crew in making passages. Yours very truly, HOWARD GOULD.'

"I append herewith the reply to the above:

"'YACHT RACING ASSOCIATION, 24 Sussex Gardens, Hyde Park, London, W.—Dear Sir: Your letter of June 2 was placed before the committee of the Yacht Racing Association council yesterday. I am directed to state that the committee received with satisfaction your assurances that you will carry out their suggestions. These suggestions are that the pipes and cocks connecting the water tanks under the sofas be removed at once, and that a separate supply pipe service be provided for each tank. The change will involve about 10lbs. additional weight. When these are carried out please cause Mr. A. E. Payne to be informed of the same, and he will inspect the tanks and make a formal report that the suggestions of the committee of the Yacht Racing Association's council have been complied with. I am faithfully yours, DIXON KEMP.'

"Had I been communicated with prior to this discourteous and unusual visit I would gladly have established the following facts: First, that the Niagara was measured with her water tanks empty; second, that the water in the tanks had never been used, and was not used in any instance as shifting ballast; and third, that it was impracticable to make advantageous use of the tanks for such a purpose had I desired to do so. The report that the tanks were connected by a pipe so as to make it possible, by merely turning a cock, to run the water from one tank into the other, and thus use them as shifting water ballast, which might be advantageous in certain cases, conveyed an unjust reflection, and it is not true that advantageous use of the tanks for such a purpose could be made.

"My objection is not to the fact that the examination of the tanks was made, but to the mode of proceeding adopted. Despite this action on the part of your committee, and to prevent further unjust suspicion, and in the interest of harmony, I made certain alterations in severing the pipe connection between the tanks, much to the discomfort of the crew, lessening thereby their water supply. I am surprised that I never received any explanation of the course pursued in boarding the yacht without communicating with me, although I characterized such action as discourteous at the time.

"In the absence of such explanation or disavowal on the part of the Yacht Racing Association, I consider the course pursued not only discourteous, but personally offensive and essentially destructive of the amicable relations which lie at the very foundation of the existence of international contests of this character, which should be founded upon gentlemanly intercourse, fair and open dealing, and high and scrupulous honor.

"Certainly, self-respecting yachtsmen of other countries will not hereafter voluntarily subject themselves to similar treatment if the course pursued toward me is held and declared by the Yacht Racing Association to be according to its ideas of what is proper, fair and just. As the matter has received so much publicity, I am sending a copy of this communication to the press. Faithfully yours,

"HOWARD GOULD."

The following interview with Lieut.-Col. Sir George Archibald Leach, K. C. B., of the council of the Y. R. A., has been cabled from London:

"Mr. Gould's letter is absurd. It really raises a tempest in a teapot.

"I know nothing about the report of the measuring of Niagara in 1895. Anyhow, the rule was changed after 1895.

"I was on the committee's steamer Tilbury, accompanied by other members of the council. Dixon Kemp suggested that inasmuch as it was the first time enough members of the sailing committee had gathered together to form a quorum it would be advisable to hold a meeting to consider matters awaiting the action of the committee.

"Among these matters was the subject of Measurer Payne's report upon the measuring of Niagara, in which details were given in reference to the tanks used. It was decided that a sub-committee of three be appointed to inspect the tanks, as all the members of the committee were unwilling to act simply on the measurer's report, which alleged nothing, but reported the tanks to be unusual in form of construction. Anything unusual concerning the construction of a yacht the measurer is bound by the rules to report.

"Three members of the committee, Dixon Kemp, Col. Wilkinson (who is almost the father of yachting on the Thames), and myself, went on board Niagara as soon as she went into her dock. We supposed Howard Gould was on board, as he was aboard during the race. However, we found him gone. We told Capt. Barr of our official capacity and what we wanted.

"Capt. Barr replied: 'Certainly.' He showed us the tanks, and we measured them. They were 4ft. long and about 1ft. wide at the top and 1ft. deep, doubtless sloping at the bottom. I should say each contained about 7cwt. of water.

"The sub-committee reported to the committee, which decided to send a letter to Howard Gould. This letter was written to Mr. Gould by the secretary. Mr. Gould replied to this letter, and we certainly did not understand that Mr. Gould expressed any displeasure because of our action.

"This is the entire story of what happened.

"Mr. Gould says we ought to have given him notice. That was impossible. We do not do that when inspecting yachts for the purpose of seeing if there is anything which might be unfairly used during the racing. Our inspection had no relation to the fact that Niagara was a stranger yacht.

"We should do the same thing to-morrow if a measurer furnished a similar report concerning any English yacht. In fact, we did precisely that thing a few years ago with an English yacht which we had reason to believe was not sailing with the same ballast as reported on the day of measuring.

"We did not go on Niagara for the purpose of catching Mr. Gould at any trick. We never believed he would do anything of that sort.

"Many hasty rumors were flying about. We did not pay any attention to them whatever, but acted solely on the report of our measurer. The inspection was quite as much for the purpose of protecting Mr. Gould by relieving him of any suspicions of this nature as for the purpose of protecting the Yacht Racing Association.

"Anent the matter of leaving our names when we inspected Niagara, it should be remembered that we inspected the yacht officially, and not personally. Capt. Barr knew Dixon Kemp, if he did not know any of the other members of the sub-committee.

"If Mr. Gould considers our letter discourteous, I don't. As to disavowing our action in this matter, the council will do nothing of the sort. At the next meeting of the council we will send Mr. Gould a courteous letter deeply regretting the incident which has given rise to so much feeling, and sincerely deploring the friction caused by these international contests. As for the remarks about cads, etc., that is simply scurrilous. We can afford to ignore discussion of this character."

Without discussing the propriety of the committee's action in visiting Niagara in the absence of her owner and giving him no opportunity whatever to defend himself from some sort of indefinite accusation, we are of the opinion that the committee has acted most foolishly and unfairly in doing anything else than to indorse the whole arrangement of the tanks and connecting pipe as perfectly legitimate and proper. Though not known in British yachts, such tanks and pipes are almost universal on this side, and no case has ever been known where they have been used for shifting ballast. According to Mr. Gould's statement, each of the two tanks is of 30 gallons capacity, or capable of holding when full 300lbs. of water. Any theory of the improper use of the tanks is based on the assumption that one, the lee one, is always empty and the other full, so that the total weight involved cannot be more than 300lbs. It should be evident to expert yachtsmen and intelligent men that this weight of water could not pass through a ¾in. pipe, the size as we understand of the connecting pipe, in such a way as to permit the shifting of the water from the weather to the lee tank in tacking, and that such a use of the tanks and pipe was practically impossible. Further than this, even if the pipe were large enough to admit of an almost instantaneous shifting of the water, the effect of 300lbs. in a vessel of Niagara's size, of a dozen tons displacement, and with more than half this weight disposed in her bulb at a draft of 11ft., would not be worth considering.

If all the circumstances were totally different, if Niagara were a shoal centerboard boat with a moderate weight of ballast and with a large watertank in each bilge connected by a pipe of 2 or 3in. diameter, the committee would have been justified in condemning the arrangement as at least open to suspicion. As the facts are, with two small tanks capable of holding a weight that is insignificant compared with the displacement and ballast of the yacht, connected by a very small pipe, the committee and council have shown themselves in a

most unfavorable light, both as regards their technical knowledge and their ideas of fair play.

If he is reported correctly in the above interview, Sir George Archibald Leach is certainly not qualified to serve on such a committee; according to his own figures he believed that a weight of 7cwt. (nearly 800lbs.) of water could be stowed away in a space very much less than 4cu. ft. in capacity, so that the weight of water per cubic foot would be considerably over 200lbs. According to the figures given by him, 4ft. long and about 1ft. each in height and breadth, the tanks must hold even less than thirty gallons, as they are fitted to the form of the bilge and consequently are more nearly of a triangular than a rectangular section. That the whole affair is a tempest in a teapot is very evident, but we differ from Sir George Archibald Leach as to who raised it.

Miramichi Y. C.

CHATHAM—MIRAMICHI RIVER.

Thursday, Sept. 24.

The yachting season was closed on Sept. 24 by a race for the Watt cup and club prizes. The entries were Maude, Oriana, Avis and Learig. The course was a triangular one of 6 miles, twice around, but owing to the fact that the river is less than a mile wide at Chatham the triangle was a very obtuse one. It was practically one-half running and one-half windward work, the latter against the tide. The yachts had 4m. to cross the line. A 10-knot westerly breeze was blowing. Avis, Learig and Maude crossed together, and Oriana crossed 2m. 10s. later. She gained 40s. on Learig, the largest boat in the race, in the first leg, 1½ miles to windward; 60s. on the next leg, a 3-mile run, and 1m. 10s. on the next, a 3-mile beat to windward, passing Learig and rounding the windward mark 40s. ahead. Learig gained on the second run down and ran into Oriana as the latter was swinging around the mark. Her bowsprit tore a big hole in Oriana's mainsail, and it was fully ten minutes before the yachts were separated. It was Oriana's race by over 6m. corrected time when she was fouled. Avis, which had been far behind, went ahead and won the race. Oriana, with a large piece of her mainsail flapping, was second.

Oriana had an allowance of 4m. from Learig and 2m. 40s. from Avis, besides her 2m. 10s. start and her lead. She won the final race of the season in a gale, with double reefs tied down. In the second she was dismasted early in the race while she was within her allowance. The third she won, and the fourth was easily hers when she was fouled. Oriana was designed by H. C. McLeod, now of Chicago, who is widely known as a successful amateur designer and all-round yachtsman. She is a comparatively deep and narrow centerboard; loadline 25ft., beam 7ft. 2in., draft 2ft. 9in. Her lines are round and easy, and her sail plan small. She has 1,000lbs. of lead on her board and 2,000lbs. of iron and cement inside. She was not a success in her first season, but since then has been first in two-thirds of the races and second in the rest. Her owner, Vice Com. Stewart, does a good deal of cruising in her without changing her canvas, and considers her a safe boat in any weather. She is a remarkable all-round yacht, being a safe and handy cruiser, with cabin accommodations for four, and fast in light, moderate and heavy winds.

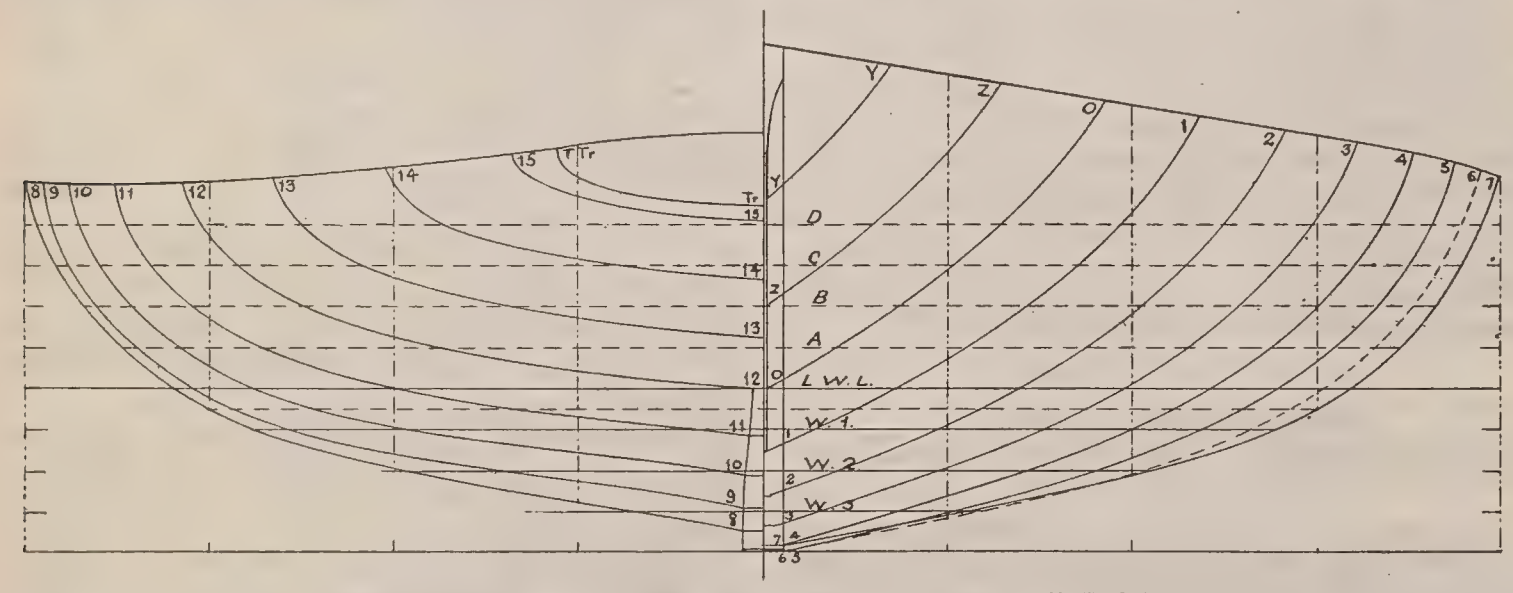
ETHELWYNN.

(*Continued from page 276, Oct. 3.*)

Before describing the construction of Ethelwynn, it may be interesting to recall the details of her designing and the manner in which the design was worked out. When the match with Spruce IIII. was first arranged in the spring of 1895, the present 15ft. class was not thought of, and there were neither 15-footers nor half-raters in America. The only boats that could come under the latter designation were two fin-keels: Trust Me, built in 1894 by the Herreshoffs, a duplicate of their successful half-rater Wee Winn; and Sagamore, a handsome half-rater designed by Arthur E. Payne, and carried at the davits of the steam yacht of the same name. Neither had ever raced here, and nothing was known of them. There were many boats in different parts of the country of 15 to 18ft. waterline, built exactly to or close copies of Scarecrow, or La Gloria, as originally published in the Forest and Stream. Although the Scarecrow design was intended for a bulb-fin, some of these boats were, as a matter of convenience, fitted with metal centerboards. Many of them were of fairly good construction, and some were neatly rigged; but none were of real racing construction or rig.

The challenger was at the time new, just sailing her first races, and very little was known about her in this country. The problem set before American designers was to produce a yacht of not over 15ft. racing length as measured by the Seawanhaka rules and special conditions of the match, to meet the new and unknown English boat in certain known waters—that portion of Long Island Sound adjoining Oyster Bay. The crew was limited to two men, a fixed weight of 300lbs. being placed aboard to represent the crew in measurement, and the time limit was five hours over a twelve-mile course.

In the case of Ethelwynn, the question of bulb-fin or centerboard was decided after a brief mental calculation; the bulb-fin involved an added displacement of some 400lbs., for the purpose of carrying something over 200sq. ft. of sail. In a racing canoe one man can carry a sail plan of 150 to 160sq. ft. on a sliding seat of 6ft. length, on an extreme beam of 30in. In the assumed 15 footer, while the sliding seat was barred, the beam was unlimited; and there were two men, or double the live ballast, to carry only about 50 per cent. more sail. With ample beam both for stability of the hull and for a seat for the double crew in hiking, there seemed no good reason for using some 400lbs. of lead to aid in carrying the limited sail plan.



The question of type being disposed of by the selection of the shoal centerboard type of considerable beam, the next point was the displacement, and a rough estimate of weight was made, as follows:

	Pounds.
Crew	300
Hull	350
Rig	75
Board	70
Rudder	10
Total	805

ETHELWYNN—TABLE OF OFFSETS.

ETHELWYNN—BODY PLAN. SCALE, 1 INCH TO THE FOOT.

The data for this estimate were very inadequate, no actual weights of hull, spars, rigging or rudder could be had, and there was no guide as to the probable soakage, a very important factor in a close calculation of waterline. It was finally decided to allow about 900lbs. displacement at the designed waterline as a safe figure, provided that no inside ballast should be found necessary.

The question of relative waterline and sail area was then taken up. After due consideration of the lengths of the English half-raters, 15 to 16ft. and over, it was decided to work for a final measured waterline of about 14ft. 6in., with its accompanying sail area of 240sq. ft. as a safe ratio for the average conditions of very light weather, with possibly a hard breeze in the course of the series of five races. At the time there was nothing between the one-man canoe on the one hand and the length class 15-footers, with large crews, on the other, on which to base the comparisons of power for the new class.

By way of guide to the hull dimensions, of beam, freeboard, sheer, etc., there was nothing better available than the design of the 21ft. bulb-fin Koko, as published in the Forest and Stream of May 2, 1896. The original design was made to a scale of 1½in. to the foot, but on inspection it appeared that a scale of 2in. to the foot would reduce the dimensions to fit the 15ft. class. The dimensions were taken off with a 2in. scale, as follows:

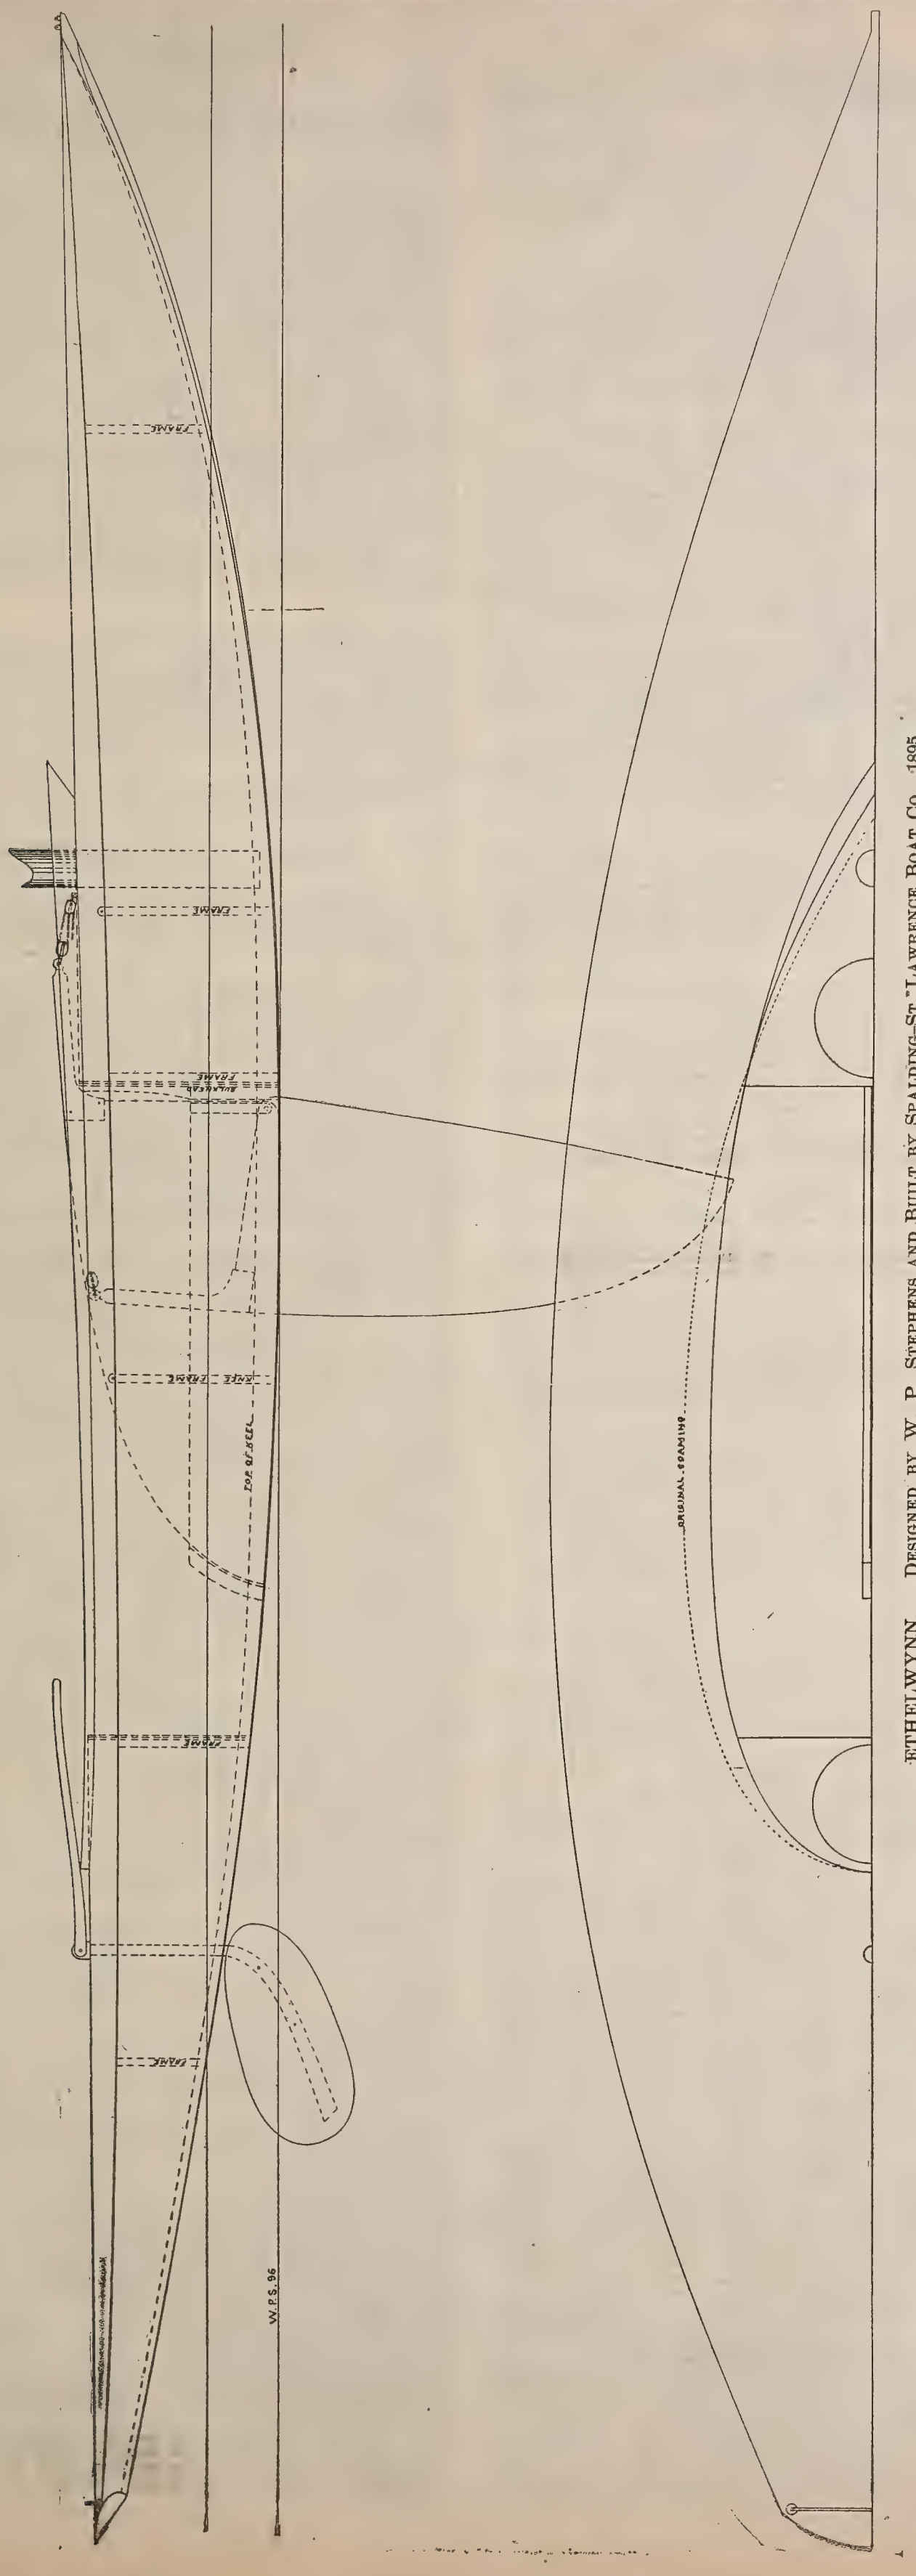
	Koko reduced.
Length over all	21ft. 4½in.
l.w.l.	14ft. 7½in.
Overhang, bow	3ft.
stern	3ft. 9in.
Beam, extreme	4ft. 10½in.
l.w.l.	4ft. 5½in.
Draft of hull	8½in.
Freeboard, lowest	10⅝in.
Sheer, bow	9in.
stern	3in.
Area of midship section, sq. ft	2.11
Displacement, lbs	1,088

In spite of the difference in size and type, Koko, as a well-proportioned craft in sheer, freeboard, etc., offered the best available guide, and the working sketch of the new craft was started on the basis of her reduced dimensions, as above. The design was started on a waterline of 15ft. as the extreme limit, with 8in. extreme draft, 10in. lowest freeboard, and a displacement of about 1,000lbs. at these maximum figures. The sail plan, of the Scarecrow type, was made by Mr. C. J. Stevens, calling for 7ft. 6in. from the fore side of the mast to the tack of the jib, thus determining about the length of the fore overhang, the mast being located at 3ft. 9in. from the fore end of the l.w.l. With the ends of the waterline located, 15ft. apart, and a depth of 8in. laid off at No. 6 station, a batten was bent to make a fair curve through the three points thus located, this curve being kept rather round and full forward, but flatter and easier aft. The fore end above water was carried up to give a freeboard of 20in. forward, and a sheer line was drawn with a minimum freeboard of 11in., giving a little higher side in proportion than in Koko, but this was reduced after several trials, the final result in the way of a sheer plan being 4ft. forward overhang, 19in. freeboard at bow, 10in. at the lowest point, well abaft the midships and about 12in. aft.

The length and shape of the fore end were easily settled, the only considerations were the length required to dispense with a bowsprit, a reasonable amount of freeboard for such rough water as would certainly be encountered at times, and a fair sweep which would admit of the use of a single length of wood for the keel and stem, without the introduction of a knee at the stemhead.

The length and form of the counter were much more difficult to determine; as the simplest, lightest and easiest construction, involving little chance of a blunder on the part of a careless workman, the ordinary dry goods box stern of so many racing craft, a short, broad counter ended by a square transom made of a single thin plank, either vertical or with a slight rake, as in nearly all the Herreshoff boats, El Chico, Olita, Wenonah and Dacotah, had much to recommend it; however, after some deliberation, it was decided to make some small sacrifice to appearance and to at least the externals of yacht designing, and to carry out a regular yacht's counter with rounded transom and archboard. This part of the work was well executed by the workmen, the result being a counter that, if a little heavier, was certainly far handsomer and more shipshape than on any other of the fleet. The sheer plan as thus completed showed that at a lighter load waterline, of 7in. draft, the length would be reduced to 14ft. 1½in., owing to the small angles between waterline and keel line, especially aft.

The midship section was then taken in hand; that of Koko to the reduced scale being 2.11 sq. ft., with a proportionate displacement of 1,088lbs., or more than desired. A piece of tracing paper was laid over the body plan of Koko and a new midship section was sketched in freehand, of slightly smaller area, retaining the same angle of deadrise, with the flat of the floor about parallel to the water at the assumed sailing angle, but with one very important alteration. The beam at the deck was greatly increased, from 4ft. 10½in. to 5ft. 10in., not for purposes of stability, but as a seat for the crew to windward. The line of the floor was carried up in a fair and easy sweep and a light turn to the bilge, to this point, of 5ft. 10in. beam and 10in. freeboard, giving as a consequence a beam of 4ft. 9in. at the waterline, or an increase of 4in. over Koko. In the final running in of the lines this beam was increased to an even 6ft. The section thus drawn showed when measured by the planimeter an area of 1.92sq. ft. to the 8in. waterline, and an area of 1.52sq. ft. to the 7in. waterline.



In all small craft of this general type, with absolutely no deadwood or keel, the cylindrical coefficient of the displacement, or the coefficient as computed from the area of the midship section, is .55 or .56—that is, the actual displacement of a vessel in cubic feet is about 55 per cent. of the contents of a solid of the length of the waterline and of a uniform cross section of an area equal to that of the midship section. This imaginary solid is, for convenience, usually assumed to be a cylinder of the same length as the waterline, its section or end being a circle equal in area to the midship section. In this case the following calculations were made:

To 8in. waterline: 15 × 1.90 × .55 = 15 67 cu. ft. × 64 = 1,014lbs. Dis.
To 7in. waterline: 14 12 × 1.52 × .55 = 11.80 cu. ft. × 64 = 755lbs. Dis

Thus a weight of about 260lbs. would lighten the draft 1in. and lessen the waterline by 10½in.; or a weight of 65lbs would make a difference of ¼in. in the draft. From these figures it seemed that the yacht could be sailed at about the proposed l.w.l. of 14ft. 6in., and with 240sq. ft. of sail.

The next stage of the work, the completing of the lines, was necessarily done very hurriedly, as the builders were writing for the plans and all ready to begin work. While

the many details of type, form, dimensions, rig, weights, construction, etc., were fully and carefully worked out at odd times while the design was pending; after the main points were settled the lines were quickly drawn, being run in as fairly as possible to suit the eye, particular attention being paid to the buttock lines and to the sections of the bow. The areas of the sections were taken off with the planimeter and the displacement calculated as a check on the first rough estimates, but the curve of areas was not plotted until a long time after; no diagonals were run in, as the bow-buttock lines and the numerous level lines showed the form to be reasonably fair. With a little more time over the final fairing some of the hard spots that show in the lines could have been worked out, but not to an extent that would have improved the boat.

As soon as the lines were completed in pencil and the displacement and position of C. B. ascertained, the final sail plan was begun and worked out in connection with the locating of the centerboard and rudder. The mast was shifted a little from the position first proposed; the centerboard was located in about the only place that it could well go, having in mind the proper balance of sail, various structural necessities and space for the lifting arm to clear the mast and boom. After the sail plan was completed and the board and rudder located, the offsets were measured from the scale drawings and the entire lines were reproduced of actual size on a large sheet of detail paper laid down on the floor of the drafting room. Very little fairing proved necessary, owing to the number of stations and level lines, and the number and accuracy of the offsets. The six sawn frames were shown full size without planking; the rabbet, top of keel, details of transom, and the sizes and positions of frames, head ledges, deck beams and all other beams were drawn to the full scale. As soon as this work was completed and the drawings shipped to Clayton, the sail plan was finished and a number of blue prints made for the sparmaker, sailmaker, etc. The last work of all was the making of a full-size templet for the centerboard plate, of the patterns for the bronze lifting handle, rudder frame and other parts, all of which were made by the designer; and of wooden models, full size, of the hanging gear for the board, the chain plates, deadeyes, and similar details to be made of sheet metal. This was done as the surest and quickest way of having every part so that it would fit when finally assembled at Greenwich, as there was not time to send spars, sails, board, etc., to Clayton to be fitted complete before shipment.

The construction of the hull was decidedly lighter than that of any of the older Scarecrows, and was an experiment; but in no detail was strength sacrificed to lightness. The keel was of clear spruce, sided 4in. amidships and tapering to 2in. at the ends, being moulded to 2¾in. for the length of the trunk amidships and thence tapering quickly, being 1¼in. deep at the fore end, the stem head, and ⅝in. at the transom. In working it out the bottom was left flat for a breadth of 2in., forming a corner about ¼in. deep outside the rabbet amidships; then, after the planking was completed, this corner was planed off so that the bottom of the keel faired into the planking for its whole length, The fore edge of the stem was lined out to ¼in. and, with the whole bottom of the keel, was finally shod with a sheet of $\frac{1}{16}$in. brass. The keel was steamed and set on a form shaped from the lines on the floor to the exact keel contour and set up on the stocks. The main frames, six in all, at the fore end of the waterline, abaft the mast, at each bulkhead, abreast the trunk and at the after end of the waterline, were cut from hackmatack knees of the required sweep, being sided ⅞in. and moulded 1¼in. at heels, 1in. at bilge, and tapering to ⅝in. at heads. Between them, and spaced about 6in., were bent frames of rock elm, ¾×⅝in. from end to end. The heels of all the frames were jogged into the keel from below and well fastened, after the fashion of racing shell construction. Cross floors were used fore and aft, and the frame at station 15 was solid, of ½in. butternut, in one piece with the deck beam.

The planking was double, the inner skin of white cedar ⅛in. thick, running diagonally from the keel to the wale, the upper hood ends being fastened to the clamp or inwale. The outer skin was of $\frac{3}{16}$in. Spanish cedar, running fore and aft, and between the two was a thickness of Union silk, laid in paint.

The two bulkheads were of $\frac{3}{16}$in. cedar, also double, with silk between, the two layers crossing diagonally. Some consideration was given at first to the idea of omitting the bulkheads and building a very light hull, open from end to end, but stiffened by two full-length bilge clamps on each side of the keel; but this was abandoned in favor of the fixed water-tight bulkheads. The question of a high water tight floor, as in the Scarecrow, was also considered and dismissed in favor of the deep well, the floor being merely light slats on the frames. Another idea that was discussed and rejected was that of a plate centerboard of rectangular form and of considerable depth, not pivoted, but movable fore and aft, as well as vertically, in the trunk, as has since been done in Vesper, Olita and several other 15 footers. While this plan had much to recommend it in the absence of positive data as to the proper length, breadth and position of the knife centerboard in the new type of boat, and offered inviting opportunities for experiment, it was rejected in favor of the simple, fixed and pivoted board of the Linton Hope pattern. Arrangements were made for shifting the board a certain distance aft if necessary, but they were never used in practice, as the board proved in the proper position.

The deck beams were of butternut, ⅝in. by 1in., but made deeper at the ends to meet the clamp. The deck was of $\frac{5}{16}$in. white cedar covered with canvas. The hull was thoroughly braced in many ways, the mast in particular was very strongly stepped, and in all her racing no signs of wringing or weakness were ever visible. The weight of the hull, as already stated, was 355lbs. when put on the cars at Clayton, which included all the woodwork, but no fittings except the brass stem and keel bands, brass plate and eyebolts at stemhead, four chainplates, two for the runners, and the rudder tube. Unfortunately we have never been able to obtain the complete weights of all parts, but when officially measured, after over four weeks' immersion and consequent soakage, she trimmed to an average immersion of about ¼in. over the 8in. waterline. The displacement to this waterline was 1,022lbs., and when this measurement was taken she had on board, in addition to the 300lbs. representing the crew, a weight of 100lbs. of lead to be carried as fixed ballast. Allowing 78lbs. for the added displacement due to the immersion below the designed line, the total displacement would be in round numbers 1,100lbs., and deducting the weight of lead ballast there remains 1,000lbs. for the loaded displacement with crew, and 700lbs. for the weight of hull, spars, sails, fittings and gear. We shall give next week the sail plan and some further details of construction.

A Successful One-Design Class.

During the past season the Cohasset Y. C., of Cohasset, Mass., has held a number of races for the one-design class, of which ten boats were built last spring. These boats were built by James McIntyre from the designs of the original Scarecrow, as published in the Forest and Stream, but were rigged with the gaff mainsail instead of the Scarecrow leg o' mutton. Apart from the actual racing, they have proved most serviceable for sailing. The following account is by W. E. Robinson in the *Boston Globe:*

Although the Cohasset half-raters are not speedy enough to compete successfully with El Heirie, Glencairn, and the fastest of the class, they are still fast and handy little boats, and have admirably served the purpose for which they were built. The racing of the season at Cohasset has been even more interesting than was anticipated when the boats were ordered, and the members of the syndicate which built them are to be congratulated on the successful carrying out of the "one class, one-design" idea.

Club sport has been promoted, no little amateur talent in skillful helmsmanship and handling has been brought out and improved, and a foundation has been laid for even better sport in seasons to come.

Interest in the class and in its racing was not very great at the first of the season, but it increased very rapidly until boats were at a premium and the entire fleet of ten boats were found competing in the races. Since the boats were built from the same set of moulds, and were in every way exactly alike when delivered from the builders' hands, the question of winning has been largely one of good handling and attention to details. And in this fact has largely lain the interest aroused. It has been a contest of skippers as well as boats to more than the ordinary degree, yet the best of feeling has prevailed in the friendly rivalry, while at the same time no racing points have been neglected.

Built from designs by W. P. Stephens, after his well-known Scarecrow model, the boats were first intended for centerboards, but were afterward fitted with fin-keels, making them practically non-capsizable, and better fitting them for use in the frequently rough waters of Cohasset and its vicinity. The fins were made to hoist, so that the boats might lie easily on the flats in the harbor at low tide, but in racing all hoisting of the fins has been barred, so that all have sailed on an equality in the matter of draft, etc.

When fairly in trim the boats proved themselves easily handled, well balanced and decidedly attractive craft to manage, and the sport was in no way lessened by the possession of these and other good qualities.

The racing of the boats, while under club auspices, has been controlled by the association formed by the owners, and special care has been taken that no undue advantage has been given one over another. Thirteen races in all have been sailed, and the accompanying tables show what has been accomplished. The racing has been accompanied by the usual good and bad fortune to individual boats and owners, but the interest has never flagged, and no boat in the class could be reckoned a sure winner in a given kind of weather.

A championship trophy of some kind will be awarded the winning boat, and in the award of that championship the percentage system of the Yacht Racing Association of Massachusetts has been adopted by the owners' association. The first table gives the boats in their order under this system, showing starts, percentage, number of times fifth place or better was secured, etc. No boat is recorded as securing a place unless she defeated a competitor. The table speaks for itself:

	Starts.	Firsts.	Seconds.	Thirds.	Fourths.	Fifths.	Last place.	Did not finish.	Ruled out.	Per cent.
Swallow	11	6	0	0	2	2	1	0	0	.545
Hoodoo	13	4	3	2	0	1	1	0	0	.461
Mermaid	11	1	3	1	1	0	3	1	1	.250
Scooter	11	1	1	3	1	0	0	1	1	.204
Blink	12	0	3	2	1	1	1	1	1	.166
Seagull	8	1	0	0	0	1	2	1	0	.100
Jap	13	0	1	1	3	1	3	2	1	.075
Honey	6	0	1	1	1	1	0	0	0	.075
Mungo	8	0	0	2	1	1	0	1	0	.050
Bee	5	0	1	0	0	1	0	0	0	.050

For a better comparison, however, of the work of the boats, a "cross" table, as used by the writer for several years in the records of the knockabout and other classes, has been prepared. This shows just the number of times each boat has beaten or has been beaten by every other boat in the fleet. A boat's wins over other boats show in the horizontal columns, her losses in the vertical ones. The comparison is thus a very close one, and enables the owner to see just what his boat has done.

In this table the boats are ranked in the order of the number of series won or lost with each of their competitors. The order would be the same on a percentage of wins to losses. The winning, losing or tieing of the various series is as follows:

Swallow won 9; Hoodoo won 7, lost 2; Mermaid won 6, lost 2, tied 1; Scooter won 6, lost 3; Honey won 4, lost 4, tied 1; Bee won 4, lost 5; Blink won 3, lost 4, tied 2; Mungo won 2, lost 6, tied 1; Jap won 1, lost 7, tied 1; Seagull lost 9.

With these explanations the table will speak for itself:

	Swallow.	Hoodoo.	Mermaid.	Scooter.	Bee.	Blink.	Honey.	Mungo.	Jap.	Seagull.
Swallow	..	7	5	9	5	7	4	4	9	6
Hoodoo	4	..	7	5	3	10	5	7	10	6
Mermaid	4	4	..	6	3	5	3	6	8	5
Scooter	1	6	4	..	3	7	3	4	9	6
Bee	0	2	2	2	..	3	2	2	3	2
Blink	3	2	5	3	1	..	3	5	7	6
Honey	1	1	2	1	0	3	..	2	5	3
Mungo	2	1	2	3	3	2	1	..	4	3
Jap	2	3	3	2	2	5	1	4	..	5
Seagull	1	2	2	2	1	2	1	2	3	..

When the racing of the boats has been of so friendly a character, it is perhaps just as well not to institute invidious comparisons. The owners have raced for sport alone, and have taken their chances of good and bad fortune as they came. The racing has not discouraged anyone, but has stimulated ambition to hold a better place in next season's record if possible.

A continuance of the class and of its racing is already assured. Several new boats are in sight, and they will be built after the same style as the others, and probably from the same moulds, which McIntyre still has in his shop.

A different sail plan may indeed be found on the boats next season, but if one has it all will have it. In the last race the owner of Honey tried a mainsail similar to that on Glencairn, Spruce IIII. and other racers, a modification of the lug and a great favorite for small craft in British waters.

With its high peak the sail proved a better one for windward work than the old one, as well as being in several ways a much handier one, and it would not be surprising to see this rig adopted for the class.

For the award of the championship next season, plan has already been proposed which will put a high premium on entering in every race, and this, with other things the owners have in mind, shows that their interest in this class is a genuine one.

Club Elections.

Sodus Bay Y. C., Sodus Bay, N. Y., officers for 1897: Com., Spencer Meade; Vice-Com., Thomas E. Elliott, of Newark, N. Y.; Fleet Capt., W. H. Cook, Sodus Point; Sec'y and Treas., F. J. B. LeFebvre, Sodus Point; Surgeon, Dr. N. E. Landan, Newark, N. Y.; Meas., Dr. F. L. Wilson, Sodus Point; Chaplain, Rev. D. W. Cavanaugh, of Lyons; Trustees: C. H. Perkins, A. C. Bartle, J. M. Pitkin, Jr., C. H. Stuart, C. P. H. Vary, all of Newark. The regatta committee is to be appointed by the commodore, and also a committee of ten to raise $200 for the racing expenses next year. The annual report shows the club in fine financial condition. A new dock has been built and a new flagstaff has been presented to the club by Com. Mott, of the Oswego Y. C., and Com. Meade has decked it with a new 16ft. flag.

Shelter Island Y. C., Shelter Island, N. Y. Officers, 1897: Com., James B. Edson, yacht Palos; Vice-Com., James Weir, Jr., yacht Tigress; Rear-Com., J. N. Kalley, yacht Truant; Sec'y., C. Pliny Brigham; Treas., W. H. Bedford; Meas., C. P. Brigham; Fleet Surgeon, J. Lester Keep. Trustees: J. B. Edson, A. B. Lynch, Rev. J. A. Aspinwall, John Cassidy, J. Lester Keep, W. H. Bradley, Charles Otis, James Weir, Jr., D. P. Hathaway, H. L. Coe and T. A. Schroeder. House Committee: J. Lester Keep, W. H. Bradley and W. H. Bedford. The Regatta Committee will be appointed at a later date.

Oceanic Y. C., Communipaw, N. J. Officers, 1897: Com., E. Henkel; Vice-Com., Frank Van Winkle; Treas., J. Golden; Sec'y, J. Smith; Meas., E. Mesereau; Fleet Surgeon, R. Hawthorne; Steward, George Davidson. House Committee: James Pray, W. Rigmaiden, Benjamin Dubois and Daniel Hurlburt.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Rochester Y. C.

CHARLOTTE, N. Y.—LAKE ONTARIO.

Saturday, Sept. 26.

The Rochester Y. C. sailed the last race of the season on Sept. 26 over a 12-mile triangle in a moderate breeze, the day being rainy. The times were:

	Start.	Finish.	Elapsed.
Nox	11 30 06	2 05 43	2 35 37
Iris	11 31 40	2 31 34	2 49 54
Facile	11 31 09	2 32 14	3 01 05
Carita	11 30 22	2 32 34	3 02 12
Kelpie	11 32 21	Not timed.	

Small Yachts.

From Com. C. H. Rockwell, United States Navy.

U. S. Naval Station, Port Royal, S. C., Oct. 2.—"Small Yachts" came yesterday. It is far and away beyond my most fervent hopes. I am an old-fashioned sailor, and the book is a great delight to me. My daughter says that no one can get an answer from me now until I get through poring over the book.

I am just now engaged in turning a fine sailing launch into a perambulating house-boat and shall get many wrinkles from that admirable book.

YACHTING NEWS NOTES.

The second race of the series between Vencedor and Siren was sailed on Sept. 22, the pair starting in a gale. Vencedor gained a great advantage at the start and at last won by thirty-eight minutes, having outsailed Siren fairly. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Vencedor	2 15 00	4 44 30	2 29 30	2 29 20
Siren	2 15 00	5 22 55	3 07 55	3 07 55

Wanda, steam yacht, Henry S. Henry, of Philadelphia, has been libelled by the Harlan & Hollingsworth Co. for charges of $12,135 for repairs. She is laid up at Manning's Basin, where she was seized on Sept. 24 by a deputy marshal. She has since been libelled by J. R. Hudson for the sum of $319.

The New York Y. C. will in the future have a triangular course off Newport, Lieut. James H. Bull, U. S. N., having at the request of the club just laid off a new course with ten-mile legs. It will probably replace the old Sow and Pigs and Block Island courses of the club, sailed for so many years. It will be known as Course No. 6.

The new name of the steam yacht Unquowa is Buccaneer, given her by her new owner, W. R. Hearst. The yacht is now at Tebo's, under the charge of Chief Heilbron, formerly of Vamoose when Mr. Hearst built and owned her. Buccaneer has been thoroughly refitted and very much improved; the main saloon has been handsomely fitted up in carved oak. The yacht will make a cruise to the West Indies in a short time.

The annual handbook for yachtsmen, "Who Won?" compiled by Capt. J. C. Summers and published by Edward Yeomans Thorp, is now out for 1896, with the usual amount of useful information as to yachts, yacht clubs, signals, records, etc. The yacht list contains dimensions of over 5,000 American yachts, and 2,000 private signals are shown in the colored plates, besides the many club flags. The miscellaneous tables contain much information pertaining to yachting and nautical matters, making a very convenient and valuable reference book.

A new steam yacht has been designed by C. D. Mosher for C. R. Flint, and will be built this winter. She will be 122ft. l.w.l. and 12ft. 6in. beam, and intended for a speed of 38 miles.

Almy, steam yacht, Frederick Gallatin, passed Cape Race, N. F., on Oct. 1, bound west, and reached New York on Oct. 5.

Triton, schr., now owned by Mayor W. A. Wilkins, of Waynesboro, Ga., went ashore in the cyclone of Sept. 26 on the Georgia coast, but will be saved.

Rifle Range and Gallery.

First Battalion Trophy Shoot at Paterson.

Paterson, N. J., Sept. 26.—The First Battalion trophy was shot for to-day at Sall's Haledon Park. The four teams competing for the trophy were Companies A, B and C, from this city, and Company D, from Passaic.

In 1894 Company A won with a score of 267; in '95 the same team won the trophy, but with a higher score, its total being 278. To-day the team of Company C came out ahead with a total of 273, the Passaic (Company D) team crowding the winners so closely that the final result depended on the scores of the last two men on those teams. Company D is one of the latest additions to the regiment. Lieut. A. S. Jones acted as referee; Major Henry Muzzy, of the Second Regiment, was judge, and Sergeant Joseph B. Mills official scorer. Below are the scores:

Company A.		Company B.	
Pvt J W Foster	0453443—23	Pvt J H Twist	2253020—14
Sergt Andrew Hall	3443424—24	Pvt B F Chandler	0325443—21

J. Bacon, Captain.

Calumet Heights Rifle Club.

Chicago, Ill., Sept. 26.—In the weekly shoot of the Calumet Heights Rifle Club, Spaulding won in Class A and Miss Ervin in Class B. Scores:

Class A, 200yds., standard target, off-hand:

Spalding	5433443344—37	Harlan	3024334244—29
Paterson	3343455433—37	Davis	0333204344—27

Class B, 100yds., Creedmoor target reduced, rest:

Miss Ervin	5454454444—43	Mrs Chamberlain	4345333343—35

Patty.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Oct. 8-10.—East St. Louis, Ill.—Tournament of the King's Smokeless Gun Club.

Oct. 10.—Hackensack, N. J.—Team race, Maplewood Gun Club versus Bergen County Gun Club.

Oct. 14-15.—Greensburg, Ind.—Second annual tournament of the Greensburg Gun Club. Targets only. Web. Woodfill, Sec'y.

Oct. 16-17.—Tacoma, Wash.—Tournament of the Washington State Sportsmen's Association, under the auspices of the Tacoma Rifle, Rod and Gun Club. G. H. Garrison, Sec'y.

Oct. 17.—Hackensack, N. J.—Fifth monthly shoot of the New Jersey Amateur Trap-Shooters' League, under the auspices of the Oritani Field Club.

Oct. 23-24.—Marion, N. J.—Merchandise shoot of the Endeavor Gun Club. Targets. Entries in 100-target handicaps close Oct. 22, to A. R. Strader, 371 New York avenue, Jersey City, N. J., or to Carl von Lengerke, 8 Murray street, New York city. Entries to be accompanied by $2 forfeit.

Oct. 27-28.—Elizabeth, N. J.—Eighth bi-monthly tournament of the Elizabeth Gun Club. First day, targets; second day, live birds.

Oct. 28-29.—Liberty, Ind.—Tournament of the Red Owl Gun Club. Live birds and targets. R. A. Creek, Sec'y.

Oct. 28-29.—Ironton, O.—Third annual tournament of the Iron City Gun Club. Targets.

Nov. 7.—Hackensack, N. J.—Cup contest, under the auspices of the Bergen County Gun Club. C. O. Gardiner, Sec'y.

Dec. 1-3.—Trenton, N. J.—Proposed contest for live-bird championship; 100 live birds per man, $100 entry. Under the management of Charles Zwirlein.

1897.

Jan. 4-5.—Prescott, Arizona.—Fourth annual tournament of the Arizona State Sportsmen's Association, under the auspices of the Prescott Gun Club. Roy Hill, Sec'y.

January.—San Antonio, Tex.—Second midwinter tournament, under the management of Oscar Guessaz, etc.

March 23-25.—New York City.—The Interstate Association's fifth annual Grand American Handicap at live birds.

April 15-17.—San Antonio, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

June (third week).—Cleveland, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Trap-shooters in Richmond, Va., are said to need some stirring. Below is a brief account of a shoot held there Sept. 26, furnished us by a correspondent in that city: "The biggest shooting event ever held here took place at the West End Baseball Park, Saturday, Sept. 26. Many of the most prominent shooters in this city took part. Shooting commenced at 1:30 P. M. and continued until dark. Two hundred and twenty-five live birds and many targets were released, but only a few succeeded in making their escape. The first event was at 25 live birds, 30yds. rise, 70yds. boundary. The winner of this event scored 22, which must be considered a good score for an amateur. The second event was at 10 live birds, same rise and boundary. The winner scored 10 straight. Messrs. T. W. Tignor's Sons, sporting goods dealers of this city, donated as a prize a handsome gun case. Everybody wanted to win it, but only one man was able to lay claim to it, and he carried off most of the prizes that day. The shoot was a success in every respect except that the public took little interest in it. The managers of the affair hope to have a larger crowd present to witness their next efforts."

The ninth annual tournament of the Iroquois Rifle Club, of Pittsburg, Pa., will be held Oct. 12-15. The programme for trap-shooters is not extensive, but the rifle programme is a good one. For the trap-shooters who are not members of the club Thursday, Oct. 15, is the only day. On that date there will be twelve events shot; ten of them will be at 15 bluerocks and two at 10 bluerocks. The 10-target events are $1.20 entrance; the 15-target events are $1.50 entrance. There will be a handicap for shooters, which runs as follows: "Class A will shoot from known traps and unknown angles; Class B will shoot from known traps and angles. Shooters in Class B winning or dividing first money will be advanced one class, and shooters in Class A failing to win in one event will shoot from the next lower class. Money divided 40, 30, 20 and 10 per cent. Shooters dropping for place will be barred. Lunch will be served, and shells will be for sale on grounds. Trains for Howard leave Union Depot at 10 and 11:40 A. M., and 1:05 and 3:20 P. M.

The dates for the tournament to be held at Ironton, O., under the auspices of the Iron City Gun Club, have been changed to Oct. 28-29. Mr. H. E. Norton, of that club, writes us under date of Oct. 2 as follows: "The dates for the Iron City Gun Club's tournament have been changed to one week later, owing to the Louisville tournament being held on the same dates as those we had chosen. Programmes will be mailed Oct. 8 and the tournament will take place Oct. 28-29. Quite a number from Marietta, Cincinnati, Columbus, Dayton, Portsmouth and Huntington will be present, and the club has every reason to believe that the shoot will be a success in every way. The live-bird match between Messrs. West and Verges vs. Stevens and Clarke will be shot the last afternoon for a purse of $400, and will be well worth seeing."

George Cubberly did some capital shooting at Charlie Zwirlein's grounds, Yardville, N. J., Oct. 2. He shot in 7 miss-and-outs, $5 entrance, and scored 55 out of 57. He divided 5 of the events, running at one time 40 straight. Winston also did good work; he shot at 41 birds and scored every one of them except the last one. Among those who took part in the sweeps was Jack Brewer, Bland Ballard, James Timmons, Eddie Hill, I. W. Budd and Charlie Zwirlein.

The W. Fred Quimby Co., the New York end of the Hunter Arms Co., the Empire Target Co. and the Hunter bicycle, has removed its headquarters to 300 Broadway, three doors above its old stand at 294. Fred will be found for a short time at least in the rear of the store at the above number. The cause of this removal is the plan for erecting one of New York's sky-scrapers on the site of his old location.

Noel E. Money, secretary of the American E. C. Powder Co., was unlucky enough to run a nail into his foot on Sept. 25. The wound was not only painful, but a severe one, Mr. Money being unable as yet to wear a shoe on the injured foot. The accident came at a bad time, as it has delayed his starting on a trip to Maine to school his foxhound puppies on Maine foxes prior to the trials of the Brunswick Fur Club.

The Rose system was given a good trial at the Pennsylvania State shoot at Harrisburg last week, and stood the test very well. That shooters know a good thing when once they have tried it is plainly shown by the fact that few programmes reach us now that do not include the sentence: "The Rose system of dividing purses will be used at this tournament."

The series of interclub team races that was gotten up by the Cook County Trap-Shooters' League, of Chicago, has proved even more successful than its promoters had hoped for. Nothing booms the sport better than friendly team races between clubs conveniently located for such gatherings.

Mr. E. A. Worthen, president of the Lake Side Rod and Gun Club, Burlington, Vt., says in a personal letter to us, dated Oct. 3: "Mr. B. H. Norton, of the Hazard Powder Co., was here this week and made one of our party at the Cambridge tournament. We made a great effort, but the wind played the dickens with the scores."

The return match between J. L. Winston, of the Austin powder, and Gustave Langen, who shoots under the name of Count, which was arranged to take place last week at Yardville, N. J., did not come off owing to Langen having hurt his arm. It will take place, however, some day this week at the same place.

The programme for the Marion merchandise shoot, to be held by the Endeavor Gun Club, of Jersey City, N. J., Oct. 23-24, is one that should attract a lot of shooters of the amateur class. The management of the club is making strenuous efforts to have the affair a complete success.

Paul Litzke writes us that, though the South has had a lot of tournaments this year, trap-shooting is scarcely on the wane, several tournaments being on the list for the next few weeks. There is very little going on in the way of trap-shooting in the South that Paul does not get wind of.

A correspondent writing to us from St. Johnsbury, Vt., under date of Sept. 30, sends us the following interesting item: "Some of the sportsmen of St. Johnsbury have become interested in trap-shooting, and last night formed a temporary organization, with J. W. Titcomb as president, and H. A. Belknap secretary and treasurer. The club has been practicing for some time, but as the interest increased it seemed best to have a permanent organization and adopt a form of constitution and by-laws, which will be presented at a subsequent meeting."

The conditions of the cup contest, offered by the Bergen County Gun Club for competition at its grounds on Nov. 7, have not yet been decided upon. President Bell, of that club, is busily engaged taking a census of the opinion of the local shooters on that point.

Live birds at Baltimore, and targets and live birds at Newburgh, N. Y., will keep the shooters busy in this section this week. It is a pity that Baltimore did not choose next week for its shoot, and thus give shooters a chance of attending both tournaments.

It is within the bounds of possibility that the Knoxville (Tenn.) Gun Club may decide upon giving one of its old-time tournaments. The Van Gilders, John Connor, Judge Lindsay, etc., are good material to work on when it comes to giving a shoot that the boys like.

Rolla Heikes will be in this city some time time this week. He will make a short stay in the East, but expects to get to Swan Creek, Mich., in time to stop a few snipe and some ducks on their way to spend the winter in the South.

The team race between the Maplewood (N. J.) Gun Club and the Bergen County Gun Club, of Hackensack, N. J., which takes place Saturday, Oct. 10, on the grounds of the Bergen County Club, will be an interesting affair.

The Red Owl Gun Club, of Liberty, Ind., will hold a tournament at live birds and targets, Oct. 28-29. The secretary, Mr. R. A. Creek, will be pleased to furnish all information desired by inquiring correspondents.

Jim Elliott is not the only person who is wondering where all those people are who seemed so anxious to shoot him a race or two at live birds less than three months ago.

Oct. 6. EDWARD BANKS.

Position of the Gun versus Sportsmanship.

BUFFALO, N. Y., Sept. 22.—*Editor Forest and Stream:* I am a reader of about all the prominent sporting papers (I should perhaps say "sportsmen's papers") published in the country. I read them as a rule from end to end, advertisements and all. It may be that I do so because I love sport and all that pertains to it, or it may be that I do it because I have plenty of time on hand, or again it may be both of the above reasons. Anyhow I've got some time to spare just now and my bosom needs unburdening, so I'm going to make you my victim.

A few weeks ago I read some letters in a paper urging the adoption of some more "sportsmanlike" method of holding the gun at the trap. It seemed to me when I read those letters that the writers had missed the mark about as badly as they probably would have done had they tried their hands at live birds or targets under the present conditions at shoots of any kind. They did not consider that the two branches of shooting, trap and field shooting, are as widely separated by natural conditions as they possibly can be. The trap, as a means for teaching a man to handle his gun in the field, is useful only in so far as it accustoms a man to handle a gun freely and easily, teaches him what his gun will do, familiarizes him with the use of powders, and above all, and often by bitter experience, teaches him that he must lead crossing birds—something that it takes him some time to learn if he only does a little field shooting each season, and only finds the usual quantity of game our woods are blessed with nowadays.

In the field—that is, both in brush and open meadows—I have done a great deal of shooting in my time. Speaking from experience, I would say that nine-tenths of my game has been killed at distances varying from 15 to 30yds. from my gun; the other one-tenth has been stopped sometimes under 15, but rarely over the 30yds. limit. Quail when pointed by a dog lie close enough at times for one to step on them; occasionally, where they have been shot at much, they rise wild. My position when going up to a dog on a point on quail is this: I grasp the gun easily with both hands, the left hand holding the gun just about the end of the fore end and the right hand just behind the trigger guard, with the first finger ready and itching to feel the trigger; my right forearm lightly touches the comb. If a quail jumps wild my gun comes up easily without loss of time, and my left arm is slightly bent (I do not and cannot believe in the stiff left arm business); in brush, where one has to shoot quick, my position and motions are just the same. In the open, when birds lie well, he is a poor sportsman who snaps his birds. Sneaking up to a dog on a point with an old cock partridge (ruffed grouse) before him, I get my gun a little nearer to my shoulder, for one needs all the time one can get on a gentleman of that kind. The above is how I do it, but I don't say that it necessarily follows that it is the right and the only way. When I learned to shoot I wanted meat, and I chose the way that came naturally to me and which seemed to get me most meat.

Now for the trap. Who has not heard some old-timer say: "Look at that fellow with his gun glued to his cheek! He'd be a pretty sight in the field, wouldn't he, if he acted like that?" That sentence, with variations, has doubtless greeted the ears of many of your trap-shooting readers. My answer invariably is: "Circumstances alter cases." Another remark one hears often is: "Why don't they hold the gun below the elbow like we used to do? That's a sportsmanlike way of shooting." Now I don't believe there is a single man who habitually shot "gun below the elbow" matches who would ever think of putting himself into the ridiculous figure-of-four position assumed at the trap on such occasions if he was walking up to a dog on point. If that is a sportsmanlike position I'm no sportsman, and never will be, I'm afraid. The one-barrel business was cruel, to say the least. Many birds shot at in matches where "one barrel only" was allowed escaped badly maimed, when a second barrel would have put them out of their misery. If we are bound to impose suffering on birds, let us at least put them out of their pain as soon as possible. The skillful use of a second barrel on a hard bird, whether in the field or at the trap, is to my mind the height of skill in shooting. How many men can place their second barrel effectively?

The "gun in any position" rule was probably made not through any sympathy with the birds, but simply because it was impossible for any referee, however good, to decide accurately all the time whether the bird *was* on the wing before the gun was put to the shoulder. It is pretty hard to keep your eye on two things, both of which need watching. With an inefficient or dishonest referee there was plenty of room for trickery, and plenty was practiced.

As trap-shooting is carried on nowadays, the conditions are generally hard enough. Live pigeons are usually liberated from 28 to 30yds. from the shooter. He has to be very quick and accurate to stop his bird within bounds; there is a big difference between 21yds. rise and 28 or 30yds. rise; there is also a big difference between the conditions of game shooting and trap-shooting as at present practiced. Then take shooting at clay targets. Ruffed grouse and quail get up and away very quickly, but none of them get away for the first 20yds. as fast as a bluerock or empire leaves the trap. Experts show us by their work, and as a result of their experience, that the gun to the shoulder is the best position for making good scores, and that is what the boys are after. I have noticed that many thoroughly good sportsmen soon adopt the gun to the shoulder when they start in trap-shooting. They want to excel and they take what they have learned is the best position.

There is also another phase of this matter that needs a little notice. A bird lost in the field through slow work with the gun does not amount to much. Frequently it can be followed and flushed again. A clay target lost, or a pigeon lost at the traps, means dollars out of pocket and ultimate defeat. Don't lose sight of the fact that it is victory and dollars, or dollars and victory, at the traps as a rule. There are exceptions to the rule, but those exceptions occur only at the home shoots of gun clubs, never at tournaments, be they large or small.

Now, gentlemen, I have had my say, and I should like to hear what the other side has got to say. Don't put this in the waste basket and I will be grateful to you, because I rather like it and want to find out whether I am right or not. 43 GRAINS.

Calumet Heights Gun Club.

CHICAGO, Ill., Sept. 26.—Below are the scores made to-day in the regular weekly shoot of the Calumet Heights Gun Club. A strong wind blew in from the traps and all targets were hard to get, many sky-scrapers among them. Paterson won in Class A, Metcalfe in Class B and Black in Class C. Scores:

Class A.

Paterson.....11101111111111111111111111—24
Lamphere.....11001111110111011111111101—20

PATTY.

Cook County Trap-Shooters' League.

CHICAGO, Ill., Oct. 3.—The eighth and final shoot of the series of interclub matches of the Cook County Trap-Shooters' League for the year of 1896 came off at Garfield Club grounds to-day, this finishing a pleasant and important feature of the season's shooting record at this city. The previous dates of these League shoots were April 25, May 16, June 20, July 18, Aug. 5, Sept. 5 and 19, results of which have appeared in these columns. The attendance to-day was hardly what was deserved by so prominent an event. It is likely that the presence of the field shooting season had much to do with the absence of many devotees of the trap who are connected with the League. To-day only two clubs, Eureka and Garfield, filled A Class teams. Eureka B Class was alone. No club filled C Class team, Calumet Heights being nearest with five men. Lack of interest may have perhaps also been due to the fact that the competition was really over before his shoot, and the main places already foregone in conclusion. Eureka Club A Class kept up her strong lead, and lands first on the season club total. As was predicted, Garfield B Class had a cinch on the season club averages, and Calumet Heights landed first in C Class. This is a good club distribution of the League Grand Prizes. The beautiful Mussey Trophy (which was long ago fully described in these columns) offered by the representative sportsman, Mr. W. P. Mussey, goes to Eureka Club, which lucky association will have a bit of silver of which they may justly feel very proud, for there are few more genuinely worthy sporting trophies out in the country than this one. The second grand prize, the Montgomery Ward & Co. silver cup, deserves almost as high praise as can be accorded the capital prize, and shows the enterprise and taste of the well-known and powerful house. The set of Expert Blue Rock traps and pull are standard goods which Calumet Heights Club will use and enjoy every week in the year.

In the season individual averages a surprise was in store. Dr. Shaw had a bit of reserve speed up his sleeve in the homestretch, and landed the first open-to-all individual prize, the L. C. Smith ejector shotgun, which is a joy forever also, because it will last forever, sure. Eddie Steck dropped back to second place and won a split-bamboo fishing rod, with which he can break targets when it is folded up. In third place there was an interesting tie between Stannard, of Eureka, Lanphere, of Calumet, and Kuss and Hicks, of Garfield, who shot even on the season's totals. Really Mr. Steck shot for Mr. Lanphere to-day, the latter being obliged to leave, but the totals at the end of the 25 tie birds showed Hicks in the lead with 22, Stannard next with 21. This tie was shot at the three center traps, traps unknown, fixed angles, 5 down. The prize so pluckily won by Mr. Hicks is a fine big refrigerator, which will come handy this winter. It is a cold refrigerator when Mr. Hicks gets left. The consolation prize for low men in the club at each contest, a keg of Du Pont smokeless powder, was won by J. Church, of Douglas Gun Club. These are the more important prizes, and the only ones on which results can be figured at this date, the club record needing long figuring before all the results can be established by the League secretary. Of these there are six prizes in each class of A, B and C. The first in the A Class is the E. C. challenge cup. The first in B Class is a Remington shotgun. The first in C Class is a Marlin rifle. The other prizes hold out in equal scale of value, the total scale of merchandise prizes being the most uniformly appropriate and valuable one has ever noted offered in a competition at the traps of a nature similar to this. The League shooters may feel themselves very well appreciated and very well rewarded for their faithfulness.

FOREST AND STREAM offers besides to-day's scores a table showing the record of every man of the League in the club contests for the entire season, which is really the news of the League's work in a nutshell:

To-day the crowd of non-shooters was better than that of the shooters, a goodly number of spectators being on hand, in spite of the horribly muddy condition of the grounds, due to the late heavy rains. Among the ladies present were Miss Kelley, Mesdames Hicks, Russell, Kuss, Richards and Rowe. Mrs. Hicks acted as cashier, and did it so pleasantly that a man who only drew down 47 cents felt entirely satisfied with the world. Among the visiting sportsmen was Mr. E. S. Rice, of Du Pont shoot fame. All went off very smoothly, including the magautrap, which turned out copy for the entire push with great regularity and ease and with one hand tied behind its back. At the close of the regular events sweepstakes shooting was taken up and followed until pitch dark, the shooters stooping down on their knees at times to catch sight of the birds in the darkness.

It may be said that the season closed with the trap-shooting enthusiasm at as keen a pitch as that which marked the first shoot of the year. The League organization was a grand idea, and has added to the interest in the sport at Chicago to a very great extent. It has been of distinct benefit in increasing the feeling of comradeship among the different clubs, always a most desirable thing. It is certain that next year's record will have an equal and possibly a greater interest to the lovers of the sport of the traps. Following are the scores of to-day's events:

MISS-AND-OUTS AT ZWIRLEIN'S.

Oct. 2.—Nine shooters, all of them top-notchers, had a good day's sport at Yardville to-day. Some excellent shooting was done by some of those present, particularly by George Cubberly and J. L. Winston. Seven miss-and-outs were shot, $5 entrance, the results being as given below:

W. H. HUCK, Sec'y.

Team Race at Fort Dodge, Iowa.

FORT DODGE, Iowa, Sept. 21.—Below find scores made to-day in a match between the Dayton and Fort Dodge Gun Clubs. Conditions: five men on each team, 20 live birds per man, five unknown traps, A. S. A. rules. The birds were a fine lot, good flyers and strong. A northwest wind, blowing about forty miles per hour across the traps, carried many birds out which would have been scored on a calm day.

F. M. D.

Pennsylvania's Sixth Annual.

The Pennsylvania State Sportsmen's Association's sixth annual tournament was held at Harrisburg, Tuesday-Friday, Sept. 29-Oct. 2. The shoot was given under the auspices of the Harrisburg Shooting Association, one of the most influential organizations of the kind in the State of Pennsylvania. The club is a strong one, and numbers among its members some of the most active and most prominent men in the State Association.

Of this tournament, and of the treatment received by the guests at the hands of its hosts, it would be hard to find anything to cavil at. The tournament was certainly a successful one, although the attendance was not up to what it has been in years past; that, however, is due more to hard times than anything else. Empty pocketbooks are bad things to go to a shoot with, and it's empty pocketbooks that most people have nowadays. The programme could not have been at fault, because the programme of events was so arranged that it did not require a large outlay of money to get along with. The tournament, therefore, must be classed as a success as times are now. As for the treatment of the visitors, surely that was all right. What reception could have been warmer than the one Harrisburg gave her guests on Tuesday? Seven fires and a cyclone don't get around together every day, and it's few cities that can afford such luxuries anyway! That cyclone was a dandy, too. It commenced about half an hour after midnight, what may be said to be the shank of the evening for trap-shooters! Some of the early birds, such as Winston, Justus von Lengerke, Dick Swiveller, etc., had gone to bed and to sleep. When the storm burst on the city the racket it made aroused the three above named, each of whom, we are credibly informed, at once rose up and made for the fire escapes. Our reception in Harrisburg was certainly warm and wet, for if ever rain fell on the earth it fell that Tuesday afternoon. The last two events were shot off that afternoon in a rain that came down in sheets, driving right into the faces of the shooters, wetting them through and through. A glance at the scores in those events will help to tell the tale.

The question as to how far rain drops deflect shot was raised and argued freely. We never remember having seen prior to that afternoon the course of a charge of shot through the rain. The shot cut a swath through the sheets of rain, its course being plainly marked by the scattered rain drops. The dark background of woods probably helped to make the course of the shot plainer than it would have been had there been no such background. It was a curious sight, but it made the wetting none the more pleasant. As to the background, the less said about that the better; the Harrisburg boys know that it is about as bad as it could be, so we will say no more, save to state that at present they can't get any other. The traps faced to the east of north; in front, some 300yds. away, was a rise in the ground that might by a stretch of imagination be called a hill. It was not a high hill, not in the least, but it was clothed with a lavish growth of hardwood trees that made the background about as hard as it could be. To make things worse, the foliage on these trees was turning and taking on the tints of fall; there was just enough yellow in the color of the leaves on the trees to make the paint of the targets about a match for them. But strangely enough the black targets, that is, those without any paint at all, and there were any quantity of such trapped, were worse to see than those that had a little paint on them. It was hard shooting, and only strict attention to business, together with a straining of the eyes, that gave one almost the fixed look that properly belongs to the bicycle face, made good scores possible.

Elmer E. Shaner was in charge of the shoot, and had things very nicely fixed. There was plenty of room for all, had the attendance been twice as big as it was. The cashier's department was in charge of Harry Gough; all shooters who have taken part in previous tournaments of the Harrisburg Shooting Association know Harry Gough and know what he can do in his department. No. 1 set of traps was used for the State events. The officials at this set were: Referee, David McCormick; puller, John Conway; manifold man, Wellington Jones; blackboard, C. C. Fickle. At the open-to-all set of traps the officials were: Referee, J. B. Ready; puller, Harry Stroh; manifold man, Ellwood Barns; blackboard, Joe Braire. B. S. Smith was "extra," and was on hand to do anything there was to be done. The position of referee was not a pleasant one, as it required very earnest attention to his work to enable him to do it properly. As it was, the strain on the eyes must have been very severe, and we are only astonished that there were not more mistakes made and more kicks registered. Both mistakes and kicks were very few and far between—very agreeably so.

Fuller Worden and his brother, Jim Worden, could not both get away from business at the same time, so they took it by turns to be chained to business and shared the days off. Brewster, Sullivan (one of the staunch supporters of Forest and Stream, and one who has been taking it ever since it was first offered to the public), Harry Dill, Wellington, etc., all active members of the home club, were on hand all the time and shot through the programme. The mention of the above six names brings up the question as to whether there are no new shooters of note in Harrisburg? Is there no young blood in such a large city?

From out of town came a strong contingent: Rolla Heikes and B. A. Bartlett, experts, representing the Winchester Repeating Arms Company; Justus von Lengerke, of the firm of Von Lengerke & Detmold, of New York, the agents in the United States for Schultze Powder Company, of Englan ; J. L. Winston, representing the Austin Powder Company, of Cleveland, O.; Captain A. W. Money, of the American E. C. Powder Company, Oakland, N. J.; Howard and Du Pont Collins, of Baltimore, the latter representing both the Du Pont and Hazard (Blue Ribbon) Powder Companies; J. S. S. Remsen, of Brooklyn, N. Y., one of the best young shots in that part of the States; E. H. Kniskern, formerly with the Wilkes-Barre Gun Company, but now a representative of Schoverling, Daly and Gales, shooting a Daly gun and Walsrode powder; W. L. Colville (Dick Swiveller), of Batavia, N. Y., the Eastern end of the United States Smokeless Powder Company, of San Francisco; etc.

We have omitted purposely all mention in the above paragraph of the representative of King's Smokeless. We did it with malice aforethought, being of the opinion that Mrs. M. F. Lindsley should have a small paragraph all to herself. The King Powder Company is a wise corporation; it keeps Milt Lindsley at home making powder, while Mrs. Lindsley comes East, visits her old friends and makes new ones for the powder her husband compounds in the mills along the banks of that little river in Ohio It is Milt's loss, but it is our gain.

The shooters of the State did not turn out as they should have done, or rather as we hoped they would have done. Among those present were: John Shaaber, Brooke Harrison, John Coldren, John Ritter and Moore, of Reading; John Thurman, Harry Thurman, W. H. (Billy) Wolstencroft, H Landis, David H. Ridge, D. Longenecker and Joe Leaming, all members of the Keystone Shooting League, of Philadelphia; George Anderson and John Burton, of the Florist Gun Club, of Philadelphia; W. H. Stroh, George Addison and George F. Nesbitt, members of the Luzerne County Sportsmen's Club; A. L. Hoffmeister, Hartmann, Moyer and J. O'H. Denny, all from Pittsburg: William Brennan, of Hatboro, who shot under the name of Duke; Krueger, Corcoran and W. H. Burnham, of York, the latter the ex-champion of the State at targets; E F. Slear, of Sunbury; J. M. Runk, of Chambersburg; M.M. McMillan, of Mahanoy City, ex-champion of the State at live birds; Anderson, of Lancaster; etc.

The above list causes us to wonder where were the following: the King brothers, Bessemer and John Shafer, of Pittsburg; Bill Clark, Kotty, Killits, Clover and Sands, of Altoona; Millspaugh, Nelse Hughes and Abercrombie, of Williamsport; Billy Fieles, of Christiania; Schmeck, of Reading; Fen Cooper, etc.? There were a lot of them marked absent when it came to roll call.

As regards the running of the shoot, there was nothing left undone that could have added to the smoothness with which everything moved along to a conclusion. The traps worked well, Al. Hebbard, of the Empire Target Co., looking after them in conjunction with Elmer Shaner. The traps used were bluerock expert traps and empire traps, empire targets being thrown during the whole tournament. The rest of the story of the tournament, its ups and its downs, together with a complete record of the scores made in all the events, are given below under separate heads for each day's work.

FIRST DAY, SEPT. 29.

The wet weather of to-day was against good work in the late hours of the afternoon. This will be noticed particularly in Nos. 4 and 5 of the open events. Below is a table of the events open only to residents of the State:

STATE EVENTS.

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	*15*	*20*	*15*	*50*	*20*	*20*	Targets:	*15*	*20*	*15*	*50*	*20*	*20*

*The totals in this column include the scores made on the extra targets allowed the shooters.

INDIVIDUAL INANIMATE TARGET STATE CHAMPIONSHIP.

The main event on the programme for shooters of Pennsylvania only was the individual target State championship trophy donated by Wm. Wolstencroft & Sons. This was shot at 50 targets, known traps and angles. George Nesbitt, the popular shooter from Wilkesbarre, carried off the trophy with 47 breaks. He ran 33 straight before dropping a single target. The detailed scores are as below.

Fuller.....11111111101101111001001110101011111010100011111010111—35

(This trophy was won at Philadelphia last year by W. H. Burnham, of York.)

THE GOLD DUST EVENT.

This event was a handicap shoot at 50 targets, with extra allowance of targets. The entrance fee for this event was $1.50, with an optional sweep of $2. The United States Smokeless Powder Company donated 20lbs. of Gold Dust powder and $10 in cash; F. R. Leib, of Harrisburg, also donating $15 to this event. Howard shot well and won with 50 out of 54. There were four others close after him with 49 each, Rolla Heikes rolling up the excellent total of 48 out of 50. The detailed scores were as below:

Heikes (0).....10111111111111111111111111 11111111111111111111111011—48

In the schedule for the open-to-all set of traps there were three 20-target events and one 100-target handicap race for the E. C. cup, donated by the American E. C. Powder Co. The details of this event appear elsewhere, together with an account of the race itself. The scores made in the three other events were as follows:

THE E. C. CUP CONTEST.

There were 28 entries in the 100-target handicap race for the cup presented by the American E. C. Powder Co. The conditions were: 100 targets, unknown angles, handicap allowance of extra targets to shoot at, $3 entrance, optional sweep of $2, $30 added by the Harrisburg Shooting Association.

The highest score made on the first 100 targets, that is, without the handicap allowance, was one of 93 by Howard. Heikes and 147 were next with 92 each. There were a whole lot of 91s, among them Remsen, who proved to be the ultimate winner, with 100 breaks and three more targets to shoot at. He shot to-day in far better style than yesterday; in fact, he shot what we consider to be his true form, as anywhere from 90 to 92 should be his average for four 25-target events. Those who finished close behind him were W. H. Wolstencroft (8), Brewster (12), Hoffmeister (14) and Moyer (16), both of Pittsburg, all the above scoring 98. In the 97 hole came Howard and 147, both with 5 handicap, and Thurman (6); Landis (8) broke 96; Edwards (5), Coldren (8) and Duke (12) broke 95 and managed to secure a portion of fifth money. In the optional sweep the money in the purse was divided on the scores made in the first 100 targets shot at. Howard took first money for his 43; Heikes and 147 second for 92; Bartlett, Edwards, Remsen and Thurman, third, with 91 each. Fourth money went to Justus von Lengerke and W. H. Wolstencroft with 90; fifth to Landis with 89.

The detailed scores given below tell the story of the race. Some idea of the difficulty of the shooting may be gathered from the fact that no straight 25 was made in any but the third round. In that round Bartlett, Landis and Coldren each went straight; 24s and 23s were plentiful all the time, but 25s were hard to get.

Squad No. 1, termed "the awkward squad" by Elmer Shaner, broke just 540 targets out of the 600 shot at in this race. The totals for each string were 131, 136, 135 and 138 respectively out of the 150 targets shot at in each round. In the last round the 138 was composed of two 24s, two 23s and two 22s; this round was shot on the No. 1 set of traps on which the State events had been decided. Scores were:

THIRD DAY, OCT. 1.

This was a day of periods of warm sunshine interspersed with cold and threatening skies that made the target shooting harder than ever. Rolla Heikes's work in the Parker Brothers' event, the 100-target race in which he scored 97, was something that could hardly be duplicated. That event is given special notice below.

In the State events the American Wood Powder trophy for three-men teams was the main event. In the table run below No. 5 was a merchandise event.

The team race is treated of elsewhere. No. 5 was a merchandise prize event. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

THE THREE-MEN TEAM CHAMPIONSHIP.

The contest for the trophy donated by the American Wood Powder Co. for the three-men team championship of the State was a pretty one, four teams entering for the event. The Keystone Shooting League continued its good team work of the previous day and walked off with this trophy also. That young member of the State Sportsmen's Association, the Florist City Gun Club of Philadelphia, went to the score and took second place, being defeated by only 5 breaks for the trophy. The conditions of the event were: 25 singles, known traps and angles, and 5 pairs. Detailed scores were as follow:

Keystone Shooting League.

THE CONTEST FOR THE PARKER GUN.

The 100-target handicap event for the ownership of the gun donated by the firm of Parker Bros., of Meriden, Conn., was a special feature of the programme of open events for this, the third day of the shoot. The handicapping committee was the same as that which officiated in a like capacity yesterday and also on Tuesday; it was composed of two members, Jacob Fentz and Elmer E Shaner, both being non-contestants. The rule that no shooter could score more than 100 targets was adhered to, and as a result there were four ties for first place and the gun. The shoot-off of the tie was a very pretty piece of target-shooting, the four men breaking the targets in great shape.

The feature of this race was Rolla Heikes's 50 straight on his first 50 targets, and H. P. "Du Pont" Collins's 25 straight in the third round of 25. When Collins broke his last target in the 25, pandemonium reigned for a few minutes, all who were not shooting having come up to witness the finish when it began to be rumored around the grounds that "Collins is going straight down there." His startling change of form was a fruitful source of conversation for the balance of the day and a great part of the night, while his right hand must have ached as a result of the handshaking he had to go through.

Squad No. 1, Elmer Shaner's "awkward squad"—Heikes, Bartlett, Edwards, Howard, Von Lengerke and Capt. Money—did some good team work in this race, breaking 544 out of 600 shot at. The squad lost only 10 targets out of the first 150, and only 12 out of the second 150, breaking 278 out of 300. In the second half of the race the squad lost 34 targets of the 300 shot at, breaking 266, an average of 88 6, and making an average for the whole 600 of 90 6. Rolla Heikes's 97 had a good deal to do with it, the rest of the squad finishing their 100 targets as follows: Bartlett and Von Lengerke 91 each, Howard 89, Capt. Money 88, with Edwards low man with 87. Harry Dill (Henry) broke 93 out of his 100, and attributes his ultimate loss of the gun to his having to change loads owing to his running out of shells. Remsen shot well again to-day, and was second to Heikes at the end of the first half with 48 out of 50. He fell down on the last 50 just when he looked like a sure tie man, breaking only 43 and, with his handicap, landing 3 targets short of 100. Fuller Worden made good use of his handicap of 20 targets, and came within 1 of making 100.

The result of the handicap race, in series of 25 targets, unknown angles, is given below, the figures in the column marked "handicap" giving the totals broken out of the handicap allowances:

	1st 25.	2d 25.	3d 25.	4th 25.	Hcp.	T'l.
H Landis (8)	23	23	23	25	6*	100
Henry (14)	23	24	24	22	7*	100
Capt Money (14)	24	20	23	21	12	100

Wellington (11)	20	20	22	19	11	92
Brewster (11)	21	16	21	20	11	89
J O'H Denny (20)	23	17	17	20	11	88
Burton (11)	22	21	17	20	7	87
Anderson (12)	18	17	21	20	10	86
Fry (20)	20	18	18	16	14	86
H P Collins (20)	17	12	25	20	10	84
Slear (14)	17	16	18	18	13	82

* Landis only shot at 6 of the 8 extra targets, Henry at 9 of the 14 allowed him, and Swiveller at 11 out of the 18 he received as his handicap allowance.

The four men tied with 100 each shot off at 25 targets per man, with no handicap allowance. As will be seen, Henry lost his 25th target, thus tieing again with Landis, the latter winning on the second shoot-off. The scores made in the first shoot make the excellent total of 93 out of 100:

	1st tie.	2d tie.
Landis	1101111111111111111111111—24	1111111001111111011011111—21

Swiveller	0101111111111111111101111—22	.....

FOURTH DAY, OCT. 2.

This was the last day of the shoot, and as usual it was devoted to live birds, the two State events—the L. C Smith trophy for three men teams and the Williamsport trophy for the individual championship of the State—being the main features of the programme. On the open set of traps a series of miss-and-outs, $2 entrance, were shot off, the failure in the supply of birds alone putting a stop to the shooting.

It was a lovely day, with a wind that aided the birds. The fine weather tempted a great many people to leave the city and come out to the grounds, the result being that there was one of the largest crowds present that we have ever seen at a shoot. There were not many ladies among the crowd, the comparatively inaccessible location of the grounds having probably a good deal to answer for in that respect.

The contests for the two trophies above mentioned were watched with great interest, the enthusiasm reaching a high pitch in the prolonged shoot-off for the Williamsport badge between J. Thurman and Brewster. The

L. C. SMITH TROPHY FOR THREE-MEN TEAMS

was competed for by four teams, representing respectively the Luzerne County Sportmen's Club, the Harrisburg Shooting Association, the Keystone Shooting League, and the Independent Gun Club, of Reading The Luzerne County men won the trophy with the score of 39 out of 45, each man shooting at 15 birds; the Harrisburg team and the Philadelphia team tied for second place. W. H. Stroh, of the winning team, was the only man of the twelve who shot in this contest to score his 15 birds. The scores in detail are given below, the flight of each bird being shown by FOREST AND STREAM'S trap score type. We are enabled to show the flight of the birds through the courtesy of G. Wellington Jones, managing editor of the Harrisburg *Call*, who acted in the capacity of official scorer in the State events, and who furnished us with a duplicate of the scores, showing the results as follows:

Team races do not attract quite as much interest as individual matches do. There is something in a man-to-man contest that is not to be found in a team race, and that something seems to catch the crowd, the contest for the individual championship attracting much more attention than the above race.

Sixteen entries were made for

THE WILLIAMSPORT TROPHY,

and of that 16 two—Joseph Thurman, the father of Harry ("Father Time") Thurman, of the Keystone Shooting League, and Brewster, of the Harrisburg Shooting Association—were the only ones to make 15 straight. The birds were a good lot as a whole, more than half of them being excellent flyers that made the boys do their best work to score them. At times one came across a crate of birds that were only medium, but as a rule there was nothing to complain about. Under such conditions, therefore, it was somewhat a matter of luck as to what sort of a bird one drew. We noticed instances of the sort more than once. W. H. Burnham, of York, drew a succession of three or four hot ones, chocolate-colored birds, that put an extinguisher on his hopes of wearing the diamond badge. E. F. Slear, of Sunbury, was another instance of the same kind. He is only a beginner at the sport, as we were informed, but his work was that of a more experienced man. His first loss was caused by a dark-blue bird that was calculated to beat many a crackerjack; he hit it hard with his first barrel, but failed to locate it soon enough with his second barrel to enable him to use his shell effectively. M. M. McMillan, of Mahanoy City, the winner of the badge last year, again shot well, and only fell down on a bird that anybody might have treated just as he did.

The shoot-off was a long one, but was full of exciting incidents. The two shooters were types of different styles of shooting; Mr. Thurman being a slow shot and very effective with his first barrel; Brewster was quicker, and *needed* his second barrel much oftener in the early part of the tie than his sixty-three-year-old opponent. It often happens that people who are interested in a shooter are so deeply engrossed in his work and the birds he draws that they do not form as accurate an opinion of the run of the birds as an impartial spectator might be expected to be able to do. We heard several remarks made that Brewster drew much the hardest birds in the shoot-off, and it is a fact that he drew a larger proportion of outgoing birds than his opponent did. But the difference in the run of the birds was really very slight, and much of the apparent easiness of some of Mr. Thurman's birds was due solely to the deadly effect of his first barrel, which time after time closed up his birds without leaving a kick in them. The score of the shoot-off shows 11 one-barrel kills for Thurman and 10 for Brewster, but Thurman used his second barrel seven or eight times when it was really unnecessary.

The tie was shot off at 5 birds. The first series resulted in a tie, each man killing his 5. The second bird of the next series of 5 that fell to Brewster's lot was an easy one, a circling incomer to the left; much to the surprise of everybody, he lost it, and put Thurman one ahead. The next two rounds resulted in kills for both men, and then Mr. Thurman got up to kill to win. As he rose from the campstool he was sitting on he said: "This settles it." As it turned out he was wrong, his bird getting away from him; Brewster then had to kill to tie, and he did it in good style. The next two series of 5 birds were shot and the score was still a tie, with the destination of the diamond badge an uncertainty. Each man had a narrow escape in those rounds. Brewster had a bird that fell within 15in. of the open boundary, but was safely gathered by the shooter. A few rounds later Thurman had a much narrower escape, his bird dropping almost on the line, where it stood facing outward, with lots of life in it, and its head cutting an imaginary line drawn between the two boundary flags; Thurman walked the bird in a little to make more sure of it, as although its wing was gone, it was a lively pigeon yet; he then gathered it in, and the crowd cheered the veteran as he came back to the score.

Brewster's 22d bird in the ties fell dead out of bounds, and cost him the badge and the title of champion live-bird shot of the State of Pennsylvania, both of which are now the property of Joseph Thurman, a member of the almost invincible Keystone Shooting League, of Philadelphia. To win those honors he had to score 39 out of 40 birds, Brewster losing two, one of them dead out of bounds, out of the same number shot at. The scores in this event were as below:

THE MISS-AND-OUTS.

Some excellent work was done on the upper set of traps, where $2 miss-and-outs were shot all day. The boys would have kept on shooting an hour and a half longer had the supply of birds not been exhausted. Harry Thurman did some good work, running 42 straight on this set. Hayward and Howard, both Baltimoreans, shot well in the morning, while Denny struck a streak in the afternoon:

In No. 3 Duston, Coldren, Smith, Moore, Henry and George all missed their first birds and re-entered, with the result shown in the above score.

In No. 4 Hayward, Bartlett and Howard missed their first birds and re-entered, with the result shown above.

Those who missed their first birds and re-entered in No. 5 were Smith, Howard, Burnham, J. Thurman and Wellington.

The re-entries in No. 6 were Money, Duston, Adams and Nesbitt.

Smith re-entered in No. 7, Moore in No. 8, and Denny in No. 9.

A FEW PICKUPS.

The three members of the Florist Gun Club, of Philadelphia, Messrs. Burton, Anderson and Will K. Park, were properly puffed up with pride at the result of the race for the Wood Powder trophy in which they came out second to the Philadelphia champions, from Holmesburg Junction. The Florists are only youthful members of the State organization, having been admitted to membership on Tuesday, Sept. 29. As the name of the club signifies, most of its members are florists by profession.

The Keystone Shooting League didn't do a thing in the way of capturing trophies! It took back with it to Philadelphia the trophies emblematic of the State championships at targets for six, five and three-men teams, while one of its oldest members, Joseph Thurman, carried off the individual live-bird championship.

Luzerne County shooters took back with them all the trophies left by the Keystone Shooting League. George F. Nesbitt, of Wilkesbarre, won the individual championship of the State at targets, and helped his fellow clubmates, W. H. Stroh and George Addison, to win the three-men team championship at live birds.

Oil City was chosen as the location for next year's State shoot. John A. Wilson, of Franklin, secured the shoot for the western part of the State, after having fought for it to cross the Alleghanies at every meeting held during the past three or four years.

It is a pleasure to note that the daily press is awaking to the fact that many of its readers like to see what has been done at the traps. The Philadelphia *Ledger* had a special representative present on each day of the shoot and gave full accounts of every day's work.

G. Wellington Jones, managing editor of the Harrisburg *Call*, acted as official scorer at one set of traps on each day of the shoot and did good work for his paper. The scores appeared in the *Call* in the proper shape, and what is better still, they were absolutely correct, something that cannot always be said about the scores which appear in the columns of the daily press, especially in those of cities much larger than the capital of Pennsylvania.

Where was U. M. C. Thomas? The red caps with long visors used by his company, the U. M. C. Company, of Bridgeport, to advertise its goods, were worn by all the trapper boys, but they only served to make U. M. C.'s absence felt the more severely. H. P. Collins said on Thursday afternoon, a few minutes after he had made 25 straight, that it was perhaps just as well that U. M. C. was not present, as a man of his age would have found it hard to stand such a severe shock to his system!

Brooklyn, N. Y., has good reason to be proud of the showing made at the traps by its representative, J. S. S. Remsen, who, young as he is in the trap-shooting world, showed his heels to most of the older shots in the majority of the events shot on the open set of traps. In both the 100-target handicap events he broke 91 out of his first 100. His work was watched with interest by all present, but by no one more closely than his father, who was congratulated many times on his son's success in the shoot for the E. C. cup.

Justus von Lengerke was tickled at the way Remsen shot. The young man from Brooklyn, N. Y., was shooting Schultze, d'ye see?

Jim Denny (it seems absurd to give him his full title) and Moyer were among the Pittsburgers who showed up at the shoot. It is a shame to couple the name of such a good fellow as Denny with that of a man who makes a public accusation of wrongdoing against a handicap committee, and then runs away when he is about to be brought face to face with the men he has slandered.

Captain Money and B. F. Smith shot a small race at live birds on the last day of the shoot; the conditions were 25 birds, $25, A. S. A. rules. Smith won by 1 bird, the Captain losing his last 2 birds. The scores were 23 to 22 in Smith's favor.

Refereeing a live-bird contest is pleasant enough until a close decision or a knotty point comes up. In the contest for the live-bird championship J. Thurman, the ultimate winner, went to the traps to kill his last bird to give him a straight score of 15. The bird flipped up and settled again, the shooter having to kill it with his second barrel to make it a "no bird." Mr. Jacob Pentz was helping the Harrisburg Shooting Association out of a hole by doing some work as referee at the time, and decided it a no bird. In our opinion the decision was absolutely correct, and none other could have been rendered. The silence that followed the killing of the bird on the ground with the second barrel, a silence broken by only a few hand clappings, showed that the vast majority of the spectators were very much in doubt as to the result of the shot.

Three sets of target traps were in position, but only two were used for the programme events. On the last two days for target shooting one trap of the vacant set was kept fully occupied throwing targets, unknown angles, for those who wanted to shoot in 50-cent miss-and-outs. Those who fell down at the other sets would often come down to try and "get even." Sometimes they did, and sometimes they did the other thing.

Altoona seems to be dead to the world of trap-shooting. Not a single representative of the gun club of that city was on hand during the shoot, with the exception of E. J. Adams, and he only put in an appearance on the last day. What has become of the Wopsononockians?

The handicap on the experts, coupled with the Rose system of dividing purses, is a little too severe. The Rose system in itself is a sort of a handicap, as it reduces both winnings and losings, giving the small fry a show.

B. A. Bartlett, of the Winchester Repeating Arms Co., gave two capital exhibitions of what he can do with the repeating shotgun. Bartlett has introduced some new features in his trick shooting, and does them as neatly as he performs the old ones.

Mrs. M. F. Lindsley (Wanda) was present at the tournament and watched with interest the work of those who shot King's Smokeless and Peters's reinforced shells. Mrs. Lindsley says she is fully satisfied with the showing made, the Parker gun and the State championship at live birds being among the many good things credited to the powder made by Milt Lindsley at King's Mills.

Jack Winston was in evidence on the first two days of the shoot, shooting Austin powder, talking matches and making artistic designs out of Winchester shells, Leader and Repeater, loaded with his powder. The boys had lots of fun with him, changing his designs and altering the lettering of some of his "hand-painted" signs, but they never succeeded in ruffling his temper.

W. L. Colville, the Eastern representative of Gold Dust, did some good shooting on the last target day of the tournament. He made a big bid for the Parker Gun, and showed the boys that Dick Swiveller and Gold Dust are not an effete corporation. He tells us that Jack Fanning is back on the Pacific slope, but that we will see him East again next summer in all probability. If a snoring match can be arranged between Fanning and the "Mayor of Sutton, Mass.," Will Park and Charlie Budd will put up the stuff for the Western man. Capt. Money backs the Eastern representative.

George F. Nesbitt, of the Luzerne County Sportsmen's Club, who hails from Wilkesbarre, was in great form on the first day of the shoot. He made some excellent runs, and landed the Individual State Championship at targets with 47 out of 50.

Howard is the name under which one of Baltimore's best shots concealed his identity. Howard shot in form that made him decidedly warm company, and stamped him as an A No. 1 man at targets. He was well to the front when it came to miss-and-outs at live birds on the last day.

While his father was hard at it, trying to outshoot Brewster for the live-bird championship of the State, Harry Taurman was busy raking in the profits at the miss-and-out set of traps. He ran something like 46 straight, and only quit when the birds gave out.

H. P. Collins got off a good one on Howard on the first day. He met Howard coming out of the club house and asked him how he was getting on. "Not very well," said Howard. "What have you done so far?" said Collins. "18 and 19 out of 20 and two 23s," said Howard. Collins looked at him and said: "I thought this was a gentleman's shoot; I had no idea that hogs were admitted."

The Harrisburg shooters have a bad case of what may be termed the "*nom de fusil* fever." Fuller, Harlow, Brewster, Sullivan, Wellington and Henry are names which are prefixed to the scores made by H. M. Fuller Worden, J. Harlow Worden, H. Brewster Shoop, W. Brensinger, G. Wellington Hepler and Harry Dill.

Rolla Heikes shot as well as ever he did in his life, and that's saying a great deal. Those who look at his scores may not think they are much out of the way—for Rolla, but then you should see the background, and have shot in the wind and rain that prevailed on the first day, to thoroughly appreciate the work of "the daddy of them all."

The cyclone that struck Harrisburg on Tuesday night just tore things up around the shooting ground. The club house was about all that was left standing when Elmer Shaner got to the scene of the tournament on Wednesday morning. As the street cars could not get out along the line that runs to the shooting grounds, it was rather late before shooting began that morning.

H. P. Collins went in for low average every day; 25 per cent. of the average money fund was his share each evening. He had a cinch on it, and said that it was the only chance he had to get even. When asked why he was losing so many targets, he replied: "So as to win low average, and get on a match with Jack Winston. If I show my form he won't play!"

Heikes, as instructor for the beginner, would be a success if all his efforts resulted as satisfactorily as the short course of instruction he put Du Pont Collins through on Wednesday afternoon. Collins had just succeeded in making three 12s in the three 20-target events, and 28 out of 50 in the first half of the Parker gun handicap. Heikes took him up to the miss-and-out trap, which was idle for a few minutes, and gave him some instructions how to shoot. Collins then went down to No. 1 set of traps to shoot his third string of 25 in the handicap, and didn't do a thing but break 25 straight. He followed that up by making 20 in his last 25, thus scoring 45 out of 50 shot at. And he has only been shooting six months at the longest! EDWARD BANKS.

Annual Meeting of the State Association.

THE annual meeting and election of officers of the Pennsylvania State Sportsmen's Association was held, Sept. 29, at Harrisburg.

The clubs represented by proxy or by delegates were: Harrisburg Shooting Association—M. H. Brensinger, H. A. Dill, H. B. Shoop; Reading Shooting Association—Henry Rambo, John Shaaber, George Ritter; Pittsburg Gun Club—E. E. Shaner, J. O'H. Denny, John A. Wilson; Keystone Shooting League—J. R. Leaming, W. H. Wolstencroft, David Longenecker; York City Gun Club, W. H. Burnham; Germantown Gun Club, Harry Thurman; Spring City Gun Club, Harry Thurman (by proxy); Independent Gun Club, of Reading—J. Shaaber, Henry Ritter, Henry Rambo; North Side Gun Club, E. E. Shaner (by proxy); Franklin Gun Club, John A. Wilson; Independent Gun Club, of Philadelphia—W. H. Wolstencroft, J. Wolstencroft, H. L. David; Wilkes-Barre Gun Club—G. F. Nesbitt, J. F. O'Neill, Geo. Anderson; Herron Hill Gun Club, J. O'H. Denny; Springfield Gun Club, H. Thurman (by proxy); Iroquois Gun Club—H. S. Hartman, W. J. Udick, A. C. L. Hoffmeister; Farmers' Gun Club—M. M. McMillan, M. T. O'Conner, Harrison Bell; Huntingdon Gun Club—Isaac Greenburg, G. G. Harman, M.D.; Oil City Gun Club, J. A. Wilson; Florist Gun Club—John Burton, Geo. Anderson, W. K. Park.

The following clubs were elected: Oil City Gun Club, an organization of sixty-eight members; Huntingdon Gun Club, Carbon County Game and Fish Protective Association, of Mauch Chunk; Florist Gun Club, of Philadelphia.

The legislative committee reported progress. Mr. John A. Wilson stated that there were several important questions now before the legislative committee, and it would be unwise to make public just at present certain matters now in its hands.

The choice of a location for next year's annual meeting brought forth a contest. John A. Wilson spoke earnestly in behalf of the interests of sportsmen in the northwestern part of the State, and said that it would be for the best interests of the Association to hold the annual meeting and tournament of 1897 across the Alleghanies. He nominated Oil City as the place for the meeting and the Oil City Gun Club as the club in whose hands next year's shoot should be placed. Elmer E. Shaner seconded the nomination.

John Ritter asked on behalf of the Independent Gun Club, of Reading, that the year's shoot be held there.

J. F. O'Neill placed in nomination the city of Wilkesbarre.

Oil City was chosen, the ballot cast being: Oil City 27, Reading 6, Wilkesbarre 5.

Harry Thurman moved and John A. Wilson seconded, that the representatives of the sporting press be made honorary members of the Association. The motion was carried without a single nay.

The election of officers resulted: President, J. O'H. Denny; Vice-President, Harry Thurman; Recording Secretary, John A. Wilson; Corresponding Secretary, Harry Reeser; Treasurer, James H. Wolstencroft (sixth consecutive term); Board of Directors: George F. Nesbitt, H. M. F. Worden, John Shaaber, W. H. Wolstencroft, Elmer E. Shaner and W. H. Burnham.

The report of the treasurer showed a cash balance in hand of $194.

On motion of Elmer Shaner the chair appointed the following committee to revise the shooting rules of the Association: Elmer E. Shaner, chairman; J. O'H. Denny and W. H. Wolstencroft.

Fall Tournaments in the South.

LITTLE ROCK, Ark., Oct. 1.—Notwithstanding that this has already been the most successful tournament season in the history of the sport, a number of tournaments are yet to be held this fall. While none of them can be classed with the large tournaments held earlier in the season, at all of them substantial inducements are offered, and doubtless all of them will be well attended.

ROGERS GUN CLUB.

The Rogers, Ark., Gun Club will hold a two days' tournament Wednesday and Thursday, Oct. 14-15. This will be a target shoot exclusively, and the club will add $100 to the purses, $45 on the first day and $55 on the last day. The programme calls for 8 events each day; the first 7 events each day are 20-bird races, $2 entrance and $5 added, 4 moneys. The eighth event on the first day will be a 25-bird event, $2.50 entrance, $10 added. The same event on the last day will be a two-men team race, 50 targets per team, entrance $5 and $20 added; in each of these events there will be 5 moneys.

Mr. W. J. Bryant, one of the club officials, writes me that they have already received assurance from sportsmen at Galena and Weir City, Kan.; Joplin and Springfield, Mo., and Fort Smith, Ark., who express their intentions of attending this shoot. Altogether it should prove quite an interesting little tournament.

KENTUCKY GUN CLUB, OF LOUISVILLE.

The Kentucky Gun Club, of Louisville, Ky., will hold its regular fall tournament on Thursday, Friday and Saturday, Oct. 22-24. The first day targets only will be shot; the remaining two days will be devoted to live birds exclusively. The principal event on the second day will be the Kentucky Handicap, 15 live birds, entrance $10, birds extra. On the final day the championship of Kentucky will be decided. This will be a 25-bird race, $10 entrance, birds extra. The trophy emblematic of the championship also goes to the winner of this event, which is a handsome silver cup valued at $200, and at present held by Mr. W. W. Watson, of Louisville, who won it last year. Additional information concerning this event can be obtained from the club secretary, Mr. J. S. Phelps, Jr., Louisville, Ky.

HILL CITY GUN CLUB, OF VICKSBURG.

The Hill City Gun Club, of Vicksburg, Miss., also announces a tournament for this fall, and the dates chosen are Nov. 4-5. As an inducement the club will add $200 to the purses. This will be a target tournament. Although this shoot will not be under the auspices of the Interstate Association, I understand that Mr. Elmer E. Shaner will have charge of the affair. This should prove an additional drawing card, as Mr. Shaner knows how to manage a shoot if any one does. The weather during the month of November is most delightful in Mississippi, while quail are reported exceptionally numerous in that State this fall.

Therefore those who attend the tournament could also spend a few days in the field. I can assure them the customary Southern hospitality and a delightful time, should they visit Vicksburg at this season of the year. Mr. J. J. Bradfield, the secretary, will cheerfully furnish any information to those who contemplate attending.

MEMPHIS ALSO IN LINE.

Memphis too will hold a tournament this fall, a two days' affair: one day targets, and one day live birds. The feature of this shoot will be a live-bird handicap at 25 birds, and the shoot will be for amateurs only, while the purses will be divided by the Rose system. Particulars will be announced as soon as the dates have been definitely settled on, which will be some time in November. PAUL R. LITZKE.

On Long Island.

NEW UTRECHT GUN CLUB.

Oct. 3.—The New Utrecht Gun Club held a shoot at live birds this afternoon on its old grounds at Woodlawn, L. I. The traps and pulling apparatus have been put in shape, but the members have to be contented with a tent for a club house, their house having been destroyed a few weeks ago by fire, which was started by lightning. New grounds have been selected near the old ones and a club house will be erected in a short time. Until those grounds are ready for occupation shoots will be held every two weeks at Woodlawn. Dr. Wynn and C. Furgueson, Jr., tied in the club shoot for the class A badge, Furgueson winning on the shoot-off. Morfey and Conny Furgueson tied for the E. C. cup, Morfey winning on the shoot-off. Scores:

Cambridge Gun Club Tournament.

CAMBRIDGE, Vt., Sept. 30.—Cambridge held her first tournament today. Our grounds were ready for practice Aug. 20. The Burlington Rod and Gun Club kindly came up and gave us points and encouragement. Later came the Interstate Association aid and now we hope with our favorite guns and nitro powders to be pounding down our share of the bluerocks with the rest of them in the near future. Clubs were not very well represented here to-day owing to the terrific storm of last night, which abated late this morning. The Burlington Rod and Gun Club, Jeffersonville and Johnson clubs were our only visiting clubs. Mr. Norton, the representative of Blue Ribbon, was with us distributing circulars, mirth and good-fellowship.

The contest was for 50 targets, divided into three events (2, 3 and 4), and were won, first, silver water set, by Ellsworth; second, silver fruit dish, by Spear; third, sole leather ammunition box, by Pease; fourth, silver napkin ring, by Morgan; fifth, gun cleaning set, by Hatch; sixth, silver souvenir spoon of Cambridge, by Partlow. The Burlington Club put up a very nice pipe to be contested for by Cambridge boys, which was won in event No. 5 by Ellsworth. Other events followed for practice: Event No. 1, known angles; 6, unknown angles; 7, 5 pairs; 8, unknown angles, unknown traps; 9, unknown anles.

BERT RICKMAN, Sec'y.

PUBLISHERS' DEPARTMENT.

New Pullman Service to Texas, Mexico and the Pacific Coast.

COMMENCING Oct. 1, the Southern Railway "Piedmont Air Line" will inaugurate a new Pullman buffet sleeping car line between New York, Birmingham, Alabama and Washington, and Galveston, Texas. Connecting at New Orleans with the trains of the Southern Pacific R. R., carrying Pullman buffet sleeping cars, New Orleans to San Francisco and City of Mexico. The new sleeping car service will be operated on the "United States Fast Mail," leaving New York 12:15 midnight, and Washington, D. C., 11:15 A. M. The famous Washington and Southwestern Vestibuled Limited continues to leave New York daily at 4:30 P. M., carrying dining cars and Pullman drawing-room sleeping car, New York to New Orleans, Memphis, Tampa and Hot Springs, N. C. For further information call on or address General Eastern Office, 271 Broadway.—*Adv.*

Game Pictures.

WE have received from Mr. Edwin Hawley, E. P. A. Southern Pacific, 349 Broadway, New York, a handsome little book of 64 pages, called "California Game Marked Down."

The book describes some famous Western game covers, and contains a valuable collection of fish and game pictures. It will be sent free on application to Mr. Hawley.—*Adv.*

All about Texas.

IF you wish to receive a 200-page handsomely illustrated book telling all about Texas and her advantages, send 7 cents postage to D. C. Price, A. G. P. A., I. & G. N. R. R., Palestine, Texas, and the book will be sent to you by return mail. Texas is now attracting a great number of settlers by reason of her cheap lands and mild climate. You will not regret the amount. When writing mention this paper.—*Adv.*

The Latest in Winchesters.

THE Winchester Repeating Arms Company, New Haven, Conn., issues a four-page illustrated folder of new goods, dealing with smokeless cartridges, the "Repeater" shot shell, model of 1895 rifle, etc.—*Adv.*

Wild Rice Seed.

CHARLES GILCHRIST, Port Hope, Ontario, writes that after several poor seasons he has at last been able to secure a good supply of wild rice seed, and is now prepared to fill all orders.—*Adv.*

Sporting Goods Catalogue.

JOHN WOOD, JR., publishes a handsome hundred-page catalogue of guns, fishing tackle, and sportsmen's goods in general. His line is very complete, and the catalogue well worth having.—*Adv.*

Wild Rice and Celery.

NORTHRUP, KING & Co., Minneapolis, Minn., seedsmen, are prepared to fill promptly large or small orders for wild rice and wild celery. Notice prices in another column.—*Adv.*

U. M. C. Price List.

THE Union Metallic Cartridge Co. has issued a new price list of cartridges, shot shells, gun wads, primers, etc., dated Sept. 1.—*Adv.*

TO LEASE.—Good shooting grounds, New Jersey. See advertisement.—*Adv.*

ANSWERS TO CORRESPONDENTS.

W. L., Milwaukee, Wis.—I own a Newfoundland puppy eight months old. He seems to be very weak and does not eat much. His eyes are running constantly and his coat is very thin and rough. All the hair on his back came out, and his skin is covered with scabs. I gave him some medicine for distemper, but without effect. What kind of illness is it, and what will cure it? Ans. Give 10grs. four times a day of "Reed & Carnrick's special protonuclein." Bathe the eyes three or four times a day with a saturated solution of boracic acid. Feed dog well; give raw meat, milk, cream, fish et

AUDUBON BIRD PLATES.

THE first subject of the series of half-tone copies of Audubon's famous bird portraits was that of the Black Duck, in the issue of Sept. 26. The second one will be of the Prairie Hen (pinnated grouse), next week, Oct. 24.

These reproductions are exciting great interest and are received with gratifying appreciation, as many letters coming to us testify. Among others, one which gives us special pleasure is this:

Editor Forest and Stream:

In your issue of Sept. 26 I notice your beautiful picture of the Black Duck and the announcement you make that it is one of a series to be published. * * * The reproductions are to me most satisfactory; they lack color, of course, but in every other respect are the best we have ever seen, and I think I may say that those of the Audubon family still remaining are much gratified with the first of the series.

M. R. AUDUBON.

CONCERNING THE EXTERMINATION OF THE DOG.

A DISTINGUISHED essayist of England advances the proposition, and defends it at length, that the dog should be exterminated from the face of the earth. She concedes all that the dog is as man's best friend; full account is made of his utility and value as guardian of home and flock and person, as draft animal and beast of burden, as adjunct of the chase, as affectionate companion; but against all this is put the terrible and unanswerable indictment that with the dog originates the scourge of rabies and hydrophobia, and the verdict reached is that the woe thus brought upon the human race by the dog outweighs a thousandfold all the good there is in him. The dog and rabies are inseparable; Pasteurism has not stamped out the dread disease and gives no promise of ever stamping it out. Nothing is more certain than that so long as there shall be dogs there will be rabies, if rabies hydrophobia, and if hydrophobia then human death caused by it. Human life is worth more than all the dogs in the world; better the dog exterminated utterly than that the lives of men and women and children should be sacrificed by reason of it.

If we shall grant all that is here premised as to the ravages of hydrophobia, and if we assent baldly to the proposition that the dog does keep alive in the world and transmit from generation to generation of humanity the disease of hydrophobia, if indeed the dog be altogether as black as he is painted, the proposition to exterminate him will yet have no general practical interest, and the alarmist who would ring the universal death knell of the canine race will be heard with indifference or at the best will be looked upon curiously as a faddist. The reason of this is found in the fact that the world at large knows nothing of the dog as a rabid creature and an agency of human disease and death. For one individual who in his personal experience or observation finds reason to dread the dog as possibly subject to madness and potentially fatal to human beings, there are a million who know the dog only as a friend, companion and the playmate of children, a creature not only harmless, but lovable, loved and loving. Thus in the popular estimate, which is the estimate made up of the million individuals, the dog does not stand for a menace to the well-being of mankind, but on the contrary for a useful and beneficent factor in civilization. This, we repeat, is because popular knowledge and experience are of the dog as a blessing, not as a curse. Men have been gored to death by vicious bulls, yet the world at large regards domestic cattle as a valuable and harmless possession, and the bovine race is not doomed to extermination. Men are killed by horses, but the popular estimate based upon the common experience with the horse does not demand the obliteration of the equine race as dangerous to mankind. More than 7,000 persons are killed annually by the railroads of this country, and 40,000 others are injured; but the popular estimate of the safety of railroad travel in general is based upon the experience of the 500,000,000 passengers who travel annually on railroads in security, and he would be considered a candidate for an insane asylum who should advocate the abolition of railroads by contending, after the manner of this woman who wants us to do away with the dogs, that so long as we shall maintain railroads there will be accidents and deaths caused by them.

The question of dog extermination therefore is in no degree a practical one, but is purely academic, and as such to be discussed only theoretically and speculatively. It is a theme which would have delighted Sir Thomas Browne, who might well have employed in its consideration some of the speculations advanced by him in his "Enquiry into Vulgar and Common Errors" (published in 1646), in the chapter devoted to the phœnix. "That there is but one phœnix in the world, which after many hundred years burneth itself, and from the ashes thereof ariseth up another, is a conceit not new or altogether popular, but of great antiquity," he writes; and then he proceeds to an examination of the writings of the ancients—Greeks, Romans, Jewish rabbis, Arabians and Egyptians—and to a refutation of the stories of antiquity concerning the fabulous bird, bringing all the resources of his speculative philosophy to bear to disprove its existence, and carrying the argument back finally to the days of Noah and thence to the Garden of Eden and the Creation. As for the assertion that there is but one phœnix in the world at a time, each successive individual rising from the ashes of the one that lived and died before it, this, he says, "seemeth not only repugnant unto philosophy, but also Holy Scripture, which plainly affirms there went of every sort two at least into the ark of Noah." Moreover he argues:

> "It infringeth the benediction of God concerning multiplication. God blessed them, saying, 'Be fruitful and multiply, and fill the waters in the seas, and let fowl multiply in the earth;' and again, 'Bring forth with thee every living thing, that they may breed abundantly in the earth, and be fruitful and multiply upon the earth,' which terms are not applicable unto the phœnix, whereof there is but one in the world, and no more now living than at the first benediction. For, the production of one being the destruction of another, although they produce and generate, they increase not and must not be said to multiply, who do not transcend an unity."

This was a sockdologer for the phœnix, and it would be a sockdologer for the impious advocate of dog extermination who would kill off the tribe of dogs and thereby "infringe the benediction concerning multiplication."

Practically, however, should man as lord of creation make up his mind to do for the dog, he would not be restrained from putting his purpose into execution by any regard for "the divine benediction" to the canine race to increase and multiply. Alexander Ross, who believed in the existence of the phœnix, and undertook to reply to Browne, accounted for the fact that no one had ever seen the bird by its exercise of that instinct which taught it to keep out of the way of man. "For had Heliogabalus, that Roman glutton, met with him, he had devoured him, though there were no more in the world." Whatever may be said of Ross's faith in the phœnix, he certainly understood human nature. If the profligate Heliogabalus could have secured the brain of the phœnix for a tidbit he would have gobbled it up, and with the greater gusto that it was the only one left.

History has demonstrated again and again that when man, "the great tyrant of the creatures," has the opportunity to destroy an animal, though there be no more in the world, he surely does so. It is only the species whose instinct teaches them to keep out of the way of man, and which are fitted successfully to flee before him, that can keep their place on the earth. Creatures like the great wingless birds, which men can get after with a club, fall before him and perish from the land. Where is the dodo? Clubbed off the earth. Where is the great auk? Clubbed, the very last one. Where are the seals? Clubbed from most of the earth's surface; and we have been discussing in international boards of abitration—ten or twelve bound volumes of talk—and appointing investigating commissions, and taking statistics, and dickering over the *modus vivendi*, and nevertheless all the time keeping up the clubbing, until who knows what the seal supply is today and what it will be next year, or how short the time when there will be no supply at all? Does any one believe that the man who shall have the fortune to club to death the last seal is going to feel anything but brutish joy at the thought of such a feat to brag about? And if Alexander Ross were writing to-day, would not his opinion of the old Roman Emperor hold good as to the human wolves who are slaughtering the buffalo of the National Park?

The extreme rarity of a bird or other animal, instead of being accounted a reason for protection, is regarded as affording an added stimulus to its capture and destruction. Let a bird stray from its customary range, and, diverging from the limits laid down for it in the books, adventure new haunts, it has crossed a dead-line and flies to certain death; the collector, man or boy, awaits it with gun and powder, and a museum ticket labeled "Rare." The rarer the species, the more eager the pursuit of it; if a pair were thought to be the sole survivors of their kind, the collectors would shoot one another in their mad scramble to bag the last one.

Heliogabalus has been dead these two thousand years, but his spirit of remorseless, cruel, unsparing selfishness is alive in the world to-day, as the record of one and another obliterated species of animal life demonstrates.

RAIL FROM FROGS.

THERE is a widespread belief that the immense numbers of sora or Carolina rail which make their appearance on the marshes all of a sudden come from frogs. Before the skeptic shall scout the notion, let him consider the evidence in its support. This is what the defenders of the theory say: In the first place, rail and frogs are found in the same marshes, but not together. One day it is all frogs and no rail, and the next all rail and no frogs. Where then did the frogs go to if they did not turn into rail? and where did the rail come from if they are not transmogrified frogs? Rail are poor flyers, as every one knows who has flushed them on high tides; and it is clearly impossible for them to have come by flight from a distance to the grounds where they appear so suddenly and without warning. If there was not the frog theory to fall back upon in explanation of their origin we might assume that, like the mice of the Nile fields, they come from the mud; in which case it would be with the rail as Théophile Gautier said of certain insects which are hatched from eggs, that knowing no parents they may thin themselves the direct children of the earth. Moreover, th frog-rail theory has all the dignity of age. Alexander Wilson, the father of American ornithology, recorded that the belief was current in the early years of the century, and he tells a story of a planter who dug out of the mud a creatur half-frog and half-rail—nothing less, that is to say, than th frog turning into the rail. Wilson also asserted that the people in his day believed that the birds buried themselves in the mud, although, as he pointed out, while ditchers and dredgers frequently carried on their operations in this mud, none of them was ever known to dig out any of the birds. Mr. Lowry, however, whose notes in another column have brought this subject to attention, tells us of guides living at points far distant from one another, who while digging for muskrats in the marshes have exhumed quantities of rail. Those who contend for the frog origin of the birds have at least grounds for their theory as substantial as those upon which are based the long-standing beliefs that swallows bury themselves in the mud for the winter and that some snakes sting with their tails.

The belief is likely to hold for another hundred years. It is purposeless to cite against it the perfectly well-known facts of ornithology which have been determined with respect to the rail, that it is a migratory bird passing to and from north and south, from the British Possessions to Central America, nesting in northern latitudes from Massachusetts to Fort Rae, building nests and laying eggs, which nests and eggs are perfectly well known to naturalists; and that as to its powers of flight it is so good a bird on the wing as to pass annually in spring and autumn to and from Bermuda, a distance of more than 500 miles over the Atlantic; and moreover, that it has been taken on ships at sea 300 miles from land. These facts might be printed in every journal in the land regularly, year in and year out, but they would not shake the confidence of the native in his frog theory; he has it firmly fixed in his noddle that rail come from frogs, and this he will stick to. Of him it may be said as Sir Frederick Thesinger said to the man who addressed him as "Mr. Smith, I believe." "If you believe that," was the retort, "you would believe anything."

The Sportsman Tourist.

FISHING IN ICELAND.

After our long day's ride it was a relief to see, across a waste of black sand, the parsonage farm of Sirra Arni. The grassy roofs and low walls of turf and stone could hardly be distinguished from the surrounding "tun" or home fields, but the little black church stood boldly outlined against the distant tracts of lava. No other house was in sight; to the north lay Myvatn ("lake of midges"), surrounded by five scarred craters, and dotted by many islands, volcanoes in miniature, where thousands of wildfowl were circling and screaming. On the east and south was the great desert of the Odadahraun, and still beyond the snowy heights of Askja—Iceland's largest volcano—could be dimly seen.

My arrival was attended by some confusion. Five sheep dogs rushed down the trail to meet us, and barking furiously assailed the heels of the ponies; they promptly kicked and shied, and in a disorderly tangle of animals we reached the farm just as Sirra Arni's pleasant face appeared in the low doorway. Fifteen minutes later the packs were removed, the ponies grazing in the wild pastures, and the pastor and I, seated on the churchyard wall, were discussing the prospects of plant collecting and fishing.

His report of the latter was discouraging. In the lake were plenty of char, but they could be taken only by nets; there might be a few trout in Gronavatn—a small river a mile and a half away—but he had never fished in it; indeed the only good fishing he knew of was in the upper waters of the Laxa, several miles from its source, in Myvatn. To reach the river a guide and two ponies would be needed, and as these were difficult to hire in the midst of haymaking I decided to be content with Gronavatn.

The principal object of this visit to Myvatn was to collect flowers, and not until the third morning did I treat myself to a half day's fishing. I found Gronavatn a charming little river, whirling with many a rapid through the old lava fields. The air was calm, sweet and so clear that long after the parsonage was out of sight I could hear the haymakers' voices, and the singing of a small Icelander, who was driving the milking ewes to pasture.

As I tied on a March-brown and a butcher I saw a trout rise near some rushes across the stream, and felt that my fishing line was to fall in pleasant places.

A ¼-pounder was hooked at the third cast, and a double catch of pound trout quickly followed. As I was fishing and having "a beautiful time," a rough-looking man on a pony came ambling up, stopped, smiled a broad, benignant smile, dismounted and came toward me. In America I would have been disturbed had a dubious character accosted me in a lonely place a mile and a half from home, but not here with these honest, kindly Icelanders. I only said: "Godan daginn" and awaited developments. He took the rod from my hand, examined it with a critic's eye, and without a word began to fish. Four trout he caught in rapid succession, the look of content deepening on his countenance, then said: "Tak! tak!" returned the rod and, leaving the trout, mounted and trotted briskly away.

At the end of two hours I had taken fourteen fish, weighing from ½lb. to 1½lbs. There is such a thing as being too successful when one is far from home. At noon the farm people saw across the moor the spectacle of a sunburned, disheveled "Ameriku kona" lugging a botany box, sketch book, fishing tackle and a string of eighteen trout, and sitting down every few minutes to rest on a piece of lava. A relief expedition was dispatched by the kind-hearted pastor, consisting of a small boy with a box for the trout strapped on his back.

They were all of the same species: the *Salmo fario*, or river trout of Great Britain. But here in these clear, swift waters they have much lighter colors than those of England. I did not see a single yellow brown fish at Myvatn; all were silvery below and halfway up the sides, while the back was a dusky green or blue-black with many small black spots. The flesh was a light pink, and delicious eating.

That delectable morning at Gronavatn was the last of our fine weather. A cold storm followed, turning the distant hills white with snow; then came dense fogs rolling in every afternoon from the desert and inclosing us in cold mists until noon of the following day. The guest room of an Icelandic farm has no fire and no place for one. The accumulated chill of years is in it, and only the eider down puff on the bed keeps the traveler from perishing untimely. At night he can be comfortable, however he may shiver in the daytime. I found that even extinct volcanoes can be utilized for warming purposes. Every morning after breakfast I scrambled briskly up to the summit of a cone near the house, down to the bottom of the crater, and then trotted around the rim half a dozen times; this put me in quite a glow, and I was then in a mood to rest on the deep red slag and admire the strange beauty of Myvatn seen through the rising mists.

Several times I returned to the stream for an hour or two of fishing, once capturing a 3½-pounder. My stock of flies was getting low, and the day before I left Sirra Arni's I manufactured one with a large bait hook, a snipe's feather, a piece of red Liberty silk and a scrap of tinsel from the top of a whisky bottle. It was a wonderful production, tied with shoe-button thread, and I was really ashamed to put it on the leader. But it pleased those simple-minded Icelandic trout; one jumped for it at the first cast and several followed in quick succession. Then a fish rose languidly, took the fly and turned down under the bank. At first I thought it a small one and tried to kill it in short order, but I soon found out my mistake. Feeling himself hooked, he darted out again, broke clear from the water and dashed across the stream. Seeing how large he was, I gave one anxious look around me for some one who could help me land him, as I had neither gaff nor net. No one was in sight, and there was nothing to be done but tire him completely out, in much anguish of spirit lest he tear out the hook. Then when he lay motionless, his broad side turned up on the water, I led him cautiously to a shallower place, put down the rod, keeping the line taut in my hand, waded in and scooped him up in my dress skirt. Five pounds was the verdict an hour later, when he was solemnly weighed by fifteen of the family, and voted to be the finest fish they had seen taken with rod and line. I shall always regret that I did not spend some time on the Upper Laxa. While at Myvatn I heard a story of a small boy at the farm of Helluvad, on the river, who went fishing with the fly one evening after supper and caught 120lbs. of fish that averaged 3lbs. apiece. This is truly a remarkable tale, but we must bear in mind that Helluvad is a noted place for big trout; there is no darkness in an Icelandic summer and we are not told at what hour that boy went to bed.

From Sirra Arni's farm I went to Reykjahlid, on the eastern shore of Myvatn, a place interesting from the many mud wells, hot water and sulphur springs in the neighborhood. There is the Stora Gjá, too, a great rift made by an earthquake, which I explored by the aid of Jon, the farmer's big son. In some places one looks down to unknown depths, in others the rift is partially filled up with fallen fragments and the action of the weather, and here grow deep beds of ferns, tall buttercups and crane's-bill, which instead of being a crimson pink, as with us, has the most vivid purple hues.

I visited also some of the islands in the lake, where immense numbers of birds have their nests. Never have I seen so many babies tumbling about, and so many anxious

THE STORA GJA.

mothers. There were scaup ducks, long-tailed ducks, red-breasted mergansers, black scoters, mallard, teal, gulls and snipe.

The peasants guard these islands carefully from intrusion, and the young birds were quite fearless. I caught a baby snipe in my hand, and when released it trotted away as calmly as possible. Great numbers of eggs are taken for food, and while at Reykjahlid my fare consisted principally of hard-boiled ducks' eggs and char from the lake. These when fresh are good enough fare, but the Icelanders, like the Norwegians, prefer their food fermented and a little tainted.

One learns to venture on new strange dishes in the far north. I have eaten the eggs of eider and scaup ducks, gulls, guillemots and four other kinds unknown to me,

ICELAND PACK PONIES.

raw salmon and wild goose slightly smoked, raw herrings sliced with onions, sheep's milk and butter, "skyr," or sheep's milk curdled by rennet, sheep's head pickled in whey, blood and meal sausages, angelica roots, and later, in the Faroe Islands, I graduated proudly on whale. Puffins, I am glad to say, were out of season.

One morning Jon called me to see a fine lot of char which they had taken with gill nets during the night. I was faily startled by the brilliant tints. Fifteen great fish lay in the bottom of their boat, the lower part of their bodies gleaming with the most brilliant orange and yellow. Above they varied from a soft gray to a very dark green, almost black. All had faint gray spots on the sides, with here and there a red one, while the lower fins were reddish bordered with white. In weight they ranged from 2 to 9lbs. Filled with enthusiasm at this sight, I went trolling with Jon, using a small spoon which I had found very taking in Canada for black bass and lake trout; but not a bite did I have. Jon, indeed, had assured me that it was useless to try, that the char are only taken in nets; but as Jon spoke no English, only a little Danish, and I still less, I had not felt sure that I understood him correctly.

Reykjahlid is a fair type of an Icelandic farm. In front are five little wooden gables connected by thick walls of turf and stone. One is used as a guest room; in three tools, harness and stores are kept; and the fifth, the central one, opens into a long, dark passageway which extends to the family living rooms at the rear of the house. Here is the "eld-hus" or kitchen, the milk and skyr rooms, and the general living rooms, where men, women and children eat, and sleep in open bunks about the walls. The people are very reluctant to have a foreigner explore these rooms. He is conducted on his arrival to the spare room, which is seldom wanting, and there he eats, sleeps and lives during his stay.

The Icelanders are kind, honest and hospitable, and I never had the least fear about traveling alone among them. I went very slowly, made short journeys, and so dispensed with relays of ponies. Nor did I have a regular guide. On my arrival at a farm where I was to spend several days I sent back the man and ponies, taking others from the place when I resumed my wanderings. Many English tourists complain of extortionate charges, but I did not meet with a single instance during the nine weeks of my stay. Perhaps my simple outfit and shabby, weather-worn appearance had a lowering effect upon prices. Usually I paid 2 kroner (56 cents) a day for board and lodging, and at Reykjahlid, where I remained nine days, the farmer flatly refused to accept more than 49 cents a day, for he said, "You have eaten very little."

After leaving Reykjahlid I took a week's excursion with a friend of Sirra Arni's as guide to the great waterfall Dettifoss, the Speaking Rocks, Asbergi, and over the mountains to Laxamyri, near the seaport of Husavik. Here is one of the finest farms in Iceland. Two causes of its prosperity are seen in the carved and painted wooden figures of an eider duck and salmon over the front doorway. Above the farm the Laxa (the same river that flows from Myvatn) rushes in fierce rapids and little falls, then widening divides into many channels, eddying deeply about low, grassy islands, where the eider ducks breed. From Myvatn north to the Arctic Sea the river abounds in trout. Salmon are plentiful in its lower course, but lava pillars about twelve miles from the farm prevent the fish from ascending beyond that point. Five farmers have the right to fish in the neighborhood, but only two avail themselves of it—Sigfus, the farmer at Laxamyri, and Thorgrimur, at Næs. The latter place is the better for rod fishing. One year two Englishmen spent six weeks there, taking about 125 salmon. Another season only four were caught, but this was one of the cold years which occur about once in every ten, when the pack ice from Greenland drifts southward, shutting in the north coasts of Iceland. The ice does not actually enter the rivers, but blocks the fjords and the fish do not seem to run. The keen north winds check the growth of the grass, snow falls even during the summer months, and much misery is caused. In Iceland the farmers' flocks are their mainstay, and when the scanty hay crop fails most of the sheep must be killed. This last summer, however, was a good one for the Icelanders. Young and old, all were at work gathering in the short, fragrant grasses. And while the men worked late into the light nights, the nets in the river gathered a harvest of trout and salmon. Not only were the gill-nets used, but once, at midnight, the farmers' sons with a seine took fifty sea trout. Beautiful fish they were, weighing from ½lb. to 5lbs., and shining like burnished silver. The sea trout run to about the first week of August, while the salmon begin about June 1 and continue until the last of September.

The largest trout I caught at Laxamyri was only 2½lbs. The water near the shore in many places was shallow and weedy. I had no waders, and my rod was too heavy for me to cast far with it. The wind too blew almost a gale during most of my stay, fairly whisking the fly from the water. I hoped that some properly equipped and skillful angler would happen along, that I might at least see the capture of a salmon. I had had a faint, wild hope that I might capture a small one, but this was too great an ambition to be realized. Still, there might have been a chance for it had I gone to the best places further up the river, but there a bull was roaming at large. Several times I started in that direction, but my courage failed me before I reached the spot. It is astonishing how many black bulls the feminine eye can see in the strange, dark forms of the lava fields.

One day, after catching two fish of 2lbs. each, I hooked one which went the way of many big fish and escaped. The manners of salmon are unknown to me, and I have often wondered if it could have been one. I had cast a grilse fly at the head of a rapid when something took the fly, and as I struck the line looped itself around the tip of my rod. I could not reach it, for the fish dragged heavily and positively refused to yield an inch. There was nothing to be done but to await the final catastrophe. Four times the fish went up and down, the dripping line slowly cutting the surface of the water, and being jerked reluctantly out, inch by inch. Then with a rush he went down the rapids; the tackle was strong and the hook tore out. Could it have been a salmon or was it a giant trout? There are big fish in the Laxa. The very next morning Joannes, the farmer's son, called me out to see a 10lb. trout taken in a net near the fjord, with three fine grilse. It looked at first glance like a female salmon, having the same small head, thick body and silvery sides. The best of all was a 32lb. salmon—the largest, Joannes said, that had been taken, in his recollection, on the farm.

In looking at a large map of Iceland, fifteen rivers called Laxá are to be seen. These are or have been salmon rivers, as the name indicates—"Lax," salmon, and "á," river.

Trout abound in all rivers which do not drain glaciers, but the best fishing is in the Myvatn Laxa, the Sog near Lake Thingvellir, the fishing lakes of the Arnavatnheidi, in Svinavatn, and in the tributaries of the western Hvita.

On our homeward journey some Englishmen showed me their salmon flies. The Jock Scott and silver doctor were the favorites, though the Childers, snow-fly, butcher and Durham were also used.

For trout I found a grilse Jock Scott was a favorite at Myvatn and Laxamyri; in fact, most of the grilse flies would be good, and a large March-brown should be included.

The Icelandic fishermen on the Laxa make their own flies, and use almost altogether one with a rather dark brown wing and red body.

During my week at Laxamyri there were few hours when the weather was even reasonably good. A bitterly cold, high wind blew from the Arctic Sea, bringing a dense sea fog, while a heavy rain continued for four days. It was impossible to fish. My numbed hands

could not feel the rod or manage the reel. Not until the day I was to take the Thyra at Husavik did the storm cease, and I rode away under serene sunny skies, looking back with keen regret at the beautiful river, where those big fish lay that I didn't catch.

That evening the fog closed in again, and at 10 o'clock the waiting population of the little settlement heard a faint muffled voice somewhere out at sea.

"Thyra kommer!" cried an old fisherman seated on the beach, and "Thyra kommer!" went from mouth to mouth as slowly through the fog loomed a shadowy vessel, to be shut from view in another moment by the inrolling mists.

Three hours later we were steaming cautiously to the westward *en route* for Reykjavik by the north and western coasts of Iceland. ELIZABETH TAYLOR.

"Forest and Stream's" Contributors.

CHARLESTOWN, N. H., Oct. 9.—*Editor Forest and Stream:* Words fail to express my regret when, as I opened my FOREST AND STREAM last night, the first thing that met my eyes was the announcement of the death of O O. S. I cannot add to your own expressions of the charms of his contributions to your columns for many years, but to my own mind he was one of the most delightful of your correspondents, and I always anticipated pleasure when I saw his initials at the bottom of a letter. How the old ranks thin out! "Nessmuk," "Ned Buntline," "Ufford," "Wells" and now "O. O. S." are gone, while "Bourgeois" and others seem to have dropped their pens. To be sure, you have plenty of fresh contributors, and the dear old paper is as interesting as ever, but I miss the old signatures at the foot of the columns. Let me add my word to the general expression of delight at the letters of my old friend "Fred Mather," if he will allow me to call him so, in which I recognize much of the same quaint fun which used to crop out in our occasional correspondence on fishculture in years past.

I have had no adventures to chronicle myself this summer. Local laws, which I helped to instigate, have closed our trout streams for a time, and the leaves are too thick in the woods yet for my old eyes to distinguish either a ruffed grouse or a gray squirrel, though both are said to be plenty, and some of my young friends have brought in their game pockets full of the latter game. I have confined my rambles t flower hunting, and have just thrown away the wilted remains of a glorious bunch of fringer gentians, which have opened their blue eyes to the sunshine in my window for more than a fortnight.

I hear good reports through the boys of the young trout we planted in our brooks this spring, when I secured 10,000 fry from Commissioner Wentworth, and hope if I live till the spring of '98 to wet a line in some of my old haunts again.

It is the first sunny morning for sixteen days, and I wish you and some of my other "chained to business" friends in the city were here to enjoy the glory of the hillsides with me. VON W.

Natural History.

WOODLAND BIRD NOTES.—IV.

The Migrants Return.

"The fern was red on the mountain,
The cloud was low in the sky,
And we knew that the year was dying,
That the wintry time was nigh."

IN musical phrase, the period from January to July is a crescendo—that from July to January, a decrescendo. In many ways the record of the last six months is the same as that of the first six, read backward. Nature shows a grand climax and anti-climax as the sun annually creeps up from its low southerly circuit to the zenith and back again, making the coldness, desolation and stillness of January culminate in the warmth and the full chorus of birds in June, only to relapse again into the frozen and dreary silence of midwinter. It is the balmy breath of spring that wafts the migrants from the South, the sharp chill of autumn that recalls them from the North. The fall transit is in the mood of the season, and the volume of life suddenly but faintly swelling and disappearing is like the last expiring brightness of the candle, except for the few species that are with us in winter. In taking a poetical view of the matter the bird life of June is at a greater advantage than that of September or October, the birds being in full song, brilliant in plumage and appearing more willing to stay with us longer than in the fall, and everything is brisk and cheerful then too. From a scientific standpoint, however, the fall is the best, for though the birds are silent, yet they come down in large numbers, they are tamer, and can be easier seen than in the spring and in a suitable locality on a fine day in the fall, a scientific collector can secure numbers of specimens, whereas in the spring he might not be able to secure any.

During September this year the migrants were very slow in appearing, it being only in the latter part of the month they were at all abundant. On the 19th of the month I saw the first return flock of the warbler family, consisting of a large flock of magnolia and golden-winged warblers. With the returning warblers in the fall come the young males and females of the summer, and on account of their nondescript plumage, which has none of the characteristics of their species, they are hard to identify and are apt to mix one up. On the 21st the migrants became more numerous, appearing in white-throated sparrows, juncos and flocks of migrant thrushes, among which were the gray-cheeked, olive-backed Picknells and hermit thrushes. The 25th, which was somewhat stormy, brought down the migrants in large numbers. The flocks of warblers were of different varieties, consisting of the migrants and the summer warblers that were still lingering behind. Among the flocks the parula, black-throated blue and the rare Connecticut and mourning warblers were the most abundant. With the warblers was associated the Canadian or red-breasted nuthatch, which appears to be quite abundant this year, and our tiny, hardy, little winter friend, the golden-crowned kinglet. Now too comes back our monotonous friend, the brown creeper, who with the perseverance of the saints has begun his winter's work just where he left off, at the bottom of the ladder. This bird is generally solitary, and is seldom found in the company of other birds unless it is the chickadee or white-bellied nuthatch, but you never find him with others of his own kind. There is always an exception to a rule, however, and that I found on the 30th, for I came across a large flock of creepers in a grove of oak trees. There were dozens of them in every tree, and with the noise they were making you might judge they were enjoying each other's society immensely.

The bluejays are very abundant this fall, and I have never observed them here (New Rochelle) before now. So far this fall I have found the female and young warblers abundant, while the brightly plumaged males are rare. Evidently they do not travel with their families. Birds are short-lived little creatures, they fall like the leaves from the trees, but where no one knows, or how they die and what of. Science is growing fast, and still there is much to learn, and it will be many a day before man has come to learn to a fine point the habits and customs of nature's children, and that day is probably far down the misty aisles and paths of the future, and then perhaps never. EDWIN IRVINE HAINES.

NEW ROCHELLE, N. Y., Oct. 1.

HORNLESS DEER.

Editor Forest and Stream:

I think I can throw some light on the subject of hornless deer. In Scotland the red deer (*Cervus elephas*) is called as follows: The male is called a stag, the female a hind, a barren female a yeld hind, the young a calf, a gelded stag a havier; and there is another class of stag—rare, but still existing—without horns, though a perfect male, which is called a hummel stag.

I have shot both hummel stags and haviers.

The haviers are either gelded by accident (by a bullet or in fighting) or else are found by the forester when just born and gelded by him. These latter are ear-marked generally, so as to know how old they are. The idea of gelding is to make them better venison.

A stag never grows any horns if gelded as a calf. If gelded when he has horns, the horns remain as they were at that time, do not grow any more, and if in velvet at the time remain so always. (These fact were told me, not from my own observation.) Also, if a stag is gelded on one side only the horn on the opposite side is affected. When I shot any stag with a malformed horn, I always looked to see if he had been injured on the opposite side by an old wound; but I was never able to verify this from actual observation, but I think it is a proved fact.

The hummel stag is a hornless stag, born so, perfect in every other way. I shot a very large one and kept his skull for some years, but have now lost it. The pedicels for horns were very rudimentary under the hair, just as F. T. describes it in your paper of Sept. 12. The foresters say these hornless stags drive away horned stags in fighting, and keep all the best hinds to themselves. In looks he was just an ordinary, very fine stag, without horns and rather a prominent forehead; I think his skull was thicker on top than normal.

A havier does not look so stag-like, but is more round and sleek like a very large yeld hind, is apt to put on fat and has no fight in him. As perhaps you are aware, in England there are packs of hounds kept for hunting "carted deer," that is deer taken out in carts and hunted with hounds, and when taken not killed, but kept for another hunt; the hounds do not hurt them.

With the Queen's stag hounds, which run over a country with very large fences, which require good jumping and resolution in horses, the deer hunted are generally haviers; and with Baron Rothschild's hounds, always haviers, as they are considered to go bolder. But with the pack I hunt with, the Surrey stag hounds, we use yeld hinds, as haviers are apt to turn crusty and refuse to run, and hinds can get over our fences well enough.

You will see from the foregoing that in Scotch deer forests, where the deer are naturally more under observation than in a really wild country, hornless male deer are known and even have a name. WALTER WINANS.

A RATTLESNAKE'S STRANGE END.

FT. MEADE, S. D., Sept. 26.—*Editor Forest and Stream:* Having always been an ardent admirer of your valuable paper, I take great pleasure in presenting your snake editor with the head of a rattlesnake, the unhappy bearer of which committed suicide a week ago at the foot of Devil's Tower by drowning himself in the Belle Fourche River. Please note the three-fangedness of the head. I have been somewhat puzzled in this matter, as I do not know for certain whether all rattlers in that section of Wyoming are equipped with an extra fang, though I am inclined to believe that nature in its omniscience has made such a provision on account of the toughness of the natives, whom just a common, every-day, two-fanged snake could not possibly undertake to vaccinate successfully. Yet this can hardly be her plan, as even a three-fanged strike would hardly be of any great shakes against the local precaution of three fingers of S. S. G. (Sundance Sealed Goods).

As to the suicide of the creature, I am forced to ask for an explanation. The snake, at first sight, coiled up in the usual manner for a prime strike, made a vicious lunge at my legging, then drew back and closely scrutinized me from hat to shoe. Instantly a change of expression came over his features, and ferocity gave way to a look that might have been born of disgust and resignation. I watched him closely, not knowing what might be his next move. He suddenly astonished me by plunging headlong into the Belle Fourche. Motionless he sank, and lay at full length at the bottom. I continued to watch him until the last vestige of his reptilious breath had risen to the placid surface in a pearly bubble, and then with the aid of a stick I raised him from the water, placed him in the sunshine and satisfied myself that life was extinct. I had never known or heard of a rattler taking to water, and here I was confronted by the plainest case of suicide by drowning in broad daylight. I have since then lost all faith in snakes. I have adopted and discarded every theory that might offer a solution in this case and am now driven to believe that this snake deliberately suicided because it had committed the blunder of wasting a well-meant three-fanged strike on an United States Cavalryman. Hereafter I shall travel *incognito* in those parts.

WM. GAULDT, Troop K, Eighth Cavalry.

[The three fangs observable in the head which accompanies our correspondent's note are, we think, not unusual. As the long fangs are very liable to injury, they are frequently shed and replaced by others pushed forward from the groove in which the partially grown teeth lie. There is thus a regular procession of teeth running from the minute germs which have not as yet taken the shape of teeth up to the long and perfect one in use. This method and its order are explained in Miss Hopley's book on snakes, and in other works. Often the second fang, that is to say, the one behind the most prominent one, makes a puncture as well as the large one.]

Mexican Rattlers.

SAN LUIS POTOSI, Mexico.—On a recent trip to a high range of hills, bordering on the east the dry mesa in which San Luis Potosi is situated, I found and killed two rattlesnakes. The hills I have mentioned are often enveloped in fog, and their dense green vegetation is in striking contrast to the drought-stricken country of the plain. The timber is almost entirely oak, and the slopes are covered with sward, and in protected corners with high weeds. The snakes were the darkest in coloring I ever saw, almost black. This seems to be out of adaptation to their surroundings, the weeds and decaying oak boughs.

Did you know a rattler's music box would not perform if wet? It stands to reason, as the saying is, but I never happened to run up against the fact before.

I have just read Ransacker's account of the Chinaman that did not die. I was surprised to learn from my Mexican guide that the bite of the rattlesnake was not usually considered fatal in the section alluded to. He mentioned a man whose arm had decayed and sloughed off from a bite in the finger, but said it was because he had not had it treated immediately. I inquired about the treatment, knowing no drugs were to be had and hoping to get on track of some interesting plant. But he knew nothing except cauterizing with heat. He had not heard of sucking or ligature, nor even, what is passing strange, of that "snake-bite remedy" which fishermen and hunters so generally carry in flat bottles. Could there be any better exhibition of pristine simplicity? AZTEC.

The Woodcock's Whistle.

MAINE, Oct. 4.—*Editor Forest and Stream:* At various times during the past few years I have read with much interest discussions in FOREST AND STREAM as to how the woodcock makes his whistle, that delicious ripple of melody so fascinating to the ear of the sportsman who hunts this shy and handsome game bird.

While shooting woodcock recently in company with a friend this question was discussed, my friend at once asseverating that the whistle was made by the bird's wings and not through the bill by aid of the throat, at the same time saying to me, "When next you shoot a woodcock without injuring his wings and without killing it, simply making a body shot sufficiently hard to bring the bird to the ground, call your dog to heel, retrieve the bird yourself, hold him by the bill suspended in the air at arm's length, and in fluttering to escape from your hand the whistle will be made by the bird's wings."

While shooting a few days later with another friend I was fortunate enough to make a body shot on a woodcock, which came to the ground with the wings unbroken. The dog caught the bird, which had attempted to fly after it struck the ground. I took it from the dog's mouth, and seeing its wings were unbroken I determined to make the test then and there.

After telling my friend what I was about to do I held the bird by its bill at arm's length, and the result was that it made the whistle three times, each time by executing a rotary movement of the wings and body while fluttering.

If any sportsman doubts this statement I wish he would do as I have done and all doubt will be dispelled from his mind as to how this enchanting whistle is produced.

W. H. HARRIS.

Coyotes Catch Cats.

SHIRLEY BASIN, Wyo., Oct. 7.—*Editor Forest and Stream:* For many years I have been a reader of your paper and I have never asked you a question, but now I want some help.

I live on a ranch, and we are somewhat troubled by field mice and mountain rats, and so we must have cats. We have them, but we do not keep them long because they are caught by coyotes. Within a few months I have lost four cats in this way. The one I have now, however, I have had for some time. Why she has escaped the enemy I do not know, for she often goes 200 or 300yds. from the house on her hunting excursions. I fear, however, that she will go the way of the others before long. How can I protect her? Don't suggest killing off the coyotes. I have been trying to do that for, lo, these many years, and without success. E.

Our Audubon Bird Plates.

SPEAKING of birds, the FOREST AND STREAM is showing much appreciated enterprise by presenting reproductions of Audubon's bird portraits chiefly for the purpose of affording its readers an opportunity for seeing for themselves the pictures of which every one has heard, but which few have ever been privileged to see in the original because of the extreme rarity and inaccessibility of the work. The copies of Audubon now in existence are confined to a few libraries and fewer individual possessors; and when the work falls upon the market, as it does now and then, it sells at prices ranging from $2,500 to $3,500. The series of pictures are and will be of full-page size, and the first reproduction (black ducks) has remarkable artistic excellence. The engraving is by photographic process direct from the original.—*The Easy Chair in Syracuse Herald.*

Game Bag and Gun.

SOME AMERICAN GAME BIRDS.*

III.—The Quail.

From the personal point of view, each one generally has his own preference in respect to the bird which he prefers to shoot to secure the greatest pleasure, and this preference in turn determines the shooter's opinion in that such bird is therefore the best of all birds for the purposes of sport. Thus one prefers ducks, and not considering that his own personal idiosyncrasies, or greater success, or habit and long association, or what not, may have much to do with his preference, he solemnly affirms that duck shooting is the best of all shooting. And so with him whose choice of sport is the shooting of some other bird—that bird is sure to be exalted above all others.

But from the standpoint of the greatest good to the greatest number, quail shooting for many reasons is the best of all shooting. It is a kind which affords such mixed shooting—open and cover, slow and swift—that parts can be found to meet the skill and fancy of all, be the former little or great, and the latter fastidious.

There is much of the open shooting which is not so difficult as to dishearten him of moderate skill, while, on the other hand, in cover the shooting tests the skill of the most expert sportsman. And again, taken all in all, whether in open or cover, the shooter of good average skill can compass a good showing in results, having the consequent pleasure which comes from reasonable success. And in this connection it may not be amiss to maintain that a certain degree of success is essential to the shooter's pleasure. Many writers deprecate the consideration of the bag, treating it as an irrelevant gross incident, or one so dominated by the beauties of nature and the ethics of shooting in the abstract that it should be mentioned in hushed tones or viewed with eyes askance. The beautiful and the useful should go hand in hand. Each is a part of the great whole, and as such should be equal factors in sportsmanship. To the sentimental, which ennobles and adorns the useful of life, there must be added the material and the practical; to the shooter there must be reward for his efforts. It has often been said that it is not all of shooting to shoot, nor all of fishing to fish, forgetting the converse that all of shooting or fishing being absent there is no shooting nor fishing at all.

Moreover, now as to quail shooting in respect to quantity, there is more of it than there is of any other kind of shooting, hence each shooter can better satisfy his longings for sport if it be measured by the size of the bag or the number of opportunities offered. And there also more of it when measured by the matter of time, for it extends through a season of about five months, taking it as it is in the North and the South. Thus the man whose business cares leave him but a few days for shooting, and these at no definite time, has more possibilities of sport on quail than on any other bird. But the very abundance of the bird seems to have checked the proper appreciation of it. Not that it is treated with neglect, but there seems to be a lack of the enthusiasm and lavish use of the superlatives, as is often to be noted when writers are discoursing on the ruffed grouse, or woodcock, etc. Nevertheless it is not uncommon to have a keen relish for what is rare, even if it be not of the best, while the good may be so common as to escape notice.

The quail is more uniformly and widely distributed throughout the United States than is any other game bird. Its habitat generally comprises both open and cover (though to this whole districts are exceptions, as will be touched on later), thus, besides giving the sportsman a mixed style of shooting, is added the charm of constant variety and the testing of his skill in woodcraft. It differs in this respect from the ruffed grouse, whose habitat is in the woods, and therefore in a much smaller section of the United States than is that of the quail; the former being strictly a bird of the forest, it in practical shooting never can be the bird of the people, though it be a bird whose qualities win the most admiration, qualities equal to testing the skill of the best sportsmen.

All works on natural history, so far as I know, teach that the quail's habitat comprises conjointly both open and cover, and while such is true in a general way, there are important exceptions to it—so much that a work devoted to the habits and habitat of the quail as they are in one locality might be distinctly erroneous if applied to the quail of some other locality. In this respect it differs from the prairie chicken and the ruffed grouse; for of the one it may be said without qualification that it is a bird of the prairie, of the other that it is a bird of the woods; and such saying of them will be found to be true wherever those birds may be found. The quail thrives wherever it can obtain a food supply, in open or cover. It readily adjusts its habitat according to the dominating circumstances of food and cover, whether it be in prairie or woods, or a country comprising both open and cover.

In the country north of the Ohio and east of the Mississippi rivers it frequents the open fields largely, preferring such as have a good food supply, with hedges or old walls and fences fringed with brush, or nearby woods and thickets to which it can run or fly for shelter or safety. In these sections it rarely goes far into the woods, preferring to skirt along the outer edges of them merely for protection and shelter, as the hawks are its deadly enemies and it needs to be ever alert in avoiding them.

Flights.

Often the flight of the quail is a compromise between cover and open, it including both, so that on the other hand it is never so easy a prey to mediocre skill as is the bird of the open, the prairie chicken, the bird of slow wing, little given to strategy in evading its enemies, and trusting for safety to open flight, which is neither swift in itself nor puzzling to the shooter. As the ruffed grouse is so difficult as to be discouraging to most of shooters as being beyond their skill, patience or endurance, so the prairie chicken, being at the other extreme, soon dulls the sportsman's interest from the monotony of the sport which is afforded and the ease with which the bird may be killed. The chief merit of chicken shooting consists in that it is summer shooting, coming at a time when the zest of the sportsman is keen from months of deprivation from sport with dog and gun, and when the outing has the charm of the prairie in its most beautiful adorning and the novelty of the shooting season's beginning. There is a monotonous sameness to chicken flights which begin and end in the open, thus lacking the spirit which pervades the sport wherein is a variety of flights in cover and open, and wherein the trees and brush force the shooter to time his shots and to quick decision to take advantage of the opportunities offered. Such combinations of obstructions and flights, combining curves and straight lines, require a style of shooting differing in every particular from the spiritless and calculating shooting so commonly practiced by the methodical chicken shooter. When the chicken becomes very wild, as it does late in the season, flushing at long ranges, it is difficult to shoot it, though shooting then is a test of the gun quite as much as it is of the shooter, and it is at a time when nearly all shooters have finished their shooting on the prairie, hence late chicken shooting is not worthy of much consideration as a sport of the many.

Roosts and Shooting.

It oftenest roosts in the open fields where there is at least a few inches growth of grass, or stubble, or weeds for concealment, and it uses the same place many times if not constantly disturbed, as indicated by the grass or other vegetation being beaten down in the small circular opening—the roost—about 2ft. in diameter, and the pile of droppings in the center of it. The birds roost on the ground, bunched up close in a circular form with their heads outside; thus all facing toward the outer circumference of the circle, which cannot be approached without coming to the view of some bird; and thus the arrangement is said to provide for the safety of the whole. In theory it seems an admirable arrangement; in practice it works very faultily. They often fly reluctantly when they have comfortably adjusted themselves for a night's rest, and the pointer or setter can draw very close to them then, generally doing it with greater precision than when they are more scattered about, the evening hours also being more favorable for stronger scent. Were not dogs trained to such stanchness as is required in shooting, they could easily at such juncture spring in and capture, as indeed some partially trained dogs will do under the circumstances.

In the States of greatest bird abundance, as in Arkansas, Mississippi, etc., and where there are many ragweed fields, in them very destructive shooting often takes place near the twilight hours, when the birds have settled themselves for their night slumbers. When the dog points, the shooter fixes himself at a good distance from the roost to obtain the best scatter of the shot. Then the birds being flushed, they swarm up loosely all together for 3 or 4ft., where the shooter snaps them and often does nearly as much damage as if he had potted the birds on the ground. It is hardly necessary to add that this practice is disapproved by all true sportsmen.

In the Prairie Region.

In Minnesota, Dakota, Nebraska, Kansas and other prairie States the quail readily adapts itself to the local peculiarities of the different sections, utilizing such slight advantages as may offer, as hedges, fences, the cover with which most streams are fringed, high weeds, etc., in this respect the habitat of one bevy being quite distinct from that of another even in the same immediate locality.

Its Enemies.

It sadly needs cover for its protection, its enemies being both of air and earth—hawks, foxes, dogs, etc.—and the eggs too fall a prey to the rapacious appetites of some of its enemies. In the South the cur dogs of the negroes—every family owning from one to as many as they can possibly maintain, and all kept in a kind of half-famished condition—prowl through the fields seeking for food, and they are the very worst of egg destroyers. Were it not so hardy and prolific a bird its fate would be swift and certain extermination. The negro dogs seem to be almost omnivorous. In the fall they may be seen making daily visits to some persimmon tree, where they eat the fallen fruit with great apparent relish, and the ones which have some claim to hound blood are not averse to making a meal in the cornfield on corn when it is in the milky stage. With such rapacious enemies to contend against, the destruction of the quail must be great, but in addition to all that, many are trapped and netted, methods which destroy whole bevies at a time.

Quail of the Woodland.

But to return to the matter of the quail's habitat—in certain parts of the South, as in the oak woods in sections of Alabama, Texas, Arkansas, or in the pine woods of Louisiana, Mississippi, etc., the quail may live wholly in the woods, food being therein secured in abundance, and food is always a first consideration. In cover some of the shooting is easy and some of it very difficult, though hardly ranking in the latter count with ruffed grouse, in respect to which bird the quail is neither so wary nor so wild. Shooting in some parts of the pine woods is almost as easy shooting as is that of the open, the ground being bare except for its covering of dry pine needles. The smooth trunks of the pine trees standing several yards apart and free from limbs upward of 30 or 40ft. offer no serious obstacle to the shooting. In other sections of the pine woods, where the growth of the trees is more stunted and the limbs grow from near the ground up, the difficulty of the shooting is second to none, and in some sections almost impossible.

Prairie Quail.

Again, there are sections wherein the quail lives on the open prairie, as in parts of Arkansas, and that being strictly open shooting it much resembles chicken shooting, excepting the difference in the size and speed of the two birds, the quail being much the quicker to get away at the start. It makes its flight in the open prairie, lighting near any little bit of shrubbery, be it no more than a bush or two of sumac, which by the way grows here and there on the prairie in Arkansas. In the woods when pursued it frequently takes to the tree tops for safety, where it is safe indeed. On the warm days, or when there has been a long spell of pleasant weather, it is far less wild than when the weather has been stormy, or when there has been a sudden change from warm to cold. Such changes add to the difficulties of the shooting immeasurably.

Northern Shooting.

In the North it makes its habitat where some buckwheat or other grain field will be available for a food supply. It so arranges its haunts that it has some cover within easy flight, to the densest part of which it flies for safety when flushed, not refusing the heavily timbered swamps if too much persecuted by the shooter. In such places it has an excellent chance to foil its pursuer by simply running away, or if pressed to take flight it has many chances to escape owing to the difficulty of shooting accurately in the dense cover.

New England shooting is the most difficult of all quail shooting, excepting perhaps shooting in the dense pines of some sections of the South, the shooting being difficult in itself, and to have any satisfactory success the scattered birds must be diligently followed and sought in the thickets, be they ever so dense. In this respect it differs from shooting in the sections of more abundance, where such close attention to the scattered birds is unnecessary either for sport or the interest of the bag.

In the South, where there is an abundance of birds comparatively, the sportsman rarely tarries with a bevy which gives him any special difficulty. It is much easier and more satisfactory to go on and seek more birds. For this reason, even under favorable opportunity, the scattered birds are never as a rule hunted till the last one is flushed and marked down, and flushed again when it is possible, the limit to seeking them in the North being generally when there is no hope of finding the birds at all. These are good reasons why the birds of the North should be wilder than the birds of the South, and why there should be differences in the methods employed in shooting them.

In New England buckwheat fields are the choicest resorts for food, and any adjacent brush or long grass of swamp or upland or the skirts of woods afford them the shelter and protection that they need or seek. No doubt the birds become wilder in the North than in the South, for first of all the inclement weather of the North tends to make them so, and there is a much more relentless pursuit of them by the shooter. The birds being scarce, after the bevy is scattered the search continues while there is a hope of finding a single remaining one, and if success with them has been unsatisfactory the shooter may return later to catch them, when they are whistling to each other in their attempts to come together as a bevy.

Quail Dogs.

In the broad plantations of Mississippi, Alabama, Tennessee, Arkansas, etc., a dog of reasonably wide range is necessary—much wider than would be either desirable or

* The first paper of this series, the Woodcock, was printed in issue of Sept. 12. The second, the Ruffed Grouse, Oct. 10. Others to follow will be devoted to the Quail and the Snipe.

useful in New England or similar sections in respect to cover, for there is much of the country in the South, open and cover, which everywhere affords a bountiful food supply, and therefore the birds are to be found in the most unexpected places, the cover and cultivated fields not aiding the hunter's judgment to the degree that they do in New England shooting. In the latter place there are comparatively few areas in which the birds can get both food and cover together, or even food alone, and the sportsman soon learns to distiguish the favorable places; in the South there is food in abundance everywhere, in cover and open. There are vast fields, some of which are overgrown with sedge grass, others with weeds, with fields of cotton and corn interspersed, any part of which is a fit habitat for the birds; thus the dog working out such ground in the South can beat out all parts of it with probable success. In the more open grounds of the South the dog can be seen at long distances, so that a wide range is not detrimental in that respect, providing that the dog is really working to the gun and not self-hunting or semi-self-hunting.

As to the manner in which the dog should hunt, no hard and fast rule can be laid down which would apply to all sections. Whatever may be the habitat of the quail, it learns to make the most of its surroundings in promoting its own safety and interests. It learns whether it is better to fly or run in evading its pursuer, and the best strategy to attain that end. If good cover is conveniently near it may trust to its wings at once for safety, and to its legs and wings if followed into the cover.

If the country is open or with narrow and insufficient cover, as in parts of Louisiana and other sections where the ground is thoroughly cultivated, it trusts a great deal to its legs and cunning devices. In working on such birds the dog must learn to govern his work by the circumstances of it. He might be an excellent performer on quail in the North and a poor one in the South, or he might be a good one in Mississippi and a poor one in Louisiana, though the presumption is that if he was good in one section he would soon be so in any other after the necessary experience.

Dogs in Louisiana.

Many of the plantations of Louisiana are drained by open ditches running parallel at reasonably equal distances from each other, though the distances may vary greatly one field with another, and may be 50 or 200yds. more or less apart, while other ditches of like arrangement intersect them at right angles; thus a plantation may be cut up with more or less regularity into small squares surrounded by ditches. Some plantations may be irregularly ditched, while others with a fair degree of watershed may not be ditched at all. The heavy rains round the banks of the ditch and its bottom, and a fringe of weeds and brush thick and thin in places string along the banks and make a fairly good shelter for the quail. On the squares are grown cotton, or corn, or nothing, as the case may be, though if not cultivated there is always certain to be a good crop of weeds. There is always plenty of quail food. When flushed in such places, the quail may fly a few yards to the first ditch, or may cross over two or three ditches before finding a place to its liking. As mentioned elsewhere, the state of the weather may greatly affect its habits. Then the bevy having gone to the ditch for safety, the dog to be useful must have great superiority in roading in the ditch or in the open. When in the ditch, the birds run swiftly along the bottom. It is almost impossible at first to induce the dog to go into the ditch, or being in it is impossible to make him remain therein, though it may not be over a foot deep and dry at that. He will cross out from one side to the other, missing the scent and accomplishing nothing useful. He does not know what is required of him. But once he catches the idea he soon improves on it, following carefully along the bottom of the ditch and pointing the scattered birds here and there every few yards apart in ones and twos, the shooter having a good opportunity from his position on the outside to kill as the birds whir out. The shooting is not so easy as one might imagine. Sometimes the birds run swiftly several hundred yards or more in the ditch and may then cut across to other ditches, giving work which may try the most experienced dogs in following the puzzling trail. If the birds happen to be near a cotton or corn field, where the ground is bare and no ditches for concealment, they may run so fast and far that the dog may never get near enough to them to secure a point, and the shooter who is inexperienced in this work will think that his dog is surely deceiving him. When near the woods or switch cane the birds often take shelter therein, and when in the latter it is well to give up further pursuit of them.

In the sugar country, where there may be cornfields here and there among the broad levels of the sugar cane, the character of the shooting again changes. Many birds will be found in and around the cornfields, and then it is very pretty shooting. It may not be amiss to mention, for the benefit of those who shoot about sugar cane fields for the first time, that they should keep their dogs out of such fields as much as possible. The cane in harvesting being cut diagonally across with a knife, the stump has an edge which will cut a dog's foot almost as a knife would, and it is a common matter for a dog to split his toes or heel if run in a sugar field, with the result of a crippled dog and no more work for the time being.

Winter Shooting in the South.

In Mississippi in the midwinter season the birds stay in the woods mostly. Good shooting may be had in the South from the middle of November to the first of March, though many of the Southern States have a much longer open season, but the dense cover and warm weather make a natural limitation to the sport. The weather is mild, the birds are strong and the sport is at its best in the winter months of the South.

Guns for Quail Shooting.

Quail shooting is close shooting as to the ranges at which the birds are killed. Most birds are killed within 25yds., some much nearer than that distance. A gun weighing from 6½ to 7½lbs. is of ample weight, and the 12-bore is most commonly used, though the 16 and 20-bores are excellent and preferred by many sportsmen, and of course the smaller bores may be much lighter than the 12-bore. The 16 and 20-bores being smaller, their killing circle is less, though they shoot with quite as much force as the 12-bore. Closer holding is required to shoot them well. Whichever is used, the gun should be a cylinder. There is no need of a choke-bore in quail shooting. Some shooters use a .44cal. shotgun.

It is an extremely difficult matter to induce the average shooter to use a cylinder-bore gun. Its use seems to be construed as reflecting on his ability to shoot a close gun instead of being accepted as a matter concerning the gun fit for that particular kind of game. It requires time to effect a cure in the use of choke-bores in quail shooting. One has to treat indulgently the emotional attacks, sentimental and practical, which appertain to shooting, from the romance of it which requires that the landscape be bathed in mellow sunlight, the prairie bespangled with flowers, the breezes laden with the fragrance of the wild woods, the glories of nature coloring all, to the attacks in the practical details which require the closest of guns in shooting quail and woodcock, the heaviest of loads when the lightest are better and what common sense dictate, or that a point, be it ever so well done and so accurate withal, is sporting heresy unless made by a black, white and tan dog. The sportsman should go forth equipped for his sport according to its needs and not to the whimsicalities of senseless fashion. He should not take a full-choked gun in cover nor a cylinder-bore gun to shoot ducks. There should be intelligent adjustment of means to ends. Industry and skill and woodcraft should not be balked by inappropriate theories and weapons.

The foregoing is written of the quail as it refers to man's pleasure afield with dog and gun. It naturally is not fearful of man and rather prefers to dwell near his haunts, not from an affection for him, but from the fact that near the cultivated sections there is always more food to be found than in the uncultivated. The matter of providing food for itself and its young is quite as constant and insistent in the life of the quail as it is in the life of man.

It often nests close by the cultivated fields. Its cheery, ventriloquous whistle reiterating its favorite utterance "Bob White" may be heard about the farms here and there particularly in the morning hours, and the name "Bob White" has come into use to designate the bird itself. Sometimes the call is uttered with a short introductory note, and these, with a few alarm calls, or calls of inquiry when the birds have become scattered, seem to be about all the calls these birds have.

In many parts of the South, where the birds are in greater abundance, their sweet notes may be heard in many directions in the early morning and evening hours, and work great harm to it, for the shooter hears them and thereby learns of the whereabouts of all the birds in his neighborhood and "locates" the haunts of every bevy. In the fall the notes of the quail often serve to inform the sportsman as to the best course for the morning's hunt. In the South it is called "partridge."

In the fall when the shooting opens the quail soon learns of its danger, and its habits thereupon change quickly to conform to a life of greater safety, compromising on the dangers, the food supply and the thickets as places of refuge from danger, for the quail will run many risks to be near an abundance of food. However, when danger is impending it avoids the open much more than when danger is not, and is more alert, quicker to suspect mankind and quicker to take alarm.

When spring returns the birds seem to lose their fears of man, and they breed with little reference to concealment from him. Their confidence is unimpaired till fall approaches, when there is a repetition of all the fears and troubles and dangers of the preceding years.

He who can average three kills out of five shots is an excellent marksman. The shooter may make a run of ten or twenty straight kills, but there are soon sure to come misses if he does not pick his shots, and in winter the shooting is much more difficult than in the fall. Of course the man who never misses might do better, but the man who never misses is of the parlor and not of the field.

B. Waters.

ARKANSAS GAME.

Little Rock, Ark., Oct. 5.—One by one the bars of restriction have been taken down, until now it is lawful to shoot all kinds of game in the State, with the exception of pinnated grouse, which are protected.

Aug. 1 it became lawful to shoot deer, and from then until Feb. 1 deer may be hunted without restriction. Notwithstanding that opening day was an extremely hot one—the thermometer registering 103° in the shade—a number of parties were out. Encouraging reports concerning the deer come from all parts of the State, and though the weather has up to the present time been very unfavorable for hunting, quite a number of deer have been shot by local hunters, and our commission merchants have also received quite a number. Friday I saw a consignment of six that came from Winchester, Drew county, a little station on the Pine Bluff branch of the Iron Mountain road.

Sept. 1 the opening season on turkey began, and for the next eight months a war of extermination will be waged on this noblest of game birds; a season entirely too long by three months. If the bird was only given a chance to mature he could manage very well to hold his own with the majority of hunters; in fact, better than any of our other game. With the exception of gobbling time in the spring it takes a skillful and crafty hunter to meet with anything like success when in quest of this bird. In gobbling time he who is well up in the art of calling will find it no difficult task to lure the then bent on love-making gobbler to destruction, and it is at this season of the year that most of our turkeys are shot. This bird, I am pleased to say, is reported in increased numbers from all parts of the State, and not a few have already been shot.

Oct. 1, the opening day on quail, dawned bright and clear, just as every shooter desired; but the breeze that had been blowing from the north was succeeded by a calm, and the sun shone down with a summer fierceness that soon took all the hunt out of man and dog, and also added to the difficulty of finding birds. For in such weather they only remain in the opening for a short time, going into the woods and thickets, where they remain until about 5 o'clock in the evening, when they again come out into the opening to feed and roost. This they continue to do during the hot days of early fall, but on cloudy days they generally are to be found in the openings all day, while later on in the season just the reverse is the case. For when the weather gets cold and it is clear they always seek the sunshine, while in cloudy weather they take to the woods or just skirt them.

Though the conditions were altogether unfavorable to success, I could not resist the temptation to at least make one effort for a quail supper. Having some six weeks previous found four coveys in a little pasture just below the city, I thought I would have no difficulty in bagging a half dozen, which was all I desired. A start was made at 7 o'clock, and when I arrived at my little pasture you can judge of my inward disgust when I found that some of my friends had already preceded me, and were working over the field with their dogs, but without success. Not satisfied with their showing, I made my dog work carefully over the whole field again, and also the adjoining woods, but all to no avail; several other fields were hunted over with like results, and while the dog several times showed signs of game nothing was found until about 10 o'clock, when he found two scattering birds in some high ragweeds. These proved to be very strong and entirely too swift for me, so I quit in disgust, as it now was very warm. I never saw so many shooters out as on this day, yet a careful inquiry failed to find any one who had met with anything like success; sixteen birds to two guns was the best bag I heard of, and that was the result of a hard day's hunt. Though the open season has just begun, the netter is already plying his vocation.

To-day the sportsmen of the city were treated to the disgraceful spectacle of a whole bevy of quail being displayed in a show window of one of our restaurants. That these birds were netted is beyond the shadow of a doubt, for in this season of plenty it would be next to impossible to catch them in a trap. The most aggravating part of the whole matter is that the sportsmen are powerless to take any action against it. Under our existing statute it is legal to trap quail on one's own premises, and furthermore to shoot them at any season if in the act of destroying fruit or grain. This perhaps was the transgression these birds were guilty of; very likely digging up the farmers' sweet potatoes. As the burden of proof is on the prosecutor, it is impossible to convict any one for trapping or netting quail, no matter where they are caught.

Nor is this the only thing the sportsman has to contend with here. From all reports it is very evident that quail have been shot for a month or more past. Six weeks ago there were numbers of coveys to be found in the fields on the outskirts of the city, then nearly grown. Yet of all of the coveys that had been located by the sportsmen at that time few were to be found on the 1st, and these only in broken and depleted number, while from their extreme wildness it was apparent that they had been hunted. To-day I was told by a gentleman whose integrity cannot be questioned, that on Sept. 26 he saw a man walk up one of our main streets, right in the heart of the business center, with five quail, which were displayed in full view. Yet no one had the courage to arrest him, and if any of the officers saw him they evidently did not understand or did not want to do their duty. What's everybody's duty is nobody's. Despite these discouraging circumstances I still believe this will be one of the best quail seasons we have had for a long time, though to get good shooting one will have to go to a less populated district. The vegetation is quite rank and there is plenty of cover, so that a fair estimate of our quail cannot be made until we have had several frosts, which will enable one to go thoroughly over the ground. This will likely not occur before November.

The prospect for good duck shooting is not brilliant. Wood duck shooting in this vicinity has been a failure, and really so all over the State, with a few exceptions. The slaughter of this beautiful bird began as early as June, when the early brood was scarcely able to fly. It was at this time that the market hunters on the Sunk Lands in the northeastern part of the State, near Paragould, Greene county, resumed operations, and this will continue into May next year. Nothing like the usual bags were made here this year. Some of our local shoot-

ers began shooting what few wood ducks there were in this neighborhood in July, and since then they have kept persistently at it, but six is the largest bag I have heard of. Wood duck shooting in the summer time is a most unsatisfactory sport. The flight never lasts longer than an hour in the morning, and about the same length of time in the evening, and frequently much less. About 50 per cent. of the birds shot are lost, as no effort is made to retrieve them until after the flight has ceased, during which time all the cripples have made good their escape. The shooting is generally where the water is covered with buckbrush, lilypads or flags, where even the dead ones are difficult to find, while on the evening flight the retrieving must be done after dark. Imagine a man pushing his boat through such obstructions seeking his dead ducks with a torch, with millions of mosquitoes buzzing around and very likely the temperature up to 90°. This is what some people call sport. This handsome duck, once so abundant in our neighboring marshes and lakes, has almost disappeared. Yet some of our shooters are at a loss to account for its departure, for only five short years ago a bag of forty in an evening was no extraordinary feat. To me the solution of this problem is very apparent.

For the past ten days there has been a good flight of these ducks near Cache, a small station on the Helena branch of the Noble division, which is a part of the Iron Mountain system.

Our prospects for fall duck shooting are not any brighter. The extreme and prolonged drought of the past summer has dried up many of our lakes, sloughs, bayous and marshes, so that unless we have a great rainfall within the next two weeks I fear this sport will be of a rather inferior quality here. Some few teal have already arrived, and our first flight is now about due. Teal are reported to be quite numerous on the lakes near Van Buren, in the northwestern part of the State. A bag of thirty-eight was made on the Sunk Lands last Tuesday, Sept. 29.

A tidal wave of squirrels seems to have struck the State, as though to overrun it. Everywhere large bags are made daily, and without any visible diminishing of the supply. At Wilmot, in Ashley county, there is a market hunter who first ascertains how many squirrels he can dispose of, and then kills just that number; no matter how many, he always fills his orders.

PAUL R. LITZKE.

WILD TURKEYS.

I HAVE killed wild turkeys. But there came a day when I was entering my 'teens and living on the farm that I saw more wild turkeys than I ever saw before or have seen since, and I did not kill any of them either, though I was armed with father's favorite rifle. Where those turkeys came from and where they went after the chasing I gave them is not plain to me, for I did not hear of them before nor after that day.

It was my habit in those days of boyish irresponsibility, whenever a leisure hour afforded me the opportunity, to take down the old muzzleloading rifle and make a bee line for the woods. I did not have far to go and kept the family table pretty well supplied with squirrels. In this way I became a tolerably sure shot even before I had the strength to hold the long-barreled piece off-hand. I usually kept the rifle in order and the old shot pouch supplied with everything needed. So on this day I slung shot pouch on shoulder, took down the gun from its rack, and crossed the highway that separated our farm from a neighboring wood. I reached the corner of the wood about 100yds. from our house, walked along the fence a few rods to find a top rail that would not roll, climbed to the top of the rail fence and took a look at the woods. I would not have been surprised to see one or more gray squirrels going up trees or running on logs, but imagine my feelings when I counted just twenty-five full-grown wild turkeys on a large oak log not 150yds. distant. One would have been enough, but twenty-five all in a row, and not over 250yds. from our house. By the time I had recovered from my surprise the turkeys were off and going, some walking, others stopping to pick a bit of nut or look at me, then running to catch up. Of course some of those turkeys were mine. I concluded that two would be about the right number, so slipping off the fence I started to sneak within rifle shot.

It was impossible to keep behind trees from all of them, and when the turkeys saw that I was following them they just laid themselves out to have fun with me. One would raise himself on his tiptoes and flap his wings, and just as I pointed my gun around a tree at him another one would say quit and my intended victim would move on. Thus for half a mile I followed, dodging from tree to tree, and trying for this one, then for that, but never being able to get a bead on one before it moved. Finally, after they got me so rattled I could not have hit a flock of barns, a fine gobbler stepped on a small log and gave me the first fair chance for a shot; of course, I missed. The turkeys flew a short distance and went to scratching for their dinner.

Blowing through the gun to open the tube, if perchance burnt powder had lodged therein, I poured the powder home, then fished out bullet and patching and placed them on the muzzle. Next I felt for my knife, with which to start the ball and cut the heavy drilling. No knife there. Could I tear the drilling with my teeth? Of course, I must. And I did succeed in getting a portion torn off large enough for half a dozen loads, and rammed the charge home. The turkeys were no doubt looking for me and gave me the same old "song and dance." I fired at the first one that came in range, but missed; and with much flapping of wings the twenty-five turkeys flew over me and back toward the place where I had first seen them. Again I chewed at the drilling and enveloped the bullet with a goodly portion, then wiping the perspiration from my brow started after my turkeys. When I reached the edge of the woods, the turkeys had crossed the highway and were running across our farm. I went to the house and got my knife, then started to get my turkey. I had concluded that I could get along with one turkey. They seemed a little shy when I tried to approach within easy gun shot, so I took the first chance and fired. Twenty-five turkeys arose and sailed away, and that was the last I ever heard of wild turkeys in the vicinity of my old home.

During the winter of '69 to '70, while getting my first experience in pedagogy near where the Wabash River enters the State of Indiana, I took a stroll in the neighboring forest one evening, and for a companion took along a rifle belonging to the gentleman with whom I was boarding.

I did not expect to kill anything; simply had to work off some of that pent-up wildness that was not allowed to assert itself in the schoolroom, and to draw on my imagination for the rest.

After going some distance into the timber I stopped by accident, facing a large dead oak tree that stood some fifty paces distant and towered head and shoulders above its neighbors. I scanned this once mighty oak from base to branch, meditating the while on the ravages of time. But what is this? Perched high upon a branch and looking out over a sea of gentle swaying tree tops stood a lone wild turkey. What a fitting *finale* to my meditations. The decaying oak, once the monarch of the forest, now hoary and withering, the worms gnawing at its trunk, and its roots mouldering in the earth, and supporting with one of its lifeless arms what was the last specimen I have seen in eastern Indiana of the noblest game bird known to America.

I have never forgiven myself for killing that bird.

G. W. CUNNINGHAM.

RHODE ISLAND GAME INTERESTS.

PROVIDENCE, R. I., Oct. 12.—*Editor Forest and Stream:* Just at the present time the members of the sporting fraternity of this State are more or less interested in the ultimate results of the prosecution of Allen Stone, who was captured red-handed during the close season with nineteen partridges in his possession. The details of his arrest and the technical quibbles whereby his lawyer has endeavored to secure his liberty have been given at length in these columns. Last Friday the matter again occupied the attention of the court, when something of a surprise was given by the discontinuing of these cases, it being deemed unwise to prosecute on the warrants in those cases, because of technicalities involving the legality of the appointment of the game warden who made the complaint, and the manner in which the several warrants were issued. Lawyer F. W. Tillinghast, who has been called into the case by the Rhode Island Game Protective Association since the first calling of this case, advised this discontinuance after a careful examination of the authorities. He said:

The statute clearly intends to punish the offender for every bird found in his possession, but it does not follow that a separate complaint must be made for each bird. It is the having in one's possession that constitutes the offense, and whether it be one or many birds, the offense is the same, only the penalty is changed. For the nineteen birds found in the possession of the defendant Stone, he may be made to suffer the penalty prescribed in the law of paying a fine of $20 for every bird, but it should all be alleged in the indictment.

He also argued that the intent of the word bird was the act which constituted the offense, and he quotes a case in point, that of State vs. Prescott, 153 Mass. 396, in which it was alleged that the defendant did unlawfully take 1,000 smelts. The court held that but one offense had been committed and that the number of fish was of no consequence except for the purpose of determining the penalty to be imposed.

Mr. Tillinghast said that when the birds, however, were separated the case ceased to hold. However, the matter of W. L. Plaisted's qualifications to serve the warrants was not a consideration, as the intent of a warrant was to get the offender into court, and after once appearing and pleading it would make no difference if a seven-year-old boy had served them.

As to Mr. Stone's once having been in jeopardy, he stated that in the lower court it was not possible that he be in jeopardy unless he had been tried and sentenced.

Stone was immediately arraigned again on a warrant including the nineteen birds in one. He pleaded not guilty, and was placed under $500 bonds to appear for trial next Friday, Albert Burgess being his bondsman. The warrant was sworn out by Game Warden Thomas W. Penney, of Providence, to avoid mistake. H. F. Thompson is counsel for Stone.

John Comstock and George L. Keach were tried, following the above case, for each having a partridge in his possession unlawfully during the close season. Fines of $20 and costs were imposed and both men entered appeals.

Efforts to Stock Warwick Neck.

The Warwick Neck Game Association was organized in September, 1895. It is composed chiefly of summer residents who are interested in field sports and are desirous of protecting the game in the depleted covers of the Neck.

The club has a small number of members, and they are allowed a limited number of days shooting during the season. If they start to hunt on a day and spend but an hour, that counts as a complete day. They are limited to ten birds to each gun, and are fined 30 cents for each bird above that limit, and must not shoot more than fifteen in all. No birds may be sold. The officers of the association are: President, F. H. Peeham, Jr.; Vice-President, H. N. Campbell, Jr.; Secretary and Treasurer, C. A. Nightingale.

Warwick Neck is favorably situated for the experiment, as it is surrounded on three sides by water and has continuous cover which is congenial to quail. Leases of the land were readily obtained from the owners, who preferred that the shooting on their premises should be done by responsible parties, who would use due care and not injure the property. These leases were carefully prepared by a prominent Providence attorney and contain provisions authorizing the taking of such measures as they may deem necessary for the protection of game on their premises and to bring suit against any trespassers.

It being too late for stocking when the association was organized, the grounds were posted and pains taken to preserve what native game birds there were on the Neck, and it is stated that there never was so little shooting as during the fall of 1895.

In March, '96, about 400 Kansas quail were purchased of Charles Payne, of Wichita, Kan., and liberated on the preserves of the association. Kansas quail were chosen, as they were considered more hardy than other birds and are of larger size. Of the 400 quail purchased by the association, only about a half dozen died in the transportation of 2,000 miles.

Care was taken to feed the birds after they were liberated, and as the season advanced they spread out all over the Neck and wandered over the lawns and meadows, piping their cheerful notes in all directions. Many nests were found in quite unusual places. One containing twenty-seven eggs was placed in some weeds not 10ft. from high water mark. Another was located beside a large rock in a pasture where blasting was going on within a few rods. The mother quail continued to "hold the fort" through it all, and brought off seventeen lively chicks. One of the residents put off for two weeks the cutting of grass, until the quail could be hatched from several nests that were in the field.

The association proposes to care for the birds that are left over, and in the close season have them fed and cared for. This is in a measure necessary, for the quail will go where they can get food. And as they are dependent upon seeds and the like for their sustenance, when the ground is covered with snow, they will go long distances in search of food. To avoid this and keep them on the Neck an effort will be made to induce the farmers to throw out a little grain at such times as may be necessary.

Another game bird which this association is to have on the preserve is the English pheasant. The organization has received 158 eggs, and from these some fifty birds were hatched. There is a peculiarity about the pheasant, for she will continue to lay some fifty or sixty eggs if they are taken from her as fast as they are laid. As soon as these eggs were received they were placed under twelve setting hens within one week from their leaving the other side. As soon as they were shipped a wire was sent which gave notice to have the setting hens ready, and they were secured. The hens were set in small houses especially prepared. Unfortunately they were placed too near the ground, and during the heavy rains which occurred about that time some of them became wet and were chilled, so that only fifty hatched, or possibly they were made weak by the journey. As it resulted only twenty-six birds lived to maturity. It is a question whether these birds will be able to take care of themselves in this climate and find food, but at all events the association will see that they are cared for. The young birds required a special kind of meal and they have grown very rapidly.

The members will refrain from shooting them this season, and application will be made to the General Assembly to place a close law on English and Mongolian pheasants until Oct. 1, 1397. The club feels much encouraged by the results of these efforts to propagate the pheasant, and propose another season to enter upon it on a much larger scale.

All these experiments cannot but prove beneficial to the sporting interest of the State, and these birds will help the shooting all over the vicinity.

The association has posted a notice to sportsmen: "The land on Warwick Neck is posted, and shooting rights have been acquired by the Warwick Neck Game Association. Sportsmen will kindly take notice and avoid trespassing on these grounds."

Notes.

Stray deer have been reported as having been seen in different parts of the State during the past fortnight or so, but with one exception I have seen no reports of any having been shot. Edward Underwood, seventeen years of age, shot one a few days ago in the Buck Hill woods, near Pascoag. It weighed about 150lbs.

John D. Tiplady and Joseph E Oates were recently fined $20 and costs each for shooting quail in the close season in North Providence. W. H. M.

THE SORA OR RAIL BIRD.

Editor Forest and Stream:

As in FOREST AND STREAM of Oct. 10 you have an article entitled "Some Queer Ways of Game Birds," it has occurred to me that it would be a good thing if any reliable information can be obtained as to the habits, etc., of the sora or water rail. I have hunted them in the marshes of Maryland and Virginia for many years, and the queer stories about these birds and their habits are legion.

The negroes and many white sportsmen down their positively say that they originate from frogs, and assert that there is nothing more strange in this than "that butterflies should come from caterpillars and frogs from tadpoles." At first thought this seems ridiculous, but in a recent rail shooting trip away up on the Rappahannock River, in Virginia, I found any number of the natives who stuck to this story, and in another location in Maryland, fully 200 miles away, they one and all made the same assertion. One thing is certain, that if the hunter goes on to the marsh one day and is deafened by the croaking of frogs, his guide will quickly say, "No birds to-day," and diligent search will fail to find any. The next day if he visits the same spot, and the frogs are silent, the guide will say, "The birds are here, sir," and sure enough they will be found on hand.

Now everybody knows that the water rail is a poor flyer. When he first appears he can fly but a few hundred yards at the utmost; toward the latter part of the season, when he becomes fat, he cannot fly any distance at all. In the September *Outing* there is a very interesting article on the rail bird, in which the writer says that the birds "arrive in the marshes in May and depart at the first frost." How could they do this when they can't fly? I have made diligent inquiry, and have never found anybody who ever saw them in May or found their nests or young. Men who have spent their lives in the vicinity of the marshes ridicule the assertion that the birds ever appear there until August or September, and I have been repeatedly told by these very men that the birds do not entirely disappear at first frost, but have been seen and killed even as late as Christmas.

Several guides at points far distant from each other have even asserted that "in digging out muskrats, they had dug up the birds out of the mud in a state of torpidity," and the same has been said of the house martin. I once overheard one of them telling a group of his friends that in turning up his nets one winter day near a muddy spot they found a house martin in them, "torpid and sort of gummed up." They wiped the bird dry and laid it in the sun, and in a few minutes it became lively, rose in the air some 50ft. and then dove straight down into the mud and disappeared. At any rate this is a most interesting subject, so much so that I have heard it discussed for years by rail hunters everywhere I have been, and the natives one and all agreed that the birds "came from frogs." I know of a marshy place in a valley in the mountains of West Virginia where rail birds have fre-

quently been killed, and the mountains are so high that it would be a physical impossibility for them to surmount them when they are fat, which is always the case later in the season. How did they get there? How could they get away?

At 4:30 o'clock in the afternoon of Tuesday, Sept. 15, I left Baltimore on Weems Line steamer Westmoreland, and after a pleasant trip down the Chesapeake Bay and up the Rappahannock River I arrived at the pretty little town of Tappahannock, Va., at 1 o'clock P. M. the next day and was met on the dock by Capt. A. F. Bagby. He is a sportsman and also is mine host of the Hotel Bagby, and a mighty good host is he. The hotel is pleasantly situated and well kept. They get their drinking water from an artesian well 720ft. deep, from which the water flows under a natural pressure. This water supply business is an important item, for most of the country towns get their water from nearby wells too often infected from surface drainage, which results in more or less danger of typhoid and malarial fevers. Tappahannock was troubled some in this way until they used artesian water, and is now one of the healthiest of towns.

Capt. Bagby is a sportsman and good fellow, and had most kindly made every possible arrangement for me, so that when he drove me out to the marsh (three and one-half miles distant) the next day we found boats and pushers ready, and as soon as the tide served he and I went at it and bagged fifty-one rail birds, which was doing pretty well, as the tide was not high enough to enable us to get to the best parts of the marsh.

The weather was too hot and tides too low for the next three or four days, so he supplied a nice team of horses and on Tuesday, Sept. 22, he and I rode twenty miles across the country to the Matapany River, and he located me at the hospitable old colonial house of W. T. Henley, Esq.

Mr. Henley owns a marsh of some twenty or thirty acres in extent, located directly opposite his place, and as the tide served about noon we gunned on it and bagged forty-four birds, and Capt. Bagby returned home that afternoon. I remained two days longer, but tides were too low for much sport and I got only twenty rail birds there; we could not get at them on account of low tides. If the sportsman can happen along there just after a big easterly gale toward last of September or early in October he is sure of fine sport in rail bird shooting, for there are two marshes near Tappahannock of considerable extent and they are swarming with birds, and Capt. Bagby will always make arrangements for boats and pushers. And so ended my rail bird shooting for the season of 1896.

ROBERT C. LOWRY.

ACROSS THE OLYMPICS.

SEATTLE, Wash., Sept. 30.—*Editor Forest and Stream:* Frank Reid, of Buffalo, N. Y., and Roland Hopper, of Orange, N. J., have in their possession two sets of magnificent bull elk horns, a trophy of their eventful trip over the Olympic Mountains from Hood Canal to the Pacific Ocean, a trip which has not been taken previously except by two parties—one the Government expedition in 1890, and the other a press exploring venture about the same time. The little party of which Reid and Hopper were members traveled more miles, endured more hardships, and had more genuine pleasure and saw more grand sights than any other hunting party which has yet had its experiences in western Washington given to the public. The trip was planned about a year ago, while Frank Reid and a party of friends were camping at Clifton, which is the extreme head of Hood Canal. Reid had been anxious to visit the practically unexplored portions of the Olympics for some time and briefly outlined his plan, which included a trip over the Olympics, through the stamping ground of the elk, blue grouse and bear, to the headwaters of the Quinault River on the western slope, and then down the river to the lake of the same name. After a hunt and fish at the lake he proposed to secure the services of Indians and shoot the rapids of the lower Quinault River and land at the Quinault Indian reservation on the Pacific Ocean. From there he suggested a trip either along the shore or by canoe to Cape Flattery, and then up the Sound to Seattle, making a trip of 265 miles. He found kindred spirits in Roland I. Hopper, of Orange, N. J.; Fred Church, son of the famous painter, who lives on the banks of the Hudson River; and Edward Munn, who was manager of the Princeton football team in 1895. Reid had been "holding down" a claim on the shore of Lake Cushman for two or three years, but his home is in Buffalo, N. Y.

Every member of the party was living near Lake Cushman, that beautiful little body of water which lies in a deep valley at the eastern base of the Olympics, surrounded by forests of giant firs and within hand-shaking distance of Mount Rose and Mount Ellinor, which tower 5,000ft. above it. In preparing for the journey it was calculated that six weeks' provisions would be necessary. Each man was allotted a 40lb. pack in addition to his firearms and ammunition, which all hunters will recognize as no small burden in itself. Only four rifles were taken along—one .30cal. new Savage rifle, two .45-90 Winchesters and one .38 55 Marlin. The camping outfit and provisions were put on three small but strong and sure-footed cayuses. The combined weight of the loads carried by the cayuses was about 500lbs., and great care was taken to see that these burdens were securely fastened to the beasts, because the shifting of a pack on a narrow, mountainous trail not only means hard work, but possibly the loss of both animal and luggage as well. On the evening of July 24 everything was ready for the start, and the next morning witnessed the assembling of a picturesque party at the west side of Lake Cushman, where the Government trail, made in 1890 by Lieut. O'Neil's party, has its beginning. Each one of the party wore the toughest looking wide-brimmed sombrero ever seen, coarse shoes with hobnails, and a pair of overalls and undershirt. In fact, each one had aimed to cut the weight of his outfit to the minimum and still keep it serviceable. To a person who has never plodded through a Washington forest or clambered up a mountain side in pursuit of a deer it is hard to convey an adequate idea of the wear and tear on clothes and footwear. If a person not acquainted with the Olympics becomes lost, even though a short distance from his friends, he will ofttimes find his clothes in shreds when at last he hears a response to his "whoo-hoo."

At the end of the second day out from Lake Cushman the little party found itself at the head of the Skokomish River, twenty-five miles from home. Many people speak of this place as the "First Divide," and although the Lake Cushman boys looked upon it as a comparatively easy part of the journey, a man unaccustomed to such jaunts would involuntarily remark, "Deliver me from any harder work with this pack on my back."

The rain came down in torrents now and there was a great hustling to make camp and get a fire started. The camp having been made and the coffee-pot set to boiling and the bacon to frying, all gathered around and calculated which would get the lion's share. Out camping in the Olympics a man unconsciously arrives at that stage when he figures on the size of each piece of bacon and amount of coffee left in the pot after the first round.

They talked that evening of the trip up the Skokomish and congratulated themselves that they still had three horses, because it was a wonder that one of the beasts had not been killed while it was rolling down the mountain side. It is truly wonderful how near a man or beast will come to death on a mountain journey, and yet escape with a few bruises and scratches. If one of those three cayuses could talk, its story of a roll down the mountain would be interesting. What caused the outbreak is still a mystery, but without the slightest warning this animal commenced plunging, and a moment later cleared a 4ft. log at the side of the trail and went rolling down the steep decline to the river below, carrying with it a pack weighing 150lbs. Fifty feet below the trail a friendly log that was propped slightly above the ground stopped the cayuse in its mad flight, and the startled hunters had the "pleasure" of gazing down upon a conglomerate mix-up of a big pack and a small animal, whose four feet were pawing the air in a wild manner. With some misgivings the hunters worked their way down to the scene of disaster and cut the pack loose to effect a rescue.

Along the river at stated points may be found the places where Lieut. O'Neil camped. Each camp has a number, and even to this day the ranchers who live in the Lake Cushman country speak of them as Camp No. 3 or 4 or 5. The last-mentioned would afford a writer material for a clever story. At this point the restless waters jump and tumble over ragged rocks that form the bottom of a cañon. From bank to bank it is fully 100ft., and from top to bottom 80ft. A log not more than 3ft. in diameter spans this chasm, making a convenient footwalk for any one who desires to cross. Sometimes hunters walk boldly out on the rough surface and after reaching the middle suddenly think of home and mother, and make the remainder of the journey on their stomachs, while the waters roar below them in vain efforts to induce a fall. Tradition has it that Lieut. O'Neil used to drill his men on that log in order to cure them of any disposition to look right or left. Did this party walk the log? Oh, no; they had horses to get across, so all went up stream to a ford and crossed in safety. Roland Hopper tried to walk the log two or three years ago with a heavy pack. When he was part way across the pack shifted, and for a moment it was a life and death balance act with him. Finally he effected a compromise by embracing the log. Hopper says he is glad he was not one of O'Neil's soldiers.

After four days of almost incessant rain camp was broken and the party made its way over a rough country to the headwaters of the Duckabush. This point is called the second and sometimes the main divide. It is the point that separates the rivers which flow into Hood Canal from those that make their way down the steep western slope to the Pacific Ocean. On a clear day a magnificent panorama stretches itself in all directions before the eyes of the adventurous hunter. Within a quarter of a mile is the Duckabush glacier, a sight in itself worth traveling miles, and from its base creeps the stream that finally loses itself in the salt waters of Hood Canal. At the left hand, far away, can be seen Gray's Harbor, while down below stretches the beautiful country of the Quinault Indians. To the northwest towers Mount Olympus, its jagged head 8,000ft. above the level of the sea. In the northeast another mighty sentinel, Mount Constance, blocks the way, raising itself into the clouds as if to rival Mount Olympus. Close at hand lies Lake Marmot, whose waters are cold as ice; and in all directions peaks, some large, some small, rise up like barriers against the inquisitive hunter.

The main divide is about 5,500ft, above the sea's level, but from it more of the rugged beauty of the Olympics can be seen than at any other point. When the party pitched camp near Lake Marmot and commenced the construction of a cabin, they were compelled to dig down into deep snow banks. Before the end of a week, however, much of this had disappeared, and the valleys became transformed as if by magic into gardens of paradise. As the hot rays of the sun beat upon the snow and drove it back foot by foot, rich, luxuriant grass made its appearance and grew like mushrooms. The valleys glowed with a carpeting of wild flowers. There would be immense patches of red here, blue there, white somewhere else, and yellow further on. Fir trees had disappeared, and in their place could be found Alaska cedar and shrubs. During the three weeks that the party camped in this country of flowers, valleys, glaciers, mountain peaks and big game, the weather was hot and there was no call for heavy clothing. The moonlight nights were wonderful to behold, and Reid became sort of moonstruck until one evening he saw a shadow stealing steadily across its surface. He looked and looked, and rubbed his eyes and rubbed them harder. A horrible idea entered his mind. He could not bear to think of it, but yelled to his companions to come and look at the most wonderful sight the heavens had yet shown them. Some one remembered that there was to be an eclipse of the moon Aug. 23 and mentioned that fact, which gave Reid instant relief.

It was four days from the time camp was first made that Reid and Hopper were able to take their first hunt for elk. A heavy fog had hovered over the mountains, making it out of question for an extended trip over the "hogbacks," down steep snow slides, or through deep and narrow ravines. Probably this enforced delay made them all the more eager and determined when they did shoulder their rifles and take to the woods. They had not gone far from camp when they discovered signs of big game. They tramped nearly all day with the alluring track before them, but not a horn was seen. Finally they stopped on a ridge and were discussing the best direction in which to turn their steps, when they caught sight of some moving objects coming down a steep slide.

"Sure as you're born, we've got 'em at last," whispered Reid in smothered excitement.

"There is elk dead certain," replied Hopper, "and they will work right along down the cut at the base of this ridge. We've got 'em at last."

The elk, unconscious of danger, came down the snowy road, sliding and jumping, the herd being led by a magnificent young bull. The declivity was so sharp that when they would take a step forward their bodies would swing around, but this did not seem to worry them in the least, and they trooped along. The hunters watched them for several minutes before taking to cover and commencing the arduous journey to a position of vantage. It is impossible to detail here all the difficulties encountered in working to and around the herd. At last it was accomplished and the hunters were within 100yds. of forty fine specimens of the Olympic kings. Some were stretched out on the snow resting, while others were standing peacefully or browsing. Hopper unslung his kodak and moving up a little nearer took a snap shot at the herd. This interesting piece of work accomplished, each man picked out a young bull and moved up. A twig snapped and the sound, slight though it was, reached the ears of two cows that were slightly separated from the main herd and nearer the hunters. The cows jumped to their feet, and instantly the whole herd was aroused. The hunters lost no time, but moved rapidly into the open. With this forty elk sprang up in alarm and made off up the mountain, but not before two sharp, ringing reports were heard in the crisp mountain air, and the two young bulls had been won.

No time was lost bringing horses from camp to pack in the prizes of the chase. More pictures were taken, and this developed the fact that the curtain string had been broken when Hopper snapped at the herd.

One day after this Reid and Munn were out in the mountains when they came upon a large black bear asleep at the base of a tree. Reid stopped short and threw a shell into the chamber of his rifle. As he did so the bear awoke with a grunt and made off only to fall dead with a bullet in his head. The same day Munn killed a fine specimen of the fisher. This ended the hunting. Of fishing there was none to be had. Lake Marmot furnished an abundance of fine frogs' legs, but so far as the party discovered there was not a fish in the lake.

On the morning of Aug. 25 camp was broken and, according to previous arrangements, Munn started back for Lake Cushman with the horses and the greater part of the outfit. Church, Reid and Hopper each took a pack of 60lbs. and started for the Pacific Ocean, intending to follow the O'Neil trail, which has a course along the bank of the Quinault River. On the downward journey the first object of interest is the Lindsley glacier, which is about 6,000ft. above the level of the sea. It is a huge mass of ice, easily discerned from a long distance, and rivals in grandeur many of the already famous glaciers. It gives rise to a small stream of water, which after flowing a short distance is known as the Quinault. The water is white and, although it flows with great rapidity, it is not difficult to cross owing to its narrowness. The hunters soon discovered that the O'Neil trail was overgrown, and that in many cases the blazings made on the trunks of trees had disappeared, and could be found again only by the closest scrutiny. Indeed it would have been a difficult matter to follow the trail at all had it not been for the knowledge of Church, who acted as guide for Lieut. O'Neil. The party worked along for a considerable distance through dense thickets and over large windfalls. Such slow progress was made that it became a matter of policy as well as expediency to resort to another method of reaching the lowlands. The forest was literally covered with elk trails, and it was to this kind of a road that they trusted their footsteps. A great difficulty lay in keeping on a straight course, because at frequent intervals cross tracks would lead out into new feeding grounds. On many an occasion, when the trail appeared to be clearly defined and certain of an extended course, it would suddenly stop in the midst of some dense thicket or against a windfall. Any hunter who has attempted to make his way over a moderately rough trail with a 40lb. pack on his shoulders, cartridge belt around his waist and a rifle in his hand will recognize the actual hardships endured by these hunters. At night they slept by a small camp-fire, rolled up in blankets, and, after the trials of the day, were not troubled by sleep-disturbing dreams. Their sleeping bags are ordinary blankets folded lengthwise, then sewed at one end and up the open side. At night they crept in, pulled the upper edges close around their necks, rolled over and thus found themselves as snug as if they were in a weather bed.

On the second day the fishing began to be good. In fact, they did not have tackle strong enough to hold the trout that were eager to grab the fly which struck the riffle or eddy. It was an easy matter to step out into the river and in five minutes kill enough trout for a meal. It took five days to reach Lake Quinault, a beautiful little body of water about five miles long. The journey could have been made in a much shorter time, but the pleasure of spending a half day upon the banks of the beautiful stream could not be passed. There were signs of bear, elk and cougar everywhere, but the actual game did not put in its appearance.

It was surprising how many fine farms, with good improvements, are located around Lake Quinault. The farmers were invariably hospitable, and did everything in their power to give the visitors from the other side of the mountain a good time. Many pictures were taken, and it was with regret that the little party got ready for its exciting trip through the rapids of the lower Quinault River. Before going one morning was spent in watching the Indians catch salmon. It is claimed that the Quinault salmon are superior to every other variety known except those taken in one part of Scotland. The Quinault salmon do not exceed 7lbs. in weight. They are called blue-backs. Their flesh is very red and of a very fine grain, oily and rich.

The trip through the rapids of the Quinault is certain to become famous within a few years. There are fifty shoots and in many cases life is in danger. Our hunters' estimation of George Underwood, the Indian guide, who sat nonchalantly in the stern of the canoe, avoiding a rock here, gracefully skirting a curve there, and heading through a sea of foam, went up several points. Ten miles from the ocean the sound of the surf could be heard. At first the sound resembled that from a great battle, and as it came nearer it seemed as if volley after volley was being fired from immense guns.

After resting a day at the reservation the hunters

walked sixteen miles along the beach to the Queetz, where the Indians held them up for every cent they had for a ferry across. They camped on the beach that night, and along toward morning were awakened by a fierce fight close to their camp-fire. Every man grabbed his gun and rushed out, only to find that a lot of Indian dogs had stolen all their bacon. They tramped twenty miles more over what is known as the Ruby Sands to the Hoh River, where they found an Indian family consisting of thirteen people, which was about to embark for Port Angeles. Arrangements were made with the head of the family to take them along. The canoe was 42ft. long with a 6ft. beam. It was made at St. George Island and was one of the finest of its kind, capable under the hands of the Indians of riding a severe storm. It was a great experience to watch the Indians work the canoe through the breakers into deep water. It took four days to reach Port Angeles, and the experience of going outside Cape Flattery in rough weather was novel and exciting. Once during the trip the Indians put the canoe out of sight of land and ran in with the sealing schooner Viva, which had been seized in the Behring Sea. As the canoe hove in sight the first words asked by those on board the schooner were: "Where is Cape Flattery?" The schooner Sutherland, with a big load of disappointed Alaska miners, was also hailed near the cape.

From Port Angeles the party took a steamer for Seattle, arriving Sept. 14. A trio of tougher looking objects have not struck the city for a long time. Their whiskers resembled tules and their clothes made every policeman suspicious. When they walked into Jim Sheehan's place on Second avenue and made themselves known, Sheehan remarked: "Begorra, boys, you look tough, but you can have anything in the house." The invitation was accepted and for a couple of days the heroes of the greatest hunting trip ever taken in western Washington had a glorious old time. Having their acquaintance with the world, they returned to Lake Cushman and are now leading the lives of every-day ranchers.

PORTUS BAXTER.

CHICAGO AND THE WEST.

Reed Birds.

CHICAGO, Ill., Oct. 10.—The sportsmen of Chicago have heretofore never included the reed bird in their list of game birds, although they may have frequently seen the reed bird upon the menu at hotel or restaurant. There is a tradition, which I am sure is an altogether unjust one, which goes to the effect that my friend and companion Italian Joe, the famous upland market shooter of Chicago, kills and sells reed birds in this country all through the winter, delivering them ready picked. Of course in the winter time the reed birds have all gone South, though the English sparrows still remain. Very few shooters of this region know that the bird they call the bobolink is good to eat, but he is. There is a place down on the Calumet River where for the past few weeks countless numbers of these birds have been passing over, and numbers of them have been shot by duck hunters from their blinds. The shooters, who are also *cognoscenti*, have had some sport and plenty of eating out of this flight of bobolinks. On the platter before cooking the reed bird is a corpulent little beast, about as big as an unshucked butternut. On the platter after cooking he is not much bigger that your thumb, but good all the way through. A good relish for broiled reed birds is to make an orange salad, with a dressing of lemon juice, olive oil, salt and pepper. At least I saw this in a Sunday paper once.

Rail Birds.

In the East the tiny rail is looked upon as a game bird, and the time is coming when he will be viewed in like manner in the West. No snipe shooter of this country would ever pay any attention to a rail, and the bird has had neither a market nor a sporting value attached to it. Yet it is good to eat and does well enough to fill up the corners of a bag which does not carry as many jacksnipe as one has hoped. This fall the great Kankakee marshes are unusually full of water, and where last year there were good snipe grounds there are good rail grounds this year. The snipe hunter, splashing along in the shallow water, very often puts up one of these singular, heavy flying little birds, and sometimes does not resist the temptation to cut down the sluggish creature. If he only marks the bird down in the grass without shooting at it, and then attempts to put it up, he will find that he is rarely ever able to do so, for the rail is first a runner and then a flyer. The lesser rail is not shot for the market, but some of the hundreds of market shooters who haunt the Kankakee bottoms make a business of shooting king rail for the market. These men sometimes kill some of the small rail for their own eating purposes. The native rail shooter who is successful needs a dog, not to point the rail, but to chase it. This dog is usually a cur, and his duty is to follow the rail to its alighting place and then to run after it as hard as he can go, chasing it out of the grass and forcing it to take wing. There may be hundreds of rail all about one on a marsh, which the shooter will never see or hear if he hunts without a dog, whereas with a well-trained cur dog he can kill 100 rail a day if he likes, and at times can make a bag of three or four dozen of king rail, which bring a very good price on the market. The king rail flies about like an ice wagon, and so cannot be called difficult to hit. He is much more difficult to eat, especially in respect to his hindlegs, which constant exercise has developed into a toughness similar to that of the nether limbs of a bicyclist. There never was a season on the Kankakee when rail were as abundant and as easy to kill as this fall. Of course they cannot be shot at all in the Eastern way of hunting them from a boat, but have to be walked up on the marsh. In this way they can never be exterminated, as the spots where they are most abundant are in the deep and heavy cover of the wet marsh, where they cannot be reached on foot or in a boat.

"English Partridges."

There is another native industry on the Kankakee, which I venture to say is unknown to the public. I learned of it through a local hunter, who thought I was a good kind of man to keep it quiet. It seems that the market hunter is a lot wiser in his day and generation than he is sometimes considered. So far from being reckless and prodigal, he is thrifty and prudent to the point of conservatism. I presume that every man who ever went on a marsh anywhere in this whole wide world has had the big brown bitterns, locally called "fly-up-the-creeks," "squawks," etc., etc., fly up under his feet and flap heavily off, with long neck extended and legs hanging back in dragging helplessness. These birds are held in disrespect of the public, and though many are shot, few are ever eaten. Yet I am told in confidence that they are not bad to eat—if you are hungry. More than that, I am told and believe it to be true, that at the time of the World's Fair there were several market shooters on the Kankakee marshes who shot these bitterns regularly for one of the big restaurants at the Fair, where they were sold as "English partridges." Let visitors take counsel of memory, and declare if they ever ate any English partridges at the World's Fair. The shooters got from $3 to $6 a dozen for their birds, and I presume the restaurant man got about $3 apiece for them. Those were golden days. If I should lose my job, I think I would avail myself of this professional secret and go into the business of killing English partridges, at which one should make about $50 a day with one hand tied behind his back.

The Arrival of the Mud Hen.

The above references to lately unknown or generally despised game birds reminds one of yet another fowl whose portion was once humility, but which now has risen to recognition, none less than the mud hen, of gregarious and accessible nature and habits. Not long ago the man who would bring a mud hen home with him would have received the contempt of the fraternity, but not so to-day. The native of the Kankakee eats the mud hen and declares it good as any duck, and many sportsmen there be who are fain to make the same admission. Bags of mud hens at some of our swell clubs are not unknown, and more than one shooter has this fall surreptitiously brought home to the city a few of these birds, in the hope that he might find something upon the table which would warrant him in pursuing the birds upon the marsh, from which, as in the case of Casabianca, all but it has fled. It is an easy prophecy that we shall see the time when meadow larks, blackbirds, bitterns and sparrows will all be classed as game birds.

Shooting Notes.

Mr. H. J. Root, of Omaha, Neb., writes regarding game prospects in his State as follows:

"I returned a few weeks ago from a chicken hunt in the northwestern part of the State, and while I had very good sport and was successful in bagging something like 150 birds in a week, at the same time I am afraid it is only a matter of a short period before this magnificent game bird will be a thing of the past.

"I have visited this particular part of the country more or less for the last eight years, and while this season chickens were more plentiful than they had been for years, I can readily see that they are gradually disappearing. This, I believe, is caused by the laws. From inquiry I found that they had been shooting them since July 1, not only the people in the small towns, but parties from Sioux City. They were shot before they were hardly able to fly.

"I believe that under the enforcement of the laws in this State the birds would be plentiful for years to come, as when the law is out they are plenty strong of wing to take care of themselves.

"Jacksnipe have commenced to come in good numbers, and we are looking forward to some good shooting on marsh and lake this fall, as there is plenty of water and no reasons why game should not be plentiful."

Mr. F. R. Bissell is back from North Dakota, where he took out a State license like a little man. He says the shooting he had was worth the license. He bagged 280 birds, ducks, geese and cranes, and had a delightful trip.

Joel Kinney bagged fifty-six jacksnipe a week ago Thursday on Maksawba marsh, and says that if he had shot as well as some men do on snipe he could have killed a hundred.

It was Mr. Kinney's report that sent Mr. W. P. Mussey down to the marsh in a hurry, but meantime had come the heavy rains and high water mentioned earlier, and the birds were scattered. Mr. Mussey and Mr. John Watson together only got twenty-seven birds in two days. From now on the chance for a good day's sport at the jacks will be less than it was two weeks ago, as the water may flood the bottoms of the Kankakee country all fall. Other country is not so good, and I hear only of small and scattering bags.

At Lake Koshkonong, Wisconsin, ducks are coming in at this writing in good numbers, and there are also a good many jacksnipe reported there. This is a good place to keep an eye on for the next three weeks.

I do not get word of any good duck shooting in this country at all this fall. W. W. McFarland killed forty ducks opening day, Sept. 15, at Hennepin Club, and I am not sure this is not near the top for the vicinity this season. A few scattering bags of small numbers and no general interest are reported here and there, from Poygan to Kankakee, but no shooting of which it is safe to make mention as worth looking into. The flight of fowl has begun down the Mississippi River, but shooting there is better in the spring, when shooting should not be done. So far as I can learn, Dakota and Minnesota are the nearest field of much interest for October.

W. L. Wells is at Momence shooting snipe to-day, having gone down on a report that he thought indicated a cinch for a bag of fifty birds or so. Momence has some excellent snipe ground near it, and in the past it has offered as good shooting as was to be found in this vicinity.

A party of Chicago shooters, which included Messrs. R. R. Clark, C. D. Gammon and their friends Messrs. Pease and Kelly, are back from Colorado, where they had a big game hunt. They brought back to this place for mounting twenty-three heads of blacktail deer and three elk heads, so it would seem they had meat enough.

Mr. W. B. Mershon, chief of the Saginaw Crowd (the Forest and Stream Co., Ltd.), left his card for me one day this week when I happened to be out of the office, and stated, all too briefly, that the special car conveying himself and party to their hunting fields in the Northwest was then lying at the depot, due to start in a few hours. I regret very much that I could not meet Mr. Mershon and his friends, and see the famous car of which readers of FOREST AND STREAM have heard so much and so pleasantly.

Messrs. H. B. Start and Ernest Bell, of Elgin, Ill., leave soon for Dallas, Ark., where they will stop and hunt and fish for about six months. They go by rail to St. Louis, and then finish the journey on horseback from that city. They should meet some very interesting experiences.

National Association.

The annual meeting of the National Game, Bird and Fish Protective Association will be held Feb. 10, 1897, instead of the second Wednesday in January, as formerly announced in the literature of the Association, this change being made by consent of the committee having the executive matters in charge.

Game Prospects.

So far as can be determined at this date, the shooting season for this vicinity this fall will be nothing extra for ducks. For snipe it has been beyond the average. For plover it has not been so good as usual. For prairie chickens it has not been good, on account of a great deal of early illegal shooting. Quail will be unusually abundant in this State and in Indiana this fall. Woodcock are not much included in the plans of shooters of this place, nor is the ruffed grouse, although there are many points not far distant in Wisconsin where very fair ruffed grouse shooting can be had. These birds are about as abundant as they have been for the past few years. In general there is a marked settling back of this country into the inevitable times of a permanent game scarcity. Our shooters are hunting all over the West and South for country where they can get something to shoot. The few remaining good game countries cannot take measures too strict to keep what game they have out of the markets and out of the game pockets of the sportsmen. Yet we have game enough, even now and even here, to give everybody good shooting if each would be willing to stop at a fair divide, and not want the whole cake for himself.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

TENNESSEE QUAIL.

MEMPHIS, Tenn., Oct. 5.—*Editor Forest and Stream:* As the season advances and the leaves begin to turn my hunting fever rises, and I feel as though I would die if I did not have the glorious privilege of making my complaint to some sympathizing ear. I received a letter from my old hunting chum in Chattanooga the other day and I inclose it to you. It simply tells of the abundance of game in East Tennessee, and I can vouch for it being plentiful in West Tennessee, if the people out here tell the truth, and I believe they do. Quail are more plentiful this year than I ever knew them to be before in this State, and I hear that these conditions prevail all over the South. I asked an old farmer who chanced to come into our office to-day how the "crap of patridiges" was out in his country and his answer satisfied me.

But the cable that is welded around my leg is larger and stronger than the one which held poor Prometheus captive, and I fear the "patridges" will not be hurt by my shot this year. Business! that is a terrible word when a fellow wants to go hunting. I saw a deer hanging up at one of the commission houses to-day, and I could hardly persuade my legs to go by it. My eyes were riveted on it, my legs refused to move, and my mind went back to many a happy scene in bygone days. Will some sympathizing fellow sportsman answer one question for me? Why is it that a fellow who cannot hunt, who is absolutely anchored to business—why is it that he cannot get the notion out of his head and forget all about it? If some kind person will give me a recipe to cure the hunting fever without going hunting I will look upon him as a benefactor. A. B. WINGFIELD.

CHATTANOOGA, Tenn., Oct. 1.—*Dear Mr. Wingfield:* * * * I am beginning to take the hunting fever, and think I will have a pretty bad case by Nov. 1. I think there are more quail than usual this year; there are at least ten coveys in one mile of my home on the ridge, and in all of our usual hunting ground in Tennessee and Georgia I hear there are more than ever before. I went squirrel hunting Labor Day, Sept. 7, at Flintstone Tannery. I left home at 6 A. M. in my buggy and got to Flintstone about 8:30 o'clock. Found a man and dog, and went up on the side of Lookout. We spent an hour after a groundhog and got him, and killed six squirrels by noon. I only saw seven, and only shot seven times. The little sixteen is the gun for squirrels as well as quail.

If I had had a sportsman with me that day I think we could have killed fifteen or twenty; the dog treed at least twenty-five, and they were not in holes either. The negro never saw one that day until I had shot him (the squirrel, I mean), and *I* got too lazy to look up in the trees.

I don't think I will go after quail until next month, though the dogs, Billy and Mack, are dead anxious to go now. White and Cowart are arranging for a deer hunt, and it is booked for me to go with them. John Ridge has killed forty-two wild turkeys this fall. He brought me two last week. He killed seven in one hour the day before. W. C.

Better Game Protection in Bergen County, N. J.

HACKENSACK, N. J., Oct. 8.—The largest meeting that has been had for some time of the Farmers' Game Protective Association was held at Cherry Hill on Tuesday last. Discussion on the subject of the present game laws showed that they are regarded as weak and insufficient, the various open seasons on the different game rendering it difficult to properly protect the game and enforce the laws. The constables reported that a number of convictions had been obtained and fines imposed, and it was the sense of the meeting that the laws should be vigorously enforced and maintained, and an endeavor made to obtain better laws next year.

The association offers a reward of $10 for the arrest and conviction, or information leading to the arrest and conviction, of any person killing rabbits or quail before the 10th day of November, or for trespassing on lands posted by the association, and the association will waive all its rights to the fines imposed for the violation of game laws to the person securing the arrest, which is $20 for each bird or rabbit so killed. It also intends to vigorously enforce the law against shooting on Sunday, or the killing of insectivorous birds. Fish and Game Warden Geo. Ricardo is also on the alert and will prosecute all cases brought before him either by members of the association or by the farmers.

SENTIMENT IN MINNESOTA.

STATE OF MINNESOTA BOARD OF GAME AND FISH COMMISSIONERS, St. Paul, Minn., Oct. 1.—*Editor Forest and Stream:* There are some amendments to our game laws that we hope to have passed at the next session of our Legislature, and one of them will be to stop the sale of all game, and brook trout and black bass fish. We believe this is the essence of game protection, and the FOREST AND STREAM has always aided us in our efforts in this respect. Of course, we will have to fight, but this is the only way we will ever preserve our game, because as long as there is something in it in the way of money men will be tempted to go out and kill it. The effect of our law last winter, in stopping the transportation of venison by any common carrier, commission man or sale market, had a wonderful effect, and not 35 per cent. of the venison was killed in Minnesota last year that was killed in '94 and previous years, and it was all on account of their not being able to ship it for sale to any great extent.

Of course, they avoided the law in some respects, as it is almost impossible to stop it in every case. The Minnesota transportation law was carried up to the Supreme Court on a test last fall, mention of which was made in the FOREST AND STREAM, and it was decided in our favor. The Supreme Court decided that the Legislature had the right to say what should become of the game of the State, and all the decisions we have ever gotten from our Supreme Court have been along the same line; so if we get legislation to stop the sale of game altogether, it will surely be declared constitutional by the Supreme Court.

We believe we have more game in Minnesota at the present time than has been in the State for a good many years, and that people are taking a deeper interest than ever before in the matter. Numerous clubs have been formed all over the State to aid the Game and Fish Commission in enforcing the law and creating public sentiment, and this movement has had great effect. People look upon the game and fish of our State as worth something in dollars and cents, and this is a vital matter with people when anything touches their pocketbooks. We have noticed the effect of it this year in so many men coming from other States to fish and hunt in Minnesota. They all leave a great deal of money in our State, which is just so much richer by the transaction. We welcome everybody to come and fish and hunt here, but they must obey our law the same as our own citizens. We limit the amount of game that can be killed and the catch each day, and we allow no game to be taken out of the State. If this policy is carried out in the future, we believe we will have game and fish in Minnesota for all time to come.

Thanking the FOREST AND STREAM for the great assistance you have given the Game and Fish Commission, and the cause of game and fish protection all over the country, I remain yours very truly,

SAM. F. FULLERTON, Executive Agent.

HUNTING RIFLES AND CALIBERS.

TOLEDO, O., Oct. 9.—*Editor Forest and Stream:* I have been a very interested reader of the discussion which has been going on in the columns of your paper upon the subject of hunting rifles, and thinking that a little experiment which I recently tried might be of interest to others, I write concerning it.

I have used rifles of the .32-40, .38-55, .40-65 and .44-40 calibers, and as an all-round gun for use on game from the size of a deer down I like the latter best.

In testing the .32-40 and the .44-40 together I found that with both guns sighted to shoot center at 100yds. each shot under about as much as the other at 200yds., so that in elevation there was practically no choice between them. However, the .32-40 had by far the greater penetration. Now, the bullets commonly used in the .44-40 cartridge are of pure lead and flatten out very easily upon striking any hard substance, and desiring to see if the penetrating powers of this cartridge could not be improved by hardening the bullet, I cast some containing about one-tenth tin, and then to test the matter I fired first a lead and then a hardened bullet into a seasoned chestnut post 6in. in diameter.

The hardened bullet went clear through the post and cut its way cleanly, but the lead bullet only penetrated about 3in., and when recovered was a flat, thin piece of lead nearly 1in. in diameter, and the wood was a good deal slivered for a considerable distance each side of the track of the bullet.

I have never used hardened bullets in a .44-40 on game, but from having seen what it will do on game with a lead bullet, and then in seeing how greatly the penetration can be increased by hardening the bullet, I am inclined to think that very few of the latter bullets would fail to go through a deer at any distance up to 200yds. Next month I am going out to look for a deer, and hope to give the matter a practical test. AUTOKEE.

Indians and Game in Jackson's Hole.

Editor Forest and Stream:

On my way to Jackson's Hole this fall I saw Bannock Pete with a party of eight Indians. He was extremely happy, saying, "Mebbe so come 1st of September killum elk." Four days after their arrival nine residents of the Hole, with Constable Manning at their head, arrested five Indians, three not showing up, and allowed old Pete with the squaw to return to the reservation. The five Indians were taken to Evanston and a penalty of thirty days apiece was imposed for hunting without a license.

During their four days' sojourn in the Hole they had killed eighteen elk. In view of this slaughter and the abundance of game this season, it is but just to the residents of Jackson to allow their claim that the performance of last year was entirely justifiable.

J. J. NALL.

Quail in an Illinois City.

MACOMB, Ill., Oct. 6.—*Editor Forest and Stream:* A fine bevy of quail made their appearance in the Court House yard to-day in this city. They took refuge in the tops of the large elms in the yard. The boys got after them with their little BB rifles and shot every one of them. Evidently they had got lost and bewildered or they never would have come here, as this city has a population of 6,000, and the Court House yard is surrounded with business houses. W. O. BLAISDELL.

Texas Game Notes.

PETTY, Tex., Oct. 4.—The quail crop in this section is larger than usual. In walking a mile or so, I flushed two large coveys of about twenty-five birds each. The weather has been favorable to nesting and brooding this season, as in wet seasons the chigres are a very dangerous foe to the young chicks.

The scarcity of water during the long dry spell has caused some of the birds to migrate to the watercourses, but the recent rains have replenished the water supply and the birds are returning to the prairie again. The present crop of young birds is about grown, and the birds are in good condition apparently.

Shooting will be fine by the 15th of this month, when nearly all the cornstalks will be out of the way.

The cold snap about Sept. 27 brought a considerable flight of waterfowl. A good many teal were seen in the pools and ponds, but very few were shot that I heard of; there were also several large bunches of geese seen to pass over on their southward journey to the Gulf. The indications are good for another cold snap in a few days, when the flight will be renewed.

From Grand Saline, Tex., comes the report that the quail crop this year is good; the young ones are about grown, and seem to be strong on the wing. The duck season has about commenced; several have been killed already. The snipe marsh is not in good condition, as there has not been rain enough to cause them to stop; it is rather too early yet for a flight of jacksnipe.

We hope to get plenty of rain soon, and if so we will have good shooting of both ducks and jacksnipe from Nov. 1 to 15. PROVO.

The .303 Smokeless.

MILWAUKEE, Wis., Oct. 1.—*Editor Forest and Stream:* I have lately returned from a hunting trip in Wyoming, and before setting out purchased a Savage repeating rifle, .303cal. I had no doubt as to its trajectory and penetration, but feared the shock of the small bullet would not be sufficient for big game. My first trial was at a bull elk, 80yds. off. The ball, a metal patch with soft nose, struck him through the foreshoulder, ranged up and back, penetrating the backbone, and stopped just under the skin on the opposite side. Instead of making a small hole at entrance and a large one near the exit, the place of entering was large enough to thrust my thumb in, and it was even larger inside. The bull was dropped flat in his tracks, and never got up. My next was at a buck antelope, and was a very lucky shot. I shot from an elevation of about 100ft. at the buck on a slow trot. I made no allowance for drop, but shot point blank in that respect, only allowing 1ft. in front. At the report he dropped dead. I paced the distance, with my brother following, and it was 480 paces. The antelope was a splendid specimen, and shot directly behind the foreshoulder, and showed the same large bullet hole and perforation as the elk at the short range. This may be interesting to your readers, as it is practice, not theory. C. P. S.

Geese at Sweetwater Lake, North Dakota.

J. E. N. writes of a goose-shooting trip to Sweetwater Lake, in North Dakota. The route was from Langsdon over the prairie, twenty-two miles. "Soon after leaving our camping place we noticed thousands of geese feeding on all sides, and we wasted some time in trying to get a shot. An hour later the lake came in sight, with geese everywhere roaming, screeching and flapping their wings as only thousands of geese do congregated on a sheet of shallow water one mile square. Our shooting started during the afternoon, but not until next morning did the guns get heated up to anything like full working temperature. I did not keep the individual score, but the aggregate bag after six days' shooting consisted of 253 geese, 60 ducks, 5 chickens and some rabbits. The weather during the week was most disagreeable and very much against our shooting. We had a wagon come to meet us to convey our game, and the return trip over the prairie was uneventful. Excepting six deer, nothing was encountered."

Sea and River Fishing.

THE SCIENTIST SPEAKS.

I KNOW all the electrical and mechanical lore
Of Roentgen's rays, Tesla's oscillator, and more,
Even some things scientists must not tell;
But, best of all, I know (and treasure well)
Of a brook which runs where the crickets sing,
And the pool where the black bass is the king.

W. H. B.

FARMERS AND THE TROUT LAW.

A FRIEND has sent me two editorial clippings from the New York *Farmer*, and asks me to say in FOREST AND STREAM what I think of them. This I cannot do, for if I should say all I thought FOREST AND STREAM would not print it. The articles are so irrational, illogical and prejudiced that to any one who really understands the subject of which they treat they contain their own answer, which is, that they are based upon an unintelligent knowledge of the objects of the game law complained of and what has caused it to become a law of the State.
